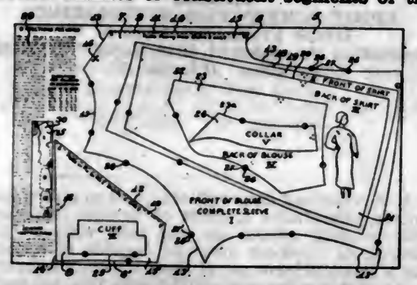
4. A can, a closure therefor, mechanism for actuating the closure including a rocking shaft having one end extending at right angles to the shaft and connected to the closure with said end vertically disposed when the closure is in closed position, and disposed to open the closure when the end is rotated from its normal vertically extending position in either rotary direction, said shaft provided at its other end with two pedals extending therefrom in opposite directions from the axis of rotation of the shaft and each pedal constituting a foot actuated lever for rotating the shaft, and said pedals normally disposed in relative horizontal position when the first named shaft end is in its vertical, closure-closed position and said pedals adapted whenever pressure is imposed on either of the pedals to depress one and elevate the other and thus rotate the shaft to shift the end vertically and thus open the closure and when pressure is applied to the elevated pedal to restore the pedals to their normal horizontal position.

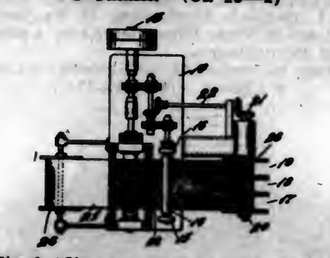
2,106,893
METHOD OF MAKING FROZEN CONFECTIONS
Frederick Thomas Krein, Park Ridge, Ill., assignor to Dixie-Vortex Company, a corporation of Delaware
Application May 6, 1935, Serial No. 19,939
3 Claims. (Cl. 107—54)

1. The method of preparing a chocolate coated frozen confection, including chilling a container, continuously, progressively and uniformly spraying the container with chocolate, filling the container to a desired extent with a confectionery mass, and refrigerating the whole to harden the mass.



2,106,894
PHOTOGRAPHIC CAMERA
Heinz Küppenbender, Dresden, Germany, assignor to Zeiss Ikon Aktiengesellschaft, Dresden, Germany
Application September 20, 1935, Serial No. 41,390
In Germany August 16, 1934
6 Claims. (Cl. 95—10)

1. In a photographic camera the combination of an electric photometer, a shutter coupled to the photometer, mechanical means movable over distances of varying lengths for setting the shutter to selective speed values, a dial having non-uniform gradations indicating said speed values, and electrical means for rendering uniform the increments in the current of the photometer upon adjustments of the shutter to successive speed values, said last named means being formed by resistance sections in the photometer circuit successively engageable by the shutter setting means and having non-uniform coefficients of resistance, the coefficients of resistance being reversely proportionate to the distance between each two successive dial gradations.

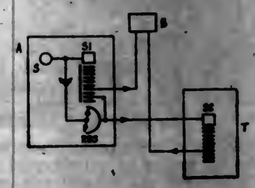


2,106,895
GARMENT PATTERN
William I. Le Coq and Martha W. Le Coq, Philadelphia, Pa.
Application October 28, 1936, Serial No. 107,952
4 Claims. (Cl. 33—12)

1. A pattern for a garment, comprising a severable sheet having delineated thereon a series of pattern outlines of constituent segments of the

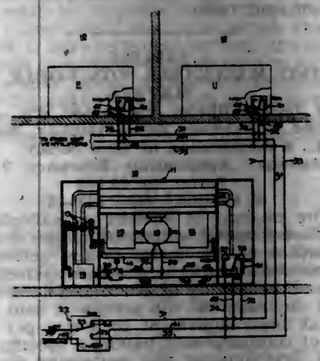
garment, in nested relation, one within the outline of another.

2,106,896
SHREDDED SHEET MATERIAL
Norman E. McCulloch, Pawtucket, and Willard A. Bourne, Barrington, R. I., assignors to The Rayon Processing Co. of R. I., Inc., a corporation of Rhode Island
Application October 23, 1934, Serial No. 749,564
3 Claims. (Cl. 19—1)



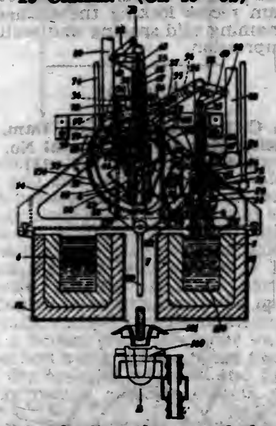
1. Staple fibers comprising spinnable lengths of sheet material cut at its opposite ends and cut along its opposite edges.

2,106,897
AUTOMATIC OR SEMIAUTOMATIC TELEPHONE SYSTEM
Richard Mercer, Kenton, England, assignor to Associated Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware
Application February 9, 1935, Serial No. 5,735
In Great Britain February 21, 1934
9 Claims. (Cl. 179—18)



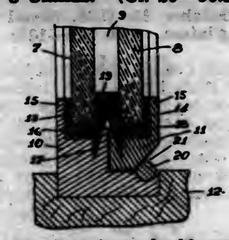
1. In a switching system, a selector switch having its contact bank divided into separately designated contact groups, means responsive to control corresponding to the designation of a contact group for bringing said selector into association with the designated group of contacts, there being lines connected to the contacts of said selector and grouped generally in accordance with the grouping of the contacts, means for causing the selector to search over the contacts of a selected group for an idle line, means effective in the event that an idle line is found for arresting the searching operation and for causing the selector to make connection with the idle line and effective in the event that all of the lines connected to the contacts of the group are busy for arresting the operation of the selector when the end of the group is reached, certain of said groups of lines having more lines therein than there are contacts in a group, the additional overflow lines being connected to spare contacts

in other contact groups, an overflow link associated with said selector and having access to the overflow lines, means effective when the selector is brought into association with a contact group serving a group of lines containing overflow lines for operating the overflow link to make connection with the selector and to make connection



with an idle overflow line of the called group, and means effective in the event that all of the non-overflow lines of the called group are busy and upon the consequent arresting of the movement of the selector at the end of the contact group for completing connection by way of the overflow link with the selected idle overflow line.

2,106,898
UNIT VENTILATOR CONTROL SYSTEM
Wayland R. Miller, Chicago, Ill., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application April 2, 1936, Serial No. 72,521
2 Claims. (Cl. 98—1)

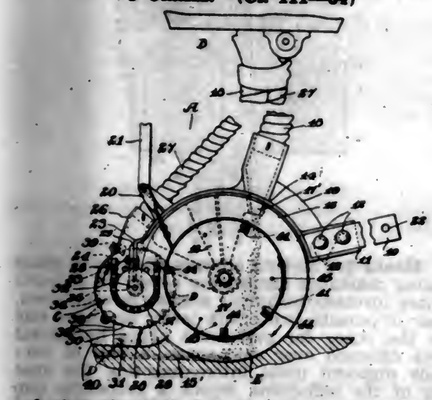


1. In a system of the class described, a plurality of unit ventilators for a plurality of spaces, each of said unit ventilators including conditioning, ventilating and control means, a single pole double throw switch associated with each unit ventilator, a master single pole double throw switch, a pair of line wires for supplying electrical energy to said unit ventilators, a first of said line wires being connected to the switch arm of the master switch and the second of said wires being connected to the ventilating and control means of each unit ventilator, connections between the contacts of the master switch and the contacts of each switch associated with said unit ventilators, and connections between the ventilating and control means and the switch arm of the switch associated with that unit ventilator whereby the unit ventilators may be controlled by the master switch and by the switches associated therewith.

2,106,899
MEANS FOR FEEDING GLASS TO GLASS FORMING MACHINES
Thomas Courtney Moorhead, Strand, London, England, assignor to The United Glass Bottle Manufacturers Limited, London, England, a British company
Application February 5, 1936, Serial No. 62,289
In Great Britain January 8, 1936
19 Claims. (Cl. 49—62)

3. Means for feeding charges of glass to glass forming machines comprising a pair of parallel furnace forehearths having a space therebetween, a pair of parallel bell-crank levers arranged one over the other for movement about horizontal pivots disposed over said space, a pair of vertically disposed units interconnecting the free ends of the bell-crank levers, a gathering cup depending from each of the vertically disposed units and means for swinging the bell-crank levers about their horizontal pivots to move the gathering cups into gathering positions over said forehearths respectively or into a discharging position over said space.

2,106,900
DOUBLE WINDOW CONSTRUCTION
William Owen, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, Allegheny County, Pa., a corporation of Pennsylvania
Application April 27, 1937, Serial No. 139,239
3 Claims. (Cl. 20—56.5)



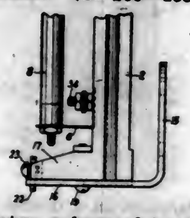
1. In combination in a double window, a stationary frame provided with a rabbet on one side and with an inwardly extending flange on its other side, a glass sheet fitting in the frame with its edges in opposition to said flange, releasable means carried by the frame and engaging the sheet at its edge in opposition to said flange, a movable frame fitting in said rabbet in the stationary frame provided with an inwardly ex-

tending flange on one side thereof, a glass sheet fitting in the movable frame with its edges in opposition to the flange thereon, releasable means carried by the movable frame and engaging the sheet at its edge in opposition to said last flange, a cam recess extending around the frames at the outer edges of the movable frame and lying partly in such frame and partly in the stationary frame, yielding spacing and sealing means between the glass sheets at their edges, and a removable strip in said cam recess locking the frames together and maintaining said spacing and sealing means under compression.

2,106,901
SEEDER

Hugo C. Rasmussen, Beaver Dam, Wis.

Application May 24, 1934, Serial No. 727,254
5 Claims. (Cl. 111—34)

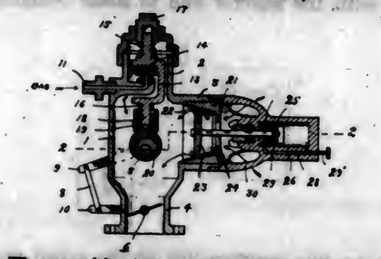


1. A seeder including, a pair of inwardly slanting discs, a fertilizer tube leading between said discs to feed fertilizer to the bottom of the furrow made in the ground by said discs, a rotatable seed dropper including a series of seed receiving pockets positioned between the rear portion of said discs and having a furrow opener means, and means for rotating said seed dropper.

2,106,902
SUBSTATION PROTECTOR

Roy G. Sands, Waukegan, Ill., assignor, by mesne assignments, to Associated Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware

Application October 25, 1935, Serial No. 46,653
6 Claims. (Cl. 200—133)



1. In a protector, a base of insulating material, a reversible L-shaped bracket including a leg for attaching said base to a wall and adapted to be exposed or concealed when said protector is mounted on said wall depending upon the position of said bracket, a cover, and means carried on said bracket for securing said cover in place independently of said base.

2,106,903
GAS MIXER

Albert Tonkin, Cloquet, Minn., assignor of two-thirds to J. L. Mannahan, Minneapolis, Minn.

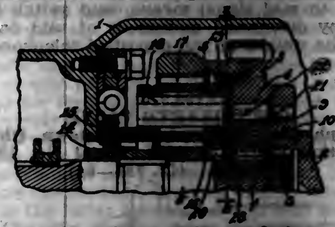
Application March 27, 1936, Serial No. 71,185
4 Claims. (Cl. 48—180)

1. The combination with a fuel gas and air mixer having a main mixing chamber provided with gas inlet and discharge ports, an air inlet chamber communicating with said main mixing chamber intermediate of said gas inlet and discharge ports, a valve for control of said air inlet including a piston carrying rod, a cylinder within which said piston reciprocates, an expansive spring within said cylinder intermediate of the piston and head of the cylinder towards said valve to normally keep the latter closed, said cylinder being adapted to contain a body of oil positioned upon both sides of said piston, an oil by-pass from one end of the cylinder to the other and a manually adjustable valve within said by-pass to regulate the flow of oil from one end of said cylinder to the other and thus control the action of said valve.

2,106,904
COATING MALLEABLE NON-NOBLE HEAVY METALS

Ernest John Wilhelm, Palmerton, Pa., assignor to The New Jersey Zinc Company, New York, N. Y., a corporation of New Jersey

No Drawing. Application February 21, 1936, Serial No. 65,138
6 Claims. (Cl. 148—6)



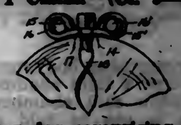
1. The method of coating a malleable non-noble heavy metal which comprises subjecting the surface of the metal to the action of an acid solution containing a reagent selected from the group consisting of chromic acid and water soluble dichromates, the acidity of said solution being at least equivalent to 3 ccs. per liter of water of sulphuric acid having a specific gravity of 1.84, said solution also containing the anions of a mineral acid of the group consisting of sulfuric acid, hydrochloric acid and nitric acid, regulating the ratio between the concentration of said reagent and the concentration of mineral acid anions in said solution within limits at which a colored coating is formed, and leaving the surface of the metal in contact with the solution until a visible colored protective coating appears on said surface.

2,106,905
OVERSPEED DRIVE NO BACK LOCKOUT

William B. Barnes, Indianapolis, Ind.

Application January 8, 1934, Serial No. 705,706
7 Claims. (Cl. 74—230)

1. In a transmission, the combination with a driving and a driven shaft, of an overspeed gearing for drivingly connecting said shafts, a one-way clutch for drivingly connecting said shafts, one of the members of said clutch being in constant driving connection with one of the gears of said gearing and another member of said clutch being in constant driving connection with the

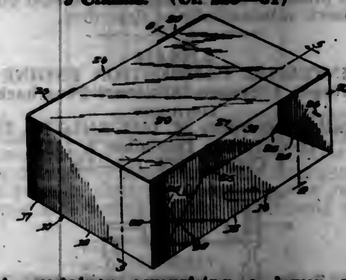


driving shaft, and means for rendering said one-way clutch inoperative in either direction of rotation when the shafts are drivingly connected through said overspeed gearing.

2,106,906
MEANS FOR AND METHOD OF TOWING LOGS

Hilmer F. Berg, Port Angeles, Wash.

Application January 22, 1935, Serial No. 2,847
1 Claim. (Cl. 9—16)

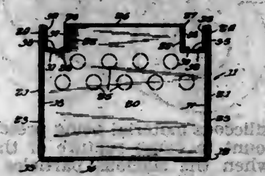


A log towing dog comprising a plate adapted to be disposed transversely upon a log and having a centrally located opening therethrough and formed at its opposite ends with eyelets to serve as reeveways for opposite sides of a cable that may be looped about the log to which the plate is applied, a spike extended through the opening in the plate comprising a shank portion on which the plate may pivot, a head for retaining the plate on the spike and by which the spike may be driven into the log; the lower end portion of the spike comprising a flattened and twisted blade portion.

2,106,907
BOX

John P. Brunt, Chicago, and Edward E. Maston, Wilmette, Ill., assignors to Brunt & Company, Chicago, Ill., a corporation of Delaware

Application January 6, 1936, Serial No. 57,772
9 Claims. (Cl. 220—31)

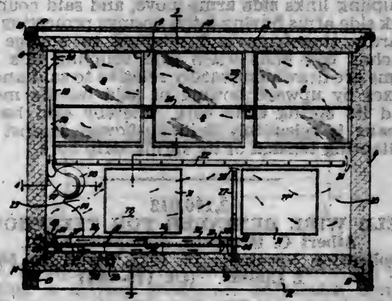


1. A container comprising a lower section formed of a unitary piece of foldable material into a bottom portion, side and end portions, and having corner portions folded upon themselves into substantial triangular form and secured to the sides of the box at a point in spaced relation from the upper edge, and a cover adapted to be received over the side portions and inside of a portion of each of said corner portions.

2,106,908
CHANNEL-VENTED BOX

John P. Brunt, Chicago, and Edward E. Maston, Wilmette, Ill., assignors to Brunt & Company, Chicago, Ill., a corporation of Delaware

Application January 6, 1936, Serial No. 57,773
3 Claims. (Cl. 229—6)



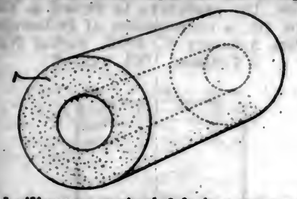
1. In combination, a receptacle having bottom, side and end walls, the end walls having struck-out portions at the upper corners thereof whereby openings are formed in said end walls, the struck-out portions remaining connected to said end wall at one of their sides, and a cover therefor having fold lines extending longitudinally thereof whereby channel portions are formed adapted to be fitted into the openings in said end walls, each channel comprising two side walls and a bottom wall, the outer wall of each channel portion being fitted against the adjacent side wall, the opposite side wall and the bottom wall having partial cut-outs therein.

2,106,909
REFRIGERATOR

Charles S. Evans, Oakland, Calif., assignor to Forderer Cornice Works, San Francisco, Calif., a corporation of California

Application March 9, 1936, Serial No. 67,781
3 Claims. (Cl. 62—63)

1. A refrigerator comprising a food chamber, a cooling chamber, an elevated shelf in the cooling chamber for supporting the ice so that the ice water may drip into the space below the shelf, a plate in the space below the shelf for receiving the drip and for dividing said space into passages and means for withdrawing air from the food chamber and discharging it into the passage below said plate.



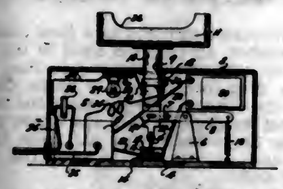
2,106,910
CATALYTIC DEVICE

John Finn, Jr., Berkeley, Calif., assignor of one-tenth to Phyllis Frahwitter, Berkeley, Calif.

Application April 16, 1936, Serial No. 74,893
8 Claims. (Cl. 23—234)

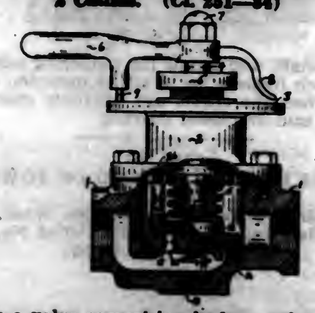
1. A catalytic device comprising a catalytic material dispersed in a frangible matrix, said

matrix containing finely divided particles of an unannealed fused siliceous material and a binder bonding the particles together as a rigid body,



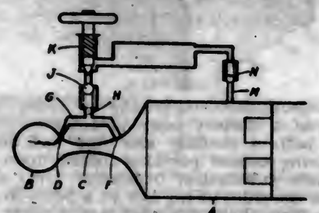
the fused siliceous material being present in sufficient amount to cause rupture of the binding material when the silicious particles are ruptured by temperature changes.

2,106,911
LUGGAGE HANDLE
Emile Garfinkel, Newark, N. J.
Application May 22, 1936, Serial No. 81,263
2 Claims. (Cl. 190—57)



1. A collapsible handle for luggage, comprising a handle means having a spring strip core extending longitudinally thereof, coupling loops affixed to the ends of said spring strip core and adapted to extend from the ends of said handle means, said coupling loops having side arms connected at their free extremities by a transverse stop bar, anchor boxes for fixed attachment to the luggage, said anchor boxes having inner end walls provided with openings through which said coupling links side arms move, and said coupling link side arms having latch nosings projecting upwardly therefrom and adapted to engage the anchor box ends when said coupling link side arms are drawn outwardly relative to said anchor boxes by upward bowing of said handle means and its spring strip core, whereby said handle means is releasably held up-bowed against the collapsing tension of its spring strip core.

2,106,912
HELD WIRE REMINDER FOR TELEPHONES
Albert C. Herzberg, Memphis, Tenn.
Application November 19, 1935, Serial No. 50,512
2 Claims. (Cl. 179—84)



2. In an apparatus of the class described having an electrically actuated signal means, a casing, a column vertically movable through the upper wall of said casing, a pivoted lever means to one end of which the inner portion of said column is connected, spring means connected with the other end of said lever means to yieldably swing the latter to hold the column in normal initial uplifted position, means on the exterior portion of said column to hold a telephone receiver deposited thereon after removal from the receiver suspension hook of a telephone instrument, and a control switch to govern delivery of electric current to said signal means, said switch being closed by downward movement of said column under the weight of the deposited telephone receiver.

2,106,913
OPEN HEARTH VALVE
Joseph Glen Hubbard, Youngstown, Ohio
Application March 9, 1937, Serial No. 129,232
2 Claims. (Cl. 251—84)

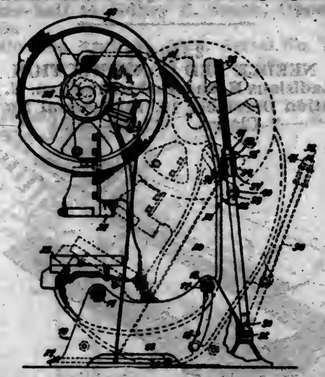
1. In a valve comprising body members drilled and tapped to form a fluid chamber therein, a circular disk within said chamber having an opening therein, a pin in said circular disk adapted to engage an opening in one of said body members, a rotatable cam shaped disk positioned upon the said circular disk, a stem formed on said rotatable cam shaped disk, an operating stem positioned in one of said body members and adapted to engage the stem formed on the rotatable cam shaped disk, a button-like insert positioned in said rotatable cam shaped disk and a coil spring also positioned in said rotatable cam shaped disk and adjacent to the said button-like insert, a secondary spring tension means positioned on the said cam shaped disk designed to apply extra tension to the said button-like insert, said secondary spring tension means comprising a cylindrical member positioned upon the said rotatable cam shaped disk, a pair of plungers and a coil spring positioned within said cylindrical member, one of said plungers adapted to contact a cam formed on an inside surface of one of said body members, and the other one of said plungers bearing against the said button-like insert, substantially as described.

2,106,914
INTERNAL COMBUSTION ENGINE
Prosper L'Orange, Stuttgart-Feuerbach, Germany
Application December 24, 1934, Serial No. 759,005
In Germany December 7, 1933
1 Claim. (Cl. 123—32)

An internal-combustion engine of the character described, comprising a cylinder, a head on said cylinder provided with a pre-combustion chamber and with a Venturi passage connecting said chamber with the cylinder, an elongated fuel receptacle in said head arranged close to the Venturi passage and parallel to the axis thereof, ducts connecting opposite ends of said receptacle with opposite end portions of the Venturi passage, a fuel supply passage leading to the receptacle, means for feeding fuel to the receptacle through said supply passage after each explosion, and a check valve controlling said latter passage and enabling the receptacle to be influenced by the air compression in the cylinder for feeding fuel into the pre-combustion chamber and by the explosion in the latter for feeding fuel into the cylinder, the duct located near the pre-combustion chamber being narrower than the duct located near the cylinder for preventing the receptacle from being completely emptied into the pre-combustion chamber.

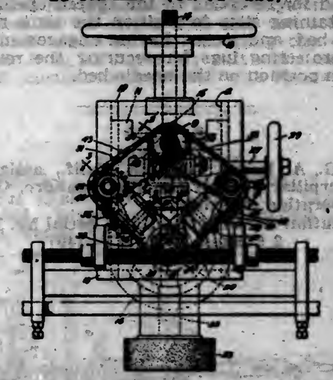
2,106,915
DRIER
James P. Martel, Evanston, Ill., assignor to Oliver United Filters Incorporated, San Francisco, Calif., a corporation of Nevada
Application July 1, 1935, Serial No. 29,276
5 Claims. (Cl. 34—12)

1. In a drier comprising a traveling support adapted to carry a bed of material: a rotatable shaft mounted above said support; discs mounted on said shaft at an angle therewith; the shaft and discs being so disposed with respect to the support that the lower peripheries of the discs will rotate through the material carried by the support as the material passes beneath the discs; and means for positively driving said shaft.



2,106,916
FLUSH VALVE CONTROL
Erwin F. Mortlock, Pasadena, Calif.
Application January 21, 1937, Serial No. 121,439
17 Claims. (Cl. 4—37)

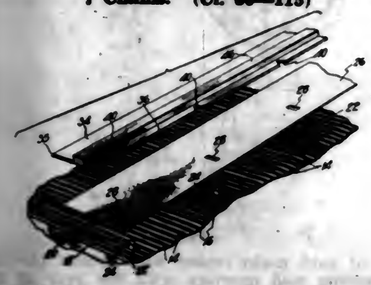
1. A tank of the class described, having in combination: an inlet valve; a float controlling the inlet valve; a buoyant outlet valve; and means operatively associating said float with said outlet valve to close the buoyant outlet valve in response to lowering of the liquid level in the tank.



2,106,917
INCLINING DEVICE FOR INCLINABLE PUNCH PRESSES
Frederic Orton, Buffalo, N. Y., assignor to Niagara Machine & Tool Works, Buffalo, N. Y., a corporation of New York
Application November 18, 1935, Serial No. 50,308
12 Claims. (Cl. 164—103)

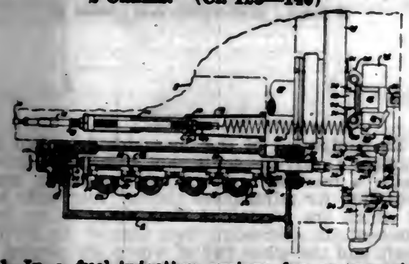
1. An inclining device for a punch press having a base and a main frame inclinably mounted on said base for fore and aft movement, comprising an elongated member maintained at all times under tension and extending upwardly in

rear of said main frame and means pivotally connecting said member with the rear of said base and main frame and including a single means for varying the effective length thereof.



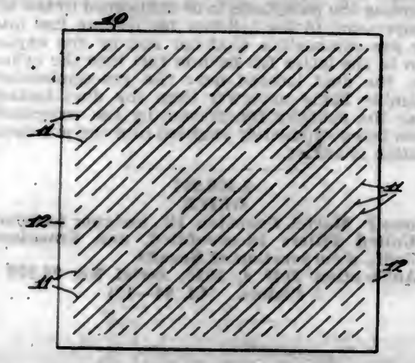
2,106,918
TRANSMISSION MECHANISM
Henry J. Perasnell, Philadelphia, Pa.
Application September 5, 1935, Serial No. 39,223
14 Claims. (Cl. 74—228)

12. Equipment of the character described including a driving shaft, an adjustable driven shaft, a movable support for the driven shaft providing for adjustment thereof, four links two of which are pivoted to each other on an axis substantially coincident with that of the driving shaft and the other two of which are pivoted to each other on an axis substantially coincident with that of the driven shaft, pivot means joining the free ends of said links in pairs to form an angular figure the corners of which are defined by the pivots, a rotative driving member on the driving shaft, a rotative driven member on the driven shaft, rotative idler members mounted substantially coaxially with said pivot means, an endless flexible driving element engaging said members, an additional shaft mounted on said support with its axis at an angle to but intersecting the axis of the driven shaft, the additional shaft being mounted for pivotal movement, and gearing interconnecting the driven shaft and the additional shaft, whereby power



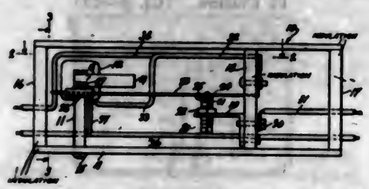
may be delivered to the said additional shaft regardless of pivotal movement thereof or of movement thereof with said support and driven shaft.

2,106,919
NEEDLE BED CONSTRUCTION
Ladislaus Rebaczynski, Brooklyn, N. Y.
Application December 10, 1935, Serial No. 53,704
7 Claims. (Cl. 66—115)



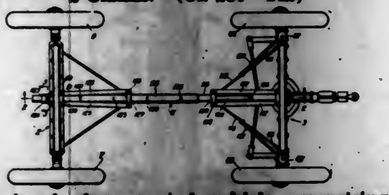
1. A knitting machine needle bed comprising a body portion, spaced ribs on the body portion forming intervening channels for needles and needle jacks, and means for preventing displacement of needles and needle jacks relative to the channels, said means comprising a retaining strip overlying said ribs and intervening channels, said retaining strip having spaced openings therein, lugs projecting from certain of said ribs and adapted for reception in the spaced openings of the retaining strip to position the same relative to the bed, and means having engagement with said projecting lugs for securing the retaining strip in position on the needle bed.

2,106,920
ENGINE
Carl G. A. Rosen, Oakland, Calif., assignor to Caterpillar Tractor Co., San Leandro, Calif., a corporation of California
Application December 26, 1933, Serial No. 703,929
2 Claims. (Cl. 123—140)



1. In a fuel injection system for compression ignition and the like engines, a plurality of individually detachable fuel injection devices each having an element mounted for axial reciprocation to control operation thereof, the elements being all axially alined with adjacent ends of adjacent elements in surface to surface contact to provide for movement of all of said elements simultaneously in either direction and to allow for ready removal or insertion of any of said devices, and a C-clamp member mounted for reciprocation along an axis parallel to the axis of reciprocation of said elements and having spaced apart means engaging the outermost elements to effect simultaneous movement of all of said elements as a unit together in either direction, said clamp member comprising the sole means for maintaining said elements in free abutting relation.

2,106,921
FRUIT PACKING SEPARATOR
George Sykes, Los Angeles, Calif.
Application August 10, 1936, Serial No. 95,186
3 Claims. (Cl. 217—27)

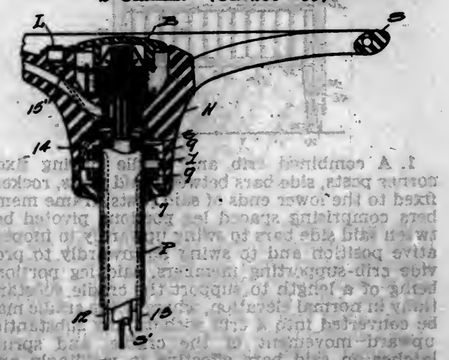


1. A fruit packing separator comprising a sheet of flexible material having a continuous marginal portion and provided throughout its area within said continuous marginal portion with diagonally disposed slits arranged in substantially parallel rows which slits divide the sheet into a series of continuous narrow strips extending from points adjacent two sides of the sheet to points adjacent the other two sides of said sheet and with said slits disposed in staggered relation.

2,106,922
FLICKERING DEVICE
Joseph Tascher, Brooklyn, N. Y.
Application October 6, 1936, Serial No. 104,177
2 Claims. (Cl. 200—87)

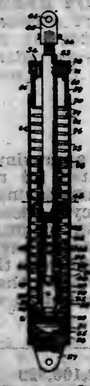
1. A pulsating device comprising a base, an electro-magnet supported above said base and having a core provided at one end with a lateral extension, a support rising from said base and spaced from the magnet longitudinally of the side arm of the core, a bracket carried by said support and adapted to have a conductor connected thereto, a contact carried by said bracket, a resilient arm of nonmagnetic material extending from said support over said bracket and carrying a contact disposed over the contact of the bracket, said arm extending in overlapped and parallel spaced relation to the side arm of the core, and a weight of magnetic material carried by said arm and shiftable along the same opposite the side of the core and constituting an armature.

2,106,923
WHEELED VEHICLE
Miles H. Tuft, Rock Island, Ill., assignor to Deere & Company, Moline, Ill., a corporation of Illinois
Original application June 15, 1934, Serial No. 730,758. Divided and this application February 8, 1935, Serial No. 5,523
2 Claims. (Cl. 280—142)



1. A wheel supported vehicle comprising a front gear, a rear gear, and means connecting said gears comprising a pair of reach pole sections rigidly connected with said gears, respectively, one of said sections being torsionally yieldable and having one end rigidly connected to one of said gears, and holding means adjacent the other end of said yieldable reach pole section for rigidly connecting said other end of the yieldable section with said other section selectively at any one of a plurality of longitudinally spaced points on said other section so that the amount of torsional yielding of said first section remains constant for any given stress independent of the distance between the front and rear gears.

2,106,924
AUTOMATIC LOCOMOTIVE FLANGE OILER
Joseph A. Gaffre, Portola, Calif.
Application August 7, 1937, Serial No. 157,924
12 Claims. (Cl. 184—3)

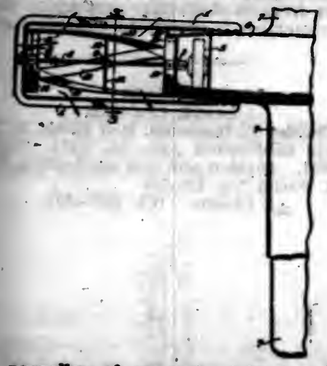


1. An oiler of the character described comprising an oil line having a discharge opening arranged and adapted to discharge oil against the flange of a driving wheel of a locomotive, a fluid pressure line, an ejector in said oil line and fluid pressure line arranged and adapted for actuation by the fluid in the pressure line for causing a flow of oil with the fluid to said discharge opening, a valve associated with said ejector operative by the fluid in the pressure line to move for opening the oil line to flow of oil to the ejector and automatically operative upon cessation of admission of fluid under pressure to the ejector to move for closing the oil line to flow of oil in the oil line to the ejector.

2,106,925
CIRCUIT CONTROLLER FOR INDICATORS
Lydia A. Hagler, Otis Orchards, Wash., assignor of one-half to Sidney E. Smith, Opportunity, Wash.
Application April 21, 1936, Serial No. 75,600
2 Claims. (Cl. 200—59)

1. The combination with the hollow hub of a steering wheel a rotary head rigid therewith, an integral upwardly projecting contact member on the head, and an integral downwardly projecting contact member, said contact members being spaced within the head and of resilient material, of a tubular post having stationary contact units thereon located above and below the head, said units each having annular track-ways on adjoining faces for co-action with said contact members, and means for disconnecting one contact member from its stationary unit while the other contact member is connected with its stationary unit.

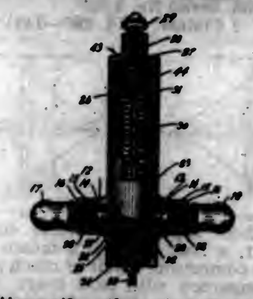
2,106,926
DOOR CLOSER
Charles E. Hammell, Red Bank, N. J.
Original application July 20, 1931, Serial No. 554,064. Divided and this application April 21, 1934, Serial No. 721,750
6 Claims. (Cl. 187—31)



1. In combination, a door, actuating levers therefor, plural power devices of different effective length to move said door, a cylinder, a piston within said cylinder, said power devices contained within said cylinder, and means operable from without said cylinder to adjust one of said power devices.

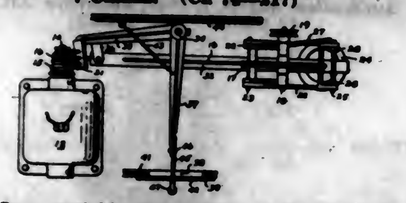
2,106,927
COMBINATION CRIB AND CRADLE
Mary A. Kinnear, Worcester, Mass.
Application May 19, 1937, Serial No. 143,596
2 Claims. (Cl. 5—106)

1. A combined crib and cradle having fixed corner posts, side bars between said posts, rockers fixed to the lower ends of said posts, frame members comprising spaced leg portions pivoted between said side bars to swing upwardly to inoperative position and to swing downwardly to provide crib-supporting members, said leg portions being of a length to support the cradle substantially in normal elevation, whereby the cradle may be converted into a crib without any substantial upward movement of the cradle, and spring latches on said bars effective to yieldingly and automatically receive said frame members when said members are swung upward and to retain said members in raised position between said side bars.



2,106,928
AIR OR WATER CRAFT PROPULSION
Charles M. Lee, Falls City, Nebr.
Application June 30, 1937, Serial No. 151,189
4 Claims. (Cl. 170—156)

1. A propeller of approximately general cylindrical form mounted for rotation around a central longitudinal axis having one open end and one closed end, said cylindrical form being open at its sides except for longitudinally extending pitched peripheral blades having their working faces on the outside and with their forward edges nearer the axis of rotation than the rear edges, and said blades extending in a helical direction around the cylinder.

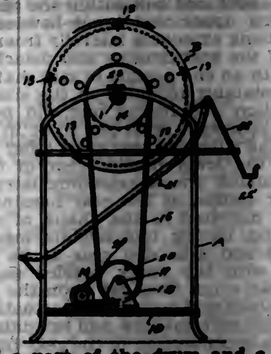


2,106,929
WATER TEMPERATURE CONTROL VALVE
Charles B. McClure, Denver, Colo., assignor to Lenore L. McClure
Application February 13, 1936, Serial No. 64,505
1 Claim. (Cl. 236—12)

A thermostatically controlled mixing valve, comprising a housing, hot and cold water inlets to the housing, valves in said inlets, valve operating means on said valves extending into said housing, a sleeve in said housing, a thermostat moving said sleeve axially, cams on said sleeve adapted to engage said valve operating means, one of said cams adapted throughout a range of adjustment to maintain one of said valves fully

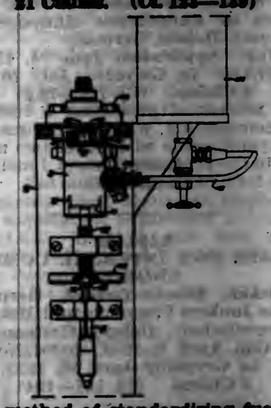
open at all times, the other of said cams adapted to maintain said other valve partly open, means for rotating said sleeve to initially set said valves, said thermostat moving said sleeve to maintain a predetermined temperature by regulating said partly open valve, said cams being so formed that either valve may be independently fully opened at will.

2,106,930
VARIABLE SPEED BELT DRIVE
Ferdinand Nigra, San Francisco, Calif., assignor to Nigra Duplicator Company, San Francisco, Calif., a corporation of California
Application September 20, 1935, Serial No. 42,250
7 Claims. (Cl. 74—217)



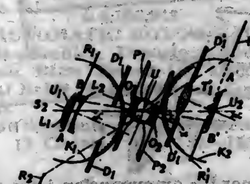
7. In a variable speed drive of the character described, the combination of a drive shaft fixed against an axial shifting thereof and having a stepped pulley fixedly mounted thereon and providing a succession of belt grooves, a driven pulley, a belt extending around said driven pulley and engaged in a groove of the stepped pulley, and means mounting said driven pulley for free pivotal movement thereof about an axis in its plane whereby said pulley is arranged to be and remain in the plane of the belt when the belt engages different grooves of the stepped pulley.

2,106,931
PHOTOGRAPHIC PRINT DRIER
Virgil L. Polson, East Moline, Ill.
Application August 24, 1937, Serial No. 160,682
2 Claims. (Cl. 34—4)



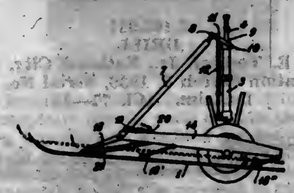
1. An apparatus for drying photographic prints comprising a supporting frame, a drum rotatably supported thereby, means for rotating the drum, a plurality of squeegee plates, means for removably holding the plates to the rim of the drum, means for heating the drum, a chute carried by the frame and extending under the drum for receiving the prints dropping from the

plates, and a rack for receiving and holding the plates released from the drum, the plate holding means including a stationary member for holding the rear edge of each plate between



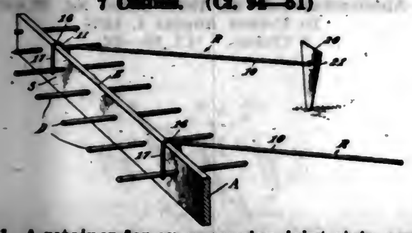
itself and a part of the drum and a manually releasable member for holding the front edge of each plate to the drum and said rack being located adjacent a downwardly movable part of the drum.

2,106,932
ENGINE
Carl G. A. Rosén, Oakland, Calif., assignor to Caterpillar Tractor Co., San Leandro, Calif., a corporation of California
Application November 7, 1933, Serial No. 696,960
21 Claims. (Cl. 123—139)



1. The method of standardizing fuel injection pumps of the type adapted to eject measured amounts of fuel therefrom, so as to obtain uniform action thereof and interchangeability, each pump having a train of members including a pump plunger member adapted for movement to determine the beginning of fuel injection and a second member associated with said plunger member; which comprises the steps of providing a plurality of sets of said second members, the members of each set having a dimension in the motion transmitting line thereof varying by a constant amount from the corresponding members of another set, said constant amount being less than the permissible error in the dimension of the plunger member in a standardized pump, determining the size of the second member which most accurately satisfies the conditions for a given pump, and mounting a second member of the determined size in said pump.

2,106,933
REPRODUCTION OF LENTICULAR FILMS
Anne Henri Jacques de Lasteyrie Saint Genies, Versailles, France
Application July 25, 1936, Serial No. 92,665
In France August 1, 1935
8 Claims. (Cl. 88—24)



1. In a system for copying goffered films with the aid of a principal optical system of small aperture, the plane of its pupil being different from the zone of convergence of the axes of the elementary beams of each of said films, supports for said films, means to give to said films and to said principal optical system synchronous homothetic relative displacements while remaining parallel to one another and perpendicular to the axis of said principal optical system, a source of light placed beyond the original film on the optical axis of said principal optical system which passes, throughout the copying operation, through the centre of said optical system and the centre of the two films, a guard rigidly connected with the support of each film, each provided with a window the periphery of which is equal to said respective zones of convergence, and screens movable relatively to the films in planes near to said films, said screens each having a window the periphery of which is equal to the conical projections of said respective zones of convergence on the respective planes of said films from the centre of said principal optical system, said windows remaining coincident with said respective projections during their movement relative to said films.

2,106,934
LANDING GEAR FOR AIRCRAFT
Raymond Saulnier, Puteaux, France
Application March 18, 1936, Serial No. 69,542
In Germany March 19, 1935
11 Claims. (Cl. 244—103)

1. Landing gear for aircraft comprising in combination, a pair of runners, rigid rods linked to and carrying each runner, and a deformable member associated with said rods and organized to resist the aerodynamic stresses acting on the runner, while being capable of yielding to the pressure acting on the runner on landing, one of said rods being linked at one end to a point near the front end of the runner, a lever pivotally connected with the other end of said rod and with a point of another of said rods, the bottom end of which is linked to the rear part of said runner.

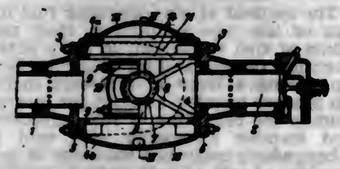
2,106,935
RETAINER FOR EXPANSION JOINT STRIPS
Vincent Schiavi, Wilmington, Del.
Application March 15, 1937, Serial No. 131,067
7 Claims. (Cl. 94—51)

1. A retainer for an expansion joint strip comprising an anchoring rod, means at one end of the rod for attachment to the strip, and an apertured anchoring member loosely carried at the other end of the rod, whereby said rod may be angularly adjusted relative to said member.

2,106,936
LIGHTWEIGHT SADIRON CONSTRUCTION
Howard A. Smith, St. Louis, Mo., assignor to Knapp-Monarch Company, St. Louis, Mo., a corporation of Missouri
Application July 16, 1935, Serial No. 31,613
8 Claims. (Cl. 219—25)

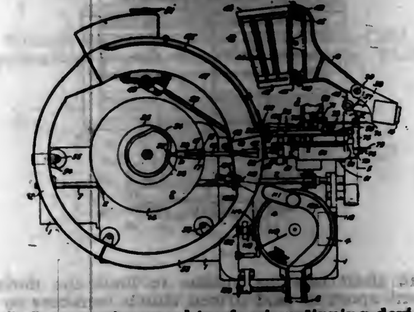
1. In an electric appliance having a heating element and a shell, a terminal assembly for said heating element comprising an elongated plate portion having a pair of terminals thereon and spaced longitudinally thereof, and an arm portion extending from one side thereof and arranged at an angle relative to the plane of said plate portion, the opposite side of said plate portion and the outer end of said arm portion engaging spaced parts of said shell under stress to support said terminal assembly relative to said shell.

2,106,937
DRILL
John E. Torbert, Jr., National City, Calif.
Application March 4, 1936, Serial No. 67,146
1 Claim. (Cl. 77—15)



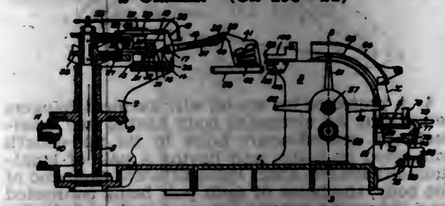
In a power drill, a tool head including a shaft housing, a shaft rotatably mounted therein and having one end portion adapted to receive rotary motion from a drive shaft, a gear housing having companion upper and lower sections, a bolt extending through the gear housing centrally thereof and having a threaded head at its lower end screwed into a threaded opening formed in the lower section, the upper end portion of said bolt being threaded and projecting outwardly through an opening in the upper section of the gear housing, a double gear loosely mounted about said bolt within the gear housing and having upper and lower beveled gears, a tubular shank extending laterally from the lower section of the gear housing and detachably connected with an end portion of said shaft housing, a shaft rotatably mounted in the shank of the lower section and having one end portion detachably connected with the shaft in the shaft housing and a beveled gear at its other end meshing with the lower beveled gear of the double gear, a tubular shank extending laterally from the upper section of the gear housing, a shaft rotatably mounted in the shank of the upper section and having tool holding means at its outer end and a beveled gear at its inner end meshing with the upper beveled gear of the double gear, a nut threaded upon the projecting end portion of said bolt, and an actuating handle formed rigid with said nut and extending radially across the upper section of the gear housing and terminating adjacent the shank of the lower section whereby the nut may be loosened to permit turning of the upper section to dispose its shank in predetermined angular relation to the shank of the lower section and the nut then again tightened to secure the upper section in the adjusted position.

2,106,938
FIREPROOFING OF WOOD
Heinrich Trumm, Carl Ciar, Paul Kühnel, and Walter Schaff, Oberhausen-Holten, Germany, assignors to Ruhrchemie Aktiengesellschaft, Oberhausen-Holten, Germany
No Drawing. Application June 21, 1935, Serial No. 27,744. In Germany July 10, 1934
5 Claims. (Cl. 134—78.6)



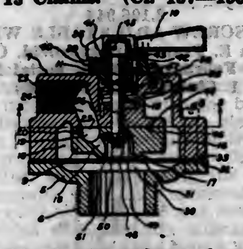
1. The process of producing a resinous fireproofing composition, which comprises acting on 1 mol. dicyandiamide with about two mols formaldehyde in the presence of about 1 mol. ammonia under the form of an ammonium salt.

2,106,939
CRANKCASE FOR INTERNAL COMBUSTION ENGINES
Karl Wilcken, Dessau-Ziebigk, Germany, assignor to Junkers Flugzeug- und Motorenwerke Aktiengesellschaft, Dessau, Germany
Application April 2, 1936, Serial No. 72,256
In Germany April 10, 1935
3 Claims. (Cl. 121—194)



1. An internal combustion engine in which the cylinders are arranged on opposite sides of the crankshaft, comprising in combination, a crankcase forming a unitary structure having, at right angles to the crankshaft, the cross-section of an U, the legs of which extend parallel to the plane passing through the cylinder axes, a series of cylinders mounted on the bottom of said U-shaped structure and a series of cylinders mounted on the free ends of the legs of the crankcase so as to brace the legs relative to each other, crank bearings arranged on the inner side of said bottom and formed with a joint extending at right angles to the mean cylinder plane and a bearing cap for each crank bearing separately mounted in the cavity of said U-shaped structure.

2,106,940
WAXING MACHINE
Dennis Wood, Stanmore, England
Application September 21, 1936, Serial No. 101,835
In Great Britain August 30, 1935
7 Claims. (Cl. 91—46)



7. In a waxing machine having dipping devices mounted upon a rotary carrier, a dipping device comprising an arm pivoted on said carrier, a lever pivoted on said arm, a holder detachably mounted upon said lever, said holder consisting of a stamped metal cage adapted to receive an article to be dipped, means controlling pivotal movement of said arm for lowering and thereafter raising said holder, and other means controlling pivotal movement of said lever for tilting said holder and draining said article when raised after dipping.

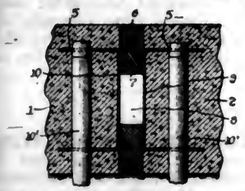
2,106,941
CONVEYER
Dennis Wood, Stanmore, England
Original application September 21, 1936, Serial No. 101,835. Divided and this application March 10, 1937, Serial No. 130,180. In Great Britain August 30, 1935
2 Claims. (Cl. 198—21)

1. Means for feeding articles standing upon a conveyer belt to a machine, comprising a wheel rotatable on a horizontal axis in proximity to said belt, the plane of rotation of said wheel being perpendicular to the travel of said belt, a plurality of finger-like members secured on said wheel, said members being perpendicular to the plane of rotation of said wheel and passing upwards in turn beside said belt, means for pushing said articles one at a time laterally off said belt at a position aligned with the upward movement of said members, and a tubular guide concentric with said wheel, said guide having a continuous slot at one side for the passage of said members during rotation of said wheel, said members catching said articles as pushed off said belt and lifting them one at a time through said guide, and said articles being steadied at their upper ends by said guide while standing on said members.

2,106,942
AUTOMATIC ROTOR VALVE
Vernon D. Beehler, Evanston, and Robert D. McIntosh, River Forest, Ill., assignors to The Imperial Brass Manufacturing Company, Chicago, Ill.
Application September 10, 1934, Serial No. 743,388
13 Claims. (Cl. 137—153)

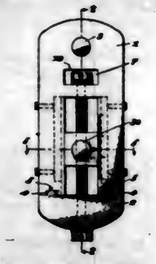
1. A combined rotor valve and pressure shut-off comprising a valve body and a rotor housed within said body, a fluid chamber within said body, a passage for fluid therethrough, a base member forming a pressure chamber separated from said body by a diaphragm, said rotor being positionable to selectively conduct gas to a plurality of outlets, said diaphragm being positionable against said passage to effect closure thereof; a handle attached to said rotor engageable in stops at predetermined positions of said rotor, a power means operable on said rotor between certain stops to effect return of said rotor to a selected position and inoperative between other stops.

2,106,943
COMPOSITION MATERIAL
Albert C. Fischer, Chicago, Ill.
Application February 15, 1932, Serial No. 593,839
Renewed July 2, 1937
17 Claims. (Cl. 154—44)



1. A laminated structure comprising juxtaposed composite sheets, each of said sheets comprising a foundation provided on one face with a series of integrally formed projecting ribs of solid rubber and intervening recesses, and sponged rubber inserted within the recesses to provide cellular mass portions.

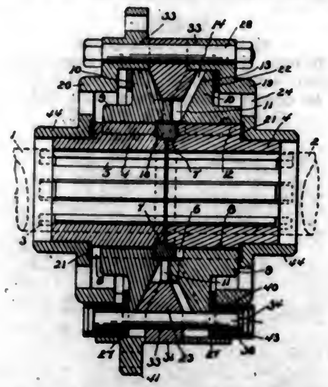
2,106,944
PAVING
Albert C. Fischer, Chicago, Ill.
Application June 17, 1933, Serial No. 676,247
5 Claims. (Cl. 94—18)



1. A paving construction comprising spaced apart expansion joint elements and paving sections having inserted therebetween an expansible joint, means embedded in the joint and in each

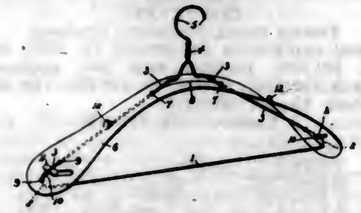
of the sections, and means for supporting the first

means in place while the sections are being assembled.



2,106,945
SLIDING SCREW ADJUSTABLE WRIST PIN
Eldon E. Francis, Bakersfield, Calif.
Application February 5, 1937, Serial No. 124,332
1 Claim. (Cl. 74—600)

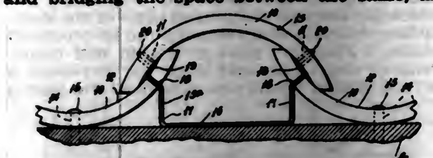
In a device of the class described, the combination of an inverted substantially U-shape frame including spaced side portions, said side portions provided with elongated grooves on their inner faces, said side portions provided in their outer ends with dove-tail grooves, an end section provided with dove-tail tenons, said tenons in said dove-tail grooves, long fastening bolts extending through portions of said end section and through said dove-tail tenons and into the side portions of said frame, said frame provided in its side with a recess, said recess being formed in said frame near its upper end, a rotatable shaft extending through said end section and having its outer end extending beyond said end section, said rotatable shaft having its inner end extending into said recess, a roller bearing within said recess and on said shaft, a nut within said recess against said roller bearing and fastened on the inner end of said rotatable shaft, a roller bearing on the outer portion of said shaft and against the outer face of said end section, a nut fastened to the outer end of said shaft and against the last-mentioned roller bearing, said frame provided in its side portions with registering elongated grooves, bearing strips in said elongated grooves, adjusting screws extending through the side portions of said frame and engaging said bearing strips, a block provided with a wrist pin adjustably mounted on said rotatable shaft between the side portions of the frame, and said block provided with extensions at its sides engaging said bearing strips within said elongated grooves.



2,106,946
DIFFERENTIAL MECHANISM
Clayton E. Frederickson, Chicago, Ill.
Application March 31, 1936, Serial No. 71,945
18 Claims. (Cl. 74—389.5)

1. A differential comprising a driving clutch member having clutch teeth on its opposite sides, two driven clutch members located one at each side of said driving clutch member and having clutch teeth to mesh respectively with those of said driving clutch member, two shaft sections, means to mount said driven clutch members on said shaft sections so that said driven clutch members will turn with and be slidable along

said shaft sections, means to limit the movement apart of said driven clutch members to a distance such that only one driven clutch member at a time can be unmeshed from the driving clutch member, and including means continuously urging said driven clutch members into mesh with said driving clutch member.

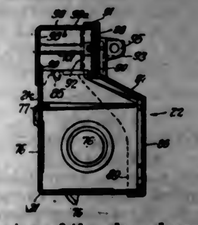


2,106,947
GARMENT HANGER ATTACHMENT
Alexander Hamilton and Charles Brock, St. Joseph, Mo.
Application February 18, 1937, Serial No. 126,487
8 Claims. (Cl. 223—88)

4. A protector for use on wire garment hangers comprising an elongated body having two longitudinally spaced-apart holes in its mid-length connected by a slit, and having a pair of longitudinally spaced-apart holes adjacent each end of the body, the holes of each pair being connected by a slit, and a tongue adjacent each end slit for purposes described, said body having longitudinally directed tongues located intermediate the end and mid pairs of holes which when bent up in use serve as stops for the shoulder straps of a garment.

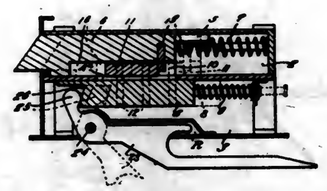
2,106,948
NO SCREED TILE CLIP
Lou Harrington, San Antonio, Tex.
Application April 28, 1937, Serial No. 139,574
5 Claims. (Cl. 108—10)

1. In combination with spaced apart tiles, a clip having means frictionally engaging said tiles and bridging the space between the same, and



said means being in detachable engagement with tiles bridging the first mentioned tiles.

2,106,949
BREAD SLICER FEED
William Walter Hartman, Los Angeles, Calif.
Application August 24, 1936, Serial No. 97,558
27 Claims. (Cl. 146—153)

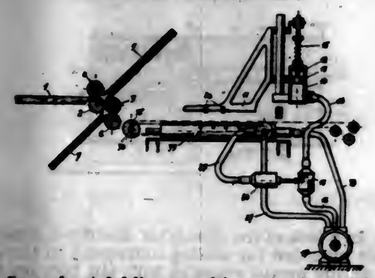


2. In combination with a slicing mechanism comprising a plurality of power driven slicing blades adapted to have a loaf moved therethrough on a given slicing level, a gravity infeed conveyor chute extending at a downward inclination and adapted to convey loaves to be sliced to a position lower than said slicing level, a movable elevator adapted to receive loaves from said chute and to positively engage the bottom of said loaves, and power driven means for moving said elevator to positively elevate the loaves to the slicing level, and a reciprocating ram for pushing a loaf elevated by said elevator through the blades of said slicing mechanism.

2,106,950
COMBINATION ENCLOSURE FOR ELECTRIC METERS AND PULL BOXES
Frederick C. Holtz, Springfield, Ill., assignor to Sangamo Electric Company, Springfield, Ill., a corporation of Illinois
Application January 19, 1935, Serial No. 2,462
24 Claims. (Cl. 247—2)

1. In apparatus of the class described, the combination of a base adapted to have an electric meter mounted thereon, a meter cover for enclosing said meter, securing means for securing said meter cover to said base adapted to be released by rotation of said cover, a pull box associated with said base, a cover for said pull box, means engaged by the pull box cover when the latter is in position for precluding rotation of said meter cover to releasing position until after said pull box cover has been removed, and means for sealing the pull box cover in position.

2,106,951
DOOR LOCK
Allan C. Hubbell, Long Beach, Calif.
Application June 10, 1936, Serial No. 84,580
4 Claims. (Cl. 70—149)



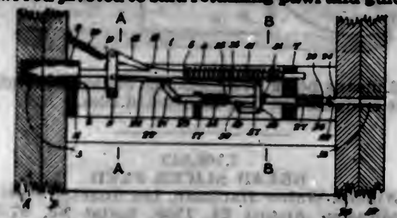
4. In a lock of the character described, a casing, a bolt mounted for sliding movement in the casing, spring means engaged with the bolt for normally projecting the latter, a block slidably mounted in the casing laterally of the bolt, said bolt being provided with a longitudinal channel and a vertical slot intersecting the channel, a vertically movable slide plate mounted in the casing and movable through said slot, said slide plate being provided with a notch aligning with the channel when the slide plate is in a lowered position, a spring device connected with the slide plate for normally urging the same to a raised position, means on said slide block and working in the channel of the bolt for engaging the slide plate when the latter is in a raised position for transmitting movement of the slide block to the bolt for retracting the latter, a handle mounted on one side of the casing, inter-engaging means on said handle and the slide plate for moving the slide plate downwardly upon rotation of said handle in one direction for placing the notch in the slide plate in alignment with said channel, whereby said bolt will be retained in projected position against retraction incidental to a sliding movement of said block, said first mentioned handle means and said bolt having inter-engaging means for retracting the bolt incidental to a movement of the handle in a reverse direction, and handle means at the second mentioned side of the casing engageable with said block for operating the latter to retract the bolt when said slide plate is in its raised position.

2,106,952
PROCESS OF PRODUCING ANHYDROUS ALKALI METAL SULPHIDES
Hermann Theodor Joseph König, Dordrecht, Netherlands, assignor to N. V. Stikstofbindingsindustrie "Nederland", a company of the Netherlands
No Drawing. Application December 27, 1933, Serial No. 704,209. In Germany December 28, 1932
14 Claims. (Cl. 23—134)

1. Process for preparing substantially pure anhydrous sodium sulphide comprising the steps of reacting on sodium carbonate at a temperature of about 600° C. with a gas mixture containing hydrogen sulphide up to about 15%, the remainder consisting of hydrogen and carbon monoxide in the proportion of about 5 to 2, eliminating from the spent gases up to 90% of the formed carbon dioxide and water vapor, adding fresh hydrogen sulphide up to the original amount and recirculating the so obtained gas mixture until the sodium carbonate is completely converted into normal sodium sulphide.

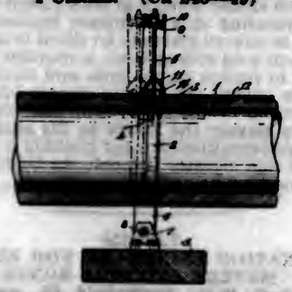
2,106,953
CROSS FOLDING MACHINE
Richard Ludewig, Leipzig, Germany
Application September 26, 1936, Serial No. 102,677
In Germany September 25, 1934
10 Claims. (Cl. 270—62)

1. In a sheet folding machine, a pair of folding rollers, means for feeding a sheet in the zone of action of said rollers, a stop for limiting the movement of said sheet, a vertically movable blade for creasing said sheet between said rollers, a suction actuated piston rigidly connected to said blade and adapted to move the same to crease said sheet, a suction line connected to the cylinder of said piston, a portion of said line being formed to provide an opening therein, and said opening being adapted to be overlaid by an edge portion of said sheet whereby to seal said opening and increase the suction in said line enough to actuate said piston.



2,106,954
DOOR LATCH AND LOCK STRUCTURE
Charles E. Mace, Ottumwa, Iowa, assignor of one-half to Harold S. Vinson, Ottumwa, Iowa
Application November 2, 1936, Serial No. 108,991
7 Claims. (Cl. 70—146)

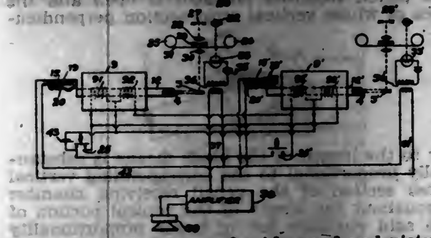
1. In a lock structure of the kind described, a support, a latch bolt slidably mounted thereon having a projecting arm, a handle having an arm extending substantially at right angles thereto, means for pivotally mounting said handle and arm to swing like a bell crank lever, a sliding bolt carried by said handle arm and adapted to coact with the arm on the latch bolt for opening the latch bolt when the sliding bolt is in retracted position and the handle is manipulated for latch opening movement.



2,106,955
LOCK
Duncan Douglas McArthur Moffitt, Arapito, Westport, New Zealand, assignor to The Moffitt Automatic Lock Company Limited, Westport, New Zealand, a corporation of New Zealand
Application August 25, 1936, Serial No. 97,837
In New Zealand October 21, 1935
6 Claims. (Cl. 292—335)

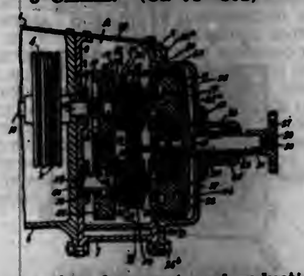
1. In a latch for doors, a casing, a latch rod slidable in said casing, an engaging end to said rod, a spring normally tending to project said latch rod forwardly into engaging position, means to retract said latch rod, a releasing rod projectable through the hinged edge of the door, a spring to retain said releasing rod in projected position, a retaining pawl pivoted in said casing to engage and retain said latch rod retracted, a pawl rod pivoted to said retaining pawl and guided

in alignment with said releasing rod, means to retract said pawl rod rearwardly and operate said retaining pawl to engaging position with said latch rod, and means to disengage said retaining pawl from said latch rod when said releasing rod is moved forwardly upon the closing of the door.



2,106,956
DEVICE FOR SUPPORTING STEAM PIPE LINES
Uhei Nakamura, Minoh-mura, Osaka, Japan
Application June 3, 1936, Serial No. 84,236
In Japan June 22, 1935
4 Claims. (Cl. 248—49)

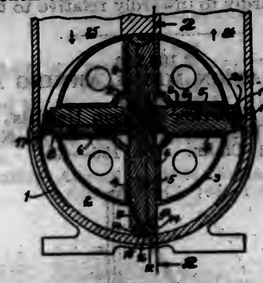
1. A device for supporting a pipe line within a relatively confined space in order to prevent distortion of said pipe when expansion of said pipe occurs, comprising a supporting member below the pipe line, means pivotally mounted on said supporting member and extending upwardly beyond the pipe line, and means pivotally connected at one end to the upper end of said frame and at the other end to the pipe line.



2,106,957
CHANGE-OVER FOR SOUND PICTURE APPARATUS
John F. Nielsen, Corona, Long Island, N. Y., assignor to United Research Corporation, Long Island City, N. Y., a corporation of Delaware
Application January 27, 1934, Serial No. 708,553
3 Claims. (Cl. 88—16.2)

3. Sound and picture changeover apparatus comprising a motion picture projector having a light blocking mechanism adapted to be removed and replaced, film sound record reproducing means associated with said projector comprising a light sensitive cell, an amplifier, a transformer for coupling said cell to said amplifier, a loud speaker connected to said amplifier, a second motion picture projector having a second light blocking system adapted to be removed and replaced, a second film sound record reproducing means associated with said second projector comprising a second light sensitive cell, and a second transformer for coupling said second cell to said amplifier, electrical contacts in shunt with each of said transformers, means for alternately operating said contacts and said blocking mechanism to instantaneously switch sound and picture

reproduction from one of said sound and picture reproducing means to the other thereof, said means including independent electrically actuating means for each light blocking mechanism and respective sound contacts, and means for actuating both of said electrical means simultaneously for simultaneously actuating said light blocking mechanisms and contacts for each of said picture projectors.

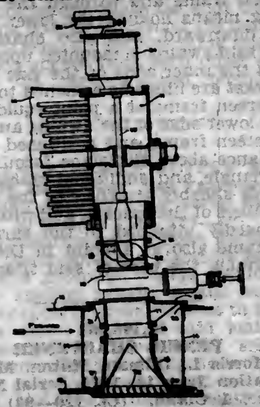


2,106,958
COMBINED MARINE GEARSET AND REDUCTION GEAR
Fred E. Pettit, Jr., Beverly Hills, Calif.
Application September 22, 1936, Serial No. 101,933
8 Claims. (Cl. 74—361)

1. In a combined gearset and reduction gear for coupling a drive shaft operating in a continuous direction to drive a driven shaft in either of two directions at a reduced speed, a bell gear secured to said driven shaft, a main driving gear and a reverse driving gear both meshed with internal teeth on said bell gear, means for mounting said main drive gear for rotation about an axis aligned with said drive shaft, a countershaft mounting said reverse driving gear for rotation about an axis parallel to the axis of said drive shaft, a gear driven by said drive shaft, an idler gear meshed with said last named gear and rotatable on said countershaft, and means for selectively coupling said drive shaft to said main drive gear, and means for selectively coupling said idler gear to said reverse drive gear.

2,106,959
POSITIVE PRESSURE COMPRESSOR
John Phillips, Oakland, Calif.
Application May 18, 1936, Serial No. 79,502
2 Claims. (Cl. 230—153)

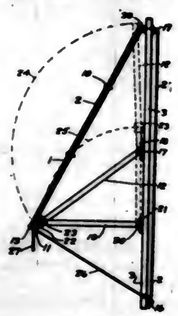
1. In a rotary compressor having connected and reciprocating main vanes and a casing defining a compression chamber, a pressure seal shoe on the termini of said vanes and a fly vane movable on each of said main vanes and contacting each terminal shoe, a portion of said fly



vane being exposed to chamber pressure, said portion being so shaped that pressure in said chamber will apply force to the oppositely disposed shoe.

2,106,960
PRODUCTION OF HIGHLY VISCOUS OILS
Mathias Pier and August Eisenhut, Heidelberg, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany
No Drawing. Application June 12, 1935, Serial No. 26,518. In Germany June 28, 1934
6 Claims. (Cl. 196—13)

1. The process of producing a highly viscous oil which comprises subjecting a crude "high molecular paraffin wax condensation product" to extraction by means of a hydrocarbon, the critical temperature of which is below 250° C., at a temperature above 25° C., and subjecting that portion of the product which remains undissolved to extraction by means of a selective solvent other than said hydrocarbons.



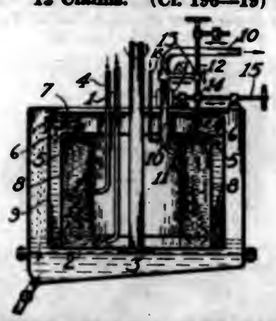
2,106,961
CONDENSER SCOOP APPARATUS
Henry F. Schmidt, Lansdowne, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application October 5, 1935, Serial No. 43,668
10 Claims. (Cl. 257—26)

1. An intake conduit for a ship comprising an intake fitting whose outboard end is disposed sub-

stantially flush with the hull of the ship, and a strainer plate disposed in said outboard end, said strainer plate comprising vanes curved and formed to change the direction of flow of water from rearwardly to inwardly relative to the ship.

2,106,962
COMBINATION METAL AWNING AND SCREEN
Joseph M. Sullivan, Jackson Heights, N. Y.
Application February 11, 1935, Serial No. 6,061
1 Claim. (Cl. 156—43)

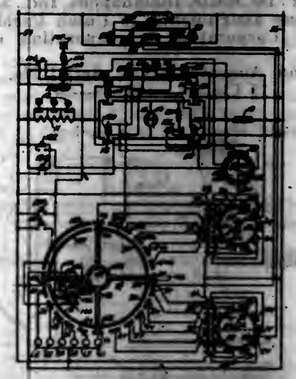
A combination metal awning, screen and support, in which the awning portion is formed of a plurality of metal plates hingedly attached in such a manner that, as the awning is raised, the plates collapse like an accordion, and in which said plates are mounted upon a screen frame through hooks at the upper end and a bracket, with the entire bracket positioned in a triangle, in which the altitude corresponds with the screen frame, the hypotenuse with the awning, and the base with a horizontal plane extending from the lower edge of the awning, with the awning in the open position, and connecting the said lower edge to the frame, and also in which said awning is raised and lowered by a flexible strand connected to the lower edge of the awning, extending upward through an opening in the upper part of the frame and downward on the inside thereof; said device characterized in that the said flexible strand also extends from the lower edge of the awning, with the awning in the open position, downward diagonally to the lower part of the screen frame and through the said frame, providing means holding the lower edge of the awning downward, and also characterized in that the said awning is mounted upon a bracket, in which the inner ends of the side members of said bracket are hingedly attached to the surface of the screen frame at a point equidistant from both the lower edge of the awning and upper end of the screen frame, and positioned a considerable distance above the plane forming the base of the triangle, and additional braces with their outer ends slidably attached to the said former side members of the bracket, and with their inner ends hingedly attached to the surface of the screen frame also at a point in the horizontal plane forming the base of said triangle.



2,106,963
PENCIL SHARPENER
Morris L. Ullman, Milton, Mass.
Application June 12, 1935, Serial No. 26,203
1 Claim. (Cl. 120—93)

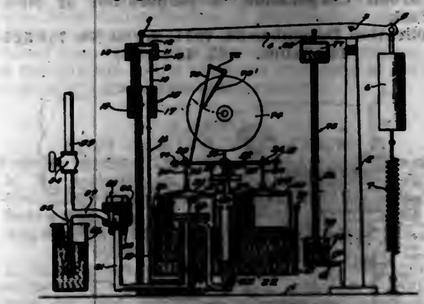
In a pencil sharpener, the combination of a body provided with a longitudinally disposed pencil receiving chamber, blade means parallel to and intrusive into the pencil receiving chamber, and a snugly fitting cover sheathing the said body save at its rear end and bottom and pivoted upon the said body near the mouth of the pencil receiving chamber, the said cover forming with the said body a conico-cylindrical chamber the end of which nearer the mouth of the pencil receiving chamber is open and the area of whose vertical cross-section perpendicu-

lar to the length of the blade means is substantially proportional to the corresponding vertical cross section of the pencil receiving chamber throughout the length of the conical portion of the said chamber but of lesser proportionality throughout the cylindrical portion of the said chamber, and the said cover being rotatably displaceable from the top of the said body in a direction perpendicular to the plane of the top of the said body.



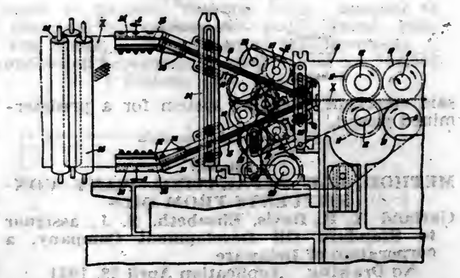
2,106,964
CENTRIFUGAL DEWAXING OF OILS
Alfred A. Wells, Roselle Park, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application June 14, 1934, Serial No. 730,567
13 Claims. (Cl. 196—19)

2. Process for dewaxing oil comprising admixing therewith a solvent of relatively higher specific gravity having preferential solubility for oil in contact with wax, cooling the mixture to cause separation of wax as a solid phase, subjecting the cooled mixture to centrifugal force whereby a lighter waxy layer separates from a heavier oily layer containing a relatively higher content of oil and withdrawing the separated waxy layer from the whirling zone through a constricted passageway by means of its kinetic energy and without the application of force from the materials remaining in the centrifugal zone.



2,106,965
SCREW DOWN MOTOR CONTROLLER
David C. Wright and Harry L. Wilcox, Cleveland, Ohio, assignors to the Electric Controller & Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application December 21, 1933, Serial No. 703,424
36 Claims. (Cl. 172—239)

3. The combination of a main motor, a control device for stopping the motor, a second motor, a second control device for stopping the second motor, a differential gear mechanism connected to both motors and to both control devices, means whereby the main motor drives the first mentioned control device through the said gear mechanism when the second motor is not running, and means whereby the second motor drives both control devices through said gear mechanism when said main motor is not running.

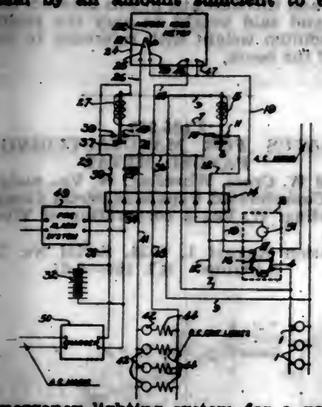


34. A screw-down motor control system for shifting the rolls of rolling mills into different adjusted positions with respect to each other and including a screw-down motor for shifting the rolls and arranged for connection to a source of electrical energy, a single control means for controlling the operation of the motor for roll shifting, scheduling means settable for predetermining concurrently a plurality of independent schedules of roll shifting by the screw-down motor, each schedule defining a plurality of adjusted roll positions in a predetermined sequence, and means for operatively associating the scheduling means with the same control means selectively with respect to said schedules for controlling the motor operations to effect the roll shifting in accordance with any selected one of the schedules and for concurrently rendering the motor irresponsive to the other schedules.

2,106,966
GAS GRAVITOMETER
George S. Binckley, Los Angeles, Calif.
Application May 6, 1935, Serial No. 20,975
5 Claims. (Cl. 265—44)

1. In a device of the character disclosed, a fulcrumed beam, a pendulum secured to said beam, means for varying the angle of the pendulum with respect to the axis of the beam, a pendulum weight, and thermostatic means between the pendulum and said weight to vary the position of the pendulum weight with reference to the fulcrum of the beam.

2,106,967
APPARATUS FOR MANUFACTURING EXPANDED METAL
Leonard W. Cress, Wheeling, W. Va., assignor to The Consolidated Expanded Metal Companies, Wheeling, W. Va., a corporation of West Virginia
Application August 1, 1934, Serial No. 737,874
5 Claims. (Cl. 164—6.6)



5. A mechanism for expanding a slitted blank of predetermined length having deformed selvedges, including a pair of stationary expander guides diverging from each other in a direction generally transverse the plane of the blank, the guides having grooves adapted to engage the deformed selvedges of the blank to interlock therewith and thus prevent the blank from being drawn laterally out of the guides during expansion, a pair of additional guides having grooves also adapted to engage the deformed selvedges of the blank, the additional guides being positioned beyond the divergent guides with their grooves arranged substantially parallel to each other, and means for feeding a blank through the guides including at least three sets of roller devices serially arranged along the path of movement of the blank, one set being positioned in advance of the entrance ends of the divergent guides, another set being associated with a divergent guide intermediate the ends thereof, and a third being positioned beyond the delivery ends of said additional guides, the three sets of roller devices being spaced from each other a distance less than the predetermined length of the blank.

2,106,968
EMERGENCY POWER SUPPLY SYSTEM
Joseph M. Dannheiser, San Francisco, Calif.
Application April 27, 1936, Serial No. 76,591
10 Claims. (Cl. 171—97)

1. In combination with a main lighting system and main power source, a stand-by battery system having a minimum charge requirement, an emergency lighting system, means for connecting said emergency lighting system to said stand-by battery upon failure of said main lighting source, means for disconnecting said battery from said emergency lighting system upon approaching said minimum stand-by charge requirement, and means for automatically maintaining said battery at a charge greater than said

minimum by an amount sufficient to energize

said emergency lighting system for a predetermined period.

2,106,969

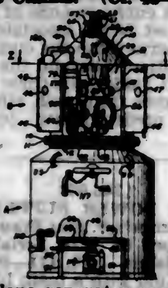
METHOD FOR SEPARATING WAXY CONSTITUENTS FROM OILS

Garland H. B. Davis, Elizabeth, N. J., assignor to Standard Oil Development Company, a corporation of Delaware

No Drawing. Application April 28, 1934, Serial No. 722,965

9 Claims. (Cl. 196—19)

5. In the art of dewaxing wax-containing oils involving separation of wax from oil, the step of preparing the oil for separation of wax therefrom, which comprises adding thereto a heavy hydrocarbon distillate comprising high boiling fractions obtained by distilling hydrocarbon residues until they become substantially solid.



2,106,970

ACETYLENE GENERATOR

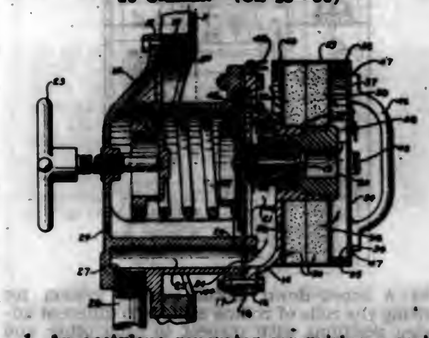
Maurice P. De Motte and Clarence H. Baker, Indianapolis, Ind., assignors, by mesne assignments, to Union Carbide and Carbon Corporation, a corporation of New York

Application August 14, 1934, Serial No. 739,731

20 Claims. (Cl. 48—38)

1. An acetylene generator comprising an outer wall forming a gas chamber, said wall having a recess in one side thereof forming another chamber outside of said gas chamber and accessible from the exterior of said generator; and generator and gas control devices secured in said recess within the general outline of said wall.

15. An acetylene generator comprising a lower portion in operative relation to an upper portion; a charging platform rigidly secured to said lower portion; and means to facilitate opening said generator comprising a plurality of hinges operatively connecting said portions adjacent said platform so that said upper portion will rest on said platform when swung to open position.



2,106,971

ACETYLENE GENERATOR

Maurice P. De Motte, Indianapolis, Ind., assignor, by mesne assignments, to Union Carbide and Carbon Corporation, a corporation of New York

Application August 2, 1934, Serial No. 738,099

13 Claims. (Cl. 48—56)

1. An acetylene generator comprising a casing enclosing a gas generating chamber, said casing including a wall having a hole therethrough opening into said chamber; a gas delivery conduit extending through said hole into said chamber, adapted to communicate with said chamber and to convey acetylene gas therefrom to a gas distributing device; and mechanism responsive to pressure within said delivery conduit for controlling the flow of gas from said chamber into said conduit, said conduit passing through said pressure-responsive mechanism, said mechanism being enclosed within a housing, the major portion of which is disposed within said chamber, said mechanism, housing and conduit being removably mounted on said wall and removable as a unit from said chamber through said hole.

2,106,972

ACETYLENE GENERATOR

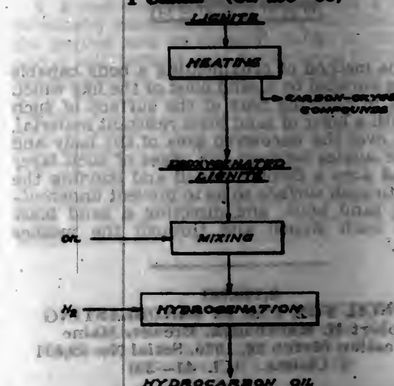
Maurice P. De Motte, Indianapolis, Ind., assignor, by mesne assignments, to Union Carbide and Carbon Corporation, a corporation of New York

Application December 26, 1934, Serial No. 759,515

16 Claims. (Cl. 48—53.3)

1. An acetylene generator comprising an outer casing adapted to contain a partial filling of water; a carbide hopper in the upper portion of said

casing having an outlet opening above the surface of said water; an annular drip flange rigidly secured to said hopper around and below said outlet opening, said flange being provided with an interior annular recess; an annular valve seat of relatively soft rubber within said flange around said outlet opening and backed up throughout the extent of its annular surface by a rigid support; means for securing said valve seat within said drip flange comprising a relatively rigid annular retaining plate within said drip flange below said valve seat, and a spring ring between said plate and the lower wall of said recess; a movable mushroom-type carbide valve adapted to cooperate with said valve seat and form a fluid-tight closure for said outlet; and means for operating said valve to feed carbide from said hopper into said water.



2,106,973

HYDROGENATION OF HIGH OXYGEN COAL

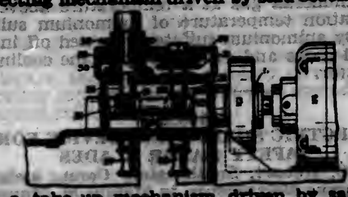
Carleton Ellis, Montclair, N. J., assignor to Standard-I. G. Company

No Drawing. Application April 13, 1931, Serial No. 529,597

1 Claim. (Cl. 196—53)

Process of liquefying lignite to form useful liquid hydrocarbon oils, which comprises rapidly heating the lignite in the absence of added reducing gases and at approximately atmospheric pressure to a temperature at least in the lower part of the range normally used for carbonization, maintaining the lignite at this temperature for a time sufficient to remove oxygen combined with carbon of said lignite and insufficient to cause appreciable carbonization or liquefaction of the lignite, incorporating the decomposed non-carbonized material with a pasting oil, and subjecting the mixture to the action of hydrogen at high temperature and under high pressure.

2,106,974



FILM DRIVING MECHANISM

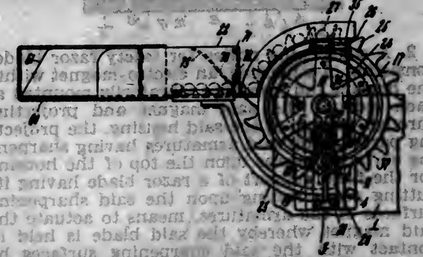
Edwin L. Fischer, Jackson Heights, Long Island, N. Y., assignor to United Research Corporation, Long Island City, N. Y., a corporation of Delaware

Application July 10, 1935, Serial No. 30,755

6 Claims. (Cl. 88—18.6)

1. In a system for the projection of talking motion pictures, the combination of a motor, a shaft driven by said motor, a plurality of counter-shafts driven from said motor shaft, a gear driven by one of said counter-shafts, a second gear concentric with a second counter-shaft and intermeshed with said first gear, intermittent picture projecting mechanism driven by said second gear,

and a take-up mechanism driven by said first gear.



2,106,975

ARTICLE FEEDING AND PACKAGING MECHANISM

Joseph N. Francis, Woburn, Mass., assignor to Standard Coin Wrapper, Incorporated, Boston, Mass., a corporation of Massachusetts

Application September 18, 1934, Serial No. 744,545

7 Claims. (Cl. 226—2)

1. A mechanism of the class described, comprising a chute, a wheel having a plane of rotation substantially in the axis of said chute and projecting above the bottom of said chute, said wheel having peripheral teeth defining between them article receiving spaces from which articles are fed to said chute as said wheel is rotated, means for feeding articles successively into said spaces above the bottom of said chute in a direction transverse to the plane of rotation of said wheel, an abutment on one side of said wheel forming a stop against which the articles so fed may impinge, and inclined toward said wheel adjacent to said chute, means for rotating said wheel, and means cooperating with said abutment on the other side of said wheel to position said articles laterally of said wheel.

4. A mechanism of the class described, comprising a chute shaped to enter and support a carton for packaging articles, means for feeding articles of small heightwise dimension relative to said carton successively along the bottom of said chute into said carton, and a plate hinged to the upper portion of said chute and free to swing on its hinge axis and inclined downwardly and in the direction of passage of articles therein toward said carton, said plate having an upward extension from its lower portion inclined toward said carton in position to direct said articles into said carton in superposed relation.

2,106,976

NEUTRALIZATION OF ACID TREATED OIL

John McArthur Harris, Jr. and Norman F. Black, Baton Rouge, La., assignors to Standard Oil Development Company, a corporation of Delaware

No Drawing. Application December 17, 1935, Serial No. 54,950

4 Claims. (Cl. 196—41)

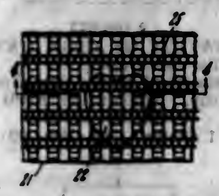
1. A process for neutralizing sulfuric acid treated lubricating oil which comprises blowing the oil

with ammonia gas at a temperature above the sublimation temperature of ammonium sulfate, whereby ammonium sulfate is carried off in the evolved gases and deposited upon the cooling of the latter.

2,106,977
ELECTRIC SHARPENING DEVICE FOR SAFETY RAZOR BLADES
Louis C. Hobart, Southington, Conn., assignor, by mesne assignments, to Marcus M. Munelli
Application April 5, 1932, Serial No. 604,513
5 Claims. (Cl. 51—58)

2. A sharpening device for safety razor blades consisting of a housing, an electro-magnet within the housing, an armature vibratorily mounted at each side of the said magnet and projecting through the top of the said housing, the projecting parts of the said armatures having sharpening surfaces, means upon the top of the housing for the fixed support of a razor blade having its cutting edges resting upon the said sharpening surfaces of the armatures, means to actuate the said magnet whereby the said blade is held in contact with the said sharpening surfaces by magnetism and the armatures vibrated, so as to cause a reciprocating rubbing action between the edges of the blade and the sharpening surfaces.

2,106,978
WOOD PRESERVATIVE COMPOSITION
Sonfi Kameeam, New Forest, Dehra Dun, British India
No Drawing. Application April 12, 1934, Serial No. 720,248. In India April 27, 1933
3 Claims. (Cl. 134—78.6)



1. A wood preservative consisting of about 3 parts by weight of a copper sulphate, about 1 part by weight of a water-soluble arsenate, and about 3–5 parts by weight of an alkali dichromate.

2,106,979
PROTECTION OF BODIES FOR SANDBLASTING ORNAMENTATION
Robert H. Kavanaugh, Brewer, Maine
Application March 20, 1936, Serial No. 69,849
13 Claims. (Cl. 41—39)

3. The method of preparing a body for sand blast ornamentation which consists in spreading over the surface to be ornamented of such body a coating of material in liquid suspension or solution, which material has the capacity of coalescing into a substantially continuous coherent film upon drying of the liquid vehicle, and of then remaining in adherent connection with the surface to which it has been applied, with an adhesive bond of less strength than its coherent strength, and applying and adhesively connecting to such film a stencil sheet or layer of sand blast resistant material.

2,106,980
METHOD FOR SANDBLAST ORNAMENTATION
Robert H. Kavanaugh, Brewer, Maine
Application March 20, 1936, Serial No. 69,850
3 Claims. (Cl. 41—39)

1. The method of ornamenting a body capable of being abraded by a sand blast or the like which consists in covering part of the surface of such body with a layer of sand blast resistant material, placing over the uncovered area of the body and into the angles between the edges of such layer and said area a flexible stencil and bonding the stencil to such surface so as to prevent undercutting by sand blast, and directing a sand blast against such stencil and through the meshes thereof.

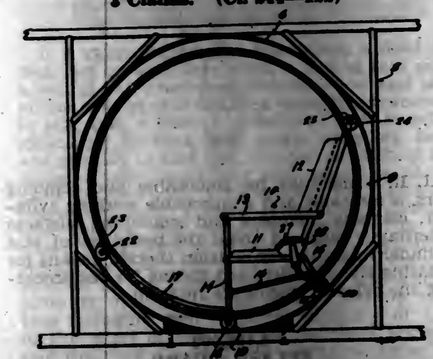
2,106,981
STENCIL FOR USE IN SANDBLASTING
Robert H. Kavanaugh, Brewer, Maine
Application March 20, 1936, Serial No. 69,851
3 Claims. (Cl. 41—39)

1. A lace stencil impregnated with sand blast resistant material and having one or more masks of sand blast resistant material united to its structure over a limited area of such structure.

2,106,982
GALVANIZING FLUX
Raymond J. Kepfer, Lakewood, Ohio, assignor, by mesne assignments, to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application November 14, 1934, Serial No. 752,942
7 Claims. (Cl. 91—70.2)

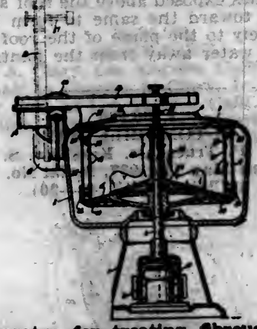
3. As a new manufacture, a prepared foaming galvanizing flux composition for use on a galvanizing bath of molten metal, comprising about one-half to two per cent of triethanolamine and a chloride flux selected from the group consisting of zinc chloride, ammonium chloride, and zinc ammonium chloride.

2,106,983
WOOD PRESERVATIVE
Kenneth H. Klipstein, Short Hills, N. J., assignor to Calco Chemical Co., Inc., Bound Brook, N. J., a corporation of Delaware
No Drawing. Application February 27, 1937, Serial No. 128,137
1 Claim. (Cl. 167—33)



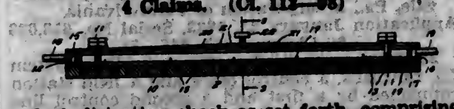
An insecticidal composition comprising a volatile petroleum solvent, betanaphthol and diacetone alcohol.

2,106,984
IMPROVED NUT
Anthony George Maldon Michell, Melbourne, Australia
Application July 18, 1935, Serial No. 31,961
In Great Britain June 13, 1935
7 Claims. (Cl. 85—32)



3. A nut comprising a core having a circumferentially continuous internally threaded conoidal portion and an integral flange at the larger end of said portion, said flange being formed with circumferential salliences, a separately formed shell surrounding the core, circumferentially spaced from its conoidal portion and constructed with a recess having niches corresponding with said salliences, the base of said recess forming a seat for supporting the flange of the core, a recess at the lower end of the shell forming a shoulder, and said core being permanently attached to the shell by having its lower end expanded into the latter recess under said shoulder.

2,106,985
AEROPLANE SEAT STRUCTURE
Robert C. Miller, Unionstown, Pa.
Application July 1, 1936, Serial No. 88,483
3 Claims. (Cl. 244—122)

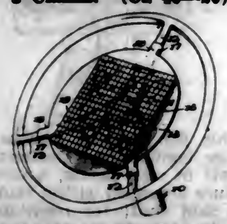


3. A seating structure for aeroplanes comprising a cylindrical casing having its edges bent to form opposed internal trackways provided with closed outer sides, respectively, a chair arranged in said casing, means for supporting said chair comprising pairs of opposed rollers rotatively mounted on said chair to run in said trackways, the rollers of one pair being laterally separable for frictional engagement with the closed sides of their respective trackways, a lever on one side of said chair adjustable into different set positions, and means operative by said lever to separate said separable roller in different degrees in different set positions of said lever, whereby variable braking pressures are selectively obtained between said separable rollers and their respective trackways, and including a rotary spreader, and operating connections between said spreader and separable rollers.

2,106,986
APPARATUS FOR TREATING FIBROUS WASTE FOR JOURNAL BOX USE
Edwin S. Pearce, Indianapolis, Ind., assignor to Railway Service & Supply Corporation, Indianapolis, Ind., a corporation of Indiana
Application January 9, 1934, Serial No. 705,917
7 Claims. (Cl. 68—23)

4. Apparatus for treating fibrous waste for journal box use, comprising a stationary casing, a rotatable shaft in said casing, a work-receiving basket structure arranged within said casing and mounted on said shaft for rotation therewith, said basket structure having spaced peripheral walls, the outer one of which is constructed and arranged to retain oil when stationary and the inner one of which is of perforate form, said outer peripheral wall being arranged for discharge of oil therefrom when in rotation, agitating means arranged in said basket structure for rotary movement about said shaft and on which agitating means work may be placed, means for effecting rotary movement of said agitating means about said shaft, and means for rotating said shaft and hence said basket structure.

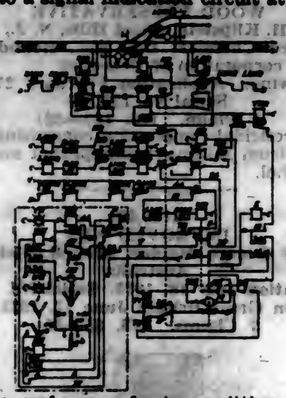
2,106,987
DISTORTION CHECK FOR WELDING APPARATUS
Lawrence C. Powell, Portsmouth, Va.
Application December 22, 1936, Serial No. 117,239
4 Claims. (Cl. 113—98)



1. A distortion check as set forth, comprising a bed adapted to receive a pair of articles to be welded together, an article clamping bar provided with an elongated slot therein, means for clamping the bar on to the bed, a second slotted bar engaging the outer side of said first bar and engageable beneath the clamping means of said first bar adjacent the ends thereof, and threaded means carried by said second bar and engageable with the first bar intermediate the ends thereof to hold said first bar against longitudinal bending.

2,106,868
CAR ROOF STRUCTURE
John J. Tatum, Baltimore, Md.
Application January 6, 1936, Serial No. 57,813
4 Claims. (Cl. 105—5.4)

1. In a car roof structure, side walls, roof sheets extending side by side transversely of the roof and having downturned edges secured to the side walls, and carlines of inverted V-form projecting upwardly above the level of the roof between and rigidly secured to and underlying the juxtaposed edges of the adjacent sheets to unite said sheets, each carline presenting an apex portion and sides exposed above the roof sheets and converging toward the same to form baffles inclined acutely to the plane of the roof sheets to direct rain water away from the joints between the sheets.

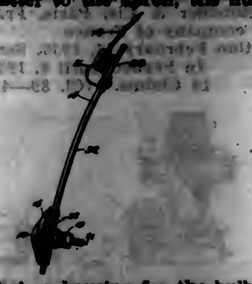


2,106,869
AUTOMOBILE MAP
Jesse P. Truesdale, Kershaw, S. C.
Application May 11, 1937, Serial No. 142,951
2 Claims. (Cl. 40—26)

2. The combination with the steering wheel of a vehicle including a rim and spokes, and a horn button disposed centrally of the steering wheel, of a substantially circular flexible sheet having a map thereon, said flexible sheet being applied to the upper side of the steering wheel and covering the button, said sheet having a smaller diameter than the rim and arranged in substantial concentric relation to the rim for providing a space between the rim and the edge of the sheet, radial arms carried by the sheet and arranged upon the spokes, and means to attach the radial arms to the spokes.

2,106,900
REMOTE CONTROL SYSTEM
Harry C. Vandeusal, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application January 23, 1933, Serial No. 653,023
26 Claims. (Cl. 246—3)

23. In a centralized traffic controlling system for railroads, a control office and a field station connected by a first and a second control line wire, a switch control lever and a signal control lever at said office, a track switch and associated signals at said station, means responsive to the operation of said switch control lever for controlling the operation of said track switch over said first control line wire, means responsive to the operation of said signal control lever for controlling the operation of said signals over said second control line wire, a relay directly responsive to the operation of said signal lever and energizable independently of said line wires for transferring said first line wire from a switch control to a signal indication circuit at said control office, and means for transmitting signal indications over said first line wire.



2,106,901
MACHINE FOR SMOOTHING AND COMBING SKINS AND THE LIKE
Alexander Wilhelm, Budapest, Hungary, assignor to the firm Pannonia Bőrnyújtógyárosnemesítő és Kereskedelmi r. t., Ujpest, Hungary, a company of Hungary
Application July 25, 1936, Serial No. 92,525
In Hungary October 8, 1935
4 Claims. (Cl. 149—24)

1. In a machine for smoothing and combing furs, a rotatable and reciprocable working cylinder, combing members and smoothing surfaces alternately disposed about the periphery of said cylinder in stationary relation thereto, means for rotating the cylinder, and means for reciprocating the cylinder during its rotation.

2,106,902
SPLASH GUARD
Gustave F. Bahr, Fairfield, Conn., assignor to Casco Products Corporation, Bridgeport, Conn., a corporation of Connecticut
Application October 12, 1936, Serial No. 105,164
6 Claims. (Cl. 240—8.1)

1. In a splash guard, an apron having an aperture therein; an electrical socket carried in the aperture of the apron, said socket having an outer metal shell in circuit therewith, the shell having an open end passing through the apron aperture and being projected therebeyond and having an external thread on the thus projected

part thereof, the shell also having an external shoulder at the base of the apron; an electric lamp carried by the socket in the open end of the shell; a nut at the front of the apron and screwed on the threaded portion of the shell for securing the latter to the apron, the nut being

formed to include a housing for the bulb of the lamp including a substantially cylindrical wall around said bulb extending beyond the tip of the same; a connection plate electrically connected with the shell and held thereby against the apron, for conducting current to the bulb; and means connected with the socket for conducting current from the bulb.

2,106,903
GAUGE
Ralph E. Bestic, Los Angeles, Calif.
Application March 9, 1936, Serial No. 67,887
3 Claims. (Cl. 33—147)

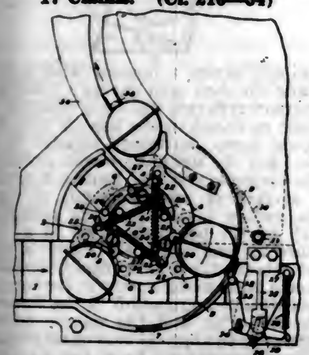
1. A gauge including a base plate, a fixed jaw mounted on said base plate, a slot in said plate, a pair of angle members secured below said plate at the ends of said slot and extending transverse to said slot, a pair of cylindrical slide members extending between said angle members below and parallel to said slot, a slider on each of said slides, a yoke connecting said sliders, a pair of arms on said yoke, a cylindrical post extending below said plate, a collar rotatively mounted on said post, a ring rotatively mounted on said collar, a dial secured to said collar, a second dial secured to said ring, a pair of flexible members secured to and extending between said arms, a plurality of loops in one of said flexible members engaging said collar, a plurality of loops in the other of said flexible members engaging said ring, and a second jaw positioned above said plate, said second jaw member having a portion thereof extending through said slot and secured to said yoke.

2,106,904
PHYSICAL EXERCISER
Arthur William Chapman, London, England
Application April 1, 1937, Serial No. 134,430
In Great Britain April 15, 1936
6 Claims. (Cl. 272—97)

1. A physical exercising device comprising tubes arranged as a telescopic system, a spring housed therein to extend the system, and grips mounted on the opposite ends of the system to facilitate

compression thereof, and screw means for adjusting the spring by rotating an element associated with one of said grips.

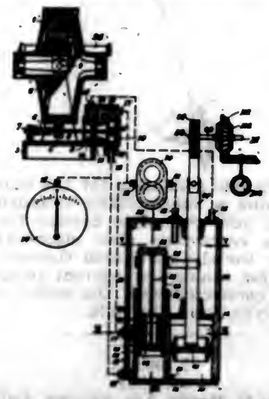
2,106,905
HEADLIGHT
Charles A. Clary, Los Angeles, Calif., assignor of one-half to Charles A. Clary, Jr., and Pauline Baker, both of Los Angeles, Calif.
Application November 5, 1935, Serial No. 48,827
1 Claim. (Cl. 240—41.1)



A headlight having a housing with a shell, the housing and the shell each having a window opening, a primary reflector having a concave reflecting surface mounted in the base of the shell, an illuminating lamp positioned relative to the reflector to have the light therefrom reflected to a focus, the secondary mirror having a concave reflecting surface of greater radius of curvature than the radius of the primary reflector, said secondary mirror being mounted in a frame, a link connecting one side of the frame to the shell, a bracket attached to a substantially opposite side of the frame and having a tongue, the tongue having an adjustable connection to the housing, the shell, the reflector and the mirror being positioned whereby the optical axis of an incident ray on the secondary mirror from the lamp and the primary reflector and the optical axis of the reflected ray from the secondary mirror form an acute angle and also whereby the optical axis of reflected ray is inclined downwardly relatively to the horizontal, the illumination from the said lamp being adapted to project a cone of light rays adapted to form on a horizontal road surface located below the primary reflector substantially oval in outline with the long axis of the plane of the optical axes of the said incident and reflected rays, the distance between the primary reflector and the mirror being such that secondary unfocused light rays from the primary reflector and from the inside of the shell illuminate the secondary mirror whereby the secondary illumination from the said mirror appears to an observer having his eyes outside of the cone of rays forming the elliptical pattern, as a non-glare illumination.

2,106,996
BOTTOM TUBING PLUG FOR OIL WELLS
William K. Edwards, Big Spring, Tex.
Application May 3, 1937, Serial No. 140,551
6 Claims. (Cl. 166—13)

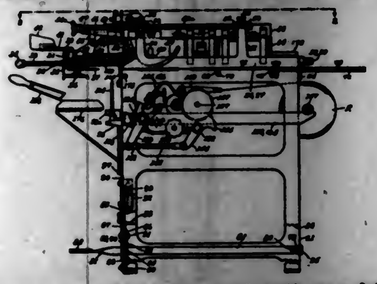
1. A bottom tubing plug for oil wells comprising a disk having its upper face ground to form a tight joint with the seat in a tubing section, said device provided with a peripheral groove, and a resilient expansion ring seated in the groove and arranged to frictionally engage a groove within the tubing section.



2,106,997
BOTTLE LABELING MACHINE
James O. Fenner, Worcester, Mass., assignor to Economic Machinery Company, Worcester, Mass., a corporation of Massachusetts
Application July 11, 1933, Serial No. 679,959
17 Claims. (Cl. 216—54)

2. In a labeling machine including a labeler and means for feeding articles thereinto, the combination of an article feeding mechanism to present the articles to said labeler, means associated with the article feeding mechanism for successively arranging the articles in a definite and uniform facial position and means for retaining the set position of the articles for presentation to said labeler.

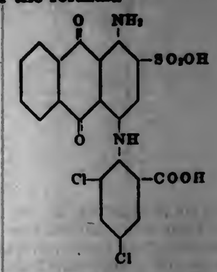
14. A labeling machine comprising a table rotatable about a vertical axis, brackets mounted on the upper surface of the table, a gripping device pivotally mounted on the table adjacent to each bracket, each gripping device being adapted to clamp an article against the corresponding bracket, and mechanism for swinging the gripping devices about their pivots and into engagement with the articles for holding the articles in position for presentation to a labeling operation.



2,106,998
TACHYMETRIC CORRECTING DEVICE, MORE PARTICULARLY FOR USE IN CONNECTION WITH SIGHTING APPARATUS FOR ARTILLERY
Jean Fleux, Paris, France, assignor of one-half to Schneider & Cie, Paris, France, a joint-stock company of France
Application February 14, 1936, Serial No. 63,934
In France April 4, 1935
14 Claims. (Cl. 89—41)

1. A tachymetric correcting device for use in gunnery fire control systems in combination with a target observing telescope and an element of the gun laying mechanism whose position is to be corrected to compensate for the probable change of position of the target during the time of flight of the projectile, comprising a suspension frame operatively connected with the observing telescope to move therewith at least in azimuth, a gyroscope having its casing pivotally mounted in said suspension frame on an axis at right angles to the axis of rotation of the gyroscope rotor, a fluid operated servo-motor device operatively connected to the element whose position is to be corrected, means controlling the supply of fluid to said servo-motor device including a movable member subjected on one side to the pressure of the fluid supplied to said controlling means, and means for transmitting to the other side of said member the thrust exerted by said gyroscope casing in attempting to precess about its pivotal axis in said suspension frame upon movement of said frame in azimuth.

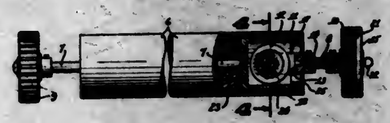
2,106,999
HAND OPERATED WRAPPING MACHINE
Henry Ernest Goerke, Floral Park, and Gustave Adolph Bystrom and Harry William Schmale, Brooklyn, N. Y., assignors to American Machine & Foundry Company, a corporation of New Jersey
Application May 5, 1934, Serial No. 724,150
20 Claims. (Cl. 93—2)



1. In a hand operated wrapping machine, the combination with manually operable means for drawing a web of wrapping material from a roll and severing a wrapper from the web, of devices for supporting the severed wrapper in a horizontal position, spaced swingable tuckers above said devices, a manually operable lifter arranged to move an article upwardly between said devices and tuckers to drape the wrapper about three sides of the article and tuck the wrapper down over the ends of the article, a manually operable horisontally movable slide, a bottom folder and a pair of spaced end folders on said slide adapted when moved toward the article while said lifter is in an elevated position to fold one end of the wrapper under the bottom of the article and fold the forward side flaps of the wrapper over said tuckers, respectively, a heated sealer table arranged to wipe the skirt of the wrapper under the bottom of the partially wrapped article when the latter is pushed thereover and heat seal the

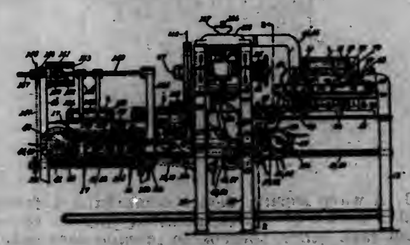
bottom seam so formed, spaced stationary folders on said table adapted to complete the folding of the end flaps of the partially wrapped article when the latter is pushed therebetween, a pusher on said slide adapted to advance the partially wrapped article onto said table and between said stationary folders, spaced cam rails on said pusher adapted to lift said tuckers up from the partially wrapped article, sealing plates beyond said stationary folders to heat seal the overlapped end flaps of the wrapper, and cooling plates beyond said sealing plates.

2,107,000
ACID WOOL DYESTUFFS OF THE ANTHRAQUINONE SERIES
Richard Hilpert, Frankfort-on-the-Main-Hoechst, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application July 28, 1936, Serial No. 93,122. In Germany August 14, 1935
1 Claim. (Cl. 260—99)



The members of the group consisting of the compound of the formula

and the alkali metal salts thereof.



2,107,001
ERASER HOLDER FOR TYPEWRITERS
Charles G. Hurrie, San Francisco, Calif.
Application May 17, 1937, Serial No. 142,971
7 Claims. (Cl. 197—161)

1. In a typewriter having a platen assembly including a roller and a knob for rotating said roller, said assembly having a concealed interior chamber, and a passage extending therefrom to the outer end face of said knob, a rotatable reel mounted in said chamber, a flexible connecting member wound upon said reel and extending through said passage, an eraser connected with

the exterior end of said flexible member, a spring connected with said reel, said spring being tightened by the unwinding of said flexible member and acting to re-wind the same upon said reel, the eraser being yieldably held by said flexible member and said spring in an accessible position adjacent the end face of said knob.

2,107,002
HELICAL SINGLE KNIFE TYPE BREAD SLICER
Thormod Jensen, Laurelton, and Anton Van Veen, Brooklyn, N. Y., assignors to American Machine & Foundry Company, a corporation of New Jersey
Application February 27, 1934, Serial No. 713,174
9 Claims. (Cl. 146—95)

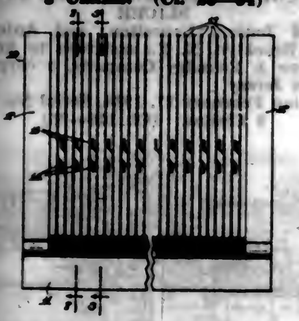
1. In a bread slicing machine, the combination with a helical knife, of means for rotating said knife, a table beneath said knife, mechanism for continuously advancing a loaf lengthwise of said table and across the path of said knife, a guide on the table arranged to bear against one side of the advancing loaf, and a stationary ledger plate arranged to engage the other side of said loaf and having an inclined edge along which the cutting edge of said knife moves while cutting a slice from the loaf, the inner face of said ledger plate being grooved lengthwise from its inclined edge to provide ridges adapted to press into the advancing loaf and hold it down on said table, said knife rotating in a direction to move the lower edge of said knife against said ledger plate.

2,107,003
GARMENT PROTECTOR FOR GARMENT HANGERS
Allen M. Johnson, Greenfield, Ohio
Application July 24, 1936, Serial No. 92,377
3 Claims. (Cl. 223—93)

1. A device of the character described comprising a strip of resilient material having a central slot therein for engaging a hook portion of a suspension member, and a plurality of centrally converging slits intermediate the ends thereof, and having a slit at each of the opposite ends

thereof which makes a series of alternating

angles to form tabs in the strip for engaging the suspension member.



2,107,004

DEVICE FOR WARP LEASING

Frank H. Kaufmann, Elkins Park, Pa., assignor to Steel Heddle Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania

Application April 20, 1937, Serial No. 137,926

8 Claims. (Cl. 28—54)

1. A warp leasing device comprising a frame, and a series of dents mounted therein spaced from each other, thereby to provide dent spaces in which the warp is located, said dents being arranged in pairs, one dent of each pair having a hook open in one direction and the other dent of each pair having a hook open in the other direction.

2,107,005

CELLULOSE ETHER RECOVERY

Walter J. Le Fevre and Joseph W. Britton, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Michigan

No Drawing. Application February 5, 1937, Serial No. 124,262

7 Claims. (Cl. 260—152)

1. The process which consists in etherifying an alkali cellulose with an excess of a lower alkyl halide in a closed reactor, thereafter employing the pressure of the remaining volatile reactants to effect a complete discharge of the reactor content when pressure thereon is released, and leading the discharged reactants and product into a body of water, the temperature of which is substantially below the boiling point of the alkyl halide.

2,107,006

APPARATUS FOR TREATING DEPLETED OIL SANDS

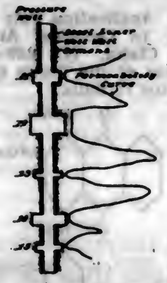
William E. Lang, Lexington, Ky.

Application May 1, 1936, Serial No. 77,413

7 Claims. (Cl. 166—1)

1. A pressure packer, adapted for use in oil wells, having a chamber therein and means for connecting the chamber to a well tubing, passage means for conducting fluid under pressure between the chamber and the exterior of the packer at a short intermediate portion only thereof, mechanical means adapted to releasably press and seal the packer against a well wall at each side of

said intermediate portion to prevent flow of fluid under pressure lengthwise along the exterior of the packer and restrict flow of fluid to that passing between said intermediate portion of the packer and the directly surrounding well wall, thereby permitting fluid to be forced into or withdrawn under pressure from a portion only of an oil sand exposed in a well.



2,107,007

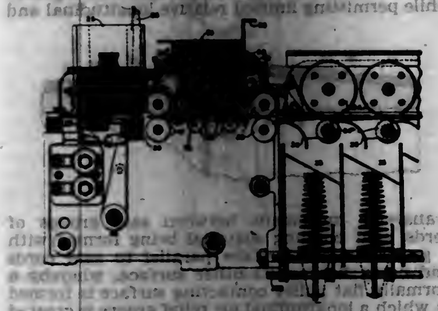
METHOD OF INCREASING RECOVERY FROM OIL SANDS

William E. Lang, Lexington, Ky.

Application December 15, 1936, Serial No. 115,996

12 Claims. (Cl. 166—21)

1. A method of pressuring an oil sand having a plurality of associated productive stratums of different permeabilities exposed in a pressure well, comprising injecting a pressure fluid under pressure directly from the well into one or more stratums of relatively low permeability without making an injection into the stratums of relatively high permeability, so that pressure fluid can enter the latter stratums only after diffusion through and from sand of lower permeability, whereby oil from the stratums of low permeability is forced into the stratums of high permeability and increases the percentage of saturation thereof, promoting uniformity of recovery and maximum production from the entire sand.



2,107,008

SIGNING DEVICE

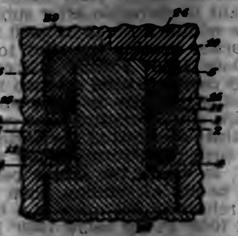
William W. Lasher, Jr., Brooklyn, N. Y.

Application February 6, 1935, Serial No. 5,219

9 Claims. (Cl. 209—119)

1. In combination, a reciprocating sensing means comprising a plurality of contact pins each having an inner member and an outer member, both of said members being movable with respect to each other, electric circuits; and means for connecting the inner members in series and the outer members in parallel in said circuit.

2,107,009



APPARATUS FOR MOLDING STRUT PISTONS

Ernst Mahle, Stuttgart, Germany

Application June 24, 1935, Serial No. 28,524

In Germany June 27, 1934

6 Claims. (Cl. 22—58)

2. Apparatus for molding pistons having preformed metal inserts which comprises, an outer metal mold shell formed in two parts, and a one-piece extractable metal core, which carries formations homogeneous therewith for holding inserts, said core being shaped to give the piston its internal form.

2,107,010

SMOKING STAND AND ACCESSORIES THEREFOR

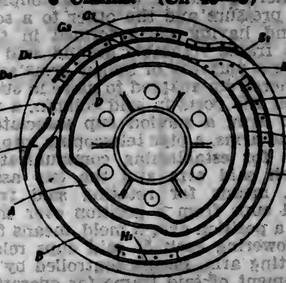
Edward F. McDonald, Buffalo, N. Y., assignor to Faries Manufacturing Company, Decatur, Ill.

Original application November 23, 1931, Serial No. 576,982. Divided and this application April 6, 1933, Serial No. 664,758

8 Claims. (Cl. 131—51)

3. In a portable smokers' stand, an upright tubular standard, a closure plate at the upper end of said standard and having an opening therethrough, a waste receptacle disposed within said standard and having an upper funnel portion releasably secured to the walls of said opening, a handle secured to the funnel, a tray having a central aperture, the walls of said aperture releasably engaging said closure plate and supported thereby.

2,107,011



MACHINE FOR MAKING HOLLOW GLASSWARE

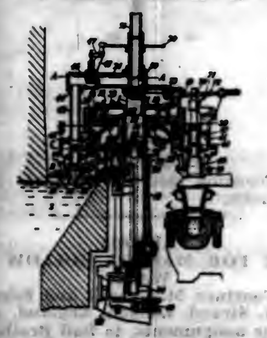
Thomas Courtney Moorhead and Edgar Philip Dorman, Strand, London, England, assignors, by mesne assignments, to Ball Brothers Company, Muncie, Ind., a corporation of Indiana

Application August 15, 1933, Serial No. 685,269

In Great Britain August 1, 1933

6 Claims. (Cl. 49—6)

5. In a glass shaping machine, a cam plate, a substantially circular guide rail mounted on the operative face of said plate and defining the inner wall of an inner cam track, a second guide rail substantially concentric therewith mounted on the operative face of said plate and defining the inner wall of an outer cam track, an eccentric guide rail connecting the first-mentioned guide rail with the second guide rail to connect the inner cam track with the outer cam track, said first-mentioned and second guide rails having detachable segments, and a detachable eccentric guide rail segment adapted to be interchanged with said detachable segments to connect said guide rails.



6. A glass shaping machine comprising a frame rotatable about a vertical axis, a plurality of molds pivotally supported on said frame, a cam having an inner guide track and outer guide track, means for connecting the inner and outer tracks of said cam, means for rotating said frame, means associated with said molds and cooperating with the tracks on said cam for causing the molds to travel for a portion of each revolution of the frame in an inner circle and for the remainder of such revolution in an outer circle, said track-connecting means being interchangeable with other portions of said track to vary the distance through which said molds travel in each of the inner and outer circles.

2,107,012

MEANS FOR FEEDING GLASS TO GLASS SHAPING MACHINES

Thomas Courtney Moorehead, London, England, assignor, by mesne assignments, to Ball Brothers Company, Muncie, Ind., a corporation of Indiana

Application January 30, 1935, Serial No. 4,193
In Great Britain January 18, 1935
3 Claims. (Cl. 49—5)

1. Apparatus for feeding glass from a forehearth to the molds of a glass-shaping machine comprising a central vertical column having two cavities therein one of which is coupled to a source of pressure and the other to a source of suction and having ports formed in the wall thereof, a frame rotatable around said column and having a plurality of hollow arms extending radially therefrom adapted to move in succession past one of the ports in said column, a valve in each such arm, a suction cup associated with each of said arms, a pipe telescoping into each of said arms for establishing communication between each said arm and the cup associated therewith, means for rotating said frame to move said cups from a position over the forehearth to a position over a mold, means for raising and lowering each of said cups relative to its supporting arm, means controlled by the rotary movement of said frame for operating said cup raising and lowering means to cause each cup to dip into the forehearth, means responsive to the rotation of said frame for operating said valves to connect the interior of said cups to a source of suction and gather a charge of glass therein when said cups are in their lowered position, a severing mechanism, means controlled by the rotary movement of said frame for actuating said severing mechanism to cause it to pass beneath each cup as it leaves the forehearth to sever the glass stringing therefrom, and means controlled by the movement of said frame for connecting said cup to the pressure cavity in said column to discharge the glass gathered in said cup into the mold of the shaping machine.

2,107,013

BELT

Delevan F. Morgan, Oak Park, Ill., assignor to Nuecord Company, Chicago, Ill., a corporation of Illinois

Continuation of application Serial No. 40,275, September 12, 1935. This application February 21, 1936, Serial No. 65,096

4 Claims. (Cl. 74—232)

1. A power transmission belt comprising a plurality of cords extending longitudinally of said belt and arranged in a series of spaced groups across substantially the full width of said belt, the space between said groups being of substantially less width than the width of said groups, a web supporting said groups of cords, and an elastic bonding material in said space and joining said cords and said supporting web together while permitting limited relative longitudinal and

transverse movement between said groups of cords, said bonding material being formed with a groove in one surface parallel to said cords and being flat on its other surface, whereby a normally flat pulley contacting surface is formed in which a longitudinal air relief groove is created under the first mentioned groove during operation of the belt over a pulley.

2,107,014

PROCESS OF TREATING AUSTENITIC CHROME-NICKEL STEEL ALLOYS

Julius F. Sachse, Philadelphia, Pa., assignor to The Midvale Company, Philadelphia, Pa., a corporation of Delaware

No Drawing. Application January 6, 1937, Serial No. 119,265

3 Claims. (Cl. 148—12)

1. The herein described method of treating nickel-chromium-carbon steel alloys to render them resistant to corrosion after subjection to a temperature within a range of 1000 to 1600° F., which comprises heating the alloy to such temperature above 1650° F. that the carbon is in substantially complete solid solution in the alloy, then subjecting the alloy to a hot working operation through a temperature zone ranging from the temperature specified at the beginning of the working to such temperature below a maximum of 1650° F., at which the larger percentage of carbon will be out of solution, then cooling the alloy, then reheating the alloy to a temperature in excess of 1000° F. but below 1600° F. and substantially below the temperature of the first heating, holding the alloy at that temperature for a substantial period of time, and then cooling to atmospheric temperature.

2,107,015

TIRE COVER AND LOCK THEREFOR

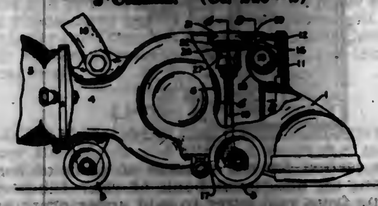
Bladen M. Short, Detroit, Mich., assignor, by mesne assignments, to Houdaille-Hershey Corporation, Detroit, Mich., a corporation of Michigan

Application August 26, 1935, Serial No. 37,874

14 Claims. (Cl. 150—54)

1. In a wheel assembly, a wheel, a wheel support, said wheel and support having cooperating attaching means adjacent the rim of the wheel, means cooperating with said attaching means and mounting said wheel on said support, a hood disposed over the front of the wheel and shielding said attaching and mounting means, means carried by said hood and engageable with the front of a tire mounted on the wheel, and means adjustably supporting said hood from said wheel support so that said hood may be held in cooperative relation with said wheel notwithstanding

variations in width of tires carried by the wheel.



2,107,016

SUCTION CLEANER

Eugene L. Snyder, Canton, Ohio, assignor to The Hoover Company, North Canton, Ohio, a corporation of Ohio

Application October 26, 1935, Serial No. 46,858

3 Claims. (Cl. 240—3)

1. In a suction cleaner, a casing, means movably supporting said casing, means to adjust said supporting means to raise and lower said casing relative to a surface covering undergoing cleaning, height-indicating means to indicate the position of said casing including a relatively movable transparent dial and pointer, said casing being provided with a forwardly facing aperture, an electric light within said casing adjacent said aperture, a reflector partially enclosing said light to direct rays through said aperture, said reflector being formed with an aperture, said casing being formed with a second aperture toward which rays through said reflector aperture are directed, said dial being mounted in said second aperture and illuminated.

2,107,017

AIR CONDITION INDICATOR

Athelstan F. Spilhaus, Cambridge, Mass.

Application April 4, 1936, Serial No. 14,635

1 Claim. (Cl. 73—336)

An air condition indicator comprising a chart turnable about a fixed axis and having radiating, angularly spaced thermometric arc graduations thereon, a bi-metallic thermostatic strip having one end connected to said chart for turning the latter, means for movably supporting the other end of said strip for setting said chart to desired zero position, mutually spaced concentric humidity indicating arcs disposed on said chart about the turning axis thereof as a center, a pivoted pointer turnable about an axis common successively to said consecutive thermometric graduations as said chart turns under the action of said bi-metallic strip, a lever arm fixed upon said pointer, a hygroscopic hair element having one end connected to said lever arm for turning said pointer, means for changing the point of connection of said hair element to said lever arm to determine the range of movement of said pointer,

means for movably supporting the other end of said hair element for setting the zero position of said pointer, and a zone depicted upon said chart and superimposed on said temperature and humidity indications for indicating a factor, such as human comfort or ice forming conditions.

2,107,018

COLLAPSIBLE FORM

John C. H. Wendes, Naugatuck, Conn., assignor to United States Rubber Products, Inc., New York, N. Y., a corporation of Delaware

Application July 13, 1936, Serial No. 91,446

7 Claims. (Cl. 18—41)

1. A collapsible form comprising a plurality of separable sections having one or more complementary nesting edges and defining straight slots therebetween, when assembled, each of said sections having a tail piece, separable complementary seating members each engaging some of the tail pieces, and a common clamping member engaging said seating members with a readily detachable connection for securing the form in its assembled condition.

2,107,019

ODOR DISPENSER

Harry B. White, Canton, Ohio, assignor to The Hoover Company, North Canton, Ohio, a corporation of Ohio

Application July 13, 1934, Serial No. 734,946

3 Claims. (Cl. 21—127)

1. In an odor dispenser for suction cleaners of the type having jointed dusting tools, a flanged

collar adapted to be clamped between abutting ends of two dusting tool elements, a split resilient seat member carried by said collar, and

an open-ended vial seated in said seat with its major axis parallel to the central axis of said collar.

2,107,620

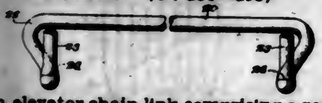
ADJUSTABLE PAPER ROLL SUPPORT

John H. Williams, Chicago, Ill., assignor to Victor Adding Machine Company, Chicago, Ill., a corporation of Delaware

Application June 24, 1937, Serial No. 150,086

8 Claims. (Cl. 242—55.2)

1. A paper roll support comprising a base having outwardly extending arms, said arms being pivotally carried for upward swinging movements on the base, means for adjusting said arms to vary the distance therebetween while they are swung upwardly and for locking them in their adjusted positions when lowered, and a pair of cooperating roll-engaging heads carried at the free ends of said arms.



2,107,621

POTATO DIGGER CHAIN

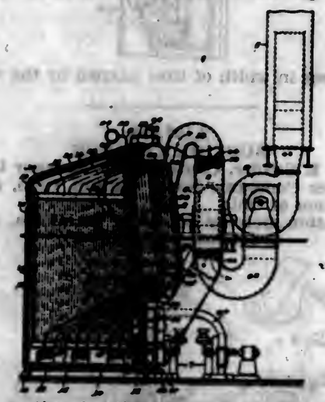
Herman R. Altgelt and Rudolph J. Altgelt, South Bend, Ind., assignors to Oliver Farm Equipment Company, a corporation of Delaware

Application February 18, 1935, Serial No. 6,970

5 Claims. (Cl. 198—195)

1. An elevator chain link comprising a rod having sprocket wheel engaging portions and adjacent link engaging hooks, the bearing portions of said hooks having upset cross section and depressed cylindrical surfaces for increasing the wearing surface and strength thereof.

2,107,622



STEAM GENERATOR

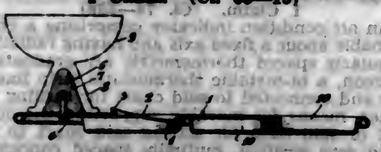
John Philipp Rudeshausen, Philadelphia, Pa., assignor of one-half to Day and Zimmermann, Incorporated, Philadelphia, Pa., a corporation of Maryland

Application April 8, 1935, Serial No. 15,211

4 Claims. (Cl. 122—235)

1. In a steam generating unit, the combination of a combustion chamber and a boiler section, the walls of said combustion chamber being lined with water tubes exposed to the radiant heat of the burning fuel in said chamber, and forming a substantial part of the steam generating section of said unit, said boiler section comprising a transverse steam-and-water drum at the upper end of said boiler section, a transverse water drum substantially vertically below said first mentioned drum, a bank of riser tubes connecting said lower drum with said upper drum at points above the normal water level of said boiler, a bank of downcomer tubes connecting said upper drum below the water level thereof with the lower drum, and a baffle extending between said banks downwardly from said upper drum to a point adjacent but spaced from said lower drum to provide a passage for the gases of combustion from said riser bank to said downcomer bank of said boiler, a wall extending from said lower drum upwardly between said combustion chamber and said boiler section and providing at the top thereof a passage from the top of said combustion chamber to the top of said

boiler section for the passage of gases of combustion, an additional bank of riser tubes extending from said lower to said upper drum and arranged to the rear of said wall, the heat absorptive capacity of said boiler section being relatively small whereby the temperature of the gases of combustion leaving said boiler section after traversing the tubes thereof is higher than the temperature required to ignite the fuel in said combustion chamber, burners for impelling fuel in a finely divided condition into said combustion chamber, and means to supply air to said burners and means to transfer the heat of the gases, immediately they leave said boiler, to said air on its passage to said burners to raise the temperature of the air so supplied to substantially the temperature at which said fuel ignites.



2,107,623

SERVICE PLATTER

Margaret Bertsch, Philadelphia, Pa.

Application March 25, 1937, Serial No. 132,994

1 Claim. (Cl. 65—15)

A service platter having a thumb hole and a plurality of depressions located in spaced relation along the marginal portion of said platter and adapted to receive food articles, and a conoidal mount, for the reception of a vessel, positioned rearwardly of said thumb hole, said mount and said thumb hole being arranged substantially along the longitudinal axis of said platter, the arrangement being such as to maintain a balance when the platter and its contents are supported through the medium of said thumb hole.

2,107,624

COUPLING DEVICE FOR TOY TRAINS

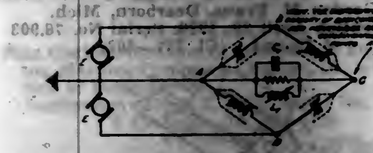
Joseph L. Bonanno, Forest Hills, N. Y., assignor to The Lionel Corporation, New York, N. Y., a corporation of New York

Application May 31, 1935, Serial No. 24,496

11 Claims. (Cl. 212—74)

1. In a toy car, a car body, a car truck pivoted to the body to swing about a vertical axis spaced from the end of the car body, a coupler bar pivotally supported from one of said car parts to swing in a horizontal plane, and means responsive to the swinging of the car body relative to the car truck for swinging the coupler bar in the same direction, said means including a longitudinally extending laterally yieldable member having one end secured to the car body, the other end being yieldable to permit lateral displacement of the coupler bar from the position normally determined by the angular relation of the car truck and car body.

2,107,625



ELECTRICAL COUPLING ARRANGEMENT

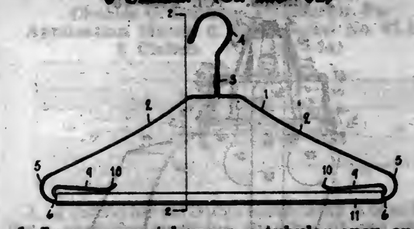
Werner Buschbeck and Richard Breckner, Berlin, Germany, assignors to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a corporation of Germany

Application August 19, 1932, Serial No. 685,915

In Germany August 20, 1932

5 Claims. (Cl. 178—44)

1. A circuit coupling arrangement for coupling a symmetrical circuit with an unsymmetrical circuit comprising two separate means of high frequency alternating current voltage supply of like size and phase, each of said separate means of supply directly connected together in series and grounded at their junction point, the ungrounded portion of said high frequency alternating current voltage supply being connected to a load circuit, said load circuit connected to a bridge-like arrangement having terminal connections at opposite arms for optimum transfer of energy from said supply source, said arms having shielded capacitive and shielded inductive reactances providing a tuned circuit which is tuned to a desired working wave, the distributive capacity of said shielded capacitive and shielded inductive reactances being concentrated at the terminal connections of said opposite arms on said bridge-like arrangement, said tuned circuit being connected to the terminals of the opposite arms of said bridge-like arrangement and in parallel relationship with said load circuit.



2,107,626

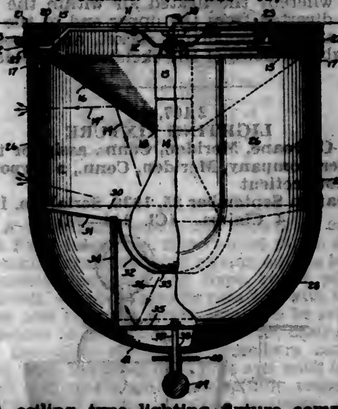
GARMENT HANGER

James D. Causey, Detroit, Mich., assignor to Star-Service Hanger Company, Detroit, Mich., a corporation of Michigan

Application April 8, 1937, Serial No. 135,743

6 Claims. (Cl. 223—91)

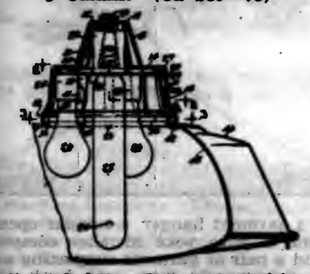
1. In a garment hanger, a tubular open-ended strut and a wire yoke member comprising a hook and a pair of garment supporting arms diverging downwardly from said hook, the free ends of said arms being bent downwardly and inwardly and conformed to provide inwardly extending loops opening outwardly, said loops being engageable in the ends of said strut, said free ends terminating in spring clamping fingers bent back on said loops and extending toward one another and lying along the exterior upper surface of said strut.



2,107,627

INDIRECT LIGHTING UNIT

Leroy C. Deane, Meriden, Conn., assignor to The Miller Company, Meriden, Conn., a corporation of Connecticut



Application April 5, 1935, Serial No. 14,756

7 Claims. (Cl. 240—78)

1. A ceiling type lighting fixture comprising a translucent enclosure having slightly diffusing vertical side walls for directional transmission of light and a closed bottom, a centrally disposed pendant lamp socket and bulb, a downwardly dished reflector extending across the enclosure below the bulb and at substantially the lower portion of said vertical walls for upwardly and outwardly reflecting light toward the walls of the enclosure above the reflector, the reflector having a small opening below the lamp bulb to allow the escape of light downwardly for dimly lighting the portion of the enclosure below the reflector, a reflecting plate in the lower portion of the enclosure and acting to reflect light received through the opening, and spacer means between the plate and the reflector for supporting the reflector in position.

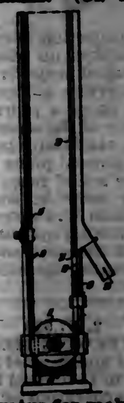
2,107,028
DIRECT LIGHTING FIXTURE
Leroy C. Deane, Meriden, Conn., assignor to The Miller Company, Meriden, Conn., a corporation of Connecticut
Application February 6, 1936, Serial No. 62,801
9 Claims. (Cl. 240—78)

1. A direct lighting fixture comprising a central downwardly opening lamp socket, a pendant mercury vapor lamp carried therein, a plurality of downwardly opening lamp sockets circumferentially disposed below the central socket, incandescent lamps in the latter mentioned sockets, a common support for all the sockets, said support being in the form of a skeletonized holder to provide ventilation about the sockets, a lamp enclosing member carried by the holder and disposed about the lamps to cause air heated thereby to pass upwardly through the member and the holder, and a baffle plate mounted below the sockets and apertured to receive the upper portion of the lamps and having its edge spaced from the holder to provide a peripheral ventilation space whereby the heated air within the member is diverted from the upper end of the vapor lamp and its supporting socket, and passes out through the holes of the skeletonized holder.

2,107,029
LIGHTING FIXTURE
Leroy C. Deane, Meriden, Conn., assignor to The Miller Company, Meriden, Conn., a corporation of Connecticut
Application September 25, 1936, Serial No. 102,525
4 Claims. (Cl. 240—78)

1. A lighting fixture comprising a light source, and an annular, open-topped glass shade having highly reflecting side walls, slightly convergent downwardly and adapted to produce a wide upward distribution of direct and reflected light for indirect lighting, and a lower, clear glass zone integral with said walls for downwardly transmitting light within a narrow angle from nadir for direct illumination of a circular area underneath the fixture, the clear glass zone being fluted and tapering upwardly and inwardly.

2,107,030
COMBINED TABULATING AND PUNCHING MECHANISM
Elmer H. Dreher, Brooklyn, N. Y., assignor to Remington Rand Inc., Buffalo, N. Y., a corporation of Delaware
Application June 14, 1934, Serial No. 730,549
17 Claims. (Cl. 164—112)



1. In combination, a punch mechanism comprising a plurality of punches, a removable translator component containing elements for actuating individual ones of said plurality of punches, and a mechanism interchangeable with said translator component for manual operation of said punch mechanism.

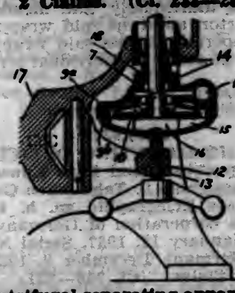
2,107,031
HEAT TRANSFERRING TUBE STRUCTURE
Gordon M. Evans, Dearborn, Mich.
Application April 29, 1936, Serial No. 76,903
5 Claims. (Cl. 257—262)

1. A tube structure for heat transfer purposes comprising, a plurality of longitudinally drawn strips of sheet metal extending lengthwise of the structure, each strip having an intermediate portion for constituting a part of the tube wall, said intermediate portions being disposed so that the portions cooperate to form a complete tube wall, the edges of the strips extending outwardly of the tube form to provide radiating parts, each strip having an abutting portion between its intermediate portion and each edge, with the abutting portions of one strip substantially facing the abutting portions of another, and a plurality of other strips of the same length as the first mentioned strips, one positioned between each two adjacent abutting portions of the first mentioned strips and each lying in part within the tube and in part without the tube to provide unbroken heat conductors within the tube and radiating parts without the tube, said abutting portions and the parts of the other strips lying therebetween being united to seal the tube and hold the strips in assembly some of said radiating parts being cut transversely of the tube to form wings, and alternate wings on each cut radiating part lying in different relatively angular planes.

2,107,032
RUBBER THREAD
John R. Gammeter, Akron, Ohio, assignor, by mesne assignments, to United States Rubber Company, New York, N. Y., a corporation of New Jersey
Application August 24, 1932, Serial No. 630,583
17 Claims. (Cl. 18—8)

15. In an apparatus for making rubber thread, a travelling wire having at least one comparatively sharp longitudinal edge, means for applying a rubber-containing liquid coating material onto said wire, means for drying said material, and means for stripping off the dried rubber deposit in thread form.

2,107,033
CASH REGISTER
Max Garbell, Chicago, Ill., assignor to Victor Adding Machine Company, Chicago, Ill., a corporation of Delaware
Application March 3, 1936, Serial No. 66,881
6 Claims. (Cl. 235—33)

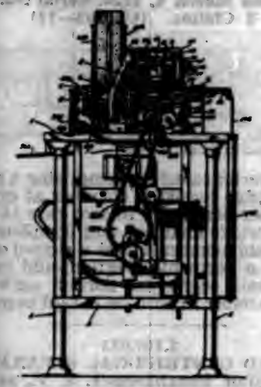


1. In a cash register having key controlled racks carried for reciprocating movements, a shaft, pivotally mounted indicators on said shaft, connections operatively connecting the indicators with the racks, said connections comprising link means each pivotally carried at one end and with its other end removably attached to an indicator, and means supporting the link means forming means for disconnecting said link means from the indicators.

2,107,034
CONVERTER CARTRIDGE
Charles C. Guthrie, Pittsburgh, Pa.
Application March 6, 1936, Serial No. 67,453
2 Claims. (Cl. 102—14)

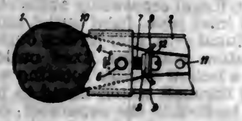
1. A converter cartridge comprising a case having a cartridge receiving chamber at one end, a solid member positioned in said case at the rear of said cartridge chamber and completely filling said case, said member having a slotted outer face to produce a segmental portion, and means for springing said segmental portion outwardly to hold said member in position in said case.

2,107,035
CLOSED CENTRIFUGAL SEPARATOR
Selden H. Hall, Poughkeepsie, N. Y., assignor to The De Laval Separator Company, New York, N. Y., a corporation of New Jersey
Application January 22, 1935, Serial No. 2,689
In Sweden February 16, 1934
2 Claims. (Cl. 233—23)



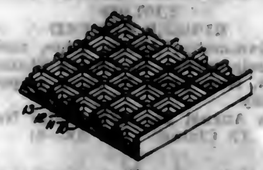
1. A centrifugal separating apparatus comprising a fixed inlet pipe, fixed outlet pipes, a rotatable centrifugal separator having outlets in closed communication with the fixed outlet pipes respectively, a hollow spindle rotating with the separator and through which liquid to be separated is adapted to flow to the separator, casing members providing stationary chambers communicating with the fixed inlet pipe and with the inlet end of said rotatable hollow spindle, respectively, a centrifugal pump impeller mounted on said spindle and through which inflowing liquid is pumped from the first mentioned chamber to the second mentioned chamber, and guiding wings positioned in the second mentioned chamber and adapted to reduce the rotative speed of the liquid during its flow from the pump impeller to the hollow spindle.

2,107,036
ARTICLE DIVIDING AND PACKAGING MACHINE
Arthur S. Heineman, Los Angeles, Calif.
Application January 2, 1935, Serial No. 1,283
Renewed June 22, 1937
10 Claims. (Cl. 93—2)



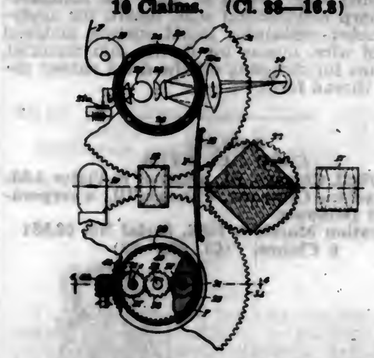
1. In a commodity packaging machine, means for receiving a mass of a commodity having an

approximate predetermined shape and an approximate predetermined size, means for dividing said mass evenly into a plurality of fractions thereof, means actuated by operation of said dividing means in dividing a fraction from said mass for subdividing each of said fractions into individual servings of said commodity, means for



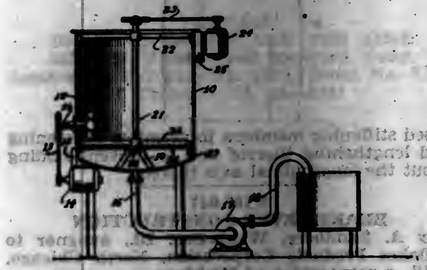
holding each individual serving while it is subdivided from said fraction and for conveying said subdivision to a wrapping table means associated with said wrapping table for wrapping each individual serving individually, and means for supporting a carton adjacent said wrapping table, and means operable across said wrapping table for placing a plurality of individual servings in a single carton.

2,107,037
RADIO MOUNTING DEVICE
Hermann Kippenberg and Paul Künzer, Berlin, Germany, assignors to Telefunken Gesellschaft für Drahtlose Telegraphie, m. b. H., Berlin, Germany, a corporation of Germany
Application January 12, 1937, Serial No. 120,182
In Germany December 9, 1935
1 Claim. (Cl. 248—231)



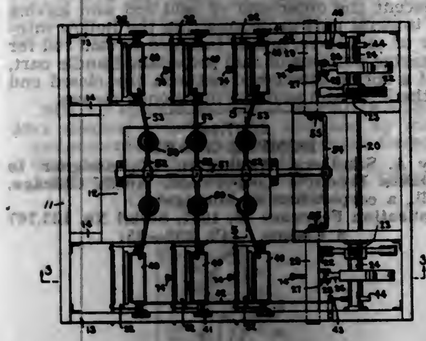
A device adapted for mounting apparatus on columns in which the apparatus to be mounted is fixedly secured to a U-shaped beam resting with one of its ends against the column comprising, means for pressing the end of said beam towards the column, said means including a band embracing said column, a block member mounted near the end of said beam, a screw fitted into said block and means mounted on said screw for gripping said band, said band being adapted to be tightened to thereby press the end of said beam towards the column by turning said screw in one direction, turning the screw in the other direction being adapted to loosen the band and permit adjusting the U-shaped beam member on the column, a second U-shaped member mounted near the end of the beam which is resting against a column, said second U-shaped member cooperating with the first to form an enclosure, said block being mounted within said enclosure and attached to both U-shaped members.

2,107,038
PROJECTION SCREEN
McLennan Leonard, Regent's Park, London, England
Application April 3, 1937, Serial No. 135,727
In Great Britain April 6, 1936
3 Claims. (Cl. 88—24)



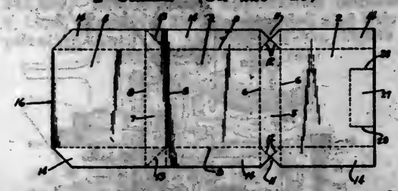
1. An opaque projection screen in which the front surface is broken up into small elemental areas by closely spaced projecting barriers adapted to intercept laterally diffused light, the barriers being made up of a plurality of steps extending transversely of the screen, one set of faces of the steps being essentially parallel one to another and to the general plane of the front surface and the other set of faces being so inclined that substantially none of the projected light directly reaches them, the screen being provided with sound-transmitting apertures debouching in the lateral faces of the steps so that they are invisible from the front of the screen.

2,107,039
RIBBON FEEDING MECHANISM
Jacob F. Leventhal and Samuel Bagno, New York, N. Y., assignors to Leventhal Patents, Inc., New York, N. Y., a corporation of Delaware
Application September 27, 1934, Serial No. 745,683
10 Claims. (Cl. 88—16.3)



1. In a ribbon feeding apparatus comprising a radiation emitting element, a radiation sensitive element associated therewith, a rotatable control unit having a series of radiation transmitting areas adapted to pass between said radiation emitting and radiation sensitive elements, and a shield for limiting transmission of radiations to a single control unit transmission area; means including a rotatable feed unit for passing between said elements in operative relation to said control unit a ribbon having a longitudinal row of alternating radiation transmitting and radiation obstructing areas, a rotatable member, an electric motor responsive to said radiation sensitive element mounted thereon, one unit having a shaft coaxial with said member, driving connections between said motor and said shaft, and means for rotating said member and the other unit in predetermined speed.

2,107,040
PROCESS OF FILTERING EGGS
Frank B. Lemon, Chicago, Ill.
Original application January 26, 1935, Serial No. 3,601. Divided and this application May 7, 1936, Serial No. 78,299
4 Claims. (Cl. 99—113)



1. The method of filtering eggs which comprises stirring a mass of broken egg material containing egg shell fragments, chalaza, egg meats and the like from beneath the surface of said mass to produce a mixture of uniform color without incorporating large amounts of air into the mass, sucking the egg meats of said uniformly mixed mass through a barrier which will retain the shell fragments thereon and simultaneously disintegrating the chalaza as it collects on the barrier to a size small enough to pass through the barrier.

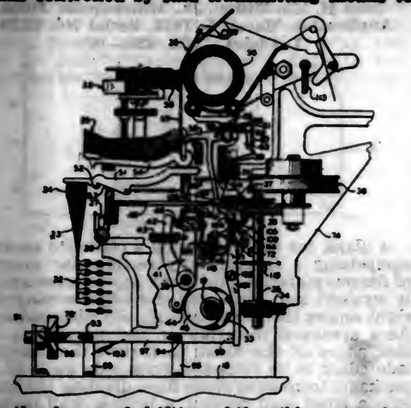
2,107,041
BATTERY GRID CASTING MACHINE
Albert H. Lahrman, Cincinnati, Ohio
Application August 10, 1936, Serial No. 95,171
3 Claims. (Cl. 22—57)

1. In a casting machine, the combination of a lead pot, a plurality of pairs of complemental molds on each side of said lead pot, one part of each mold being stationary, the other part of each mold being mounted on a slide, a cross-shaft below said slides, a pair of segment gears alternately spaced on said shaft, shafts above said first-named shaft, pinion gears on said shafts arranged to be rotated by the respective segments, and crank arms on said second-named shafts having connection with said slides for opening and closing said molds.

2,107,042
CIGARETTE PACKAGE
John H. MacMillan, Jr., Minneapolis, Minn.
Application March 5, 1936, Serial No. 67,314
1 Claim. (Cl. 229—16)

A blank for use in forming a cigarette package comprising a substantially rectangular member of fibrous material, said blank having substantially straight side edges and end edges arranged at right angles thereto, longitudinally disposed score lines arranged inwardly of and parallel to the side edges of the blank to permit the marginal side edges to be folded to form side walls of the package, transverse score lines dividing the blank into a front wall portion, a bottom wall portion, a back wall portion, a top wall portion and a closure flap in the order named, and diagonal score lines on said marginal side edge portions to facilitate forming the bottom wall and top wall of the package.

2,107,043
BLANK ALIGNING MECHANISM AND METHOD
Abraham Novick, Flushing, N. Y., assignor to F. L. Smithe Machine Co., Inc., New York, N. Y., a corporation of New York
Application October 7, 1931, Serial No. 567,372
9 Claims. (Cl. 271—50)



1. In an envelope making machine, mechanism for aligning blanks comprising a relatively slow-moving conveyor, means for feeding said blanks upon the conveyor in separated condition, a contact element pressing the blanks at a medial region thereof yieldingly against the conveyor so as to cause them to assume the movement of the conveyor but also allowing for movement of adjustment of the blanks with reference to the conveyor, and secondary conveyor mechanism adapted to move in juxtaposition to, and at a faster speed than, the conveyor first mentioned and having thereon blank engaging means adapted to engage the blank at opposite sides of said medial region and to push the blank from behind and, aided by the contact element, to effect an alignment of the blanks.

2,107,044
TWO-COLOR RIBBON MECHANISM
Louis M. Potts, Evanston, Ill., assignor to Teletype Corporation, Chicago, Ill., a corporation of Delaware
Application August 5, 1936, Serial No. 94,350
12 Claims. (Cl. 178—25)

1. In a telegraph apparatus, a platen, a shiftable ribbon carrying mechanism, means to shift and return the ribbon carrying mechanism irrespective of the position of the platen to reveal the record at the point of printing after each

printing operation, transmitting means, and means controlled by said transmitting means to

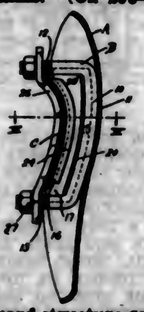
vary the degree of shifting of the ribbon carrying mechanism.

2,107,045
ELECTRIC CONTROLLER CONSTRUCTION
Christian A. Rasmussen, Cleveland, Ohio
Application March 4, 1935, Serial No. 9,243
5 Claims. (Cl. 200—6)

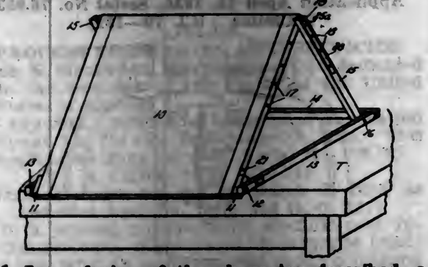
1. In a controller drum construction, a shaft, a plurality of contact carrying arms extending laterally from the shaft comprising a like plurality of identical sheet metal elements bent into divergent channel form with the web of the channel disposed adjacent to the shaft and each flange of one element disposed adjacent to and generally parallel to a flange of the next adjacent element around the shaft, the generally parallel pairs of flanges constituting the said arms, contact elements each having a portion disposed between a corresponding pair of flanges respectively and means to clamp them therebetween, and means to mount the plurality of sheet metal elements on the shaft.

2,107,046
WAIST BAND FOR GARMENTS
Isaac W. Rohatyn, New York, N. Y.
Application May 20, 1935, Serial No. 22,235
3 Claims. (Cl. 2—231)

1. A belt for a garment affixed to the waistband portion thereof, comprising a section of a pocket longitudinally disposed and affixed to the inner surface of the said waist-band portion, a tape member adapted to slide within the said pocket, a pair of pivotal clasping members disposed exterior to the ends of the pocket and affixed to the inner surface of the waist-band portion, the said clasping members being adapted to engage and disengage the said tape member for adjustment of the girth of the garment, the said pocket being provided with vertically disposed stiffening members to permit a shortening and lengthening thereof and to prevent folding about the longitudinal axis thereof.



2,107,047
BRAKE LEVER CONSTRUCTION
Ray A. Sandberg, Waukegan, Ill., assignor to Oakes Products Corporation, North Chicago, Ill., a corporation of Michigan
Application January 15, 1936, Serial No. 59,278
16 Claims. (Cl. 74—537)

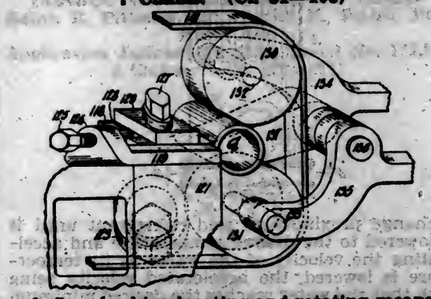


1. A hollow brake lever fashioned from sheet metal and having a closed outer end, a pawl rod within said lever and having its outer end in closely spaced relation to the closed end of said lever, an actuating handle pivoted to said lever adjacent the outer end of said rod and having an integral part projecting into the hollow interior of said lever, means fastened to said rod for engaging portions of said projecting handle part, and a spring interposed between the closed end of the lever and said last mentioned means.

2,107,048
BUMPER GUARD
Ray A. Sandberg, Waukegan, Ill., assignor to Oakes Products Corporation, North Chicago, Ill., a corporation of Michigan
Application February 15, 1937, Serial No. 125,767
8 Claims. (Cl. 293—55)

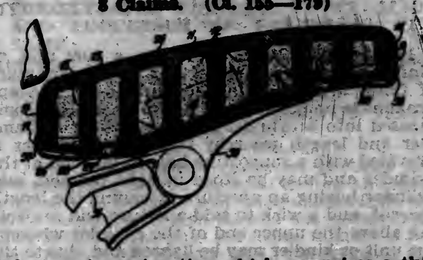
1. A bumper guard structure comprising an oblong cup-shaped body, a U-bolt having its yoke within the body and with its legs projecting through the open rear side thereof, a plate fitting into said body and shaped to cooperate with the front wall of the body to form a fulcrum support for the bolt yoke, and a clamping means cooperable with the outer ends of said bolt for clamping said body with its opening edges against the front face of a bumper bar.

2,107,049
DRAWING BOARD AND THE LIKE
Alfred H. Young, West Hartford, Conn.
Application February 28, 1935, Serial No. 7,707
6 Claims. (Cl. 45—121)



1. In a device of the character described, a board, a three-sided supporting frame having side members arranged at opposite sides of the board, and a rear cross member closely adjacent to the rear edge of the board when the parts are in folded condition, said frame being substantially of the same thickness as said board and said board lying within the plane of said frame when the parts are in folded condition, means for pivotally connecting the forward ends of said side members to said board adjacent the forward edge of the latter, legs disposed to opposite sides of said board within said frame and pivotally connected to the respective side members adjacent the rear edges of the latter, and means for adjustably connecting said legs to said board, said legs when the parts are in folded condition lying between said side members and the side edges of said board.

2,107,050
SOUND RECORDER AND REPRODUCER
Max Bender, Astoria, N. Y., assignor, by mesne assignments, to United Accountigraph Corporation, a corporation of Nevada
Application July 8, 1932, Serial No. 619,465
1 Claim. (Cl. 179—100.41)

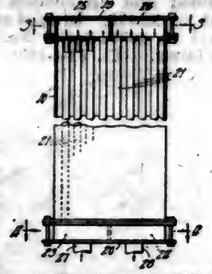


In a device of the character described, a magnet having opposite poles, a flat U shaped member of magnetic material pivotally supported at approximately the center of the bend of the U, and the bend of the U being located between and under the influence of said poles, and a stylus secured directly in the end of each leg of the U.

2,107,051
BUSHING LOCATING AND ROTATING MEANS
Ottie E. Briney, Pontiac, Mich.
Original application April 12, 1927, Serial No. 183,629. Divided and application September 6, 1935, Serial No. 39,436. Divided and this application April 15, 1936, Serial No. 74,589
7 Claims. (Cl. 51—102)

1. In a bushing locating and rotating means, a base including a bushing abutment member, an arm projecting from said base, a pin mounted in said arm, two pivotally movable arms, each to pivot relative to the other, a bushing abutment roller rotatable on the inner end of each of said pivotable arms, and a belt contacting both of said rollers to rotate the same and thereby rotate the bushing and localize the same against said abutment member.

2,107,052
SEAT CONSTRUCTION
Franklin O. Church, Buffalo, N. Y., assignor to Dunlop Tire and Rubber Corporation, Buffalo, N. Y., a corporation of New York
Application April 25, 1936, Serial No. 76,313
8 Claims. (Cl. 155—179)



3. A seat construction which comprises a thin rigid base, a cushion of porous, resilient and elastic material on the upper surface of said base and a pair of sheets of relatively inelastic flexible material, one sheet at each end of said base on the underside thereof and joined to said cushion at the side and end edges of said base to hold said cushion to the front and back edges and the side edges of said base adjacent to the front and back edges while permitting said cushion to be freed from said base when stretched lengthwise sufficiently to clear said sheets of material.

2,107,053
METHOD OF REFRIGERATION
Ural R. Coons, Fort Wayne, Ind., assignor of one-half to Herbert L. Somers, Fort Wayne, Ind.
Application October 28, 1935, Serial No. 47,155
4 Claims. (Cl. 62—177)

1. In the refrigerating art the method of cooling water below 32° F. without freezing, which con-

sists in maintaining a body of refrigerant at a substantially constant pressure corresponding to a temperature slightly less than the desired minimum temperature of the water, causing the water to flow in a confined stream in close heat

exchange proximity to said refrigerant until it is lowered to the desired temperature and accelerating the velocity of the water as its temperature is lowered, the accelerated velocity being such that the water reaches the desired minimum temperature without freezing.

2,107,054

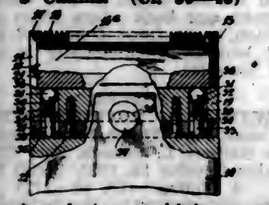
FUEL UNIT

Leemis M. Haymond, Cincinnati, Ohio

Application July 24, 1935, Serial No. 32,920

2 Claims. (Cl. 44—41)

1. An article of manufacture, a fuel unit or kindler consisting substantially of an admixture of finely divided wood and paraffin, in the approximate proportion of 2½ to 1 by weight, compressed into a cylindrical shape having a diameter and length whereby the unit or kindler is provided with a supporting base at one end of the cylinder and may be stood upright thereon, said cylinder having an aperture extending the length thereof, and a wick in said aperture and projecting above the upper end of the cylinder whereby the unit or kindler may be lighted and, due to the composition of said cylinder, whereby the fire is confined to the upper end of the cylinder.



2,107,055

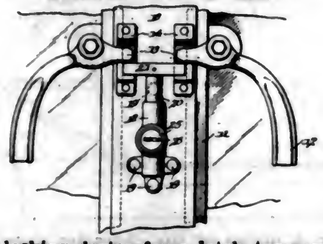
SHAVING DEVICE

Jens O. Jensen, Miami Beach, Fla., assignor to Bernard F. Connolly, Mount Vernon, N. Y.

Application June 24, 1937, Serial No. 150,015

3 Claims. (Cl. 30—43)

6. A shaving device combining a supporting handle, and a shaving head removably mounted thereon comprising a stationary cutting member, a second cutting member movably mounted relative thereto and a pair of spaced spring pressed means mounted in said head for urging said members together into close shearing engagement, said means including a part engageable with a portion of said handle to effect compression of the spring means when the head is assembled on the handle.



2,107,056

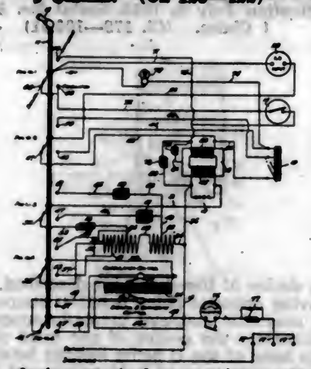
CASEMENT WINDOW AND DOOR LOCK

Herman H. Kistner, Baltimore, Md., assignor to Kistner Lock & Appliance Company, a corporation of Maryland

Application April 23, 1936, Serial No. 76,033

2 Claims. (Cl. 70—121)

2. A locking device for a latch type swinging window or door fastening mounted on the window or door and having a cam element mounted on the jamb with which the latch member is adapted to engage to clamp the window or door in closed position, said locking device comprising a casing mounted on the jamb adjacent to said cam element and having a sliding member adapted to be projected into the path of movement of said latch member to prevent its disengagement from said cam element, means carried by said casing for locking said sliding member in projected position, and means for securing said casing to said jamb, said securing means being inaccessible in projected position of said sliding member whereby said locking device cannot be removed when said locking means is in locking position.



2,107,057

SURGICAL APPARATUS

John G. H. Liebel and Edwin S. Flarsheim, Cincinnati, Ohio, assignors to The Liebel-Flarsheim Company, Cincinnati, Ohio, a corporation of Ohio

Application April 5, 1932, Serial No. 604,574

9 Claims. (Cl. 128—422)

1. An electro-surgical apparatus, comprising, a transformer adapted to provide current of appropriate power for performing surgical operations, and a spark gap connected to the secondary of the transformer to provide a high frequency current, a capacity and inductance incorporable in said secondary circuit to provide a cutting current, a capacity and inductance incorporable in said circuit to provide a coagulating current, two power control devices, one functionally operative for controlling the power of the cutting current, the other functionally operative for controlling the power of the coagulating current, and means for switching from one type of current and one power control device to the other type of current and other power control device.

2,107,058

PROCESS FOR MAKING AN INSECTICIDE

Louis N. Markwood, Washington, D. C., dedicated to the free use of the People of the United States of America

No Drawing. Refiled for abandoned application Serial No. 744,636, September 19, 1934. This application June 24, 1937, Serial No. 150,165

1 Claim. (Cl. 167—34)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

In a process for preparing nicotine-peat reaction products, the steps which comprise treating peat with an acid from the group consisting of mineral acids and acetic acid, washing said peat to remove soluble matter, bringing together in intimate contact an aqueous solution of nicotine and said peat, allowing the mixture to react, and recovering the water-insoluble portion.

2,107,059

MOTOR FUEL COMPOSITION

Franz Rudolf Moser, Amsterdam, Netherlands, assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware

No Drawing. Application May 11, 1935, Serial No. 20,987. In Great Britain May 16, 1934

6 Claims. (Cl. 44—9)

6. A composition of matter comprising a liquid hydrocarbon motor fuel component and a relatively small quantity of acetone peroxide.

2,107,060

METHOD OF PREPARING PHENOLIC COMPOUNDS

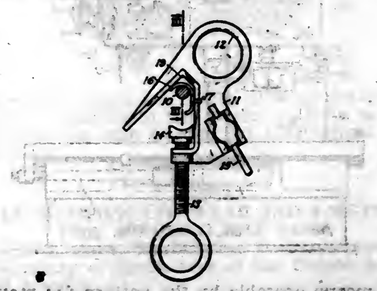
John F. Olin, Grosse Ile, Mich., assignor to The Sharples Solvents Corporation, Philadelphia, Pa.

No Drawing. Application December 6, 1935, Serial No. 53,210

19 Claims. (Cl. 260—154)

1. The method of effecting reaction between an unsaturated hydrocarbon and an aromatic compound substituted in the nucleus by an hydroxyl radical which comprises effecting initial condensation between the aromatic compound and said unsaturated hydrocarbon in the presence of an acid catalyst, neutralizing the acid catalyst, and thereafter effecting rearrangement of the reaction products so produced by heating in the presence of a Friedel and Crafts catalyst.

19. The method of producing a para-tertiary alkyl phenol which comprises mixing an olefin composition containing branch chain olefin and normal olefin with phenol and effecting initial condensation between the phenol and the branch chain olefin in the presence of an acid catalyst under conditions controlled to substantially preclude reaction between the phenol and the normal olefin, neutralizing the acid catalyst, removing normal olefin from the mixture by distillation and thereafter effecting rearrangement of the reaction products so produced by heating in the presence of a Friedel and Crafts catalyst.



2,107,061

CONDUCTOR PROTECTING TAP CLAMP

Ralph R. Pittman and Carroll H. Walsh, Pine Bluff, Ark.

Application January 22, 1937, Serial No. 121,812

4 Claims. (Cl. 173—273)

3. The combination with a live line clamp having adjustable clamping means for removably engaging a conductor, a protecting member detachably mounted on the body portion of said clamp, and means responsive to movement of said adjustable means for releasing said member from the body portion of said clamp, said movement affixing said protecting member to the conductor in interposed relation to said clamp and said conductor.

2,107,062

HYDROXYLATED FISH OIL FATTY ACIDS AND PROCESSES OF PREPARING THE SAME

Anderson W. Ralston and Stewart T. Bauer, Chicago, Ill., assignors to Armour and Company, Chicago, Ill., a corporation of Illinois

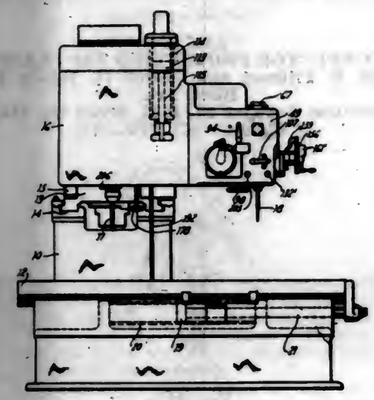
No Drawing. Application March 17, 1936, Serial No. 69,411

13 Claims. (Cl. 260—112)

1. The process which comprises partially hydrogenating a fish oil material having an iodine number of at least 100 and being chosen from the group consisting of fish oil and the unsaturated fatty acids thereof until the iodine number is not more than about 80, and then hydroxylating the partially hydrogenated fish oil material.

2,107,063

PATTERN CONTROLLED MILLING MACHINE



Erwin G. Roehm, Norwood, Ohio, assignor to The Cincinnati Milling Machine Co., Cincinnati, Ohio, a corporation of Ohio

Application April 14, 1937, Serial No. 136,844

22 Claims. (Cl. 90—13.5)

1. In a tracer mechanism for automatically controlling power movement between a tool and work piece, a tracer arm supported for universal movement about a point and relative to a fixed axis passing through said point, rate and direction control mechanism for governing said power movement having motion transmitting connections with said tracer arm whereby movement of the tracer arm into or out of coincidence with said axis will stop or start said power movement respectively, means for predeflecting the tracer

arm to cause power feeding of the cutter into engagement with the work, the orientation of the plane determined by the tracer and said axis dictating the direction of said feeding movement,

and means operable by the pattern for moving said tracer arm around said axis for varying the direction of said feeding movement in accordance with contour changes in the pattern.

2,107,064

PROCESS FOR SOLVENT DEWAXING OILS

Hendrikus van der Waerden, The Hague, Netherlands, assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware

No Drawing. Application April 8, 1935, Serial No. 15,290. In the Netherlands April 25, 1934
10 Claims. (Cl. 196—18)

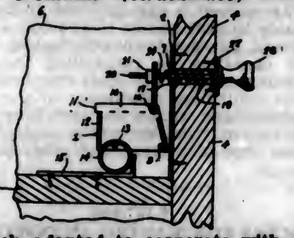
1. A process for dewaxing oil by mixing the oil with a liquid dewaxing agent having a high solvent power for the oily components of the wax-bearing oil but low solubility for its waxy components, chilling the resulting mixture to precipitate waxy components and separating the precipitated material from the oil-containing solution, characterized by the use as the dewaxing agent of a mixture comprising a partially hydrogenated naphthalene and a selective solvent having a low solvent power for oil.

2,107,065

PROCESS AND PRODUCTS RELATING TO RECOVERY OF ALCOHOLS FROM HYDROCARBON POLYMERS

Adrianus Johannes van Peski, Amsterdam, Netherlands, assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware

No Drawing. Application June 20, 1936, Serial No. 86,350. In the Netherlands July 4, 1935
16 Claims. (Cl. 260—90.11)



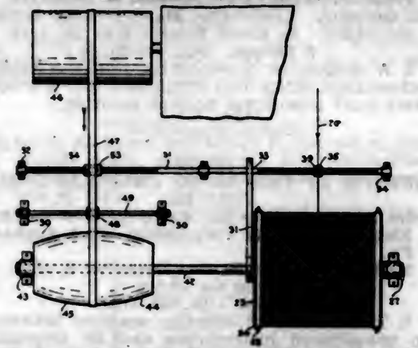
1. In a process for the production of organic oxy-compounds by the treatment of olefines with water in the presence of a mineral acid-acting compound, the step of recovering the alcohol content of the polymer mixture formed during the treatment which comprises reacting the alcoholic content of the separated polymer phase with a metal hydroxide and carbon bisulphide to form a metal xanthate, and recovering the metal xanthate from the polymer phase.

2,107,066

LATCH

Loren Floyd Weddle, Inglewood, Calif.

Application December 11, 1936, Serial No. 115,466
3 Claims. (Cl. 292—299)



1. A latch adapted to cooperate with a stop comprising a casing open at its top and bottom, said casing including a yoke mounted for vertical swinging movement in said casing, a pin mounted transversely in said yoke, a gravity actuated ring loosely mounted on the pin and engageable between the stop and the casing for securing the closure in closed position, and means for actuating the yoke for lifting the ring out of engagement with the stop, said means including an upstanding plate journaled on the yoke, a manually operable rod extending slidably through the closure and connected to said plate, and a coil spring encircling said rod and engaged with the plate and urging said rod, yoke and plate toward normal position.

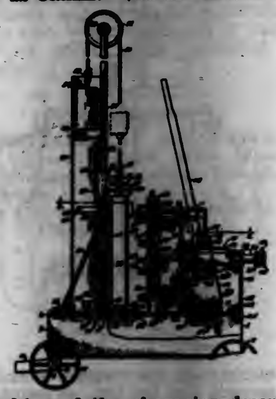
2,107,067

ELASTIC MATERIAL AND METHOD OF MAKING SAME

Sterling W. Alderfer, Akron, Ohio, assignor of one-half to Edward D. Andrews, Akron, Ohio

Application June 13, 1935, Serial No. 26,424
14 Claims. (Cl. 154—2)

1. A pre-shaped elastic material consisting solely of a plurality of rubber threads under substantially uniform tension, and a second plurality of rubber threads under non-uniform tension and arranged adjacent to said first-mentioned threads and adhesively interconnected.



6. That method of making elastic material which comprises winding a rubber thread under uniform tension about a form to provide adjacent convolutions, winding a rubber thread under non-uniform tension about the thread bearing form in a different direction to provide adjacent convolutions, applying pressure to adhere the convolutions of one winding to the other, removing the thread structure from the form, and curing the same.

2,107,068

PERFORATING MACHINE

Raymond R. Dauwalter, Birmingham, Ala., assignor to W. S. Dickey Clay Manufacturing Company, Kansas City, Mo., a corporation of Delaware

Application December 31, 1936, Serial No. 118,503
12 Claims. (Cl. 25—105)

1. A machine of the character described including a truck, tile supporting means on the truck, a mandrel reciprocably carried on the truck and movable into a tile carried by the tile supporting means, a carriage movable on the truck to and from the tile supporting means, means for actuating the carriage, means on the carriage for perforating a tile carried by said supporting means, and means on the truck for raising and lowering the mandrel.

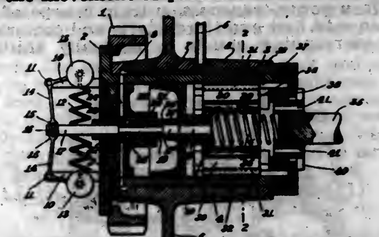
2,107,069

STABILIZATION OF ALIPHATIC SYMMETRICAL ISO ETHERS

Theodore Evans, Berkeley, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware

No Drawing. Application August 17, 1936, Serial No. 96,471
5 Claims. (Cl. 23—250)

1. A composition of matter stabilized against peroxide formation which comprises an aliphatic symmetrical iso ether and a stabilizing amount of a phenolic body selected from the group consisting of the cresols, the naphthols, pyrogallol, hydroquinone, resorcinol, phloroglucinol and nitroso-beta-naphthol.



2,107,070

SHAFT COUPLING

Werner Fleury, Arbon, Switzerland, assignor to Societe Anonyme Adolphe Saurer, Arbon, Switzerland, a corporation of Switzerland

Application September 18, 1936, Serial No. 101,357
In Germany May 9, 1936
2 Claims. (Cl. 64—25)

1. In a mechanism for changing the phase relationship between a driven shaft and a driving gear, the combination of a driven shaft, a driving gear, a servo-cylinder rotatable with the gear and spirally grooved internally, a servo-piston, a displacement member rotatable and movable longitudinally with the servo-piston and spirally threaded to engage the grooves of the servo-cylinder, means to supply fluid under pressure to the cylinder space to move the piston in one direction, a reactance spring acting in opposition to the fluid pressure, a centrifugal governor, means actuated by the governor to control the movement of pressure fluid to and from

the cylinder space, and means whereby the servo-piston is coupled to the driven shaft to be rotated thereby with freedom for longitudinal displacement.

2,107,071

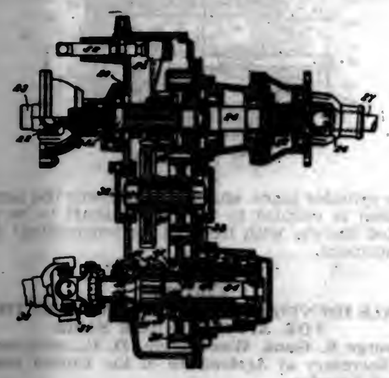
BALE IDENTIFICATION TAG AND A METHOD FOR AFFIXING THE SAME

George E. Gaus, Washington, D. C., assignor to Secretary of Agriculture of the United States of America

Application February 4, 1937, Serial No. 123,983
2 Claims. (Cl. 40—20)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In combination with a press box having fibrous material therein to be baled; of a tagging device therefor to be affixed during the process of baling; said tagging device comprising a securing member, and a non-resilient plate-like pendent identification tag connected thereto; said securing member adapted to be embedded in the fibrous material as the same is being assembled and to extend partially therethrough; said tag comprising a substantially gibbous elliptical structure, having a relatively flat center portion formed thereon, and adapted to maintain its position relative to said securing member during the process of embedment and impaction of said fibrous material, and having its concave surface in juxtaposition thereto and its convex surface in juxtaposition to a side wall of the press box.

2,107,072



MULTIAXLE DRIVE VEHICLE

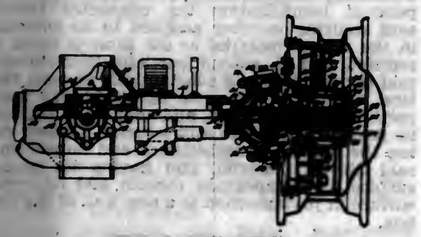
Arthur W. Herrington, Indianapolis, Ind., assignor to Marmon-Herrington Company, Inc., Indianapolis, Ind., a corporation of Indiana

Application December 5, 1936, Serial No. 114,371
2 Claims. (Cl. 74—342)

1. A power-transmission unit for motor vehicles, comprising a casing, a shaft journalled therein and projected from one side thereof and adapted for connection to the power-delivery shaft of the power plant, a second shaft aligned with said first shaft journalled in the casing and projected from the opposite side of the casing and adapted for connection with the vehicle propeller shaft, a

manually controlled clutch interposed between said aligned shafts, a third shaft journalled in the casing and projected from one side thereof and adapted for connection to a second propeller shaft, a power-transmission train interposed between said first and third shafts and comprising an overrunning clutch, a manually shiftable

clutching element interposed between said overrunning clutch and said third shaft and selectively shiftable to segregate said third shaft from the power-transmission train or to connect said third shaft with the power-transmission train through the overrunning clutch, or to connect the power-transmission train with said third shaft independent of said overrunning clutch.



2,107,073

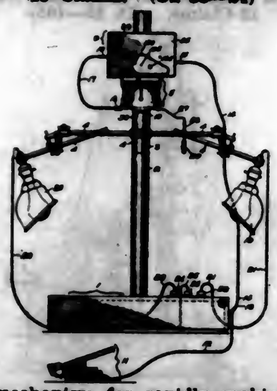
MOTOR VEHICLE DRIVE STEERING WHEEL AXLE STRUCTURE

Arthur W. Herrington, Indianapolis, Ind., assignor to Marmon-Herrington Company, Inc., Indianapolis, Ind., a corporation of Indiana

Application April 28, 1937, Serial No. 139,387

2 Claims. (Cl. 180—43)

1. A driven steering-wheel axle-structure comprising, a main casing having a middle compartment and oppositely-extended tubular portions, a differential gearing mounted in said compartment and having an axially-restrained live shaft journalled within one of said tubular portions, a wheel-carrying shell pivotally connected with said tubular portion of the main casing, a wheel journalled on said shell and having an axially-splined hub; and a universally jointed live-shaft structure having one end splined to the outer end of said live-shaft and freely axially movable outwardly relative thereto, and the other end splined to the hub of said wheel and freely axially movable relative thereto.



2,107,074

COPYING CAMERA EQUIPMENT UNIT

Edson S. Hinsline, Rochester, N. Y., assignor to The Folmer Graflex Corporation, Rochester, N. Y., a corporation of Delaware

Application January 23, 1937, Serial No. 122,018

19 Claims. (Cl. 88—24)

1. In mechanism for rapidly making photographic records and the like, an equipment unit including a camera and a magazine, said camera having a shutter and lens, and the magazine having therein pneumatic film feeding means; said unit including means to support the camera and magazine upon a basal formation in spaced, definite relation with respect to said records or the like, means mounting said camera and magazine to turn them upon the support through a wide arc toward and from the basal point of said support; and a manual-power, elongated, transmission member extending exteriorly of the camera and magazine, constituting a part of said unit, and adapted to have manual power applied thereto in a series of separate impulses of unlimited number and to transmit such manual power by each of said impulses to the film feeding means and shutter thereby to operate the film feeding means and shutter in any of said positions upon its support and in so doing conveying operating air into the magazine to the said pneumatic film operating means in the said magazine.

2,107,075

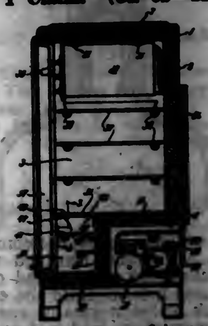
AUTOMATIC CLUTCH

Kenneth E. Lyman, Lake Forest, Ill.

Application August 30, 1933, Serial No. 687,432

3 Claims. (Cl. 192—105)

1. In an automatic clutch including driving and driven power transmitting members and a friction element contributing to the clutching connection between said members, means for automatically controlling the clutching element comprising relatively rotatable threaded members, means for adjusting the relative rotative position of said threaded members, centrifugally responsive weight members pivotal about said threaded members to impart pressure through one member to said element and means to synchronize the operation of said weight members to cause even distribution of the pressure imparted to the clutch member.



2,107,076

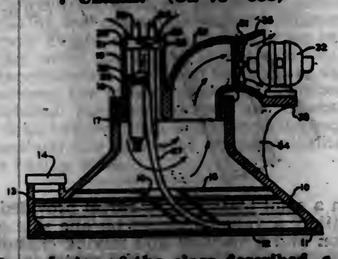
REFRIGERATING APPARATUS

George W. Mason, Detroit, Mich., assignor to Nash-Kelvinator Corporation, Detroit, Mich., a corporation of Maryland

Application February 25, 1937, Serial No. 127,624

1 Claim. (Cl. 62—116)

In combination in a refrigerator, a cabinet comprising heat insulating walls enclosing a food storage compartment including an offset portion, a cooling element for cooling said food storage compartment, adjustable partition means for separating said offset portion as an auxiliary storage compartment whereby the thermal coupling between the compartments may be varied to provide the desired degree of refrigeration in the auxiliary compartment, a machine compartment enclosed by said cabinet adjacent to and thermally insulated from said offset auxiliary storage compartment.



2,107,077

PSYCHROMETER

Philip G. Magner, Wabash, Ind., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware

Application January 18, 1935, Serial No. 2,366

7 Claims. (Cl. 73—338)

2. In a device of the class described, a casing adapted to contain a water supply therein in a lower portion thereof, a gas inlet and a gas outlet in said casing, means for passing a gas, the relative humidity of which is to be measured, through said inlet, downwardly through said casing, and said outlet, a thermometer extending in said inlet in the path of flow of the gas, a sock and wick secured to said thermometer, said wick extending substantially vertically from the upper end of said sock and downwardly into said water supply whereby the gas passes over said sock and said wick to bring the water supplied to said sock by said wick to substantially wet bulb temperature, and a partition in said casing above said water supply having an opening therein through which said wick extends whereby contact of the circulated gas with the water supply is prevented.

2,107,078

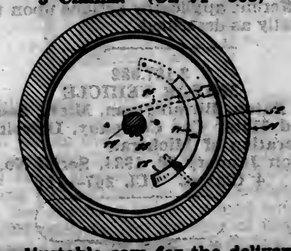
METHOD OF MAKING STOCKINGS

Louis H. Mendelsohn, Paterson, N. J.

Application July 24, 1936, Serial No. 92,331

4 Claims. (Cl. 66—148)

1. The method of forming the hereindescribed foot garment which consists in impaling one longitudinal edge of an elastic garter strip on a row of needles while holding said edge stretched beyond its normal length, causing such needles to draw a course of loops of yarn through said edge and thereupon forming a band-like portion of a knitted web of such yarn, then impaling the other longitudinal edge of the garter strip on the needles, again causing the needles to draw a course of loops of the yarn through the latter edge, and continuing to form the knitted web.



2,107,079

FUEL INJECTION PUMP

Hubert A. Mentele, Canova, S. Dak.

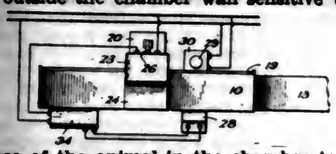
Application December 22, 1936, Serial No. 117,202

3 Claims. (Cl. 74—568)

1. An adjustable cam for the delivery plunger of a fuel pump comprising a rotatable cam carrier embodying a disk having an inclined arcuate groove in the surface thereof, a cam member slidably mounted in the groove and engageable with the plunger to actuate the same, a rack and pinion mechanism for slidably actuating the cam member in the groove to regulate the stroke of the plunger and means operable outwardly of the pump for actuating the rack and pinion.

2,107,080

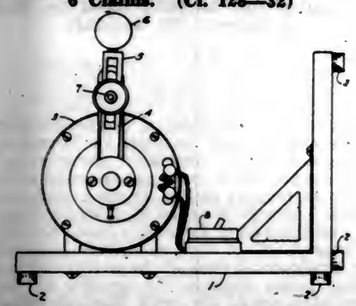
ANIMAL TRAP



James Macdonald Mitchell, Old Lyme, Conn.

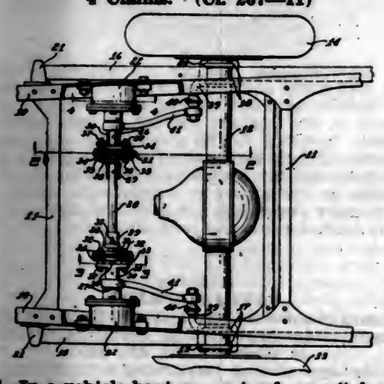
Application June 4, 1935, Serial No. 24,928

14 Claims. (Cl. 42—69)



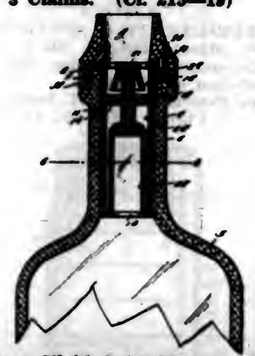
1. An animal trap comprising a trap housing, a chamber in the housing having an opening through which an animal enters the chamber, a

trap door, door actuating means, and means located outside the chamber wall sensitive to the



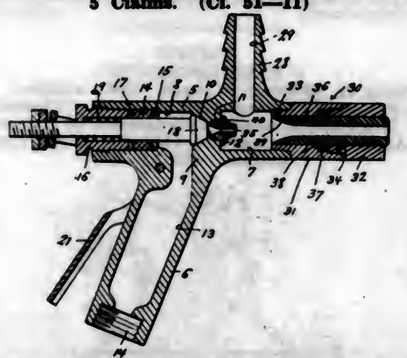
presence of the animal in the chamber to activate the door operating means.

2,107,081
ORTHOPEDIC INSTRUMENT
Charles Owens, Chattanooga, Tenn.
Application September 16, 1932, Serial No. 633,511
Renewed February 26, 1935
6 Claims. (Cl. 128—32)



5. An instrument for the treatment of the feet comprising an applicator, power means for actuating said applicator, and a support for said parts beneath the applicator to rest on a floor or other surface, said support comprising two angularly disposed bases at substantially equal distances from the applicator, said instrument being shiftable to be supported by either of the bases to secure different applicator actions upon the feet, substantially as described.

2,107,082
MOTOR VEHICLE
Clyde R. Paton, Birmingham, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a corporation of Michigan
Application January 20, 1934, Serial No. 707,450
4 Claims. (Cl. 267—11)



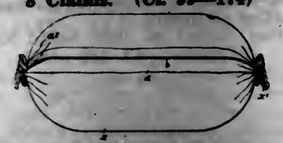
1. In a vehicle having a pair of oppositely disposed wheels, stabilizing mechanism comprising a shock absorber for each wheel, said shock absorbers being mounted on the vehicle in transversely spaced relation and each shock absorber having a movable portion, and torsion shaft means interconnecting the movable portions of said shock absorbers, said shaft means having a flexible section fixed therein permitting elongation and contraction thereof transversely of the vehicle.

2,107,083
NONREFILLABLE BOTTLE
Joseph Arthur Patterson, Brave, Pa.
Application April 22, 1937, Serial No. 138,441
3 Claims. (Cl. 215—19)

3. In a non-refillable bottle, the combination of a bottle neck, a cylinder confined within said neck, a perforated disk at one end of said cylinder, a valve seat intermediate the ends of said cylinder, a disk valve normally engaging said seat, means intermediate said seat and said perforated disk precluding access to said valve, a float member arranged within said cylinder below said seat, and said valve and said float member being complementarily provided for contact one with the other to transmit movement from one to the other, as and for the purpose specified.

2,107,084
BLAST GUN
Clarence B. Fletcher, St. Joseph, Mich.
Application April 17, 1937, Serial No. 137,576
5 Claims. (Cl. 51—11)

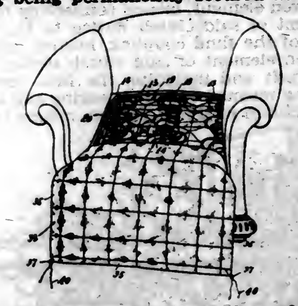
1. In a sand blast gun, a barrel provided with a partition, a valve chamber on one side of the partition and a vacuum and mixing chamber at a relatively opposite side of the partition, an integral handle for said barrel having a water passage therethrough for supplying water to said valve chamber, a spring biased reciprocating



valve mounted in said barrel, and said partition having a bore therethrough and provided at one end of said bore with a seat against which said valve normally engages, a jet nozzle threaded into said bore of the partition and extending from said partition into said vacuum and mixing chamber, said jet nozzle being provided with an axial bore through which water under pressure passes into said mixing and vacuum chamber, and also being provided with a diagonal passage through which a jet of water passes into the last mentioned chamber to set up a turbulence therein for insuring a mixing of water and sand fed to the last mentioned chamber, said barrel being provided in the region of said last mentioned chamber with a nipple for the attachment of a hose thereto for supplying sand under air pressure to the last mentioned chamber, and a nozzle mounted on the mixing and vacuum chamber equipped end of said barrel.

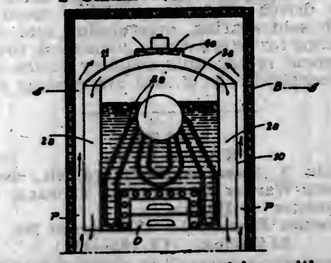
2,107,085
METHOD OF MAKING CARDBOARD ARTICLES
Russell I. Rhodes, North Attleboro, Mass., assignor to The Mason Box Company, Attleboro Falls, Mass., a corporation of Massachusetts
Application January 28, 1936, Serial No. 61,169
6 Claims. (Cl. 93—39)

1. The method of making articles from sheet material which comprises superposing a plurality of sheets with adhesive therebetween to form composite sheet material, die-pressing the composite sheet material at recurrent locations to form a series of blanks each having a downturned peripheral wall, and then separating the blanks and trimming off the material outside said wall.



2,107,086
METHOD OF FORMING MEAT PRODUCTS
Herbert Ramsey, Jr., Nutley, N. J.
Application June 25, 1936, Serial No. 87,238
3 Claims. (Cl. 99—174)

1. The method of packaging a rotund body which consists in incorporating the body in a substantially cylindrical casing of the sheet material herein defined and so that the extremities of the casing shall extend beyond the body in opposite directions, and then, having wetted the material of the casing throughout substantially the whole extent of the latter, twisting said extremities while the casing is wet and said body is so incorporated and until the part of the casing between the twists formed is stretched, and maintaining said extremities in substantially their thus twisted form and hence the casing in substantially the degree of stretch attained until the casing dries.

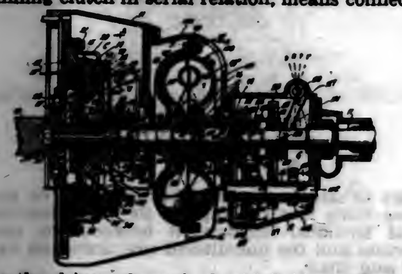


2,107,087
UPHOLSTERED FURNITURE
Frank Schlachta, Pittsburgh, Pa., assignor of one-half to Andrew K. Sypien, Pittsburgh, Pa.
Application November 24, 1934, Serial No. 754,618
3 Claims. (Cl. 155—184)

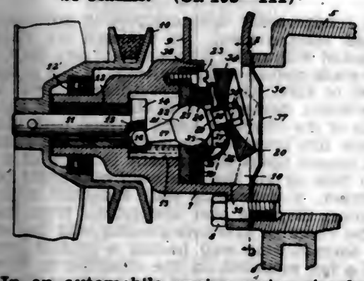
1. In an upholstered chair and the like comprising a substantially rectangular supporting frame, a platform mounted on said frame and including a plurality of seat-springs, side arms and a back inwardly upholstered, a substantially rectangular padding covering said springs, said padding being permanently secured at its front

edge to said frame, the other edges of the padding being free and tapered for ready insertion and frictional engagement between the seat-springs and the upholstered side arms and back of said chair.

2,107,088
REFRIGERATING APPARATUS
Leslie E. Scott and Ernest A. Smith, San Jose, Calif.
Application February 4, 1935, Serial No. 4,770
1 Claim. (Cl. 62—102)



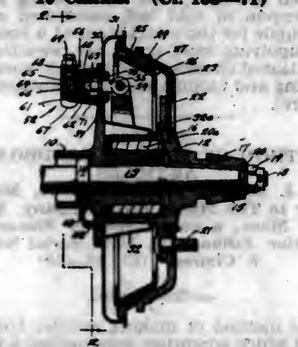
A refrigerating unit comprising with an enclosed compartment, an enclosed ice chamber mounted within the compartment and having its side walls spaced from the walls of the compartment to form air passages therebetween, a refrigerating element within the chamber, the side walls of the chamber being formed with vertical hollow fins open to the interior of the chamber and spaced apart horizontally to allow of a vertical flow of air therebetween outwardly of the chamber, a deflecting wall mounted with the chamber disposed over and spaced from the top of the chamber and overhanging said fins at the top thereof, said wall having a central opening and a fan mounted on the chamber to blow air downwardly through said opening from the space in the compartment above the same.



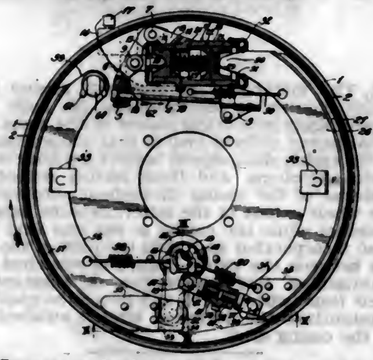
2,107,089
TRANSMISSION MECHANISM
Benjamin Arthur Swennes, Rockford, Ill., assignor to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application January 17, 1934, Serial No. 706,993
18 Claims. (Cl. 74—189.5)

1. A transmission mechanism for automotive vehicles comprising, in combination with a drive shaft and a driven shaft, a mechanical clutch

device having the driving element thereof connected to said drive shaft, a fluid coupling comprising an annular fluid-tight casing carrying internal impeller blades forming a driving element, and a runner enclosed in said casing forming a driven element, means connecting the driven element of said clutch device to the driving element of the fluid coupling, means connecting the driven element of said clutch device to said driven shaft and including the first mentioned connecting means, reduction gearing and an overrunning clutch in serial relation, means connecting the driven element of said fluid coupling to said driven shaft, means operable automatically upon an increase in the speed of said drive shaft above an idling speed to engage said mechanical clutch device, means in said fluid coupling effective coincidently with a further increase of speed to drive the driven element thereof and transmit the power of the drive shaft to the driven shaft at a higher speed than through said gearing, overrunning said clutch, and means for alternatively connecting the driving element of the fluid coupling to the driven shaft independently of said overrunning clutch.

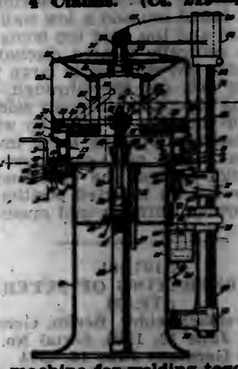


2,107,090
WATER PUMP
Benjamin A. Swennes, Rockford, Ill., assignor to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application January 10, 1935, Serial No. 1,195
23 Claims. (Cl. 103—111)



1. In an automobile engine water circulating pump, means providing an impeller chamber, means providing an oil chamber for lubricating oil, a drive shaft extending into the oil chamber through a bearing communicating therewith for lubrication, a partition separating the two chambers and having a bearing supplied with lubricant from the oil chamber, a wabble shaft universally fulcrumed intermediate its ends in the bearing on the partition and pivotally connected at one end to said drive shaft at a certain radius relative to the axis of rotation of the latter whereby movement is arranged to be communicated to that end of said shaft in a circle to produce corresponding movement of the other end, and an impeller on the other end of said shaft in the impeller chamber, the circular movement of such other end of the shaft imparting a planetary movement to said impeller.

2,107,091
BRAKE
Benjamin A. Swennes, Rockford, Ill., assignor to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application September 7, 1935, Serial No. 39,522
10 Claims. (Cl. 188—71)



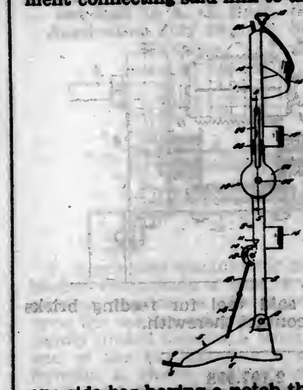
1. A brake comprising an arcuate axially displaceable friction member, an axially movable cam for displacing said friction member, a pivoted brake actuating member in support of said cam and actuative incident to a pivotal movement thereof to cause such axial movement of the said cam and said friction member.

2,107,092
BRAKE CONSTRUCTION
Benjamin A. Swennes, Rockford, Ill., assignor to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application August 26, 1936, Serial No. 97,934
3 Claims. (Cl. 188—152)

1. In a servo brake, a brake drum, a plate, a primary brake shoe, means for initiating engagement of said shoe by said drum, a secondary shoe, a forked extension on said secondary shoe, a pivoted lever mounted on said plate, rollers on the free end of said lever, and a link connecting said primary brake shoe to a point on said lever intermediate the rollers and pivot thereof, whereby a change in the spacing between said primary and secondary brake shoe as a result of the application of braking pressure is effectuated by a shift in position of said rollers on said extension.

2,107,093
ELECTRIC WELDING APPARATUS
Ralph A. Terrell, Chicago, Ill., assignor to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application April 13, 1936, Serial No. 74,077
4 Claims. (Cl. 219—4)

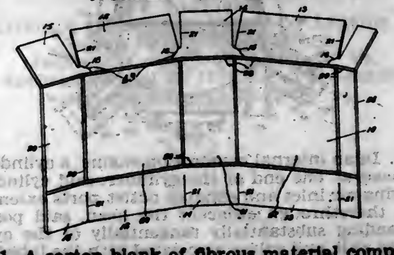
3. In a machine for welding together pieces of work, work-holder parts operable to press work pieces into assembly, and an expansible electrode providing mandrel means for guiding said parts into such assembly.



2,107,094
COLORED PHOTOGRAPHY
Oliver Arnold Townsend and Arthur Percival Masters, Wellington, New Zealand, assignors to Tru Colour Film Limited, Wellington, New Zealand
No Drawing. Application November 22, 1935, Serial No. 51,170. In New Zealand December 13, 1934
5 Claims. (Cl. 101—149)

5. Method of making photographic color prints consisting in dyetoning a bleached silver photographic image in a solution containing an iron blue dye, then in the presence of potassium bromide, pressing the image onto a surface to which it is to be transferred.

2,107,095
LEG BRACE
Norbert R. Wagner, Cleveland, Wis.
Application July 14, 1936, Serial No. 90,587
3 Claims. (Cl. 128—80)

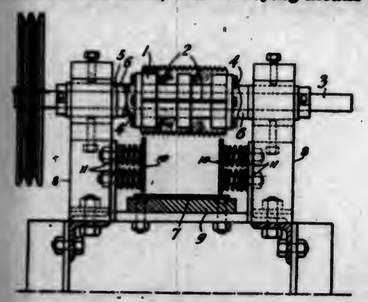


2. A leg brace of the class described comprising hingedly connected upper and lower sections, the upper section including side bars having openings therein, latches movable laterally of said side bars on the outer sides thereof for releasably locking the sections against relative swinging movement, and flexible pull elements extending from said latches inwardly through the openings to the inner sides of said bars for actuating said latches to inoperative position.

3. A leg brace comprising a pair of side bars, a foot saddle pivotally mounted on the lower ends of said side bars, an ear projecting forwardly from one of the side bars at an intermediate point, a segmental plate rotatably mounted on said ear, a link pivotally connected off center to said segmental plate, and an element connecting said link to the foot saddle, said

one side bar having a notch therein adjacent the ear for the reception of the link, said plate, link and element constituting means for supporting the foot saddle in raised or lowered position.

2,107,096
PACKAGE AND METHOD OF MANUFACTURE THEREOF
Albert Wesselman, Cincinnati, Ohio
Application March 3, 1934, Serial No. 713,902
7 Claims. (Cl. 229—37)



1. A carton blank of fibrous material comprising a plurality of side walls, end closing flaps carried by the side walls, said end flaps being foldable along transverse fold lines, the end flaps being separated by cuts extending transversely to the fold lines, said cuts extending entirely through the material and terminating a substantial distance from the fold line, the material on the side of the blank forming the outside of the carton, between the ends of said cuts and the fold line, being partially severed in alignment with the transverse cuts and decreasing in depth from a depth equal to the thickness of the material at the end of the transverse cuts to substantially a zero depth near the line of fold.

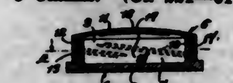
2,107,097
MACHINE FOR ROUGHENING BRICKS
Duncan Whitehouse, Mill Hill, London, England
Application January 25, 1937, Serial No. 122,277
In Great Britain January 2, 1936
3 Claims. (Cl. 125—26)

1. A machine for roughening the surfaces of bricks comprising a frame including a pair of spaced supports having journal bearings therein, a drive shaft mounted in said journal bearings, a roughening tool splined for longitudinal reciprocation on said shaft, cooperating cam means respectively on the supports and tool for causing

reciprocation of the tool on the shaft responsive to rotation of the shaft, and conveying means dis-

posed relative to said tool for feeding bricks across said tool in contact therewith.

2,107,098
INTERNAL COMBUSTION ENGINE
Clarence H. Wiegman, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a corporation of Michigan
Application April 11, 1931, Serial No. 529,249
5 Claims. (Cl. 123—30.2)

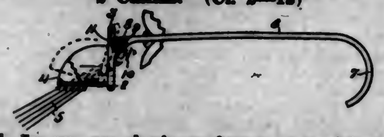


1. In an internal combustion engine, a cylinder, a head at one end of the cylinder, said cylinder having air inlet and exhaust outlet ports extending therethrough adjacent the head, said ports extending substantially tangentially of the cylinder wall, and valves associated with the interior ends of the ports and extending radially of the cylinder.

2,107,099
RAILWAY MAIL CAR
Samuel E. Wiley, Nashville, Tenn.
Application January 14, 1936, Serial No. 59,148
9 Claims. (Cl. 105—1)

1. A railway mail motor car comprising a wheeled body formed in its front end with a mail receiving opening, a rearwardly moving conveyor arrangement extending into said opening and designed to receive a sack of mail coming through said opening, said conveyor arrangement comprising a plurality of flights and means for driving each succeeding flight at a lower rate of speed than the preceding one, said means including means for driving the front portion of said conveyor arrangement at a speed approximately the speed of forward movement of the car.

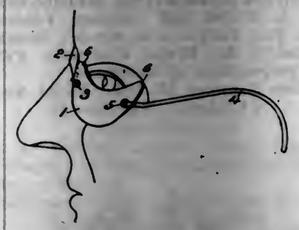
2,107,100
DISPENSING CONTAINER FOR STYPTIC POWDER
Fred H. Beyer, Lockport, N. Y.
Application February 18, 1936, Serial No. 64,534
5 Claims. (Cl. 221—61)



1. A dispenser for free flowing powders, comprising a wafer-like hollow body having a broad bottom and a broad top and a low wall connecting said bottom and top, said top being provided with a single centrally located discharge opening of small size but sufficiently large to permit the powder to flow out therethrough, said discharge opening extending through said top and the balance of the area of said top which surrounds the discharge opening being imperforate whereby upon filling said container approximately half full or less the container can be turned to any but an inverted position without spilling the powder through said opening.

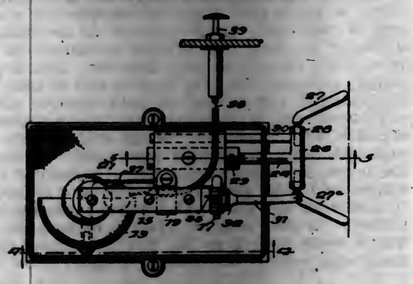
2,107,101
INDIRECT GENERATING OF SUPERHEATED STEAM
Walter Breidtschneider, Berlin, Germany
Application June 12, 1935, Serial No. 26,283
In Germany June 16, 1934
3 Claims. (Cl. 122—31)

2. A high pressure steam generating steam circulating system comprising a boiler drum, radiation and convection superheaters respectively in series, a circulating pump for withdrawing steam from the boiler drum conveying the same through the said superheaters and reintroducing it as a heat carrier into the boiler drum, a by-pass connection from a point intermediate of the superheaters beyond the outlet of the radiation superheater to the boiler drum, means in this connection for the regulation of the flow of the steam therethrough, and means for withdrawing the useful steam from the circuit at a point between the convection superheater and said drum.



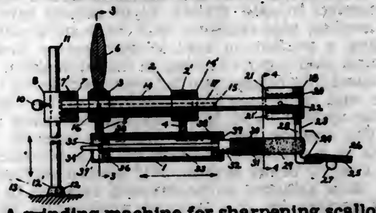
2,107,102
EYESHADE
Joseph W. Catron, Jr., Fortescue, Mo.
Application December 28, 1936, Serial No. 117,866
2 Claims. (Cl. 2—13)

1. In an eye shade, a frame comprising two rims and a bridge connecting said rims and adapted to rest on the nose of the wearer, said



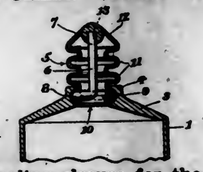
rims having respectively lower than said bridge two forwardly extending glare shield portions disposed, when the frame is in operative position, lower than the eyes and in positions in which they will intercept rays upwardly and rearwardly reflected toward the eyes, attaching means pivotally fastened to said frame for fastening said frame which permits the frame to be swung on a horizontal axis so as to tilt said shield portions at different angles to the horizontal and means for releasably locking said frame to said attaching means in the positions to which said frame may be adjusted.

2,107,103
EYESHADE
Joseph W. Catron, Jr., Fortescue, Mo.
Application June 1, 1937, Serial No. 145,802
2 Claims. (Cl. 2—12)



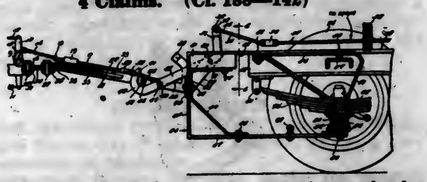
1. An eye shade comprising two glare shields, an inverted U shaped nose piece having universal joint connections respectively with the inner edge portions of said shields, and two temple bars having universal joint connections respectively with the outer edge portions of said shields and having downwardly extending rear ends adapted to respectively engage the rear sides of the ears, said nose piece and said temple bars in their operative positions holding said shields substantially upright and conformed to the face.

2,107,104
DIRECTION SIGNAL FOR VEHICLES
François Courtinade, New York, N. Y.
Application June 10, 1936, Serial No. 84,551
11 Claims. (Cl. 116—36)



1. In a vehicle direction indicator, the combination of the steering wheels of the vehicle, an audible signal comprising a clapper and a gong, a slidable member for actuating said clapper, means abutting against but detached from one of the steering wheels of the vehicle at points fore and aft of the axle of said wheel for imparting a sliding movement to said member and connections between said member and clapper for moving the latter away from the gong.

2,107,105
GRINDER
Harry J. Criner, Davenport, Iowa, assignor of one-half to A. G. Bush, Davenport, Iowa
Application July 29, 1937, Serial No. 156,331
7 Claims. (Cl. 51—32)



2. A grinding machine for sharpening scalloped blades, comprising a base, a supporting column secured thereto, a sleeve adjustably mounted upon the column supporting a transverse bar and rigidly united thereto, a block united to the free end of the bar carrying a key rigidly secured therein, a sleeve slidingly mounted upon the shaft and rotatable thereon, a shaft housing parallel with the sleeve and spaced therefrom, a grinder shaft revolvably mounted in the housing and carrying a cylindrical grinding head mounted thereon extending forwardly from the housing in combination with a head frame having successive slots formed therein adapted to receive the key, and means to secure the head frame in fixed spaced position relative to blade to be sharpened.

2,107,106
CLOSURE FOR CONTAINERS OF LIQUID OR SEMILIQUID SUBSTANCES
James M. Crook, Huntington, W. Va.
Application April 30, 1937, Serial No. 140,035
6 Claims. (Cl. 221—60)

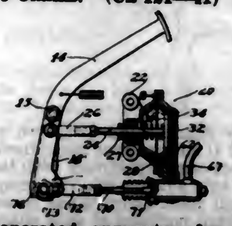
1. A self-sealing closure for the opening of a container from which a substance is to be extruded by a pressure upon the substance, comprising a stopper in fixed relationship to the opening, a cap with an outlet perforation, and a flexible neck connecting the cap to the container, said neck being contractible to seat the rim of the perforation upon the stopper and axially stretchable upon the occurrence of said pressure to unseat the rim from the stopper.

2,107,107
TRAILER
James M. Davan, Rossville, Ill.
Application May 28, 1937, Serial No. 145,369
4 Claims. (Cl. 188—142)

1. In combination, a tractor having a brake system operated lever, a trailer having brake

means and an operating member therefor, a hitch connecting said trailer to said tractor, a normally engaged latch on said hitch operatively connected to said brake system operated lever of the tractor, said hitch comprising a first section connected to said tractor, a second section connected to said trailer, pivot means pivotally connecting said sections, said latch normally engaging a portion of said second section and retaining said second section in initial position, and an operating connection between said second section and said operating member of the trailer brake system, said brake system operated lever of the tractor being arranged to operate said latch in a released position upon application of the tractor brake system, said second section being then adapted to be pivoted relative to said first section by the forward momentum of the trailer relative to the tractor in a manner to work said operating member to apply said brake means of the trailer.

2,107,108
ROTARY TOOL
John De Mooy, Shaker Heights, Ohio, assignor to The Cleveland Pneumatic Tool Company, Cleveland, Ohio, a corporation of Ohio
Application January 22, 1936, Serial No. 60,203
17 Claims. (Cl. 81—54)

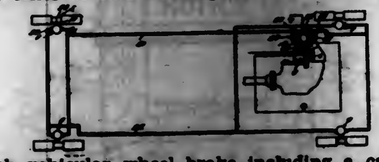


1. In a device of the character described, the combination of a work engaging member, a motor connected to said member for constantly imparting a torsional force thereto, and a power actuated rotatable hammer associated with said member for delivering a succession of blows thereto co-operating with the torsional force aforesaid for rotatably driving said member.

2,107,109
WATER BUBBLER
Albert Joseph Desrosiers, New Bedford, Mass.
Application April 22, 1937, Serial No. 138,456
1 Claim. (Cl. 210—94)

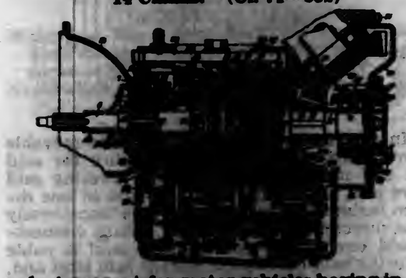
An attachment for a faucet comprising a substantially cylindrical rubber part, a downwardly tapered rubber part located in the first part and having its large end spaced from the upper end of the first part with its lower portion spaced from the internal walls of the first part, a body formed of transparent material having a passage therein which extends vertically from the upper end of the body downwardly to a point spaced from the lower end of the body and then extends upwardly and outwardly through an offset top part of the body, the upper end of the passage being threaded and the first rubber part having a reduced externally threaded part engaging the first-mentioned threaded part, the threaded part of the passage being larger than the rest of the passage to form a shoulder, a screen resting on the shoulder and a washer between the screen and the lower end of the rubber part.

2,107,110
POWER OPERATING MECHANISM
Wilfred A. Eaton and Stephen Verech, Pittsburgh, Pa., assignors to Bendix Westinghouse Automotive Air Brake Company, Pittsburgh, Pa., a corporation of Delaware
Application January 19, 1931, Serial No. 509,856
5 Claims. (Cl. 121—41)



1. Power operated apparatus for motor vehicles comprising a vehicle controlling member, means for operating said member by power including a motor having a movable power-operated element operatively connected with said member, valve means for controlling the passage of motive fluid to and from said motor and for maintaining fluid therein to hold said member in a predetermined position, a valve operating lever pivotally mounted intermediate the ends thereof on said vehicle controlling member, one end of said lever being connected with said valve means to operate the latter during relative pivotal movement between said lever and member, the other end of said lever being adapted to be manually actuated to effect said pivotal movement of said lever with respect to said member, means positioned adjacent the first named end of said lever for limiting the extent of said relative pivotal movement, and a pressure responsive element associated with said valve means and directly and non-yieldingly connected with said one end of the lever, said pressure-responsive element being subjected to the pressure of the fluid conducted to and from said motor and thereby offering a resistance to said relative pivotal movement in a degree proportional to the power required to operate said vehicle controlling member.

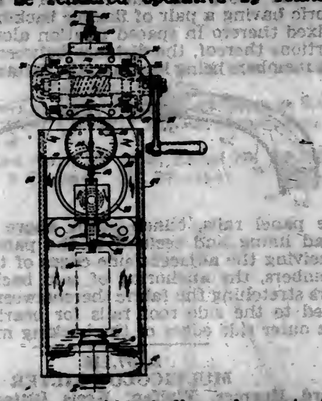
2,107,111
HYDRAULIC BRAKE APPARATUS
James W. Etchison, Cleveland, Ohio
Application July 24, 1936, Serial No. 92,451
5 Claims. (Cl. 188—153)



1. In a hydraulic brake apparatus, a plurality of hydraulic vehicular wheel brakes, a master cylinder, a pair of fluid conduits, a valve connecting said conduits with said master cylinder

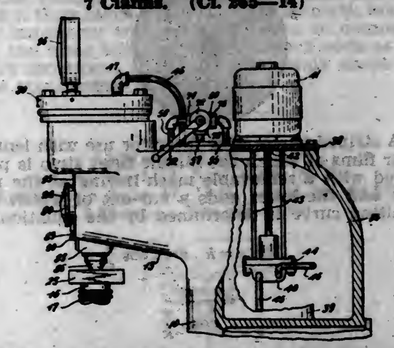
and including a casing having an inlet port connected with the master cylinder and a pair of opposed outlet ports one for each of said conduits, a valve element positioned between said outlet ports and capable of movement in both directions under the influence of the fluid for opening one of the outlet ports and for closing the other of said outlet ports, and a valve for

each vehicular wheel brake including a casing having an outlet port connected with the associated wheel brake, a pair of oppositely disposed inlet ports one for each of said conduits, and a valve element positioned between said inlet ports capable of movement in both directions under the influence of fluid to open one of the inlet ports and to close the other of said inlet ports.



2,107,112
TRANSMISSION
Thomas L. Fawick, Akron, Ohio, assignor to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application October 9, 1935, Serial No. 44,135
14 Claims. (Cl. 74—332)

1. A gear set for motor vehicles having in combination a driving shaft, a driven shaft, a countershaft, speed change and direct drive means between the driving and driven shafts and arranged on the driven shaft in coaxial relation with respect thereto, meshing gears connecting the drive shaft and countershaft, low ratio and second ratio gears fixed endwise on the driven shaft and against rotation with respect to said driven shaft, low ratio and second ratio gears rotatable freely on the countershaft and in constant meshing engagement with the low ratio and second ratio gears on the driven shaft, a reverse gear rotatable freely on the countershaft and operatively connected with said driven shaft, shiftable means on the countershaft for positively clutching said low ratio and second ratio countershaft gears selectively to said countershaft and for freeing same therefrom, and shiftable clutch means also on the countershaft for positively clutching said reverse gear to said countershaft.



2,107,113
HARDNESS TESTING MACHINE
Joseph Gegan, Lakewood, Ohio
Application July 1, 1932, Serial No. 620,622
21 Claims. (Cl. 265—13)

24. In a testing machine the combination of a penetrater, an actuating spindle, means yieldably connecting said penetrator and spindle, an indicator, a member connected with the indicator and movable relative to the penetrater, and means adapted to be rendered operative by relative

movement between said spindle and penetrator for connecting said member to move with the penetrator.

2,107,114
HARDNESS TESTING DEVICE
Joseph Gegan, Lakewood, Ohio
Application March 6, 1935, Serial No. 9,622
7 Claims. (Cl. 265—14)

1. In a testing machine the combination of a frame having thereon a specimen supporting means and a test load applying means movable relative to the supporting means, a fluid containing reservoir, fluid pressure responsive means having operative connection with said load applying means for actuating the same, a pump having a discharge connection for supplying fluid from said reservoir under pressure to said responsive means, a pair of pressure relief valves adjusted to be opened respectively by fluid pressure corresponding substantially with a predetermined preliminary test load and a predetermined main test load, and means including a manually operable valve for selectively rendering said relief valves effective for controlling the pressure of the pump discharge.

2,107,115
MOTOR VEHICLE
Jacob Hammeri, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a corporation of Michigan
Application October 23, 1933, Serial No. 694,717
12 Claims. (Cl. 296—137)

1. In a roof structure for vehicle bodies, the

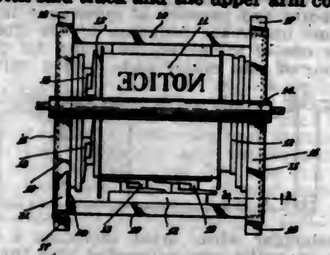
combination with a roof frame structure having roof side rails and a pair of panel rails intermediate and above the side rails, of a head lining fabric having a pair of flexible backing members affixed thereto in spaced relation along the side portions thereof, the distance between the backing members being less than the distance between

the panel rails, clinch strips above the fabric head lining and secured to the panel rails for receiving the adjacent side edges of the backing members, the anchoring of said backing members stretching the fabric therebetween and welts fixed to the side roof rails for bearing against the outer side edges of the backing members.

2,107,116
MULTICOLOR FILTER
Gerd Heymer, Wolfen, Kreis Bitterfeld, Germany, assignor to Agfa Ansco Corporation, Binghamton, N. Y., a corporation of New York
Application May 21, 1935, Serial No. 22,643
In Germany March 11, 1931
1 Claim. (Cl. 95—81.5)

A striped three-color filter for use with lenticular films of which the middle filter strip is provided with a removable mask having at the upper and the lower ends a cut-out of which the limiting curve is determined by the equations

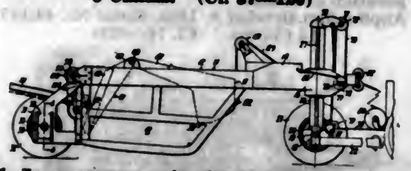
(1) $$\varphi = k \cdot \text{arc} \cdot \cos \frac{a}{r}$$



(2) $$r = \frac{a}{\cos \cdot \frac{\varphi}{k}}$$

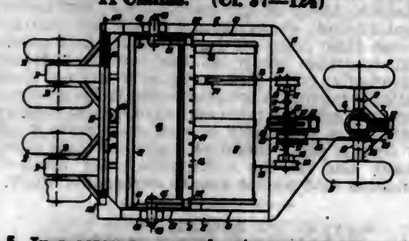
(3) $$\psi = \text{arc} \cos \frac{a}{r}$$

k designating the ratio between the green and the sum of the red and blue filter areas,
a designating half of the breadth of the middle filter strip,
r designating the distance of a point of the curve from the center of the filter,
φ designating the angle between the middle line of a green filter strip and r, and
ψ designating the angle between a point where one of the concentric circles of the outline of the filter cuts the border of the green filter area and the perpendicular to this border line through the center of the filter.



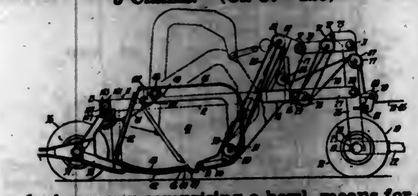
2,107,117
ROLLER BEARER FOR PRINTING MACHINES
John W. Johnson, Manhasset, N. Y.
Application December 30, 1936, Serial No. 118,236
7 Claims. (Cl. 101—348)

1. A roller bearer for printing machines embodying therein a vertically extending type high flange, a track adapted to be engaged by a composition inking roller extending perpendicularly from the top of said flange, and a spring clip having upper and lower arms and a base secured to said flange, both of said arms extending parallel with said track and the upper arm converg-



ing toward the other and being spaced below said track a distance permitting free flexure of said arm when applying the bearer to, or removing it from, a chase.

2,107,118
EARTH MOVING DEVICE
John F. Knapp, Oakland, Calif., assignor to American Tractor Equipment Corporation, a corporation of California
Application January 10, 1936, Serial No. 58,552
5 Claims. (Cl. 37—126)



1. In a scraper, a bowl, an end gate movable to sweep dirt off said bowl, a closure for said bowl; and means for raising and lowering said closure and for moving said end gate in one direction including a carriage movable transversely of said direction, a stop therefor, means connecting said carriage to said closure, and a cable for moving said carriage to engage said stop and, upon continued cable movement, for moving said end gate.

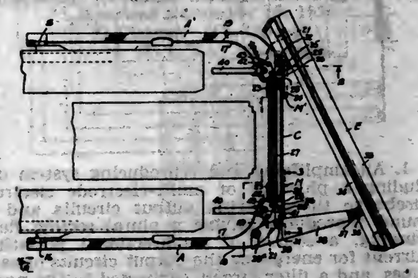
2,107,119
EARTH MOVING DEVICE
Robert B. Price, Oakland, Calif., assignor to American Tractor Equipment Corporation, a corporation of California
Application May 20, 1936, Serial No. 80,726
11 Claims. (Cl. 37—124)

5. In a scraper, an end gate, means supporting said gate for a swinging movement, a door, means supporting said door for a swinging movement, and means for interengaging said supporting means upon movement of said door supporting means whereby said gate is swung by movement of said door.

2,107,120
EARTH MOVING DEVICE
Willis H. Yount, Oakland, Calif., assignor to American Tractor Equipment Corporation, a corporation of California
Application September 16, 1936, Serial No. 101,113
5 Claims. (Cl. 37—126)

1. A scraper comprising a bowl, means for discharging dirt therefrom including a gate supported above said bowl and movable thereover to discharge dirt thereon, closure means for said bowl hinged above said bowl and movable from a bowl closing position to a raised position above the bowl, said closure means including arms adjacent each side of said bowl, means extending from said gate and engaging said arms only after opening movement of said closure means, and means for moving said gate including a pulley carried by said gate, a pulley supported above said gate and a cable extended between said pulleys.

2,107,121
FOUNDATION GARMENT
Waldemar Kops, New York, N. Y., assignor to Kops Brothers, Inc., New York, N. Y., a corporation of New York
Application October 29, 1936, Serial No. 108,128
4 Claims. (Cl. 2—27)

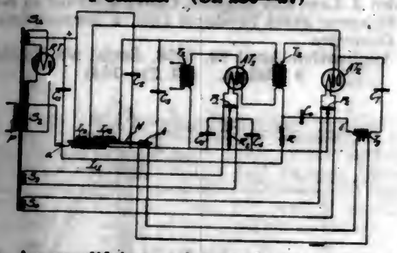


1. In a garment of the class described a body encircling member including a front section, an abdominal belt secured to said front section, said belt being of substantially uniform width throughout its length and comprising elastic material of progressively increasing elasticity in the direction of its length from top to bottom of the belt and being thereby arranged to produce a progressively increasing tension around the body from top to bottom of the belt, and means exerting an upward, yielding pull upon said belt adjacent its center.

2,107,122
COMPOSITION OF MATTER
Clemens A. Laise, Tenafly, N. J.
No Drawing. Original application September 10, 1934, Serial No. 743,460. Divided and this application October 22, 1936, Serial No. 107,016
6 Claims. (Cl. 75—136)

1. A hard metal composition consisting of a carburized alloy comprising tungsten, cobalt, chromium, thorium and iron substantially as follows: tungsten 80% to 90%, cobalt 2% to 13%, chromium and thorium .25% to 2.5%, iron .25% to 1.0%.

2,107,123
IMPLEMENT MOUNTING FOR ROAD WORKING MACHINES
John J. Low, Los Angeles, Calif., assignor to Kay-Brunner Steel Products Inc., a corporation of Delaware
Application April 20, 1936, Serial No. 75,381
9 Claims. (Cl. 37—144)



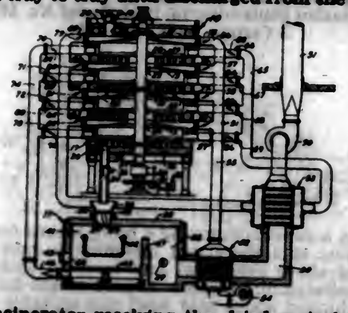
1. An implement mounting for road working machines, comprising; a pair of arms adapted at one of their ends to be pivotally supported on a road working machine at opposite sides thereof, and at their other ends to support an earth working implement thereon; and means so connecting the arms adjacent their forward ends as to allow movement of the arms relatively about an axis transversely of the arms.

2,107,124
ADJUSTABLE STAND
John Markert, New York, N. Y.
Application June 11, 1936, Serial No. 84,613
5 Claims. (Cl. 248—185)

1. In a stand the combination of a tube, a T shaped fitting comprising a longitudinal portion and a cross member, the upper end of the tube extending into said cross member, means to vary the extent of the entrance of the tube into said cross member, a supporting shaft rotatively supported in the longitudinal portion of the fitting, means coacting with the upper end of the tube to detachably clamp the supporting shaft and a table supported by said supporting shaft.

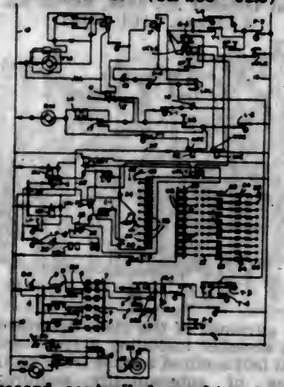
2,107,125
AMPLIFYING AND REPRODUCING SYSTEM
Benjamin F. Miessner, Short Hills, N. J., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y., a corporation of Delaware
Application January 25, 1929, Serial No. 334,870
Renewed June 4, 1935
4 Claims. (Cl. 250—27)

1. An amplifying and reproducing system including a plurality of multi-electrode electron discharge tubes having output circuits and a sound reproducer having a plural section field winding, a source of unidirectional pulsating current for energizing the output circuits of said tubes, and a filter circuit connected to the positive and negative terminals of said source interposed between said source and said output circuits, one section of said field winding being series connected in the negative line of said filter and another section being series connected in the positive line thereof, said sections being so connected that the fields resulting from the flow of filter current therethrough are additive, the last winding section having an intermediate tap connected to the anode of the last of said tubes, the anode of a preceding tube being connected to the negative side of said last section, and the positive side of the latter being connected through a condenser to the positive side of the first winding section.



2,107,126
CONVERTIBLE SINK STRAINER
Abram N. Pasman, Milford, Conn.
Application May 13, 1937, Serial No. 142,327
11 Claims. (Cl. 4—291)

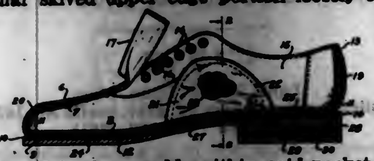
1. A strainer for a sink or the like consisting of a cylindrical cup-shaped body having a flat perforated bottom, a corrugated, perforated circumferential wall, and a handle attached to said bottom for the removal of said strainer from said sink, the perforations in said circumferential wall being located only in the depressed portions of said corrugations.



2,107,127
INCINERATION
William Raisch, New York, N. Y., assignor to Underpinning & Foundation Co., Inc., New York, N. Y., a corporation of New York
Application October 17, 1936, Serial No. 106,074
10 Claims. (Cl. 110—8)

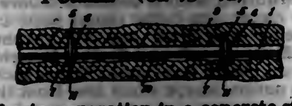
3. In combination, a multiple-hearth dryer divided into compartments by vertically spaced trays including a group of hollow trays, and means for passing preheated air through said hollow trays and then through said compartments wherein the air becomes laden with moisture and vapors of volatile material, said dryer including means for feeding said material downwardly from tray to tray until discharged from the dryer,

an incinerator receiving the dried material and the air laden with moisture and vapors to burn the combustible material and eliminate noxious odors, and a heat exchanger in which the hot gases heat the air passing from the hollow trays to the compartments.



2,107,128
PAPER FEEDING MECHANISM
Engelbert Reingruber, Vienna, Austria, assignor, by mesne assignments, to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application July 19, 1932, Serial No. 623,365
In Germany July 20, 1931
12 Claims. (Cl. 235—61.9)

1. A record controlled machine having total recording mechanism, mechanism for feeding a record strip adapted to receive entries from the recording mechanism, means controlled by the total recording mechanism for initiating operation of the feeding mechanism, and means controlled solely by a single designation in the record strip for interrupting operation of the feeding mechanism at a point determined by the location of said designation in the record strip.



2,107,129
SHOE STRUCTURE
Chester F. Rehn and Franklyn A. Rehn, Milwaukee, Wis.
Application October 4, 1935, Serial No. 43,546
1 Claim. (Cl. 36—71)

In a shoe, upper structure comprising outer leather and an inner lining loosely engaging the interior of said leather at the arch portion of the shoe, a pocket pad visible from within the shoe and being secured along its upper edge to the interior of said lining to form a substantially semicircular pocket at said arch portion, a relatively stiff bracing pad having a substantially semicircular skived upper edge portion loosely con-

fined and freely movable within said pocket between said lining and pad and having a lower substantially straight edge at the open end of said pocket, an insole having an inseam ridge, a welt, and common securing means for fastening said welt, said outer material, said lining, and said pocket to said inseam ridge.

2,107,130
MEANS FOR PREVENTING THE FORMATION OF CONTINUOUS VOIDS IN CONCRETE MASSES
Tamis C. Schenk, New York, N. Y., assignor to Richmond Screw Anchor Co., Inc., Brooklyn, N. Y., a corporation of New York
Application May 25, 1937, Serial No. 144,623
1 Claim. (Cl. 72—71)

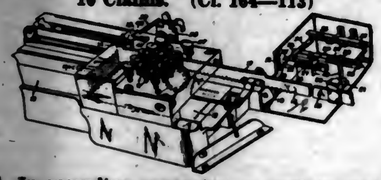
A rod for incorporation in a concrete structure, having a body portion of substantially uniform diameter extending from one side of the concrete structure to the other and provided with at least one disk tightly positioned on it and extending radially of it whereby said disk will be completely embedded in and surrounded by the concrete structure and will interrupt the formation of voids in concrete around the rod, which voids normally follow the body of the rod, and means for holding said disk in position on the rod comprising an annular raised rib integrally formed on the rod on each side of the disk whereby the disk is tightly gripped between said annular ribs and any space between the disk and rod is sealed and leakage between the disk and body of the rod is thereby prevented by said ribs.

2,107,131
RAILWAY TIE PLATE AND RETAINING CLIP
Frederick S. Schwinn, Houston, Tex.
Application August 24, 1935, Serial No. 37,739
2 Claims. (Cl. 238—249)

2. In combination, a tie plate formed on its top surface with a rail abutment shoulder and having a marginal portion slotted through the plate from the said shoulder to the adjacent edge of the plate and having a groove in the bottom surface of the plate which opens into said slot, and means for retaining the rail on said plate comprising a resilient rail retaining clip having a lower jaw adapted to be moved transversely of the rail in said slot and groove and provided with an upper jaw adapted to snap over the said shoulder of the plate to hold the clip member in its operative position.

2,107,132
CONDENSER CONSTRUCTION
Franklin S. Smith, New Haven, Conn.
Application November 25, 1931, Serial No. 577,395
Renewed November 16, 1936
43 Claims. (Cl. 175—41)

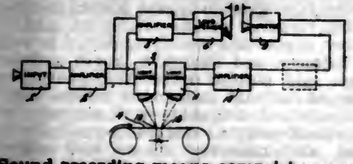
1. In condenser construction, in combination, a casing having a cover member, a rod supported by said cover member, a plurality of annular insulated condenser elements strung one after the other and lengthwise of and onto said rod, means for interfitting adjacent ends of said elements and for thereby holding them against displacement with respect to each other, means at the ends of said rod for engaging the end portions of the end elements of said plurality of condenser elements and for thereby holding them against displacement with respect to said rod, and means at the bottom of said container for holding the other end of said rod.



4. In condenser construction, in combination, a plurality of alined condenser units having opposed plate electrodes, each unit having an opening therethrough and connecting means exposed toward said opening for making electrical connection to the plate electrodes of the unit, a plurality of bus-bars insulated from each other and extending through the alined openings in said units, and said connecting means connecting plate electrodes of said units to said bus-bars.

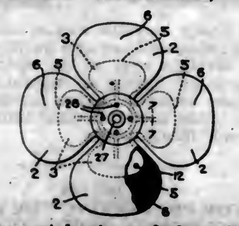
21. In condenser construction, in combination, a casing having a bottom member and a closure member opposite to said bottom member, insulating terminal means carried by said closure member, supporting means supported by said closure member and having a length sufficient to engage said bottom member, capacitor means supported by said supporting means and electrically connected to said terminal means, whereby, upon assembly of said closure member to said casing, said capacitor means and supporting means are carried into said casing, means mechanically interrelating said closure member to said casing, and means whereby the inner end of said supporting means is anchored by said bottom member.

2,107,133
PREPARATION OF SOY SAUCE
Walter O. Snelling, Allentown, Pa.
No Drawing. Application January 12, 1937, Serial No. 120,290
9 Claims. (Cl. 99—145)



1. In the preparation of soy souce, the process which comprises partially but not completely hydrolyzing a protein by an inorganic hydrolyzing agent in the absence of organic enzymes, neutralizing the resulting reaction product if desirable and thereafter completing the hydrolysis by the action of enzymes produced by the yellow-green Aspergilli *A. flavus-oryzae*.

2,107,134
CARD PUNCH FEED MECHANISM
Hermann Adalbert Weinlich, Berlin-Charlottenburg, and Ulrich Kölm, Berlin-Lankwitz, Germany, assignors to International Business Machines Corporation, New York, N. Y., a corporation of New York
Original application January 14, 1932, Serial No. 586,496, now Patent No. 1,954,232. Divided and this application November 15, 1933, Serial No. 698,098. In Germany February 13, 1931
10 Claims. (Cl. 164—113)

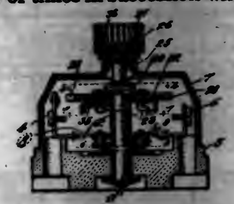


1. In recording apparatus, a carriage movable during recording operations, means for feeding said carriage; electrical means for rendering the feeding means operative, including a control circuit, and means for automatically controlling said circuit to feed the carriage predetermined extents, said automatic means including a support and two column stops each variably positionable along said support, one of the stops having the function of initiating carriage movement and the second stop of terminating carriage movement, and means engaged by first the initiating stop and subsequently engaged by the terminating stop for controlling said circuit whereby the first stop causes the electrical means to initiate carriage movement and the second stop causes the electric means to terminate such movement.

2,107,135
MEANS FOR NEUTRALIZING SOUND DISTORTION
Wesley Wilson, Chicago, Ill.
Application April 24, 1929, Serial No. 357,861
Renewed August 13, 1937
9 Claims. (Cl. 179—100.3)

1. Sound recording means comprising a sound recording circuit for making a permanent record corresponding to the sound waves energizing said circuit, a sound reproducing circuit energized by the output of said recording circuit, and a second sound recording circuit having distorting characteristics similar to the distorting characteristics of said first recording circuit energised by sound reproduced by said reproducing circuit for making a second permanent record on the same recording medium as used for the recording from said first recording circuit.

2,107,136
FAN
Louis Zaiger, Lynn, Mass.
Application September 25, 1937, Serial No. 165,729
6 Claims. (Cl. 230—261)



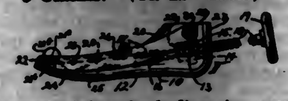
1. A fan element having a hub portion and a plurality of blades molded to shape from rubber, the dimension of each blade from the leading to the trailing edge being at least as great as the radial dimension thereof, and the hub portion and the inner radial end only of each blade being interiorly reinforced with a petaliform core member of sheet metal, the outer radial portion of each blade being free from any reinforcement and being sufficiently soft and flexible to yield when it engages an object and having the capacity to resume its normal shape when free from the object.

2,107,137
DEWAXING LUBRICATING OILS
Chester E. Adams and Frederick W. Sullivan, Jr., Hammond, Ind., and John A. Anderson, Chicago, Ill., assignors to Standard Oil Company, Chicago, Ill., a corporation of Indiana
No Drawing. Application November 1, 1933, Serial No. 696,242
13 Claims. (Cl. 196—19)

1. The process of dewaxing a wax-bearing mineral lubricating oil which comprises diluting the oil with a diluent mixture comprising substantial amounts of a wax antisolvent and a cracked petroleum naphtha, chilling the diluted oil to a low temperature, whereby the wax is caused to precipitate therefrom while the oil is retained in solution in the diluent mixture, separating the wax from the oil and diluent, and subsequently removing the diluent from the dewaxed oil.

2,107,138
ELECTRIC SWITCH
Lester F. Bird, Newark, N. J., assignor to Hanovia Chemical and Manufacturing Company, Newark, N. J., a corporation of New Jersey
Application June 28, 1937, Serial No. 150,696
5 Claims. (Cl. 200—1)

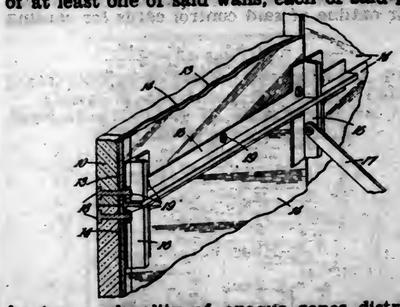
5. In a switch for starting vapor electric discharge devices, a base, a pair of terminals mounted on said base adapted to be connected to a source of power, a third terminal mounted on said base, a dial, means associated with the dial so that the rotation of the dial in one direction will close a circuit between said first pair of terminals, spring means resisting rotation of said dial in said direction, and means associated with said dial to open and close a circuit between said third terminal and one of said pair of terminals a plurality of times in succession when the spring



means rotate said dial in the reverse direction after the closing of the circuit between said first pair of terminals.

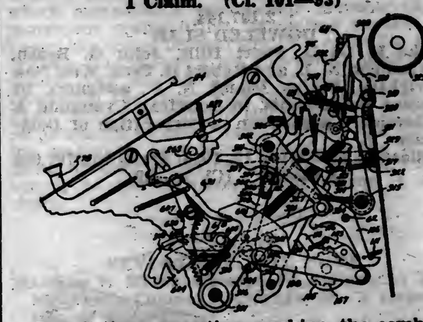
2,107,139
WASHING MACHINE
Glen G. Blandford, Grand Rapids, Mich.
Application January 10, 1936, Serial No. 58,442
4 Claims. (Cl. 259—101)

1. In a machine of the class described: a container element; a rigid supporting element therefor having downwardly tapering legs; an element for connecting the container element and the supporting element together connected to the container element and having parts bent over the legs respectively in tightly embracing relation therewith for permanently joining the supporting element and the connecting element together.



2,107,140
SHOE STRETCHER
Frank Cirelli, Philadelphia, Pa.
Application January 27, 1937, Serial No. 122,641
5 Claims. (Cl. 12—128.5)

1. A shoe stretcher including in combination a stretcher body, of two longitudinal halves held together at a point, at their rear ends and adapted to be spread in angular relation from said point, means for spreading said halves in angular relation, a downwardly and outwardly inclined upper face to each of said halves, a shell pivotally connected with the rear of said body near said point, and extending forward to lie loosely over said faces, cam edges at the sides of said shell, shaped and positioned to come in cam relation to said inclined upper faces, and as said halves are spread in angular relation to cause said shell to swing upward upon its pivoted end, near said point to lift the front portion of a shoe it may occupy.

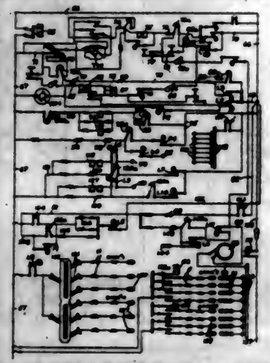


2,107,141
SQUASH-RACKET COURT AND THE LIKE
George Herbert Colt, London, England
Application November 25, 1936, Serial No. 112,627
In Great Britain December 2, 1935
7 Claims. (Cl. 189—1)

1. A games court comprising a plurality of upstanding walls, one of the surfaces of each of which serves as a playing surface, a plurality of transparent panels constituting at least a part of at least one of said walls, each of said panels

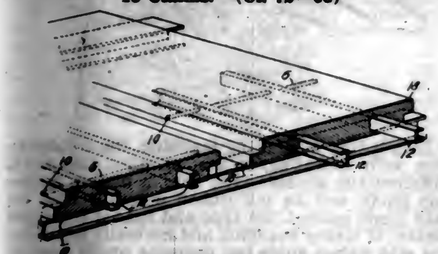
having a plurality of opaque zones distributed over its playing surface and a mesh screen disposed adjacent the other surface of the panels.

2,107,142
LISTING ADDING MACHINE
Loring Pickering Crosman, Maplewood, N. J., assignor to Gardner Company, Orange, N. J., a corporation of Delaware
Application January 23, 1937, Serial No. 122,002
1 Claim. (Cl. 101—93)



In a listing computing machine, the combination with operating means, printing hammers, differentially settable type bars, a platen, a ribbon guide, and an ink ribbon normally held by said guide against the type and spaced from the platen, of means engaging and normally restraining said ribbon guide but operable under control of the operating means to move the ribbon radially of and towards the platen, said operating means being timed first to control movement of the ribbon and thereafter to set the type bars and to cause operation of the hammers.

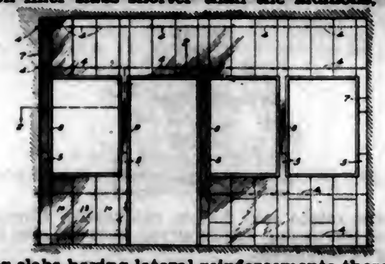
2,107,143
TABULATING MACHINE
George F. Daly, Johnson City, N. Y., assignor, by mesne assignments, to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application November 18, 1930, Serial No. 496,437
1 Claim. (Cl. 235—61.6)



In a record controlled accounting machine, means for feeding record cards, normal control cards, and special control cards, said control cards having an irregular outline, and said special control card having in addition a special perforation in a predetermined position, an accumulator, means controlled by the record cards for entering

amounts therein, total taking mechanism including normally ineffective resetting mechanism for said accumulator, means controlled by the irregular outline of said control cards for causing

an operation of said total taking mechanism, and further means rendered effective by the special perforation in said special control card for causing said resetting mechanism to operate during a total taking operation.

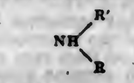


2,107,144
DOWELED SLAB
Clarke F. Davis, Short Hills, John G. Brush, Westfield, N. J., and Robert H. Peck, West New Brighton, Staten Island, N. Y., assignors, by mesne assignments, to American Cyanamid & Chemical Corporation, a corporation of Delaware
Application December 12, 1933, Serial No. 702,008
18 Claims. (Cl. 72—68)

1. A slab of set cementitious material having therein a dowel substantially coextensive with one dimension of the slab and at least partly bonded to the cementitious material, said dowel being readily removable from the slab without injury thereto with a structural element in the slab at right angles to the dowel.

2,107,145
DOWELED SLAB CONSTRUCTION
Clarke F. Davis, Short Hills, John G. Brush, Westfield, and Robert H. Peck, Elizabeth, N. J., assignors to American Cyanamid & Chemical Corporation, New York, N. Y., a corporation of Delaware
Application April 23, 1937, Serial No. 138,518
4 Claims. (Cl. 72—40)

1. A wall construction extending between the floor and ceiling comprising spaced apart mullions extending the full height of the wall, each mullion comprising a precast slab having longitudinal and lateral reinforcements therein, opening frames carried between mullions and resting upon filler slabs shorter than the mullions, the



filler slabs having lateral reinforcements therein, some of the lateral reinforcements of the mullions extending into the filler slabs and vice versa.

2,107,146
BURNING BRICK
Thomas B. Dreher, Pottsville, Pa.
No Drawing. Application February 24, 1937, Serial No. 127,402
8 Claims. (Cl. 25—157)

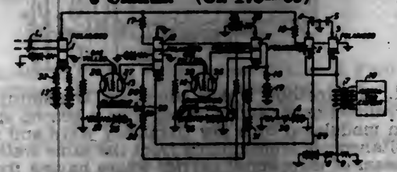
1. A method of the character described for producing black brick which comprises cooling brick in a kiln from the burning high temperature to about one-half the burning high temperature, subjecting the cooled brick to an extended period of smoking, and then cooling the smoked brick quickly.

2,107,147
GUM INHIBITORS FOR GASOLINE
Harold Walter Elley and Herbert W. Walker, Wilmington, Del., assignors, by mesne assignments, to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application August 22, 1929, Serial No. 387,737
15 Claims. (Cl. 44—9)

1. A motor fuel comprising cracked gasoline normally tending to form gum to which has been added, in an amount sufficient to inhibit the formation of gum therein, a substance from the group consisting of compounds of the type:

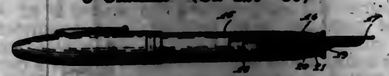
in which R represents a member of the class consisting of aryl, hydroxy aryl and alkoxy aryl groups and R' represents a member of the class consisting of hydroxy aryl and alkoxy aryl groups.

2,107,148
REFLECTOR ARC LAMP FOR THE PROJECTION OF COLORED PICTURES
Edgar Greteners, Berlin-Siemensstadt, Germany, assignor to Opticolor Aktiengesellschaft, Glarus, Switzerland, a Swiss corporation
Application February 6, 1936, Serial No. 62,592
In Germany February 1, 1935
1 Claim. (Cl. 176—118)



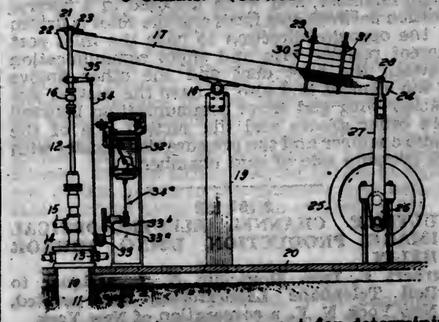
In an arc lamp comprising positive and negative electrodes, a magnetic coil surrounding the positive one of said electrodes and extending closely adjacent the point thereof, a sleeve closely surrounding said positive electrode adjacent said point, means rapidly cooling said sleeve, and

a metallic pot substantially enclosing said coil and having one wall disposed between the coil and



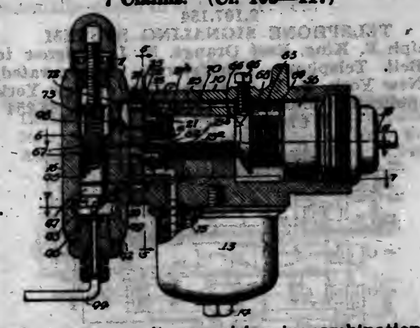
the electrode and another wall on the side of the coil away from the electrode.

2,107,149
SIGNAL DISTORTION INDICATING AND MEASURING DEVICE FOR PRINTING TELEGRAPH SYSTEMS
Richard B. Hoarn, Hollis, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application September 20, 1936, Serial No. 101,337
6 Claims. (Cl. 178—69)



1. A signal distortion indicator comprising a source of signaling impulses transmitted in combinations of the start-stop type, an electromagnetic relay responsive to the signaling impulses from said source, a plurality of other electromagnetic relays responsive to the first-mentioned relay, certain of said other electromagnetic relays being responsive to the first impulse only of a start-stop signal combination repeated by said first electromagnetic relay, a thermionic discharge device, a storing element for said thermionic discharge device controlled by said combination of signal impulses and arranged to operate said device once only while each of said combinations of signal impulses is being received, a second thermionic discharge device, a storing element for said second thermionic discharge device controlled by said combination of signaling impulses and arranged to operate said second device a number of times while each of said combinations is being received, circuit means for comparing the individual operating time intervals of said second device with the individual operating time intervals of certain others of said plurality of other electromagnetic relays, and registering means for indicating any difference in the compared corresponding operating time intervals.

2,107,150
FOUNTAIN PEN
William F. Heising, Fort Madison, Iowa, assignor to W. A. Sheaffer Pen Company, Fort Madison, Iowa, a corporation of Delaware
Application September 21, 1935, Serial No. 41,565
8 Claims. (Cl. 120—50)

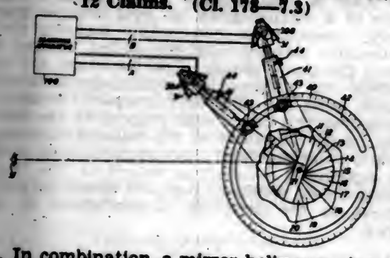


1. A feed bar for fountain pens comprising an elongated body having a plurality of longitudinally extending fissures over the peripheral surface thereof, said body having a plurality of reservoirs of a greater depth than said fissures and each of which intersects certain only of said fissures.

2,107,151
LOAD COMPENSATION IN OIL WELL PUMPS
George M. Higginson, Hawthorne, Calif.
Application October 17, 1934, Serial No. 748,626
9 Claims. (Cl. 234—29)

1. An apparatus arrangement for determining the state of load balance in the plunger stroke cycle of a reciprocating oil well plunger pump, which comprises a reciprocably movable chart, movement transmitting connecting means between the pump plunger and the chart for controlling the reciprocating movement thereof in unison with the plunger movement, means for tensioning the chart with respect to the movement imparting force of the plunger, a member reciprocating in equal time intervals, and means for making a continuous record of the movements of said member upon said chart and transversely to the direction of movement of said chart.

2,107,152
REVERSIBLE FUEL PUMP
Matthew W. Huber, Chicago, Ill., assignor to Tuthill Pump Company, Chicago, Ill., a corporation of Illinois
Application August 13, 1936, Serial No. 95,797
7 Claims. (Cl. 103—117)



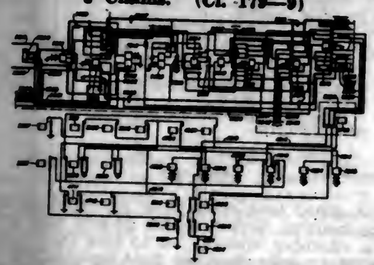
1. A pump unit comprising in combination, a pump housing having a face at one side and a pump chamber opening on to said face, means forming an inlet duct for fluid terminating adjacent to said face, a reversible rotor in the pump chamber, an element having a face positioned in spaced relation with said face of the pump housing and provided with a pair of grooves therein, and a plate between the two faces having a suc-

tion slot, a pressure slot and a fluid inlet port, and adapted when disposed in one position between said faces and the rotor is driven in one direction to have the inlet port thereof register with and effect communication between the inlet duct and one of the grooves in the element and also to have the suction slot register with and effect communication between said one groove and the suction side of the pump chamber and the pressure slot register with the pressure side of the pump chamber, and when disposed in a reverse position between said faces and the rotor is driven in the opposite direction to have the inlet port thereof register with and effect communication between the inlet duct and the other groove in the element and also to have the suction slot register with and effect communication between said other groove and the suction side of the pump chamber and the pressure slot register with the pressure side of said chamber.

2,107,153
MULTIPLE CHANNEL ELECTRO-OPTICAL IMAGE PRODUCTION USING MIRROR HELIX

Herbert E. Ives, Montclair, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application December 1, 1934, Serial No. 755,572
12 Claims. (Cl. 178—7.3)

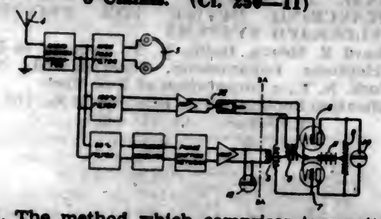


1. In combination, a mirror helix scanning device, a plurality of strip sources of light simultaneously energized by image currents, and means for positioning said helix and said sources for causing the production of a plurality of mutually superimposed complete images.

2,107,154
TELEPHONE SIGNALING SYSTEM

Ralph E. King, East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application March 11, 1936, Serial No. 68,254
6 Claims. (Cl. 179—9)

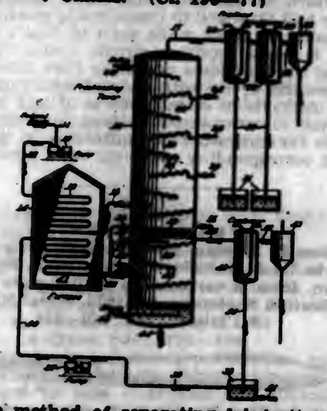


1. In a telephone system, a trunk circuit, means for establishing connections from a calling subscriber's line to a called subscriber's line, a plurality of relays associated with said trunk circuit, means responsive to the operation of one or more of said relays in the successful establishment of a connection to signal the called subscriber's line, an additional relay, and means responsive to the operation of one or more of said plurality of relays in combination with said additional relay, in accordance with different causes of failure to successfully establish a connection to give a discriminating indication to the calling subscriber's line of the cause of said failure.

2,107,155
RADIO DIRECTIONAL INDICATOR

James D. Kleinkauf, East Orange, and De Loss K. Martin, West Orange, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application July 27, 1935, Serial No. 33,458
8 Claims. (Cl. 250—11)



1. The method which comprises transmitting non-directional carrier waves from a beacon station modulated by a low frequency wave and simultaneously transmitting from the same station a beam of directional carrier waves having fixed directivity in such direction as to emit substantially no energy of the directional waves along a definite course and directional energies of opposite phases on opposite sides of the course and deriving an indication of the relative position of a point in space with respect to the beacon station solely by interaction at the point, of the low frequency modulation component of the non-directional received waves with energy of the beam of directional waves received at the point.

2,107,156
MINERAL OIL DISTILLATION

Wayne E. Kuhn and Lebbeus C. Kemp, Jr., Port Arthur, Tex., assignors to The Texas Company, New York, N. Y., a corporation of Delaware

Application May 28, 1934, Serial No. 727,970
7 Claims. (Cl. 196—77)

1. The method of separating lubricating oils and asphalt from a topped crude oil in a continuous process, which comprises heating the topped crude oil to a distillation temperature while avoiding any substantial decomposition thereof and passing the oil into a fractionating zone, fractionating the oil therein while maintaining a substantial dry vacuum to produce distillate lubricating oil fractions and a heavy unvaporized fraction, withdrawing the latter, separately heating a lighter more refractory oil to a temperature materially above the temperature of the withdrawn unvaporized fraction, simultaneously flashing the withdrawn unvaporized fraction and the lighter more refractory oil into a separate vacuum fractionating zone in such manner that additional heat is imparted from the lighter more refractory oil to the heavy fraction to thereby raise the temperature of the heavy fraction to a distillation temperature, but for such a relatively short period of time that any substantial decomposition thereof is prevented, fractionating the mixture therein, while introducing steam into the separate fractionating zone to assist in the distillation therein to obtain a heavy distillate lubricating fraction, and removing an asphalt as residuum from the separate fractionating zone.

2,107,157
EXPLOSIVE

Harold A. Lewis, Wilmington, Del., and Fred R. Wilson, Bloomfield, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application January 22, 1936, Serial No. 60,260
8 Claims. (Cl. 52—14)

1. An ammonium nitrate explosive charge adapted for use in coal mining, and having a low velocity and a low rate of pressure development, said explosive comprising more than 65% ammonium nitrate of a degree of fineness such that substantially the greater part thereof will be held on a 24-mesh screen and substantially all thereof will be held on a 35-mesh screen, said explosive being cartridged in a diameter not less than 1½", whereby a substantially complete utilization of the explosive strength of the ammonium nitrate is assured.

2,107,158
TELEPHONE SYSTEM

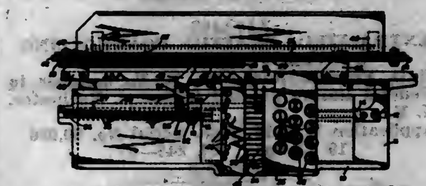
Herbert A. Lewis, Bayside, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application February 26, 1937, Serial No. 127,908
8 Claims. (Cl. 179—27)

1. In a system comprising cross-bar switches, subscribers' lines, holding bars, selecting bars, links, means for establishing a connection between a calling subscriber's line and a called subscriber's line over a link through a switch responsive to the automatic selection of two selecting bars and the manual operation of two holding bars, and manually operative means for identifying the two manually operated holding bars for the restoration thereof to normal to release said established connection.

2,107,159
IMPROVED COLORING MATERIAL

Thomas A. Martone, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware



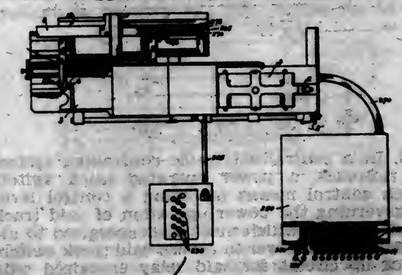
No Drawing. Application November 30, 1934, Serial No. 755,415
10 Claims. (Cl. 134—58)

1. A process for producing an improved water-insoluble pigment which comprises admixing aqueous solutions of two compounds which react without an oxidation step to form said pigment, one of said solutions containing a water-soluble sulfate of an acetylated, unsaturated, normal, primary alcohol having twelve to eighteen carbon atoms in the molecule and both of said solutions being free from emulsified oils.

2,107,160
PERFORATING MACHINE

Derk J. Oldenboom, Endicott, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York

Application January 16, 1935, Serial No. 1,991
4 Claims. (Cl. 164—112)

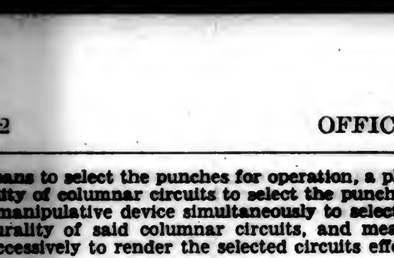


1. In a perforating machine, a base, a punch support mounted on said base, a series of punches mounted in said support, means for operating said punches, a card carrier slidable along said base to carry a card to the punches, manual means for freely sliding said card carrier back and forth and a device for inhibiting operation of the punches while the card carrier is being manually moved in either direction.

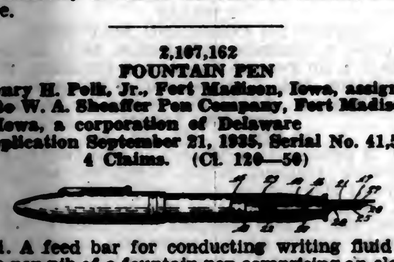
2,107,161
PUNCH

Ralph E. Page, Binghamton, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York

Application May 9, 1936, Serial No. 78,748
14 Claims. (Cl. 164—113)



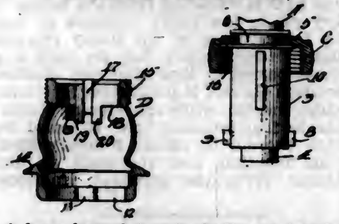
1. In a card perforating machine, the combination of a plurality of punches, key operated



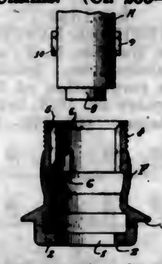
means to select the punches for operation, a plurality of columnar circuits to select the punches, a manipulative device simultaneously to select a plurality of said columnar circuits, and means successively to render the selected circuits effective.

2,107,162
FOUNTAIN PEN
Henry H. Polk, Jr., Fort Madison, Iowa, assignor to W. A. Sheaffer Pen Company, Fort Madison, Iowa, a corporation of Delaware
Application September 21, 1935, Serial No. 41,548
4 Claims. (Cl. 120—50)

1. A feed bar for conducting writing fluid to the pen nib of a fountain pen comprising an elongated housing having intercommunicating enlarged and reduced bores extending over a major portion of the length thereof, the reduced bore communicating with a slot adjacent the underneath surface of the pen nib, and spaced cylindrical inserts fitting within said bores to provide a reservoir therebetween, one of said inserts having a plurality of longitudinally extending fissures at the peripheral surface thereof opposite to and communicating with said slot.



2,107,163
CENTRALIZED TRAFFIC CONTROLLING SYSTEM FOR RAILROADS
Neil D. Preston, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y.
Application May 16, 1936, Serial No. 80,096
19 Claims. (Cl. 246—3)



18. In a centralized traffic controlling system for railroads, a power operated track switch, switch control means including a control lever for governing the power operation of said track switch, a relay which must be deenergized to allow said control lever to govern said track switch, a pick-up circuit for said relay energized only when said track switch is in correspondence with said switch control means and only when said lever is capable of controlling said track switch, and stick circuit means for said relay deenergized by movement of said lever.

2,107,164
TAP CONSTRUCTION
Frank E. Rice, Detroit, Mich., assignor to American Tap-Bush Company, Detroit, Mich., a corporation of Delaware
Application February 28, 1936, Serial No. 66,216
Renewed June 5, 1937
6 Claims. (Cl. 285—40)

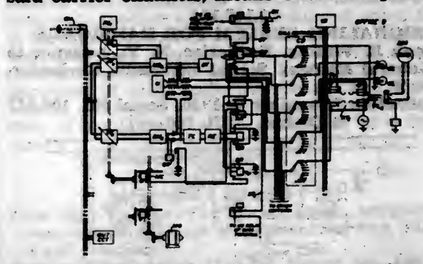
5. A beer barrel tap including a tap body, an attaching sleeve adapted to engage a tap bush, a threaded ring for connecting said sleeve to said body, said body having an axially extending lug and said sleeve having an internally formed axially extending recess to engage said lug to prevent relative rotation of the sleeve and body during application of the tap to a bush, said body having another lug angularly and axially spaced from said first lug engageable by said recess for application and removal of the sleeve to said body and positioned to prevent separation of the sleeve from the body when said sleeve is disconnected and dropped free of engagement with said ring.

2,107,165
TAP CONSTRUCTION
Frank E. Rice, Detroit, Mich., assignor to American Tap Bush Company, Detroit, Mich., a corporation of Delaware
Application April 9, 1936, Serial No. 73,395
5 Claims. (Cl. 285—40)

1. In a tap construction including a pair of telescopable and separable clamp members provided with opposed means adapted to clamp a member interposable therebetween, and a member rotatably engaging one of said pair of members and threadedly engaging the other of said pair of members arranged rotatable to produce relative axial movement of said pair of members to advance them to clamping position in one direction of movement and to retract them to clamp release position in the other direction of movement to provide for separation of said pair of members in the latter position, cooperable locking means formed on said pair of members to retain them in assembled relation for removal from the clamped member as a unitary assembly when said rotatable member has been turned to retract said pair of members to clamp release position, said pair of members being relatively rotatable to unlocked position only while in the advanced position.

2,107,166
ART OF PACKING MEAT PRODUCTS
Herbert Ramsey, Jr., Nutley, N. J.
Application November 23, 1935, Serial No. 51,093
1 Claim. (Cl. 99—174)

The method of molding and smoking irregular pork butts or similar pieces of meat which consists in providing a tubular flexible elastic porous casing, placing separate butts in said casing at intervals longitudinally of the casing, securing one end of the casing in a fixed position, twisting said casing between each butt while exerting sufficient pressure on the butts for uniformly compressing the butts into a compact smooth and shapely mass, retaining the twisted portions of the casing against unwinding to maintain the compression on said butts, subjecting the encased and compressed butts to a smoking treatment for solidifying the compressed butts and for further contracting the casing.



2,107,167
BOTTLE CLOSURE
Milton Sierad, New York, N. Y., assignor to George W. Button Corporation, New York, N. Y., a corporation of New York
Application April 20, 1934, Serial No. 721,527
3 Claims. (Cl. 221—148)

1. An elastic stopper element adapted to be located in the opening of the neck of a bottle, having a flange integral with the material of said element to substantially cover the top surface of the neck of the bottle, said element having a bore, in which the wall converges evenly downward throughout the length of the stopper to form a substantially straight surface for dropping the liquid from the bottle.

2,107,168
CARRIER COMMUNICATING SYSTEM
Warren H. Tidd, White Plains, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application February 12, 1936, Serial No. 63,510
11 Claims. (Cl. 179—15)

10. In a carrier communicating system provided with a number of carrier frequency communicating channels, the combination with a common medium of means for temporarily modulating any one of said carrier frequencies with any one of a plurality of calling frequencies, an incoming terminal connected to said medium comprising a filter variable to pass each of said carrier frequencies, a demodulator responsive to each of said carrier frequencies, a relay bridged across said demodulator and responsive upon the demodulation of any one of said carrier frequencies, a filter bridged across said demodulator and tuned to be responsive to a particular one of said calling frequencies, a second relay responsive to the passage of said calling frequency through said tuned filter, means for continuously varying said variable filter to scan all of said carrier channels, means effective upon the

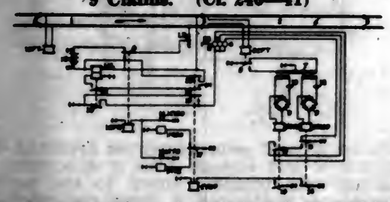
operation of said second relay for arresting the variation of said variable filter in a position to maintain said terminal tuned to the carrier frequency so modulated, a signal controlled by said second relay for indicating an incoming call, and means controlled by said first relay for maintaining said signal operated following the withdrawal of said calling frequency.

2,107,169
STAPLING MACHINE CORE
William F. Weber, Chicago, Ill.
Application August 27, 1934, Serial No. 741,658
2 Claims. (Cl. 1—3)

1. A beam magazine for a stapling device comprising a member for limiting the outward displacement of staples, a core of laminated strips for supporting and guiding such staples and over which the legs of the staples extend, the topmost of said strips having an offset section, and core fastening means in said offset section.

2,107,170
CASING MACHINE
Charles H. Wild, Baltimore, Md., assignor to Burt Machine Company, Incorporated, Baltimore, Md., a corporation of Maryland
Application January 14, 1936, Serial No. 59,026
20 Claims. (Cl. 226—15)

1. In a casing machine provided with a can-holding rack adapted to receive and hold a plurality of cans for ejecting into a case, an ejector mounted for reciprocal movement in the rack for ejecting the cans therefrom into a case, means



arranged and adapted to control the movement of the ejector and the rack for giving said ejector and said rack a relative movement whereby a row of cans in said rack is moved with the rack upon a return movement and ejected from said rack by the forward movement of said ejector.

2,107,171

SIGNALING SYSTEM FOR RAILROADS

Joseph E. Willing, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y.

Application November 6, 1936, Serial No. 109,517
9 Claims. (Cl. 246—41)

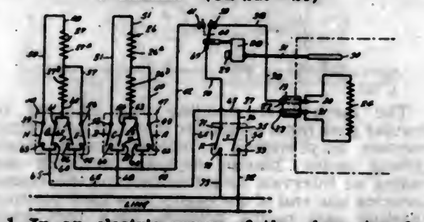
1. An approach control system for coded track circuits comprising; in combination with a plurality of track sections each having a signal; a source of current and a coding device for controlling the supply of current to the track rails of the corresponding section from said source to conform with distinctive codes each comprising a plurality of current impulses, a series relay for each track section included in series with its source of current and effectively energized by the increase in the current above that normally supplied to the track rails caused by the presence of a train; said relay when effectively energized automatically initiating operation of the signal next in advance; and a stick circuit for each of said relays controlled by traffic in advance thereof for maintaining said relay energized while said source of current is, between code impulses, temporarily disconnected from the track rails.

2,107,172

VARIABLE INDUCTANCE RADIO FREQUENCY COIL

Alfred Agricola, Berlin-Neutempelhof, Germany, assignor to Allgemeine Elektricitats Gesellschaft, Berlin-Tempelhof, Germany

Application June 5, 1935, Serial No. 25,022
In Germany June 23, 1934
4 Claims. (Cl. 171—242)



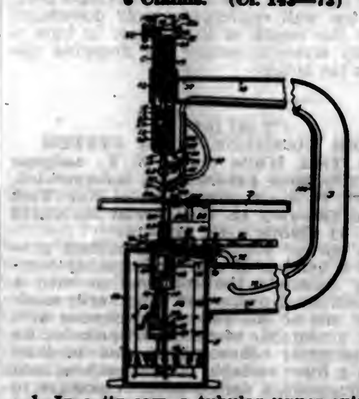
1. An inductance coil provided with a combination core and enclosure composed of compressed powdered magnetic material, said combination core and enclosure comprising a pair of substantially circular shell halves both of said shell halves having formed thereon centrally located hubs, the hub of one of said shell halves being provided with a recess for receiving the hub of the other shell half, said coil being wound around the outer periphery of one of said hubs, said recess and cooperating hub being eccentrically positioned with respect to the outer rims of the shell halves whereby the inductance of the coil may be varied by rotating one of the halves of the shell with respect to the other thereof.

2,107,173

ELECTRIC RANGE AND CONTROL SYSTEM THEREFOR

William Bauer, Mansfield, Ohio, assignor to The Tappan Stove Company, Mansfield, Ohio, a corporation of Ohio

Application February 19, 1937, Serial No. 126,684
3 Claims. (Cl. 219—20)



1. In an electric range of the character described, the combination of an enclosed burner and an exposed burner, an adjustable thermostat associated with and responsive to heat generated by the enclosed burner and unaffected by the operation of the exposed burner, a feed line connected with said thermostat and having branches therebeyond connected respectively with the exposed burner and the enclosed burner, said thermostat being operable to prevent simultaneous supply of current to both burners and serving to maintain the enclosed burner in operation until a predetermined temperature is reached and then to automatically deenergize the enclosed burner and to energize the exposed burner until the temperature adjacent the enclosed burner falls below a predetermined point and then to automatically deenergize the exposed burner and to energize the enclosed burner, said exposed burner being operable only when the temperature adjacent the enclosed burner is above a predetermined point at which the thermostat is set.

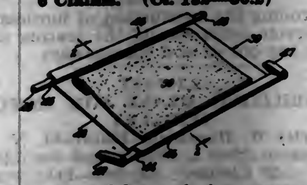
2,107,174

JIGSAW

John E. Beice, Toledo, Ohio

Application January 17, 1934, Serial No. 706,948
6 Claims. (Cl. 142—73)

1. In a jig saw, a tubular upper spindle head, provided with diametrically opposed lineal slots,



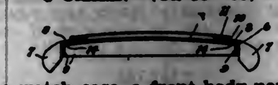
a spindle slidable axially in the lower end of said head, a spring contained within said head and attached at its lower end to the upper end of said spindle, and means connecting the upper end of said spring to the head, comprising a stud extending transversely through said slots and through said head, a head on one end of said stud, engaging one side of said spindle head, and a nut threaded on the other end of said stud and engaging the other side of said spindle head, the spring being hooked over said stud.

2,107,175

HAIR WAVING WRAPPER PAD

Piaton Constantine, New York, N. Y.

Application September 1, 1936, Serial No. 98,895
6 Claims. (Cl. 132—36.2)



1. A wrapper pad for enclosing a wound strand of hair during a permanent hair waving process comprising a flexible rectangular shape wrapper body, an absorbent pad secured to said wrapper body for infolding therein, parallel side rails along opposite sides of said wrapper body and projecting from opposite ends thereof, and means for securing the projecting ends of the side rails together when the wrapper body is rolled into tubular formation around a wound strand of hair to be waved.

2,107,176

WATCHCASE

Julius Dinhofer, New York, N. Y.

Application April 15, 1937, Serial No. 136,961
3 Claims. (Cl. 58—88)

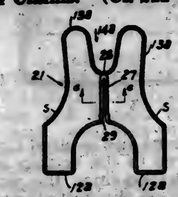
3. In a watch case, a front body portion, having a side wall and a top flange, the top flange defining an aperture, a bezel fitting said aperture and having a lateral flange abutting against the back of the body portion about the aperture, said flange engaging the side wall on the body portion with a snap fit to hold the bezel in position.

2,107,177

STRANDED CONDUCTOR

Homer W. Dudley, East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application November 1, 1934, Serial No. 750,926
1 Claim. (Cl. 173—13)



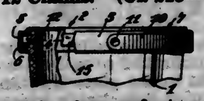
A high frequency transmission system including a stranded conductor carrying currents of superaudible frequency, said conductor comprising a multiplicity of reentrantly stranded filamentary wires, some of said wires being insulated and others uninsulated and corrosion-proof, and means binding said conductor to insure good electrical contact between said uninsulated wires at such points as they come in contact with each other, whereby there is leakage of current from each of said uninsulated wires at a point of contact with another of said uninsulated wires that is further removed from the center of the conductor at that point, the average current density in said conductor decreasing gradually from the periphery of said conductor inwards and the effective resistance of said conductor being less than it would be if all of said wires were insulated.

2,107,178

HAT STAND

Ceta May Fackler, San Diego, Calif., assignor of one-half to William O. Weisketten, San Diego, Calif.

Application October 15, 1936, Serial No. 105,699
4 Claims. (Cl. 211—33)



1. A stand consisting of two interlocked wire forms, each of said forms having at each end a recess at its mid-width, one of said recesses of each form being located at the top of the assembled stand and the other said recess being located at the bottom of the assembled stand, each of said forms being furnished along its mid-width with a slot open at one end, one of said slots being directed upwardly and fitting over the intact mid-width portion of the one form, and the other of said slots being directed downwardly and fitting over the intact mid-width portion of the other form.

2,107,179

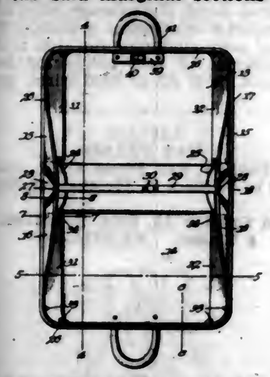
CLOSURE CAP

John C. Gibbs, Brooklyn, N. Y., assignor to Anchor Cap & Closure Corporation, Long Island City, N. Y., a corporation of New York

Application June 22, 1935, Serial No. 27,860
12 Claims. (Cl. 215—46)

1. As an article of manufacture, a closure cap comprising a disc member having a depending skirt provided at its lower edge with an inturned flange, a gasket beneath said flange, and a band member extending about said disc and gasket having an inwardly extending flange at its lower edge extending beneath said gasket.

2,107,180



HAND LUGGAGE

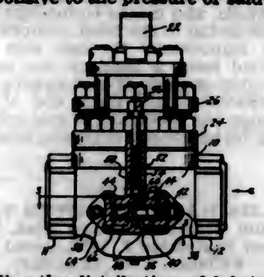
Harry D. Gihon, 3rd, Trenton, N. J.

Application January 25, 1936, Serial No. 60,857
1 Claim. (Cl. 190—48)

A luggage bag comprising a main body consisting of hingedly interjoined main side and bottom selections adapted when the bag is opened to

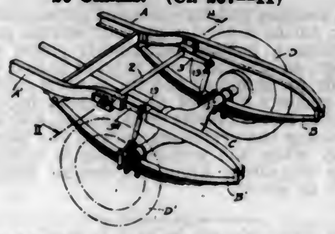
extend in a common plane, but wherein said side sections are folded relative to said bottom section and toward one another to close the bag, frame means for stiffening said side and bottom sections, said main side and bottom sections having flexible marginal sections extending from the said main sections to form top and end walls of the bag when closed, said marginal sections having hookless fastener means along the entire length of the exposed edges of the same to close the bag, the said marginal sections extending

from the side sections and secured along the edges thereof and secured to the bottom section along substantially V shaped lines, the walls of the V meeting the edges of the bottom section at the fold line, handles secured to the bag substantially at the upper outside end of the said main side sections and hanger means secured to the bag substantially at the upper inside end of one of said side main sections, whereby clothes on the hanger means may extend down one main section, across the bottom section and up the other main section.



2,107,181
DENTURE
William R. A. Guyton, Pittsburgh, Pa.
Application April 4, 1935, Serial No. 14,652
5 Claims. (Cl. 32—2)

1. In reenforcing means for artificial denture plates, the combination of a bar to be permanently embedded in the plate, and anchor members arranged to be detachably connected to the bar and having their ends adapted to be partially embedded in the mold material to properly position the bar in the mold cavity while the plate is being formed therein.



2,107,182
VALVE
Albert J. Henderson, Hempfield Township, Westmoreland County, Pa., assignor to Walworth Patents Inc., Boston, Mass., a corporation of Massachusetts
Application September 11, 1935, Serial No. 40,064
10 Claims. (Cl. 251—93)

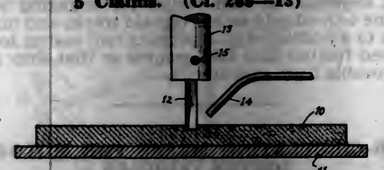
1. In combination, a lubricated valve comprising a body member having passageways for line fluid and a valve seat, a valve member adapted to engage said seat, a lubricant reservoir, and means responsive to the pressure of said line fluid

for controlling the distribution of lubricant from said reservoir selectively to the seating surfaces adjacent any one of said passageways.

2,107,183
STABILIZING MEANS FOR MOTOR VEHICLES
Charles B. Huntsman, Plainfield, N. J.
Application May 1, 1934, Serial No. 723,302
26 Claims. (Cl. 267—11)

1. In a motor car having a sprung mass and an unsprung mass, stabilizing means interconnecting said two masses, comprising a bar-member journaled at one of said masses having an arm at each end extending laterally thereof, a link attached to the end of each arm and to the other mass, the joint at one end of each link adapted for articulation in a plurality of axes.

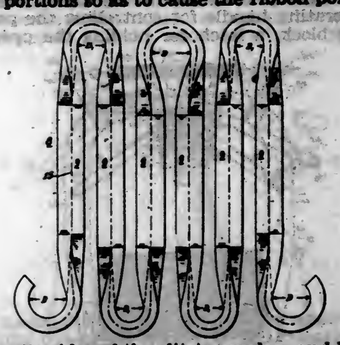
2,107,184
BOWDEN WIRE
William W. Lasker, Brooklyn, N. Y., assignor to Remington Rand Inc., Buffalo, N. Y., a corporation of Delaware
Application December 13, 1934, Serial No. 757,251
5 Claims. (Cl. 74—501)



1. In a device of the character described, a group of Bowden wires, a single Bowden wire, and a connecting member for operating said group of wires by said single wire, said member comprising a casing containing a piston having a plurality of plungers operatively associated therewith.

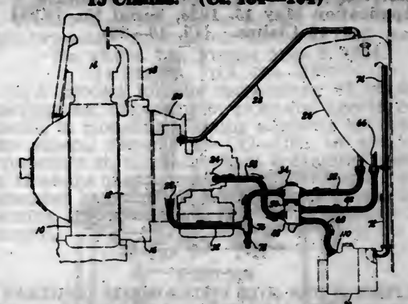
2,107,185
WATER COOLER FOR FURNACES
Lawrence R. McAfoos, Pittsburgh, Pa., assignor to Reliance Steel Products Company, Rankin, Pa., a corporation of Pennsylvania
Application April 14, 1937, Serial No. 136,801
4 Claims. (Cl. 122—499)

1. In a hollow water-cooled furnace door frame and skew-back channel cooler, a body portion forming the top of the frame, legs forming the sides of the frame, a hollow horizontal offset adapted to project into the furnace chamber beneath the skew-back channel and forming a lintel, the lintel comprising a separate structure spaced apart from the frame and connected at its ends to the frame, and connections for causing flow of water through the lintel and then through the frame.



2,107,186
METHOD OF TESTING AND CLASSIFYING BONDED GRANULAR BODIES
Romie L. Melton, Niagara Falls, N. Y., assignor, by mesne assignments, to The Carborundum Company, Niagara Falls, N. Y., a corporation of Delaware
Application December 11, 1930, Serial No. 501,536
5 Claims. (Cl. 265—13)

3. The method of determining the "grade" of a bonded abrasive article, which comprises subjecting a localized area of the article to a predetermined number of impacts of predetermined magnitude of an impact cutting tool which breaks away abrasive particles and bond in the form of detritus and relieving the cutting tool of the cushioning action of such detritus, and thereafter measuring the depth of the hole so produced.

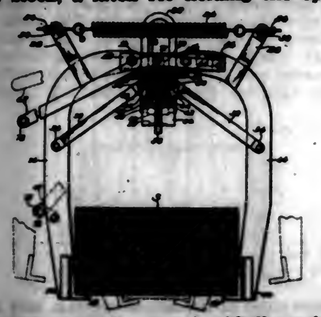


2,107,187
METHOD OF MAKING GRID RESISTORS
Otho M. Otte, Tarentum, Pa., assignor to Allegheny Steel Company, a corporation of Pennsylvania
Application March 20, 1935, Serial No. 12,011
6 Claims. (Cl. 29—155.5)

1. Method of making resistor grids of the return bend loop type from strip material which consists in slitting the strip lengthwise at predetermined points in the length thereof to form narrow ribbon portions, deforming strip at the slitted portions so as to cause the ribbon portions

on opposite sides of the slit to overlap, and bending the strip edgewise at the overlapped portions so as to form the return bend loops of the grid.

2,107,188
TEMPERATURE CONTROL MEANS FOR MACHINE LUBRICATING SYSTEMS
Earle A. Ryder and Wright A. Parkins, West Hartford, Conn., assignors to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application August 15, 1935, Serial No. 36,318
15 Claims. (Cl. 184—104)



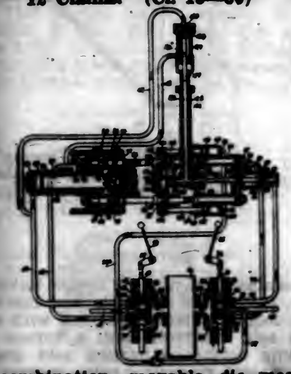
1. In combination with an engine having a lubricating system, a reservoir for lubricant, a lubricant cooling device connected with said engine and said reservoir, and a bypass around said cooling device connecting said engine directly with said reservoir, valve means responsive to the temperature of lubricant in said reservoir disposed between said engine and said cooling means to direct said lubricant through said cooling means or through said bypass.

2,107,189
SHEET CARRIER
Hans H. Schmid, Mars, Pa., assignor to United Engineering & Foundry Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application March 4, 1936, Serial No. 67,664
15 Claims. (Cl. 294—116)

1. A carrier for metal sheets or the like comprising a frame member, a pair of arms pivotally secured thereto adjacent each end, sheet engaging jaws connecting the arms on each side of the frame member, means counterbalancing the weight of the arms, and a combined cam

and toggle mechanism for controlling the position of the jaws, said mechanism including a block slidably mounted in the frame member, an operating handle for controlling the position of the block, a latch for holding the operating

handle in one position, a pair of bell crank means pivotally mounted on the block, toggle links pivotally connecting the arms to one side of each of the bell crank means, and a cam plate on the frame member, with the other side of each of the bell crank means engaging with the cam plate.



2,107,190

PLASTIC EXTRUSION MOLDING PRESS

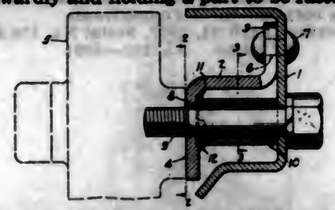
Victor S. Shaw, Cardington, Ohio, assignor to The Hydraulic Press Corporation, Inc., Wilmington, Del., a corporation of Delaware

Application May 15, 1936, Serial No. 79,954

12 Claims. (Cl. 18—30)

1. In combination, movable die means, devices for moving said die means into a closed position, an injector adapted to inject molding material into said die means, and mechanism automatically responsive to and synchronized with the operation of said injector for measuring out and distributing measured charges of molding material to said injector.

2,107,191



AUTOMOBILE FRAME ADJUNCT

Donald W. Sherman, Shorewood, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a corporation of New York

Application October 30, 1936, Serial No. 108,223

4 Claims. (Cl. 296—106)

1. In an automobile frame having a channel shaped bar, an attachment comprising a sheet metal member having a horizontal body connecting two flanges, one flange extending upwardly and being attached to the vertical web of the channel bar, and the other flange extending downwardly and holding a part to be fastened to

the frame, said last named flange being parallel to and spaced from the vertical web of the channel bar, and means extending between said last named flange and the vertical web of the channel bar for bracing the former against the latter.

2,107,192

DOUBLE SLIDE WINDOW

Julius Takach, Flushing Heights, Long Island, N. Y.

Application January 11, 1937, Serial No. 119,979

4 Claims. (Cl. 20—53)

1. A double slide window comprising a vertical window frame, sash tracks on the top side of the bottom arm of said frame, sashes slidable on said tracks and in grooves in the top arm of said frame, and elements on said sashes for engaging said frame to hold said sashes on said tracks and movable to a position which permits said sashes to be moved further into said grooves so that they are removable from said tracks.

2,107,193

AIR-CIRCULATING MEANS FOR MOTOR-DRIVEN VEHICLES

Douglas Cruttenden Woodhams, London, England

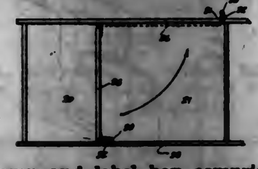
Application September 22, 1936, Serial No. 101,992

In Great Britain October 3, 1935

3 Claims. (Cl. 98—2)

3. A motor-driven vehicle having a ventilating aperture in its roof, and air-circulating means comprising an air-deflector having the form of a horizontal channel that opens in the direction of travel of the vehicle, and has its upper side constituting a blade arranged to lie above the roof so as to direct air through the aperture when the vehicle is traveling forwards, which deflector constitutes a trough and two tubes, one at each

end, constitute trunnions serving for pivotally mounting the deflector on the vehicle and for placing the trough into open communication with the outside of the vehicle.



2,107,194

STAMP AND LABEL BOX

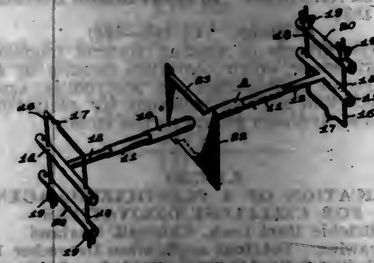
Jacob Yacker and Walter S. Kirsch, Brooklyn, N. Y.

Application March 28, 1936, Serial No. 71,394

2 Claims. (Cl. 217—7)

1. A stamp and label box comprising a box body provided therein with a fixed partition wall dividing the interior of the box body into a plurality of compartments and having therein a slot, at least one hinged wall having at one of its ends a spring hinge mounted on the fixed partition wall and serving to normally maintain the hinged wall in a position to subdivide one of the compartments in the box body into two smaller compartments, but being retractable against the tension of the spring hinge to merge said smaller compartments, and a spring clasp on the hinged wall adapted to enter into the slot of the fixed partition to hold the hinged wall in retracted position when the clasp is engaged with the slot.

2,107,195



SKI CLAMPING DEVICE

Léandre Asbert, St. Adèle, Quebec, Canada

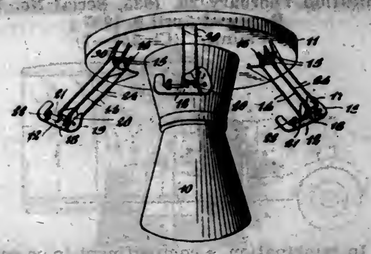
Application June 12, 1936, Serial No. 84,972

In Canada June 12, 1935

3 Claims. (Cl. 280—11.37)

3. A ski clamping device comprising a body member, end members telescopically associated with the body, a cross member secured at the outer end of each end member, a yoke bracket slidable transversely in each of the cross members, a cross bar slidable in the arms of the yoke, bracket tightening means on the outer ends of the yoke arms, and a spacing member secured on the intermediate portion of the body at right angles to the longitudinal axis thereof and parallel with the longitudinal axis of the cross members and bars.

2,107,196



AMUSEMENT APPARATUS

John N. Bartlett, Tonawanda, N. Y.

Application December 15, 1934, Serial No. 757,687

6 Claims. (Cl. 272—41)

1. An amusement apparatus, comprising a revolvable overhead support, a passenger-carrying device suspended therefrom to revolve therewith and including a laterally swinging hanger, passenger-controlled, flexible guy means connecting the opposite sides of said carrying device with said support, whereby upon exerting a pull on

such means the carrying device is correspondingly swung out of its normal path of travel, and means connecting said hanger with the overhead support for limiting the swinging of said carrying device.

2,107,197

PROCESS FOR THE PREPARATION OF WETTING, EMULSIFYING, DISPERSING OR CLEANSING AGENTS AND PRODUCTS OBTAINED BY THIS PROCESS

André Butignot, Creil, France, assignor to Compagnie Nationale de Matieres Colorantes et Manufactures de Produits Chimiques du Nord Réunies, Etablissements Kuhlmann, Paris, France, a corporation of France

No Drawing. Application April 24, 1935, Serial No. 18,978. In France May 3, 1934

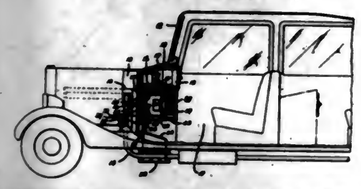
14 Claims. (Cl. 260—127)

7. A process for the preparation of wetting, emulsifying, dispersing or cleansing agents, consisting in monohalogenating aliphatic ketones of the general formula R—CO—CH_3, in which R represents an aliphatic chain containing from 6 to 18 atoms of carbon and in condensing the halogenated ketones thus obtained with agents containing a solubilising group and a reactive hydrogen.

2,107,198

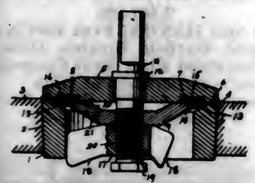
FEEDING MECHANISM FOR ROCK DRILLS

Albert Feucht, Garfield Heights, Ohio, assignor to The Cleveland Rock Drill Company, Cleveland, Ohio, a corporation of Ohio



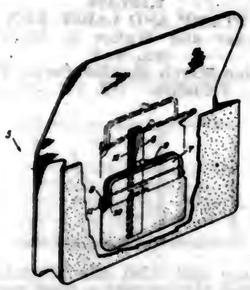
Application April 5, 1937, Serial No. 135,665

8 Claims. (Cl. 255—45)



4. In a drilling apparatus, the combination with a support, of a motor slidable on the support having jars imparted thereto, of a recoil checking mechanism for said motor including a flexible element secured to the support against longitudinal movement relative thereto, a rotatable member carried by the motor engaging said element for rotation due to the jars imparted to the motor, stop means for preventing the rotation of said member in one direction to enable a step by step feeding motion of the motor, and means carried by the motor engaging said flexible element for effecting lateral displacement of the latter relative to the support during the feeding motion of the motor.

2,107,199
HEATING AND COOLING SYSTEM
Richard S. Gaugler, Dayton, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Application February 20, 1935, Serial No. 7,401
Renewed April 9, 1937
10 Claims. (Cl. 257—7)



7. In combination, a compartment to be cooled or heated, a heat exchanger for said compartment, said heat exchanger forming a portion of a closed system containing a fluid volatile at atmospheric temperature and pressure to be circulated therein, said closed system also including a heat transfer means disposed above said heat exchanger and a second heat transfer means disposed below said heat exchanger, means for cooling said first named heat transfer means to cause the volatile fluid to condense therein, means for conveying the condensed fluid from said first named heat transfer means to said heat exchanger wherein it vaporizes and causes cooling of said compartment, means for heating said second named heat transfer means to cause said fluid to vaporize therein, means for conveying the vaporized fluid from said second named heat transfer means to said heat exchanger to cause heating of said compartment, and means operable to put one of said heat transfer means in communication with said heat exchanger and to prevent communication between said heat exchanger and the other of said heat transfer means.

2,107,200
VALVE
Louis H. Kennon, Houston, Tex.
Application May 21, 1936, Serial No. 80,935
2 Claims. (Cl. 251—129)

2. In a valve, a valve disc having an annular face adapted to contact with a valve seat, said disc having an annular groove therearound adjacent the inner margin of said face, a ring of resilient material in said groove, said assembly having an annular space completely covered by the ring, the inner margin of the ring being thicker than the depth of the groove, a clamp plate secured against the inner side of the disc and whose outer margin is clamped against and compresses the inner margin of the ring, the outer margin of the ring having an oval annular rib adapted to seat against and to be compressed by said seat when the disc is in closed position, the abutting parts of the ring and clamp plate being shaped to provide an annular enclosed space between them.

2,107,201
HANDBAG AND PURSE COMBINATION
Louis Krupp, Boston, Mass.
Application April 21, 1936, Serial No. 75,634
1 Claim. (Cl. 150—35)

The combination with a hand bag, of a purse to be contained within said hand bag, said purse having hollow horizontal portions a slide bar secured to said hand bag and held in spaced relationship thereto, slide means affixed to said purse and forming a slidable connection with said slide bar whereby to hold said purse in spaced relationship relative to the sides of said bag and guide said purse thru the opening of said hand bag, said slide means comprising a cross bar slidably engaged to said slide bar and integral prongs bent to engage in said hollow hinge portions on said purse.

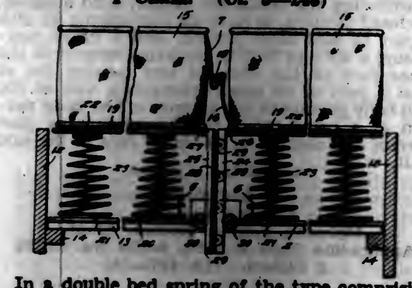
2,107,202
GLYCEROL MONOLACTATE TRIACETATE AND PROCESS OF MAKING SAME
Ritchie Hart Lock, Chigwell, England
No Drawing. Application December 10, 1936, Serial No. 115,269. In Great Britain December 17, 1935
3 Claims. (Cl. 260—106)

1. The process of making glycerol monolactate triacetate which comprises causing to act on glycerol monolactate an acetylating agent in proportion at least sufficient for acetylating the three hydroxyl groups in the lactate.

2,107,203
APPLICATION OF A PLASTICIZING AGENT FOR CELLULOSE DERIVATIVES
Ritchie Hart Lock, Chigwell, England
No Drawing. Original application December 10, 1936, Serial No. 115,269. Divided and this application June 21, 1937, Serial No. 149,547. In Great Britain December 17, 1935
6 Claims. (Cl. 106—37)

1. A new composition of matter and shaped products manufactured therefrom containing a cellulose derivative and glycerol monolactate triacetate as a plasticiser therefor.

2,107,204
MOLDED KNOB
Kenneth W. Mackesy, Montclair, N. J., assignor to Mack Molding Company, Wayne, N. J., a corporation of New Jersey
Application March 17, 1937, Serial No. 131,503
3 Claims. (Cl. 16—121)

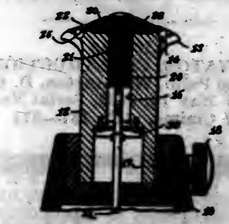


2. A knob comprising cap and base sections of plastic molding material secured together to form a shell and a rubber filler fitting said shell and

compressed thereby, said base section having reinforcing ribs and said filler having grooves re-

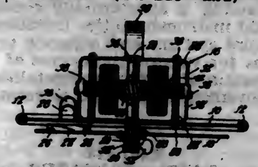
ceiving said ribs and preventing relative rotation of said shell and filler.

2,107,205
BED
Randall L. McLendon, St. Simons Island, Ga.
Application March 22, 1937, Serial No. 132,422
1 Claim. (Cl. 5—248)



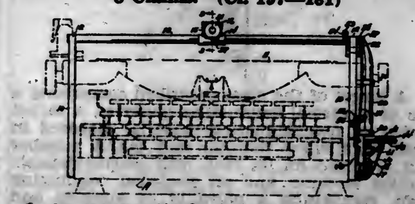
In a double bed spring of the type comprising two sections adjacent each other, each section having a rigid top frame, rigid bottom frame and spring means therebetween; a pair of vertical parallel bars pivotally connected to the top frames, said bars being separated by anti-friction devices, and said bars in contact with guiding means on the bottom frames.

2,107,206
FORM SEPARATOR
Robert Minkow, New York, N. Y., assignor to Hobbs Sales & Service Station, Inc., New York, N. Y., a corporation of New York
Application August 26, 1937, Serial No. 161,123
4 Claims. (Cl. 93—54.2)



1. A box machine comprising a reciprocating form-block having relatively separable elements, a crosshead movable with one of said elements, mechanism operative during the cycle of said machine to separate said elements, a lever pivotally connected to the other of said elements, and a link pivoted on said crosshead and to said lever operable to separate said elements and a spring between said link and lever.

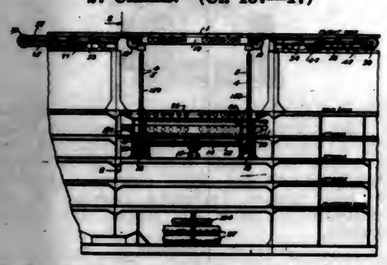
2,107,207
SHAVING IMPLEMENT
Joseph Mares, Cambridge, Mass., assignor to Gillette Safety Razor Company, Boston, Mass., a corporation of Delaware
Application May 19, 1936, Serial No. 80,568
3 Claims. (Cl. 30—43)



4. In a shaving implement, a self-contained unit comprising a pair of thin resilient blades having co-operating shearing surfaces in their outer edges, one blade having spaced circular perforations and the other elongated perforations, and flanged fasteners inserted in said perforations to unite the blades for relative movement.

2,107,208
VEGETABLE CUTTER
Frederick W. Nankivell, Chicago, Ill.
Application April 3, 1936, Serial No. 72,618
1 Claim. (Cl. 146—124)

A string bean cutter comprising a plate in the nature of a removable cover for a receptacle, said plate being provided with a load carrying bead of resilient material arranged for engaging the wall of the receptacle for supporting the plate, a rotatable cutter carried by said plate in slightly spaced relation with its bottom side, means for rotating the cutter, and means carried by said plate for guiding beans into cutting relation with said cutter, said means being accessible from the side of the plate opposite the rotatable cutter.

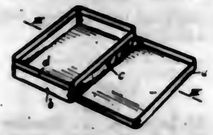


2,107,209
ERASER FOR TYPEWRITERS
George Robert O'Neal, Washington, D. C., assignor to George H. Hutaff, Jr., Wilmington, N. C.
Application February 2, 1937, Serial No. 123,687
3 Claims. (Cl. 197—181)

1. An eraser attachment for typewriters comprising a rotatable and shiftable eraser wheel, a swinging support for said wheel for bringing the

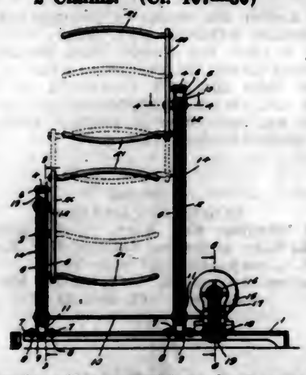
same into confronting relation and operative position with respect to a platen of said typewriter for erasure, means manually controlled for moving the support and latching and holding the wheel in operative position, and manually controlled means for rotating the wheel and simultaneously shifting it when in operative position.

2,107,210
ELEVATOR CONSTRUCTION
Blake Palm, Washington, D. C.
Application May 18, 1932, Serial No. 612,084
27 Claims. (Cl. 187—17)



1. In elevator construction, the combination with an elevating member, of balancing means for said member comprising a plurality of pressure fluid operated sustaining instrumentalities arranged to support the elevating member, means for maintaining a substantially constant pressure on said instrumentalities including a closed fluid pressure system, and separate power operated means for varying the degree of sustaining effect of certain of said instrumentalities to cause relative movement of the said elevating member.

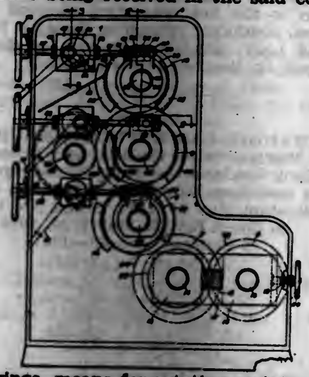
2,107,211
GAME APPARATUS
Frank E. Pavelka, San Antonio, Tex.
Application March 25, 1935, Serial No. 12,969
2 Claims. (Cl. 273—102)



1. A target of the class described comprising a plate of electrical conducting material, a target member of nonconducting material disposed in spaced parallelism thereto, said target member being provided on its face with distinguishable objective sections, and an electrical conducting screen, comprising a plurality of annular and concentrically arranged sections on the back of said target member normally in spaced relation to said plate.

2,107,212
SHEET METAL CONTAINER
Alfons Pfleghar, Stuttgart-Bad Cannstatt, Germany, assignor to Elektro-Bohner G. m. b. H., Stuttgart-Bad Cannstatt, Germany
Application January 20, 1936, Serial No. 59,944
In Germany September 26, 1934
6 Claims. (Cl. 220—31)

1. In a sheet metal container, a body portion constituting the container proper, a lid adapted, in closed position, to have an overlapping fit with a part of said body portion, and a hinge comprising a strip of flexible material secured to the inner face of the said lid and passing for at least a part of its length through a wall of the said body portion to the interior of the body portion at a point below the lid-overlapping part thereof and secured to the inner face of the said wall.



2,107,213
CANDY PULLER
Alphonse Poirier, Dutton, Mont.
Application June 3, 1936, Serial No. 83,385
2 Claims. (Cl. 107—30)

1. A candy puller comprising a base, spaced vertically arranged uprights secured to said base and one of a shorter length than the other, stub shafts journaled to said uprights with their axes extending substantially in the same vertical plane, arms secured to said stub shafts, fingers secured to said arms to pass about each other during the rotation of the arms for pulling candy placed on said fingers, a driving shaft journalled in said uprights, means for drivingly connecting the stub shafts with said driving shaft, and means for rotating said driving shaft for imparting rotation to said stub shafts.

2,107,214
INK MILL
Clarence R. Rechtin and Richard Jantsch, Cincinnati, Ohio, assignors to The J. H. Day Company, Cincinnati, Ohio, a corporation of Ohio
Application September 24, 1934, Serial No. 745,296
Renewed November 19, 1937
26 Claims. (Cl. 308—62)

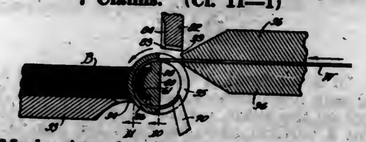
1. The combination of a frame, a plurality of superposed rolls having bearing ends, means supporting said bearing ends comprising pairs of circular bearing supports mounted for rotational movement relative to the frame, cooperative bearings associated with said supports and having their centers offset relative to the axes of rotation of the bearing supports, the bearing ends of the rolls being received in the said coopera-

tive bearings, means for rotating certain of the bearing supports in unison, and associated means for rotating the bearing supports individually, the true centers of corresponding bearing supports being offset relatively, with the axes of the superposed rolls lying normally in a single upright plane.

2,107,215
METHOD OF MAKING GRANULAR MATERIAL
Ernest Wayne Rembert, Plainfield, N. J.
No Drawing. Application May 24, 1934, Serial No. 727,240. Renewed August 21, 1937
21 Claims. (Cl. 252—2)

1. In making an improved decolorizing material, the method which includes producing, in the presence of an excess of water, a water-insoluble, hydrous multivalent metal compound adapted to possess decolorizing properties when in incompletely dried form, removing a substantial proportion of the said excess of water to form a wet, non-fluent mass containing the compound and residual water, agitating the mass, to convert the mass to pasty form, partially drying the pasty material to render it non-tacky and adapted to be granulated without excessive adherence to the granulating equipment, granulating the thus dried mass, and then incompletely drying the granules to develop the maximum adsorptive properties in the product.

10. Granules for use as a decolorizing medium comprising an intimate mixture of decolorizing clay and a precipitated adsorbent silicate of a multivalent metal of the kind described, the clay serving to bond together the said silicate and increasing the firmness of the granules.



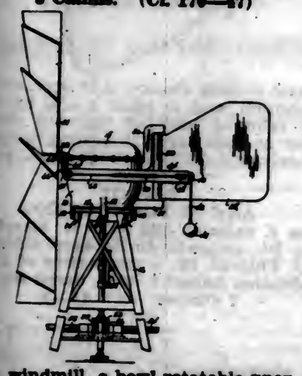
2,107,216
RECEPTACLE AND CLOSURE THEREFOR
Harry L. Rogers, Brooklyn, N. Y.
Application April 22, 1936, Serial No. 75,767
1 Claim. (Cl. 150—3)

A flexible walled receptacle comprising lips forming an opening, a slidable closure for said opening, an inner moisture proof relatively thin liner for said receptacle having an opening corresponding with said lips and an integral deformable resilient relatively thick sealing means about said liner opening including cooperating portions, said liner being fastened to the receptacle adjacent said lips, said sealing means being so constructed and formed as to normally be open and so tend to spread said lips apart

when said slidable closure is in open or partially open position, and to effect a seal by relatively tightly bringing together the said cooperating portions of said resilient sealing means when said slidable closure is moved to closed position.

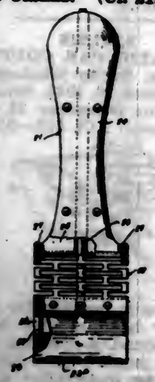
2,107,217
ART OF BOOKBINDING
Thomas J. Salsman and John M. Marchok, Chicago, Ill., assignors to Rockwell-Barnes Company, Chicago, Ill., a corporation of Illinois
Application August 6, 1936, Serial No. 94,645
7 Claims. (Cl. 11—1)

5. Mechanism for binding a book of leaves having adjacent one end thereof a row of evenly spaced passages therethrough comprising a coil forming needle, means for positioning the needle in one of the book passages, means for feeding a wire through the needle to form a helix, a plurality of guide rolls engaging the helix acting to maintain the coils thereof at a uniform radial distance from a straight axis therewithin whereby the leading end of the helix will be guided successively into each of the book passages, means to sever the wire adjacent the needle when the helix is completed, and means for withdrawing the needle from the book passage and simultaneously disengaging itself from the wire coil therewithin.



2,107,218
AUTOMATIC CAR COUPLER
Karl Scharfenberg, Berlin-Nikolassee, Germany
Application December 28, 1934, Serial No. 759,284
In Germany December 18, 1933
8 Claims. (Cl. 213—95)

2. In an automatic coupler for vehicles comprising a coupler head, a disk hook rotatably mounted in said head, a coupling link pivotally mounted on said hook, means for holding said coupling link in an inoperative position within said head, means for releasing said holding means upon engagement of said coupler head

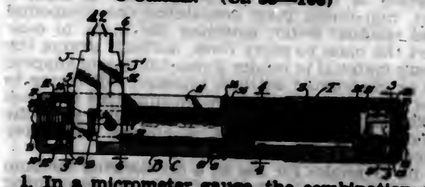


with a complementary coupler head, means for placing said coupling link in position for coupling upon release of said holding means, train service controlling members and means connecting said train service controlling members and said hook for operating said controlling members to operative and inoperative positions with said coupling link.

2,107,219
WINDMILL
Charles J. Sebenik, Buckeye, Ariz.
Application December 1, 1936, Serial No. 113,689
3 Claims. (Cl. 170—47)

1. In a windmill, a bowl rotatable upon a vertical axis, a windwheel shaft in the bowl, a windwheel on the shaft, a vane on the bowl rotatable about a vertical axis, bearings for the vane on the bowl, a countershaft in the bowl, a drum on the shaft outside of the bowl, a cable connected to the vane and windable upon the drum to close the vane, manually controllable means for connecting the countershaft to the windwheel shaft for winding the cable upon the drum, and means for moving the vane to open position after each actuation of the first named means.

2,107,220
TOOL FOR REMOVING PAINT, VARNISH, LACQUER, SHELLAC, ETC.
Frank J. Schulz, Rochester, N. Y.
Application November 22, 1935, Serial No. 51,150
2 Claims. (Cl. 219—29)

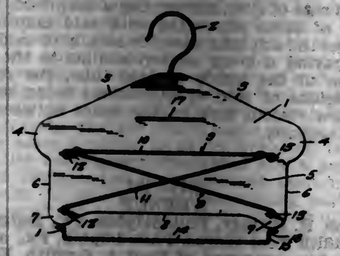


1. In a tool for removing paint, etc., from wood and other surfaces, a handle, a heat radiating element secured to the outer end of the handle, a tool head of scraper-blade formation detachably connected to the outer end of the radiator and having an opening extending completely therethrough and transversely thereof, an electric resistance element permanently mounted in said opening in the removable head in spaced relation to the heat radiating element and an electrical conductor extending through the handle and heat radiating element for direct attachment to the resistance element.

2,107,221
STRAIGHT-BAR KNITTING MACHINE
Harry Wilfred Start, Carlton, and Ernest Start, Wilford, England, assignors to George Blackburn and Sons Limited, Nottingham, England
Application May 11, 1937, Serial No. 142,968
In Great Britain March 10, 1936
6 Claims. (Cl. 66—126)

1. In straight-bar knitting machine thread carrier driving mechanism, a longitudinally reciprocating friction bar, a friction box mounted thereon, a thread carrier bar connected to the friction box, a pivoted latch on the friction box, a tumbler for locking the latch, a driving member carried on the reciprocating slur cock rail which is adapted to engage with the latch on the friction box and give the latter a positive starting movement first in one direction and then in the other, and means for releasing the latch and destroying the positive driving connection, substantially as described.

2,107,222
MICROMETER GAUGE
William J. Simmers, Chicago, Ill.
Application February 19, 1936, Serial No. 64,612
8 Claims. (Cl. 33—166)



1. In a micrometer gauge, the combination of a barrel having an elongated slot extended radially through a wall thereof in one end region, a thimble rotatively fitted over the barrel in its opposite end region and secured thereto against longitudinal travel, a ring arranged circumferentially of the barrel adjacent one end of the thimble in a longitudinally fixed relationship with respect to the barrel and thimble and rotatable with respect thereto, means for adjustably securing the ring against movement relative to the barrel, screw mechanism connected for operation with the thimble disposed wholly within the barrel, a pair of jaws extended laterally of the barrel, one carried thereby and the other extended through the barrel slot for connection with the screw mechanism adapted to be moved thereby in response to operations of the thimble, graduations on the barrel adjacent the slot and other graduations on the thimble adjacent the ring, and pointer lines on the movable jaw and ring adapted to furnish readings in conjunction with the graduations proximate thereto.

2,107,223
BEARING METAL ALLOY
Carl E. Swartz, Cleveland Heights, Ohio, assignor to The Cleveland Graphite Bronze Company, Cleveland, Ohio, a corporation of Ohio
No Drawing. Application October 24, 1936, Serial No. 107,308
3 Claims. (Cl. 75—166)

1. A bearing metal alloy consisting of from 1 to 20% antimony, 1 to 20% tin, .01 to 3% copper, .01 to 5% tellurium, and the balance lead.

2,107,224
GARMENT HANGER
Sherman Clifford Treadway and Clarence Heckendorn, Ferrut City, Ark.
Application April 21, 1936, Serial No. 75,604
3 Claims. (Cl. 223—93)

1. In a garment hanger, the combination with a coat hanger member adapted to receive a coat in the shoulder portions thereof and suspend the same with the coat enclosing said member, of a laterally swinging trousers support of a length materially in excess of the width of a folded pair of trousers at an intermediate point in the leg length thereof, so that trousers may be suspended from said support at the fold line with a material clearance between them and the ends of the support, the support having a pivotal mounting on the hanger member adjacent one shoulder portion thereof and being foldable down against the hanger member to have the suspended trousers enclosed by the coat but swingable away from the hanger member to expose the trousers for removal through the open front of the coat.

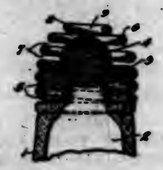
2,107,225
LUBRICATOR FOR AIR LINES, ROCK DRILLS, AND OTHER COMPRESSED AIR APPARATUS
William John Walker and Siegfried Fritz Glimbey, Johannesburg, Transvaal, Union of South Africa, assignors to Broom and Wade Limited, High Wycombe, Buckinghamshire, England
Application May 11, 1937, Serial No. 142,668
In Union of South Africa April 8, 1936
10 Claims. (Cl. 184—55)

1. A lubricator for use in connection with compressed air apparatus comprising the combination, with a lubricant reservoir, of means adapted to provide a capillary passage, means for supplying lubricant from said reservoir to said passage, and means for directing a portion of the compressed air for said apparatus into said passage to

maintain a predetermined flow of lubricant through said capillary passage into the air stream.

2,107,226
SQUEEZE TUBE CAP
Sydney Royal Weston, Montreal, Quebec, Canada
Application July 28, 1936, Serial No. 92,949
3 Claims. (Cl. 221—60)

1. A container having a lip on the one side forming the outlet and having a flat surface on either side of the approach to said lip, and a sheet rubber disc adhered to the flat surfaces and completing a resilient closure.

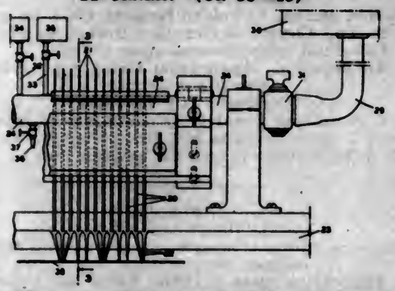


2,107,227
DRY CLEANING MACHINE
Charles K. Weedin, Bloomington, Ill., assignor to National Rubber Machinery Company, Akron, Ohio, a corporation of Ohio
Application November 29, 1933, Serial No. 700,212
2 Claims. (Cl. 210—76)

1. In a relatively high speed centrifugal extractor for washing machines, a drum mounted for rotation at high speeds on a horizontal axis, said drum having a one-piece continuous cylindrical wall extending entirely around the circumference of the drum and disposed concentric with said horizontal axis of rotation and being regularly perforated circumferentially and longitudinally, each of said perforations being defined by frustro-conical projections extending outwardly of said cylindrical wall, the internal surfaces of the projections being smooth and merging smoothly with the internal surfaces of the cylinder wall, the internal surface of the cylinder wall being smooth and devoid of projections, each of said frustro-conical projections terminating at its outer end at the margin of the defined aperture in a relatively sharp edge disposed on a circular line and formed by the junction of the outer surface of the projection

and a surface disposed angularly with respect thereto, the last mentioned surface being inclined inwardly toward the center of the aperture.

2,107,228
CONDIMENT HOLDER
Axel E. Zimmerman, West Palm Beach, Fla.
Application August 6, 1936, Serial No. 94,668
1 Claim. (Cl. 65—45)



A cover or shaker top adapted to be removably mounted on an open-ended condiment container having cover attaching instrumentalities disposed on the outer wall thereof adjacent to the open end, said cover comprising a wire-like member coiled about a common axis in helical form, providing a plurality of superposed turns, the turns of one end of the cover being adapted to interlockingly engage with the cover attaching instrumentalities on the container, and the remaining turns progressively approaching the axis of the cover, the end turn of the cover opposite to the container engaging end defining an opening and being spaced from the open end of the container when the cover is mounted thereon, and constituting a valve seat, there being spaces between the turns of the wire-like member constituting condiment discharge openings, and a spherical shaped valve member normally loosely disposed within the cover and being adapted to seat on and close the open end of the container when the holder is in one position, and adapted to have a limited movement away from the end of the container towards the seat afforded by the cover when the holder is in another position, permitting discharge of the condiment between the turns of the cover intermediate the ends of the latter, said end turn of the cover having a diameter less than the diameter of the valve member and being spaced from the mouth of the container a sufficient distance to permit free flow of the condiment therefrom but less than the diameter of the valve member so as to control the flow of the condiment laterally through the coils.

2,107,229
BRAKE DRUM
Charles S. Ash, Milford, Mich., assignor to Kelsey-Hayes Wheel Company, Detroit, Mich., a corporation of Delaware
Application December 2, 1935, Serial No. 52,571
10 Claims. (Cl. 188—218)

1. A composite brake drum, comprising a back having alternate angularly spaced peripheral portions axially offset relative to each other, and a brake ring cast on to said portions and mechanically interlocked therewith.

2,107,230
FLUID CONDUCTOR FOR RULING MACHINES AND THE LIKE
Eugene Cook Bingham, Easton, Pa., and Daniel Figlioli, Brooklyn, N. Y., assignors to Boorum & Pease Company, Brooklyn, N. Y., a corporation of New York
Application July 30, 1936, Serial No. 93,492
14 Claims. (Cl. 33—45)

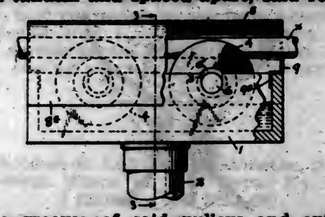
8. Means for delivering fluid from a common reservoir to a plurality of outlets at a predetermined rate of flow, comprising a manifold, a plurality of tubes connected with said manifold, a plunger in each tube movable axially of said tube, and having a cross section similar to the cross section of the inside of said tube, the relative dimensions of said cross sections being such as to allow viscous flow in the space between said cross sections.

2,107,231
WRENCH
Joseph R. Bittner, Philadelphia, Pa., assignor to Griffith Tool Works, Philadelphia, Pa., a partnership composed of Paul A. Griffith, Edward J. Griffith, Charles F. Griffith, and William K. Wilson
Application February 2, 1937, Serial No. 123,653
2 Claims. (Cl. 81—97)

1. A wrench comprising a shank having a lateral jaw at one end projecting from the inner side of the shank, said shank having teeth on said inner side, a U-shaped carrier slidable on the shank, said carrier embracing the outer side and faces of the shank and being free for transverse movement away from the said outer side, a movable jaw pivoted on said carrier for movement toward and away from the shank and having a tail end portion extending beyond the pivot and adapted to engage the inner side of the shank, a thumb lever pivoted intermediate its ends to the carrier and formed at one end as a pawl for engagement with the teeth of said shank to retain

the carrier in adjusted position longitudinally of the shank, and a spring interposed between the other end of said lever and the edge of said movable jaw and exerting pressure to force both said tail and said pawl against the inner side of the shank and tending also to resiliently retain the carrier in a normal position of engagement with the outer side of the shank.

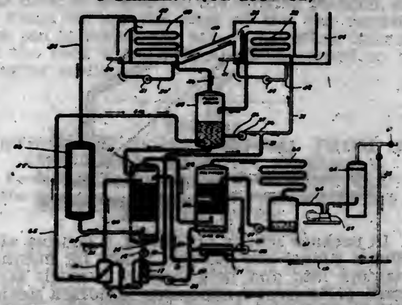
2,107,232
SHEET METAL CONTAINER
Arthur Henry Blakeway, London, England, assignor to The Metal Box Company, Ltd., London, England, a corporation of Great Britain
Application July 15, 1936, Serial No. 90,866
In Great Britain November 25, 1935
2 Claims. (Cl. 220—64)



1. A sheet metal container having a coating of protective material applied to the inner surface thereof, said container including a body portion having the side edges joined by a solder bond, the outer member of the side seam being bent inwardly adjacent the side seam and longitudinally of the seam and thence bent gradually outwardly to merge into the peripheral line of the can body whereby sharp edges on the inside of the seam tending to cause weakness in the protective coating are eliminated and a gully is formed between the inwardly bent portion and the seam, in which gully the coating material may be trapped to assure a good coating of protective material at the edge of the seam.

2,107,233
TOP CYLINDER LUBRICANT
Arthur W. Burwell, Niagara Falls, N. Y., assignor to Alox Corporation, New York, N. Y., a corporation of New York
No Drawing. Application October 24, 1935
Serial No. 46,633
6 Claims. (Cl. 87—9)

1. A top cylinder lubricant and solvent composition for use in dissolving pitch deposits and lead deposits in, and lubricating and protecting surfaces of, a combustion chamber of an internal combustion engine, which comprises a solution, in a light hydrocarbon oil solvent of mineral origin including an oil having lubricating properties, of a mixture of saturated aliphatic oxygen-containing compounds of petroleum origin said compounds including alkyl esters, lactones, alcohol-ketones, ketones and alcohols, said oxygen-containing compounds being obtained by subjecting a petroleum hydrocarbon mixture to a liquid-phase partial oxidation treatment at an elevated temperature not exceeding 160° C. and at a superatmospheric pressure not exceeding 350 pounds per square inch and being contained in said solution in an amount by volume equal to from about 3% to about 10% of the latter.



2,107,234
PULL ROD SUPPORT
James E. Chambers, West Palm Beach, Fla.
Application July 10, 1935, Serial No. 30,683
1 Claim. (Cl. 308—6)

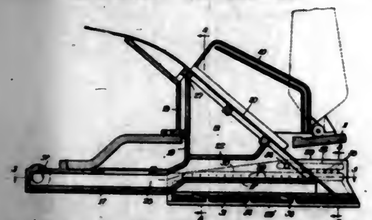
The combination with a pull rod, of a rod support comprising a bracket member, means for pivotally mounting said member on a post, and a pair of grooved pulleys journaled in said member in tandem and spaced apart, said rod lying

in the grooves of said pulleys and extending parallel to the plane of their axes, whereby said pulleys provide a relatively long bearing for the rod.

2,107,235
PROCESS OF CONVERTING HYDROCARBONS IN THE VAPOR PHASE
Myron W. Celoey, Los Angeles, Calif., assignor to Petroleum Conversion Corporation, New York, N. Y., a corporation of Delaware
Application August 26, 1933, Serial No. 686,898
8 Claims. (Cl. 196—61)

1. The process of converting hydrocarbon oils into motor fuels of the gasoline type which consists in subjecting to vaporizing conditions in a vaporizing zone the oil to be converted, adding to the vapor produced a substantially inert gas having a temperature insufficient to produce cracking of the vapor and in an amount sufficient to increase the mass of the mixture substantially, then passing the mixture through a heating zone formed of exteriorly heated surfaces to heat it within the conversion range above 900° F. but passing the mixture through said zone so rapidly that no substantial cracking takes place therein and no substantial amount of carbon is deposited in said zone, then passing said mixture to a heat conserving chamber, wherein time is allowed for the heated vapors to undergo conversion by reason of the sensible heat imparted in said heating zone to the vapor and gas in admixture therewith and without the addition of any substantial quantity of heat while in said chamber, and separating out from the reaction products those desired as motor fuels.

2,107,236
METHOD OF BREWING COFFEE
Harvey Cory, Chicago, Ill.
Original application July 13, 1934, Serial No. 734,893. Divided and this application January 11, 1937, Serial No. 119,910
2 Claims. (Cl. 99—71)



1. The process of making a true coffee infusion which consists in utilizing steam pressure to force

water at a temperature of about 150° F. into contact with freshly ground roasted coffee, in raising the water temperature to about 203° F.

within a relatively short space of time, not more than three minutes, to produce an infusion, and in straining out the coffee grounds from the infusion within a still shorter space of time.

2,107,237
PACKAGE SEALING
Lynn E. Davies, Chicago, Ill., assignor to White Cap Company, Chicago, Ill., a corporation of Delaware
Application October 25, 1935, Serial No. 46,681
23 Claims. (Cl. 226—82)

1. In package sealing apparatus, a housing affording a tunnel-like passage, means for moving containers into and progressively through said passage, portions of said housing forming a steam distributor affording a chamber having a heat radiating wall overlying the path of the mouths of containers adjacent and rearwardly from the entrance of the housing, said steam distributor having an outlet opening at one side of the path of the containers adjacent the rearward portion of said heat radiating wall, and means for providing the chamber with hot steam effective to heat said heat radiating wall, said outlet permitting discharge of steam from the chamber into said passage.

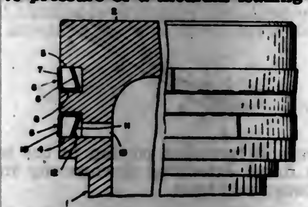
2,107,238
ROCK DRILL JOINT
Hilton H. Des Roches, Butte, Mont.
Application July 12, 1937, Serial No. 153,234
6 Claims. (Cl. 255—63)

1. In a rock drill, a shank having a slot extending transversely across the end thereof, a bit having a tongue adapted to enter said slot by lateral movement of the bit relative to the shank, means to prevent separation of the bit from the shank by movement of the bit axially of the shank, said slot having a constricted throat and said tongue having a wedge shaped portion adapted to tightly wedge in said slot when the bit is forced axially toward the shank, and cooperating means on the shank and bit to prevent lateral movement of the bit relative to the shank when said tongue is forced into said throat.

2,107,239
PAINT BOX
Violet M. Eckhoff, Warrensburg, Mo., assignor to Binney & Smith Co., New York, N. Y., a corporation of New Jersey
Application September 16, 1937, Serial No. 164,255
4 Claims. (Cl. 41—4)

1. A paint box, comprising a base section having therein receptacles for paint cakes and including a peripheral flange of stepped section, an intermediate section having therein receptacles for mixing paints and for receiving a brush and including a peripheral flange frictionally engageable around an upper step of said base flange, and a flanged cover section for embracing the intermediate section with said cover flange frictionally engageable with a lower step of said base section.

2,107,240
CONSTRUCTION UNIT
Leo W. Eliertsen, Seattle, Wash., assignor to I. F. Laucks, Inc., Seattle, Wash., a corporation of Washington
Application January 16, 1936, Serial No. 59,437
11 Claims. (Cl. 20—4)

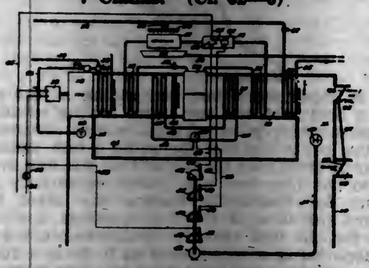


1. A construction unit comprising wallboard supported by studding by means of a plywood strip glued to both studding and wallboard.

2,107,241
PACKING RING
Phelps M. Freer, Detroit, Mich.
Application January 11, 1937, Serial No. 120,695
3 Claims. (Cl. 309—33)

1. The combination with a piston body having an annular groove, of a flexible packing ring within said groove having inner and outer walls and a portion connecting the same, said inner wall having a width greater than that of said groove and being flared toward said outer wall and radially spaced from the bottom of said

groove and also being adapted to flex when subjected to pressure of a medium leaking into the



ring to seal the portion of said groove inwardly beyond said inner wall.

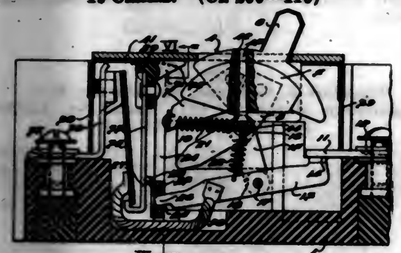
2,107,242
PRESSURE FEEDER FOR MATERIALS
Lovell Gates, Idaho Falls, Idaho
Application June 1, 1937, Serial No. 145,847
12 Claims. (Cl. 221—79)

1. A device of the kind described comprising a cylinder, end caps removably fitted to the cylinder, an extension neck separably fitted at one end of the cylinder and having separate inlets, a head rotatably fitted in the other end of the cylinder and having discharge passages opening into each other and through said head, a piston movably fitted within the cylinder and having passages therethrough, and a feed screw reversibly fitting the neck and head and threaded in the piston.

2,107,243
AIR CONDITIONING APPARATUS
Norman H. Gay, Los Angeles, Calif.
Application August 15, 1935, Serial No. 36,396
7 Claims. (Cl. 62—6)

5. An air conditioning apparatus including means providing a path of flow for the air; a refrigerating plant having a compressor, a condenser, an expander, and an evaporator connected together, said evaporator being located in heat exchange relation with the air flowing in said path; a first radiator located upstreamward of the evaporator, a second radiator located downstreamward of the evaporator, and liquid moving means for maintaining the flow through and between said radiators; a device responsive to the condition of humidity of the air moving in said path, means controlled by said responsive device for controlling the operation of said liquid moving means for determining the amount of water separated from the moving air, and means also controlled by said responsive device for changing the refrigerating effect at said evaporator, said controlled means being coordinately actuated so that a maximum operation of said liquid moving means is produced before a maximum cooling effect is produced in said evaporator.

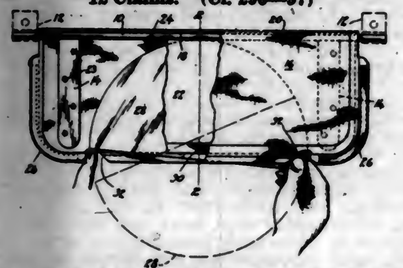
2,107,244
CLOSURE
Theodore R. Gilliland, Washington, D. C.
Application March 15, 1937, Serial No. 131,037
5 Claims. (Cl. 221—69)



1. A collapsible tube or other container having a neck, a cap screw threadedly engaged with the tube, a hinge pin extending circumferentially of the edge of the neck and traveling in the thread of the cap when the cap is screwed on to the neck or screwed to the hinging position, and a hinge ear on the edge of the cap receiving the pin to permit the cap to be swung laterally of the neck when the cap is unscrewed to the hinging position.

2,107,245
METHOD OF PRODUCING OIL FROM OIL CONTAINING PROTEIN MATERIAL
Lawrence T. Hopkinson, Washington, D. C.
No Drawing. Application February 2, 1937, Serial No. 123,729
11 Claims. (Cl. 87—6)

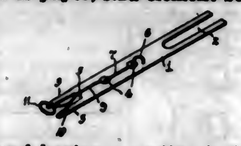
1. The method of producing oil from oil-containing protein material which is subject to relatively rapid spoilage, said method comprising treating the material with a substance capable of inhibiting bacterial action notwithstanding the presence of a base and with a substance having a pH concentration of 9 or more, subsequently treating the material with an oil-releasing substance and heating the material to separate the oil from the solids.



6. The method of producing oil from oil-containing protein material which is subject to relatively rapid spoilage, said method comprising inhibiting the development of free fatty acids and objectionable odor, taste and color characteristics by submerging fresh material of low free fatty acid concentration and devoid of objectionable odor, taste and color characteristics in a solution comprising sodium carbonate and a substance capable of inhibiting bacterial action in the material notwithstanding the presence of said sodium carbonate, maintaining the material so submerged during a period of time sufficient to cause spoilage of said material in the absence of any treatment, the concentration of the sodium carbonate and the bacterial inhibitor taken together being sufficient to render the material unfit for use as food and the amount of sodium carbonate consumed by the oil during storage of the material being insufficient to neutralize the free fatty acid which would develop during a like period in the oil of material treated with said bacterial action inhibiting substances only, and thereafter processing the material to separate from the solids, water, sodium carbonate and bacterial action inhibitor a quantity of oil of relatively low free fatty acid concentration.

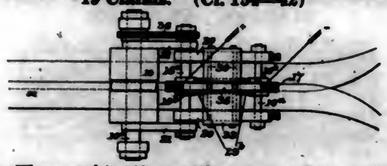
2,107,246
CIRCUIT BREAKER
John G. Jackson, Detroit, Mich., assignor to Square D Company, Detroit, Mich., a corporation of Michigan
Application June 1, 1936, Serial No. 82,769
19 Claims. (Cl. 200—116)

1. In an automatic electric circuit breaker, a supporting element pivotally mounted on a fixed part, a switching member pivotally mounted on said element, spring means interconnecting said member and element and biasing said member for rotation about its pivotal mounting, a stationary contact, a contact surface adjacent one end of said member cooperating with said contact, current responsive latching means for the opposite end of said member, a manual operator, and spring means interconnecting said operator and element for moving the element about its pivotal mounting in response to movement of said operator.



2,107,247
VISOR CONSTRUCTION
Charles Bayard Johnson, Monroe, Mich., assignor to Woodall Industries Incorporated, Detroit, Mich., a corporation of Michigan
Application June 20, 1935, Serial No. 27,474
12 Claims. (Cl. 296—97)

1. A visor structure comprising an opaque panel formed of two plies of material supported upon a frame disposed between said plies and including a top frame portion and end frame portions, a translucent visor element pivotally supported to be rotatably swung to a position of use projecting outwardly as an extension of said opaque panel or to a position of nonuse disposed between the two plies of said panel.



2,107,248
SHEET REGISTERING DEVICE FOR PRINTING PRESSES
Lawrence R. Johnson, Cleveland, Ohio, assignor to The Chandler & Price Company, Cleveland, Ohio, a corporation of Ohio
Application May 2, 1936, Serial No. 77,536
7 Claims. (Cl. 101—414)

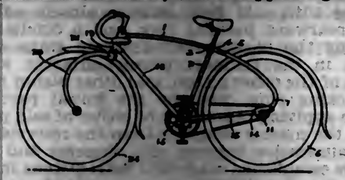
1. A sheet-receiving member having a pair of laterally spaced longitudinally-extending tines, and an element cooperating with said tines to grip a sheet of paper, said element being formed

from wire and having a portion in the form of a curved finger extending downwardly into the space between said tines.

2,107,249
PAPER-BAG-MACHINE ATTACHMENT
William C. Hepke, Philadelphia, Pa., assignor to Thomas M. Royal & Co., Philadelphia, Pa., a corporation of Pennsylvania
Application March 25, 1935, Serial No. 12,937
19 Claims. (Cl. 154—42)

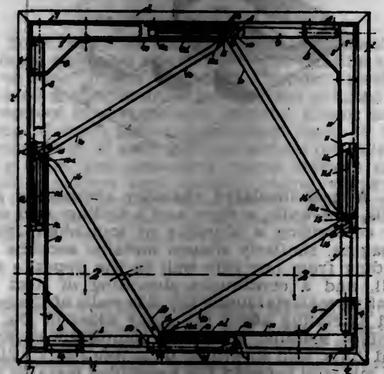
1. The combination with a paper-bag-making machine having means for overlapping the longitudinal edges of a web of paper in the formation of a tube, of heating means having a translational motion in the same direction and with the same speed as the traveling folded web and overlying and contacting the over-lapping edges of the same.

2,107,250
SHOE LAST
Joseph Harydczak, Brooklyn, N. Y.
Application March 26, 1937, Serial No. 133,253
10 Claims. (Cl. 12—136)



1. A shoemakers' last comprising a fore part and a heel part, the two parts having co-acting complementary pivot portions, means connecting the two parts together including a link member, a pair of pivot pins for connecting the link member to the fore and heel parts respectively and means for resiliently forcing the pivot pins against the sides of the link openings, the pivot pins for the link and the complementary pivot portions being so positioned as to form a toggle to securely hold the fore and heel parts in manufacturing position or in inserting position, at the will of the operative.

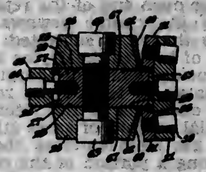
2,107,251
BICYCLE
Harvey W. Peace, Toronto, Ontario, Canada, assignor to Canada Cycle & Motor Company, Limited, Weston, Ontario, Canada
Application October 16, 1935, Serial No. 45,296
7 Claims. (Cl. 280—284)



4. In a bicycle, a frame formed with a rigid forward structure and an upper tubular spring rear fork curving downwardly and rearwardly

therefrom to a short forward bend forming resilient loops, said rear forks being solely of sufficient lateral rigidity to maintain the alignment of the wheel mounted therein, wheel supporting mem-

bers slotted to adjustably support the wheel axle and being secured to the forwardly extending ends of said resilient loops, and a lower tubular spring rear fork having its rearward ends connected to said wheel supporting members.



2,107,252
UNITED FOLDING LEG TABLE
Benedict E. Willett, Dayton, Ohio, assignor of one-half to Charles W. Riebel, Louisville, Ky.
Application October 1, 1934, Serial No. 746,325
6 Claims. (Cl. 311—82)

1. In a table, a plurality of supporting legs pivoted to the table on individual pivots arranged so that all the legs move in the same direction with respect to the periphery of the table, a longitudinally slotted guide bar for each leg and secured to the table interjacent each leg, an actuating member for each leg, each actuating member fashioned at one end with a guide means for operating in the slot of its respective guide bar and an elongated aperture at the opposite end loosely and slidably engaging the guide means of a successive actuating member, and a connecting link pivoted to each leg and pivotally embracing its respective actuating member near its apertured end whereby the operation of any one of said legs will impart similar movement to each of the other legs in succession.

2,107,253
MEANS FOR STRAIGHTENING KNITTING NEEDLES AND THE LIKE
Gustav Gastrich, Wyomissing, Pa., assignor to Textile Machine Works, Wyomissing, Pa., a corporation of Pennsylvania
Application May 29, 1935, Serial No. 24,012
16 Claims. (Cl. 266—2)

1. Apparatus for setting in straightened condition a spring-beard knitting needle and arranged to maintain the same in straightened condition during an annealing operation comprising a member having a groove therein complementary in form to the rear and side surfaces of a fin-

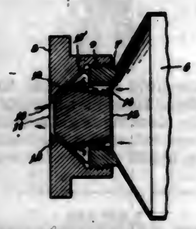
ished needle, a groove at right angles adapted to receive the needle butt, said two grooves being coplanar, and cooperating clamp means adapted to force a needle into said grooves.

2,107,254
ELECTRIC TUBE CONSTRUCTION
Clarence A. Horn, Roselle Park, N. J., assignor to Arcturus Development Company, Newark, N. J., a corporation of Delaware
Application December 11, 1935, Serial No. 53,848
24 Claims. (Cl. 250—27.5)

1. A stem assembly for electric tubes comprising a short glass tube, a plurality of separate fusible elements forming a glass wall for one end of said tube, an exhaust tube passing through said wall, and a plurality of wires sealed into said wall.

2,107,255
METHOD OF TREATING CARBONATES
Parker McComb, Monroe, La.
Application September 4, 1934, Serial No. 742,624
1 Claim. (Cl. 263—53)

The method of treating carbonates, comprising applying heated products of combustion to the exterior of a vertical retort having its upper end open and in free communication with the atmosphere so that the heat applied to the retort decreases upwardly for affording a lower reducing zone and an intermediate pre-heating zone



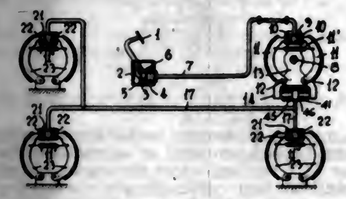
and an upper drying zone, introducing a loose charge of a carbonate comprising aggregates which are approximately one-inch to two-inches in size and having voids between them into the upper open end of the retort and gradually moving the charge downwardly through the retort so that it is subjected in succession to the action of heat in the drying and pre-heating and reducing zones, discharging the gases from the charge in the drying zone upwardly through the open end of the retort, preventing any substantial amount of gases other than carbon dioxide gas from entering the pre-heating zone by causing a portion of the carbon dioxide present in the pre-heating zone to pass upwardly through the voids in the charge in the pre-heating zone and drying zone and thereby forcing other gases through the voids in the drying zone and finally discharging to the atmosphere through the upper open end of the retort, and withdrawing a portion of the carbon dioxide from the pre-heating zone.

2,107,256

CLOSURE FOR CONTAINERS

Jens Andersen Olesen, Toronto, Ontario, Canada, assignor to Charles Ernest Johnston, Toronto, Ontario, Canada

Application February 11, 1937, Serial No. 125,202
7 Claims. (Cl. 221—60)



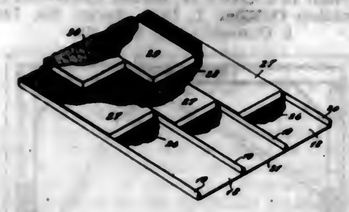
1. A closure for a collapsible tube or other container having a dispensing orifice encompassed by a threaded neck, said closure comprising a cap threadedly engaged with the neck and having a bore forming a seat encircling an orifice, and a sealing member loosely mounted in the bore thereof having a face engageable with said seat to seal off the orifice, said sealing member having discharge passages terminating at said face and controlled by the seat of the cap.

2,107,257

HYDRAULIC BRAKE

Christian Beusch, Wadenswil, Switzerland

Application September 19, 1935, Serial No. 41,322
5 Claims. (Cl. 188—152)



1. A master chamber for vehicle wheel hydraulic brake actuation comprising a cylinder having a pair of pistons, one of said pistons being located in said cylinder having a forward and a rearward packing ring, and having a fluid passage between said rings, a reserve fluid reservoir connected with said fluid passage closely adjacent said rearward packing ring, and a conduit connecting the passage between said rings with a point in the chamber closely adjacent and in front of the other piston, said other piston having a packing ring, whereby the initial part of a brake applying movement of either of said pistons seals the master chamber from the reservoir, and communication between said chamber and reservoir is established each time both pistons move to full release position.

2,107,258

HEAT-INSULATED WALL CONSTRUCTION

Edward R. Bose, Rutherford, N. J., assignor to United Cork Companies, Lyndhurst, N. J., a corporation of New Jersey

Application August 15, 1936, Serial No. 96,169
14 Claims. (Cl. 72—1)

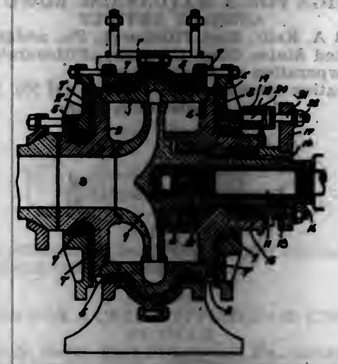
1. A heat-insulated chamber comprising side walls, end-walls, a floor and a ceiling, said ceiling comprising a plurality of individual, interengaging, similarly shaped metallic sections extending from one side wall to the opposite side wall, and a continuous sheathing of heat insulating material lining the side walls of the room and extending about the outer edges of the assembled metallic units and completely covering said units, said sheathing including heat-insulating material between the assembled metallic sections and said side walls, whereby no continuous metallic path for the passage of heat extends from the interior to the exterior of the chamber.

2,107,259

MEANS FOR STOPPING SERVICE AND OTHER GAS PIPES

Claude S. Hasel, Philadelphia, Pa., assignor to The United Gas Improvement Company, Philadelphia, Pa., a corporation of Pennsylvania

Application May 2, 1934, Serial No. 723,464
3 Claims. (Cl. 138—89)



1. Means for stopping service and other gas pipes, said means being adapted for insertion through an orifice smaller than the internal diameter of the pipe to be stopped and equipped with flexible discs capable to enter and stop and reversely capable to leave the pipe, said multiple disk member including means adapted to be engaged by an inserting tool.

2,107,260

CORROSION RESISTING PUMP AND BLOWER

Seytiro Ihara, Nakaku, Nagoya, Japan, assignor to Nippon Gaishi Kabushiki Kaisha, Nagoya, Japan

Application March 4, 1936, Serial No. 67,126
3 Claims. (Cl. 103—114)

3. In a corrosion resisting pump construction having a separable annular metallic housing and an annular hollow porcelain chamber section provided with cylindrical end flanges adapted to be received in said metallic housing, means consisting of small pieces of porcelain fused to the exterior walls of said chamber section for roughening them, and cementing means between said chamber section and metallic casing engaging with said roughening means whereby axial strain on said section is borne by said casing to prevent cracking of said hollow section.

2,107,261

FERMENTATION OF BEET MOLASSES

David A. Legg, Terre Haute, and Noble R. Tarvin, Brasil, Ind., assignors to Commercial Solvents Corporation, Terre Haute, Ind., a corporation of Maryland

No Drawing. Application July 30, 1934, Serial No. 737,574
9 Claims. (Cl. 195—44)

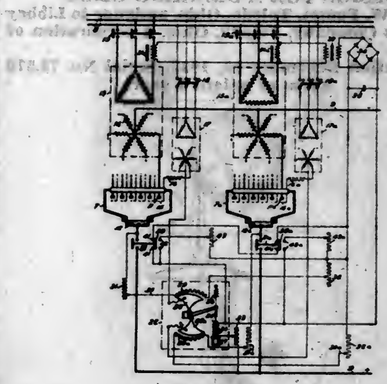
1. In the fermentation of an essentially soluble carbohydrate mash containing beet molasses as a major component, by means of bacteria of the group *Clostridium saccharo-acetobutylicum*, the step which comprises effecting the fermentation in a mash containing proteinaceous material from grain alcohol distillery slop.

2,107,262

BEET MOLASSES FERMENTATION

David A. Legg, Terre Haute, and Noble R. Tarvin, Brasil, Ind., assignors to Commercial Solvents Corporation, Terre Haute, Ind., a corporation of Maryland

No Drawing. Application July 30, 1934, Serial No. 737,575
9 Claims. (Cl. 195—44)



1. In the fermentation of an essentially soluble carbohydrate mash containing beet molasses as a major component, by means of bacteria of the group *Clostridium saccharo-acetobutylicum*, the step which comprises effecting the fermentation in a mash containing corn germ meal and a soluble non-toxic phosphate.

2,107,263

ELECTRIC VALVE CONTROL SYSTEM

Harold Winograd, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware

Application June 10, 1935, Serial No. 25,780
16 Claims. (Cl. 175—363)

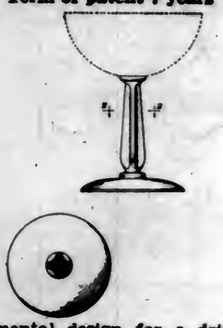
1. In an electric translating system, an input circuit, an output circuit, an electric valve connected with said circuits for controlling the flow of current therebetween, a source of electric current connected with one of said circuits for supplying current thereto, means for controlling the operation of said source, means for controlling the conductivity of said valve, means responsive to an operating condition of said valve for controlling the second said means, and means controlled by the first said means and operable in one of the positions thereof to render the third said means unresponsive to said operating condition while said valve is maintained conductive.

2. In combination, an electric current line, a first source of current and a second source of current both connected with said line for supplying electric current thereto, means responsive to an operating condition of the first said source for regulating the flow of current therethrough, means for controlling the connection of the second said source with said line, and means controlled by the second said means operable in one of the positions thereof to render the first said means unresponsive to said operating condition.

2,107,264

PROCESS FOR THE PRODUCTION OF CARBON DISULPHIDE

John Philip Baxter, Widnes, and Leslie James Burrage, Liverpool, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain



No Drawing. Application February 10, 1937, Serial No. 125,156. In Great Britain January 3, 1936
9 Claims. (Cl. 23—206)

1. The process for the production of carbon disulphide by reacting carbon and sulphur in known manner, characterized by the fact that the carbon used has been obtained by carbonizing coal between the temperatures of approximately 500° C. and approximately 600° C., for a period of 1 to 3 hours.

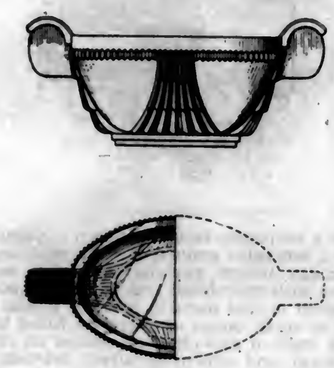
DESIGNS

FEBRUARY 1, 1938

108,200
DESIGN FOR A DRINKING GLASS
Edwin W. Fuerst, Toledo, Ohio, assignor to Libbey Glass Company, Toledo, Ohio, a corporation of Ohio
Application December 13, 1937, Serial No. 73,570
Term of patent 7 years

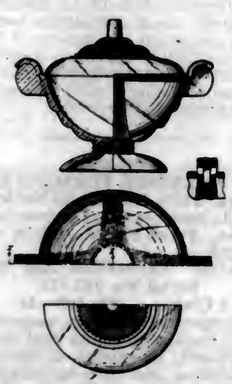
The ornamental design for a drinking glass substantially as shown.

108,201
DESIGN FOR A BICYCLE FRAME
Charles J. Fogarty, Westfield, Mass., assignor to The Westfield Manufacturing Company, Westfield, Mass., a corporation of Massachusetts
Application November 1, 1937, Serial No. 72,540
Term of patent 3½ years



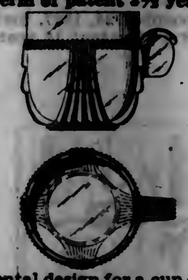
The ornamental design for a bicycle frame as shown and described.

108,202
DESIGN FOR A FLASHLIGHT CASE
Albert Gelardin, New York, N. Y.
Application July 6, 1936, Serial No. 63,685
Term of patent 14 years



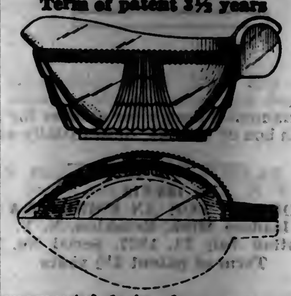
The ornamental design for a flashlight case, as shown and described.

108,203
DESIGN FOR A MAYONNAISE BOWL OR SIMILAR ARTICLE
Robert A. Kelly, East Pittsburgh, Pa., assignor to United States Glass Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application November 11, 1937, Serial No. 72,780
Term of patent 3½ years



The ornamental design for a mayonnaise bowl or similar article, substantially as shown and described.

108,204
DESIGN FOR A COVERED JAR OR SIMILAR ARTICLE
Robert A. Kelly, East Pittsburgh, Pa., assignor to United States Glass Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application November 11, 1937, Serial No. 72,781
Term of patent 3½ years

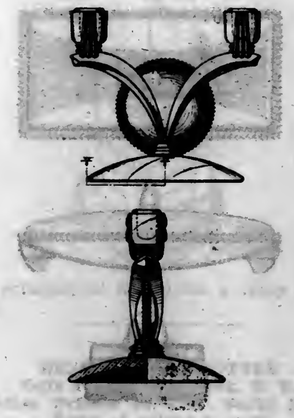


The ornamental design for a covered jar or similar article, substantially as shown.

108,205
DESIGN FOR A CUP OR SIMILAR ARTICLE
Robert A. Kelly, East Pittsburgh, Pa., assignor to United States Glass Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application November 11, 1937, Serial No. 72,782
Term of patent 3½ years

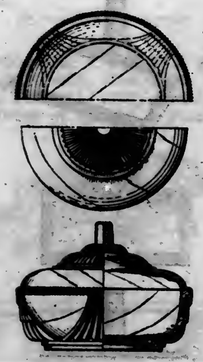
The ornamental design for a cup or similar article, substantially as shown.

108,206
DESIGN FOR A CREAM PITCHER OR SIMILAR ARTICLE
Robert A. Kelly, East Pittsburgh, Pa., assignor to United States Glass Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application November 11, 1937, Serial No. 72,783
Term of patent 3½ years



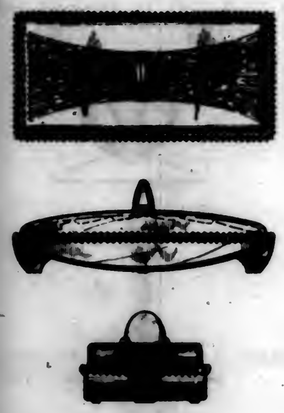
The ornamental design for a cream pitcher or similar article, substantially as shown and described.

108,207
DESIGN FOR A SALT SHAKER OR SIMILAR ARTICLE
Robert A. Kelly, East Pittsburgh, Pa., assignor to United States Glass Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application November 11, 1937, Serial No. 72,784
Term of patent 3½ years



The ornamental design for a salt shaker or similar article, substantially as shown.

108,208
DESIGN FOR A CANDLESTICK OR SIMILAR ARTICLE
Robert A. Kelly, East Pittsburgh, Pa., assignor to United States Glass Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application November 11, 1937, Serial No. 72,787
Term of patent 3½ years



The ornamental design for a candlestick or similar article, substantially as shown.

108,209
DESIGN FOR A COVERED CANDY JAR OR SIMILAR ARTICLE
Robert A. Kelly, East Pittsburgh, Pa., assignor to United States Glass Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application November 11, 1937, Serial No. 72,788
Term of patent 3½ years

The ornamental design for a covered candy jar or similar article, substantially as shown and described.

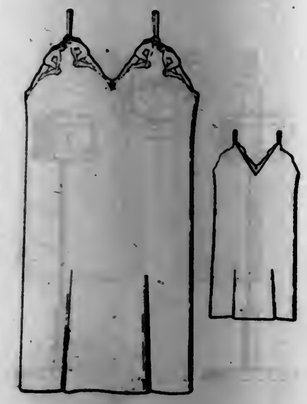
106,210
DESIGN FOR A COVERED DISH OR SIMILAR ARTICLE
Robert A. Kelly, East Pittsburgh, Pa., assignor to United States Glass Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application November 11, 1937, Serial No. 72,790
Term of patent 7 years

The ornamental design for a covered dish or similar article, substantially as shown.

106,211
DESIGN FOR A COMBINED GRAVE MARKER AND URN
Joseph M. Majewski, Jr., Kansas City, Mo.
Application October 1, 1937, Serial No. 71,906
Term of patent 14 years

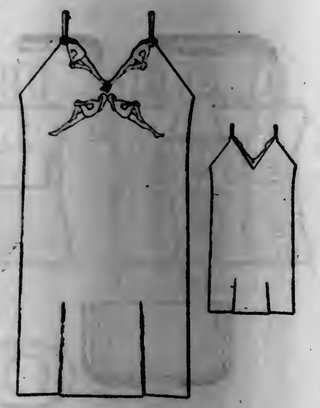
The ornamental design for a combined grave marker and urn substantially as shown.

106,212
DESIGN FOR A COVER FOR AN ELECTRIC SWITCH BOX OR THE LIKE
Ralph A. Millermaster and Alex A. Writzmann, Milwaukee, Wis., assignors to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware
Application November 24, 1937, Serial No. 73,156
Term of patent 14 years



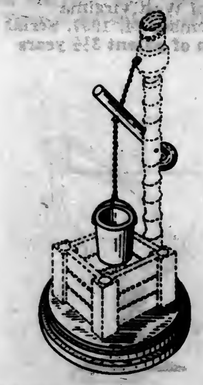
The ornamental design for a cover for an electric switch box or the like, substantially as shown.

106,213
DESIGN FOR AN UMBRELLA
Isadore Mlak, Brooklyn, N. Y.
Application July 21, 1937, Serial No. 70,557
Term of patent 3½ years



The ornamental design for an umbrella, as shown and described.

106,214
DESIGN FOR A SLIP OR SIMILAR ARTICLE
David Levy, New York, N. Y.
Application December 17, 1937, Serial No. 73,679
Term of patent 7 years

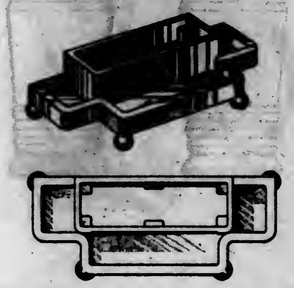


The ornamental design for a slip or similar article, substantially as shown and described.

106,215
DESIGN FOR A SLIP OR SIMILAR ARTICLE
David Levy, New York, N. Y.
Application December 17, 1937, Serial No. 73,680
Term of patent 7 years

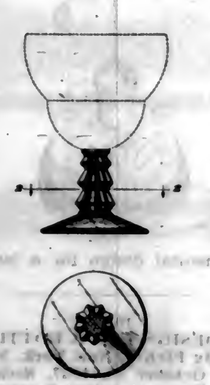
The ornamental design for a slip or similar article, substantially as shown and described.

106,216
DESIGN FOR A LAMP STAND
Morris Ozick, Philadelphia, Pa.
Application April 9, 1937, Serial No. 68,648
Term of patent 7 years



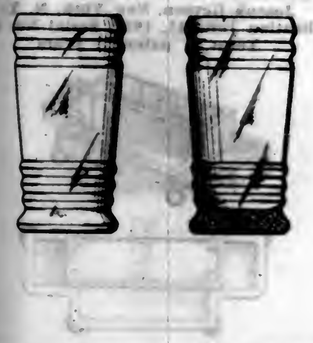
The ornamental design for a lamp stand, as shown.

106,217
DESIGN FOR A BOTTLE
Felix Pfeffer, New York, N. Y.
Application October 23, 1937, Serial No. 72,394
Term of patent 7 years



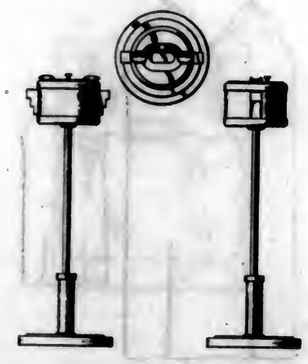
The ornamental design for a bottle, as shown and described.

106,218
DESIGN FOR A BOTTLE STAND
Joseph Revsen, New York, N. Y.
Application June 11, 1937, Serial No. 69,785
Term of patent 7 years



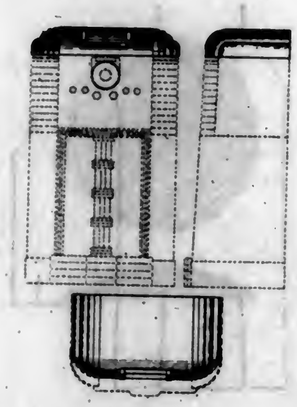
The ornamental design for a bottle stand, as shown.

168,219
DESIGN FOR A GOBLET OR SIMILAR ARTICLE
George Sakier, New York, N. Y., assignor to Fostoria Glass Company, Moundsville, W. Va., a corporation of West Virginia
Application November 24, 1937, Serial No. 73,155
Term of patent 3½ years



The ornamental design for a goblet or similar article, substantially as shown.

168,220
DESIGN FOR A GLASS OR SIMILAR ARTICLE
Morris Shapiro, Los Angeles, Calif.
Application November 2, 1937, Serial No. 72,595
Term of patent 14 years

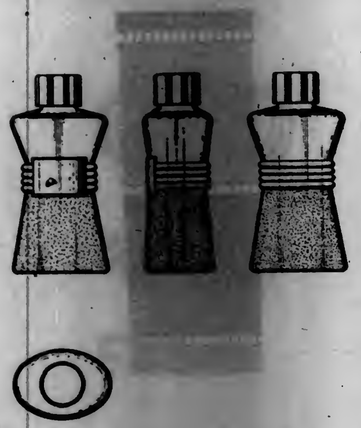


The ornamental design for a glass or similar article as shown.

168,221
DESIGN FOR A SMOKING STAND
Edward Schultz, Chicago, Ill., assignor to The Nagel-Chase Mfg. Co., Chicago, Ill., a corporation of Illinois
Application December 10, 1937, Serial No. 73,522
Term of patent 7 years

The ornamental design for a smoking stand, as shown.

168,222
DESIGN FOR A RADIO CABINET OR SIMILAR ARTICLE
Ross D. Siragusa, Chicago, Ill., assignor to Continental Radio and Television Corp., Chicago, Ill., a corporation of Illinois
Application May 5, 1937, Serial No. 69,227
Term of patent 7 years

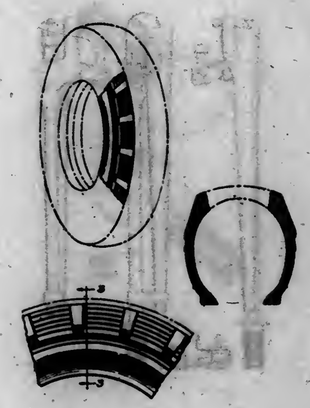


The ornamental design for a radio cabinet or similar article as shown and described.

168,223
DESIGN FOR A JAR
Frazier Smith, Wheeling, W. Va., assignor to Hazel-Atlas Glass Company, Wheeling, W. Va., a corporation of West Virginia
Application December 20, 1937, Serial No. 73,771
Term of patent 14 years

The ornamental design for a jar, as shown.

168,224
DESIGN FOR A BOTTLE
George Spielman, Los Angeles, Calif., assignor to Los Angeles Soap Company, Los Angeles, Calif.
Application November 29, 1937, Serial No. 73,236
Term of patent 14 years

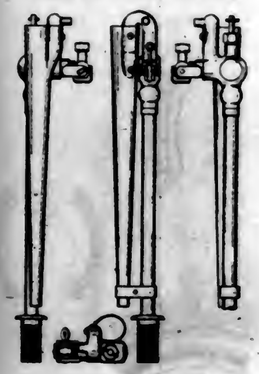


The ornamental design for a bottle as shown.

168,225
DESIGN FOR A VELOCIPEDE
Wilbur Henry Adams, Cleveland, Ohio, assignor to The Caleon Corporation, Elyria, Ohio, a corporation of Ohio
Application March 1, 1937, Serial No. 67,930
Term of patent 3½ years

The ornamental design for a velocipede substantially as shown and described.

168,226
DESIGN FOR A TIRE
Wilbur H. Adams, Cleveland, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application May 6, 1937, Serial No. 69,198
Term of patent 14 years



The ornamental design for a tire as shown.

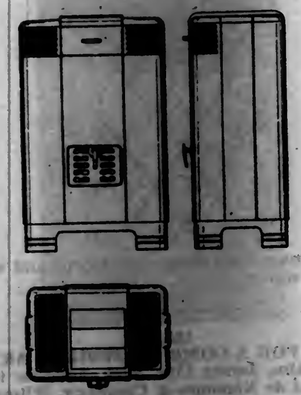
106,227
DESIGN FOR A HEATER
Lawrence A. Altheff, Chicago, Ill.
Application June 25, 1937, Serial No. 70,060
Term of patent 7 years

The ornamental design for a heater, as shown and described.

106,228
DESIGN FOR A BALL COCK
Alfred C. Arbogast, Elkhart, Ind., assignor to Northern Indiana Brass Company, Elkhart, Ind.
Application December 6, 1937, Serial No. 73,388
Term of patent 14 years

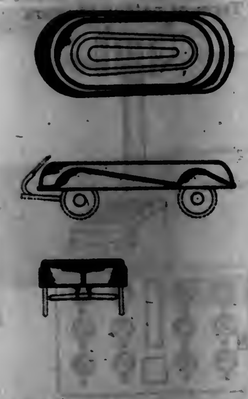
The ornamental design for a ball cock, as shown.

106,229
DESIGN FOR A BROOCH OR THE LIKE
Nicholas Barbieri, Providence, R. I., assignor to Ureas Manufacturing Company, a corporation of Rhode Island
Application December 13, 1937, Serial No. 73,569
Term of patent 14 years



The ornamental design for a brooch or the like substantially as shown.

106,230
DESIGN FOR LACE
Jean Degnin, New York, N. Y.
Application December 28, 1937, Serial No. 73,897
Term of patent 3½ years

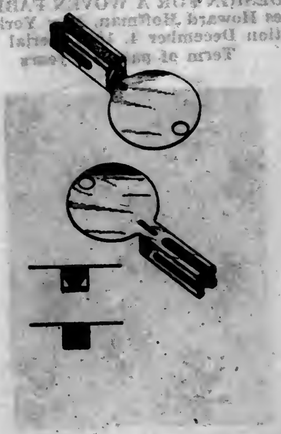


The ornamental design for lace substantially as shown.

106,231
DESIGN FOR AN AIR CIRCULATING HEATING STOVE
Edwin Mason, Kalamazoo, Mich., assignor to Kalamazoo Stove Company, Kalamazoo, Mich., a corporation of Michigan
Application December 1, 1937, Serial No. 73,290
Term of patent 3½ years

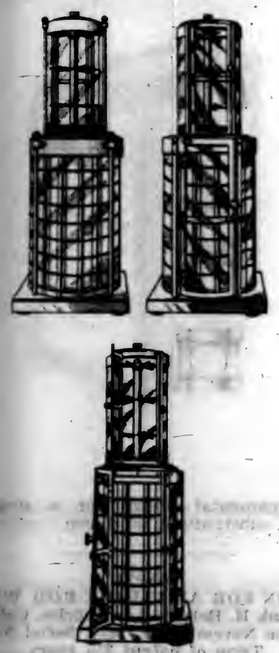
The ornamental design for an air circulating heating stove, as shown.

106,232
DESIGN FOR A COASTER WAGON
Clarence E. Garton, Sheboygan, Wis.
Application April 17, 1937, Serial No. 68,836
Term of patent 3½ years



The ornamental design for a coaster wagon, as shown and described.

106,233
DESIGN FOR A SINGLE GEM MOUNTING
Joseph Granat, San Francisco, Calif.
Application October 29, 1937, Serial No. 72,500
Term of patent 7 years

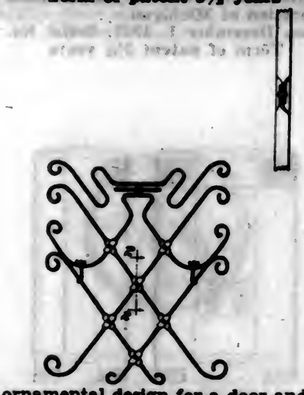


The ornamental design for a single gem mounting, substantially as shown.

106,234
DESIGN FOR AN ULLAGE-ROD WIPER
Frank H. Helsley, Los Angeles, Calif.
Application November 12, 1937, Serial No. 72,822
Term of patent 3½ years

The ornamental design for an ullage-rod wiper, as shown.

168,235
DESIGN FOR A DISPLAY STAND
Raymond A. Hennings, New Orleans, La., assignor of one-half to Alphonse G. Tennis, New Orleans, La.
Application September 17, 1937, Serial No. 71,661
Term of patent 7 years

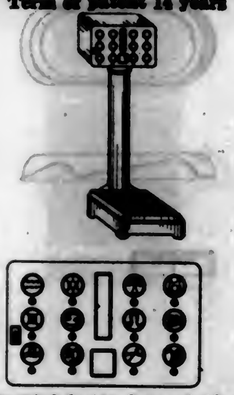


The ornamental design for a display stand, as shown.

168,236
DESIGN FOR A WOVEN FABRIC
James Howard Hoffman, New York, N. Y.
Application December 4, 1937, Serial No. 73,371
Term of patent 7 years

The ornamental design for a woven fabric, as shown.

168,237
DESIGN FOR A DOOR AND WINDOW GRILLE
Robert H. Hutchinson, Dallas, Tex.
Application December 10, 1937, Serial No. 73,511
Term of patent 3½ years



The ornamental design for a door and window grille, as shown.

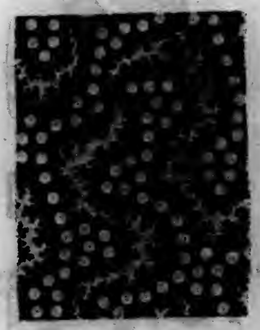
168,238
DESIGN FOR A COMB OR SIMILAR ARTICLE
Julius Kahn, Jersey City, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corperation of Delaware
Application June 19, 1937, Serial No. 69,915
Term of patent 7 years

The ornamental design for a comb or similar article, substantially as shown.

168,239
DESIGN FOR A PLATFORM SCALE
Claude R. Kirk, River Forest, Ill.
Application December 2, 1937, Serial No. 73,319
Term of patent 14 years

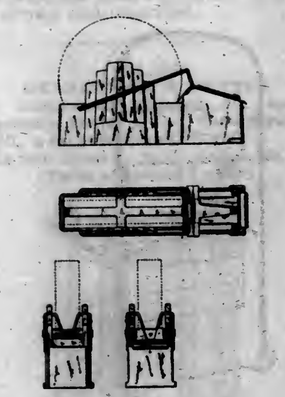
The ornamental design for a platform scale, as shown.

168,240
DESIGN FOR A TEXTILE FABRIC
Henry F. Keeh, Philadelphia, Pa., assignor to Northampton Textile Company, Mount Holly, N. J., a corperation of New Jersey
Application December 23, 1937, Serial No. 73,839
Term of patent 3½ years



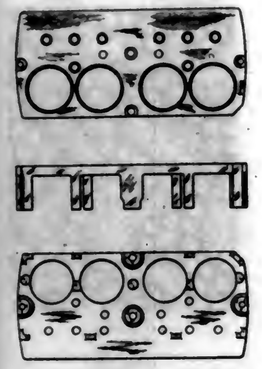
The ornamental design for a textile fabric substantially as shown.

168,241
DESIGN FOR A STOVE
Ralph E. Kruck, Springfield, Mass., assignor to Florence Stove Company, Gardner, Mass., a corperation of Massachusetts
Application December 13, 1937, Serial No. 73,552
Term of patent 3½ years



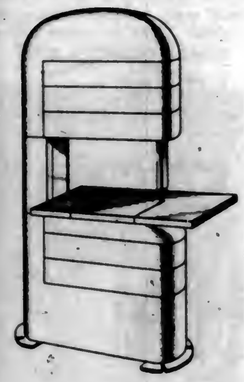
The ornamental design for a stove as shown and described.

168,242
DESIGN FOR A TEXTILE FABRIC
Marcel Mey, Paris, France, assignor to Marshall Field & Company, Chicago, Ill., a corperation of Illinois
Application August 23, 1937, Serial No. 71,279
Term of patent 3½ years



The ornamental design for a textile fabric as shown.

168,243
DESIGN FOR A DISPENSER FOR PAPER TAPE PRODUCT
Ferd H. Meyer, Oakland, Calif., assignor to The Adhesive Products Co., San Francisco, Calif., a corporation of California
Application November 24, 1937, Serial No. 73,154
Term of patent 7 years

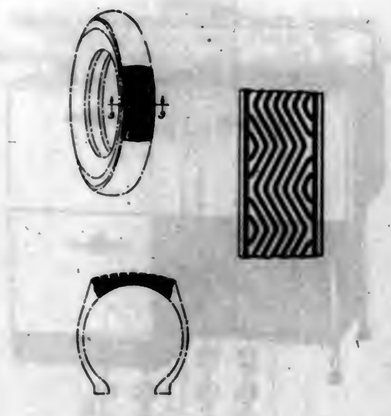


The ornamental design for a dispenser for paper tape product, substantially as shown.

168,244
DESIGN FOR A CYLINDER REBORING-PLATE
Edward R. Michener, St. Louis, Mo., assignor to H & H Machine & Motor Parts Company, St. Louis, Mo., a corporation of Missouri
Application January 11, 1937, Serial No. 67,001
Term of patent 14 years

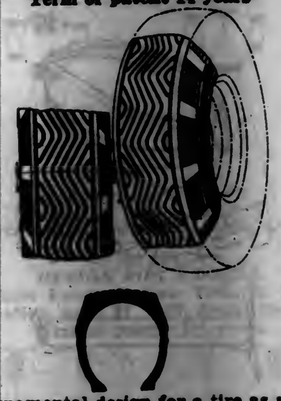
The ornamental design for a cylinder reboring-plate, substantially as shown.

168,245
DESIGN FOR A BAND SAW
John R. Morgan, Oak Park, Ill., assignor to Sears, Roebuck and Co., Chicago, Ill., a corporation of New York
Application March 1, 1937, Serial No. 67,937
Term of patent 14 years



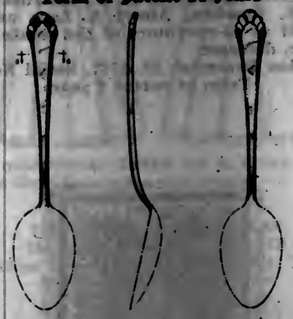
The ornamental design for a band saw, as shown and described.

168,246
DESIGN FOR A RUG
Eula Lee Ransom, Washington, D. C.
Application November 22, 1937, Serial No. 73,111
Term of patent 3½ years



The ornamental design for a rug, as shown.

168,247
DESIGN FOR A TIRE
Kimball D. Smith, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application August 18, 1937, Serial No. 71,165
Term of patent 14 years



The ornamental design for a tire as shown.

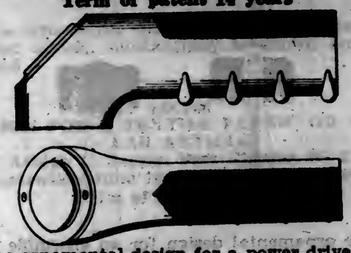
168,248
DESIGN FOR A TIRE
Kimball D. Smith, Akron, and Wilbur H. Adams, Cleveland, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application October 5, 1937, Serial No. 71,978
Term of patent 14 years

The ornamental design for a tire as shown.

168,249
DESIGN FOR A SPOON OR OTHER ARTICLE OF FLATWARE
Axel H. Staf, Providence, R. I., assignor to Gorham Manufacturing Company, Providence, R. I., a corporation of Rhode Island
Application December 4, 1937, Serial No. 73,351
Term of patent 14 years

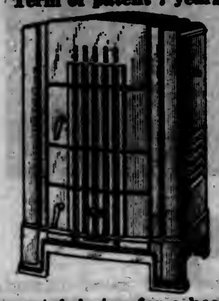
The ornamental design for a spoon or other article of flatware substantially as shown.

168,250
DESIGN FOR A FINGER RING
Nathalie C. Sternberg, Woodmere, Long Island, N. Y.
Application December 1, 1937, Serial No. 73,281
Term of patent 3½ years



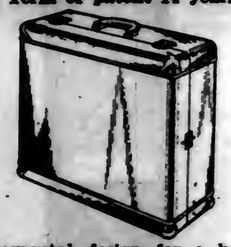
The ornamental design for a finger ring, as shown.

168,251
DESIGN FOR A BILLFOLD
William St. Thomas, Gloversville, N. Y., assignor to E. J. Wilkins Co., Gloversville, N. Y.
Application July 21, 1937, Serial No. 70,567
Term of patent 3½ years



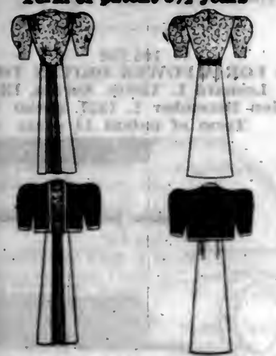
The ornamental design for a billfold as shown and described.

168,252
DESIGN FOR A POWER DRIVEN TOOL UNIT
Leonard L. Timm, Aurora, Ill.
Application December 2, 1937, Serial No. 73,318
Term of patent 14 years



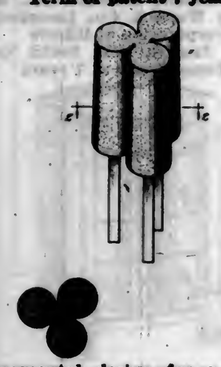
The ornamental design for a power driven tool unit, as shown and described.

168,253
DESIGN FOR A HEATER
John A. Underwood, Chicago, Ill., assignor to Montgomery Ward & Co., Incorporated, Chicago, Ill., a corporation of Illinois
Application June 1, 1937, Serial No. 69,643
Term of patent 7 years



The ornamental design for a heater, as shown and described.

166,254
DESIGN FOR A HAND LUGGAGE CASE
George H. Wheary, Racine, Wis., assignor to Wheary Trunk Company, Racine, Wis., a corporation of Wisconsin
Application May 17, 1937, Serial No. 69,294
Term of patent 14 years



The ornamental design for a hand luggage case, as shown and described.

166,255
DESIGN FOR AN ENSEMBLE DRESS
Jacob Abbate, New York, N. Y.
Application December 9, 1937, Serial No. 72,486
Term of patent 3½ years

The ornamental design for an ensemble dress substantially as shown and described.

166,256
DESIGN FOR A CONFECTIONERY PRODUCT
Petro Ariole, Chicago, Ill.
Application December 3, 1937, Serial No. 73,333
Term of patent 7 years

The ornamental design for a confectionery product, as shown.

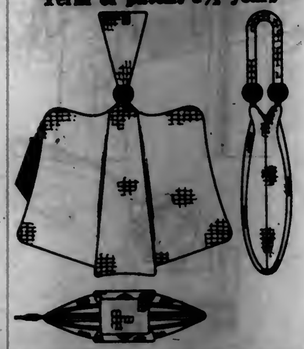
166,257
DESIGN FOR A LADY'S HEADDRESS
Elizabeth Durrant Barber, Miami, Fla.
Application November 16, 1937, Serial No. 72,940
Term of patent 7 years

The ornamental design for a lady's head dress, as shown.

166,258
DESIGN FOR A RUG
Lucien Biva, New York, N. Y., assignor to William E. Reschen, Albert A. Levy and John Hastedt as co-executors of the estate of Otto Timme, deceased
Application December 22, 1937, Serial No. 73,791
Term of patent 7 years

The ornamental design for a rug, as shown.

166,259
DESIGN FOR A DRESS
Margaret Klienbergen, New York, N. Y., assignor to Within & Schneider, New York, N. Y., a firm composed of Morris Within and Morris L. Schneider
Application November 27, 1937, Serial No. 73,223
Term of patent 3½ years



The ornamental design for a dress, as shown.

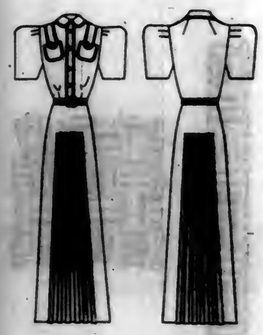
166,260
DESIGN FOR A DRESS
Rose Feintuck, New York, N. Y.
Application April 21, 1937, Serial No. 68,395
Term of patent 3½ years

The ornamental design for a dress, substantially as shown.

166,261
DESIGN FOR A HANDBAG
Henri Felmann, Chicago, Ill.
Application December 20, 1937, Serial No. 73,726
Term of patent 3½ years

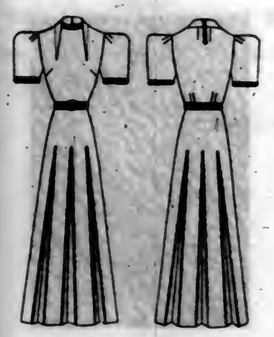
The ornamental design for a handbag, substantially as shown and described.

166,262
DESIGN FOR A PLASTIC SHEET OR SIMILAR ARTICLE
Alan F. Harvey, Kearny, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application April 2, 1937, Serial No. 68,528
Term of patent 14 years



The ornamental design for a plastic sheet or similar article, substantially as shown and described.

166,263
DESIGN FOR A TEXTILE FABRIC OR SIMILAR ARTICLE
Adolph C. Jaeger, Port Chester, N. Y.
Application June 16, 1937, Serial No. 69,873
Term of patent 7 years



The ornamental design for a textile fabric or similar article substantially as shown and described.

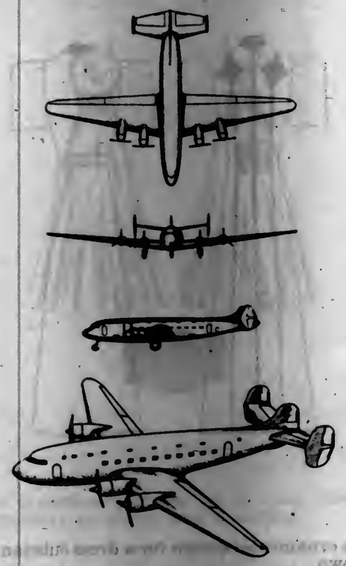
106,264
DESIGN FOR A DRESS
Albert Kaplan, New York, N. Y.
Application December 8, 1937, Serial No. 73,462
Term of patent 3½ years

The ornamental design for a dress, substantially as shown and described.

106,265
DESIGN FOR A DRESS
Jacob J. Kushner, New York, N. Y.
Application December 16, 1937, Serial No. 73,652
Term of patent 3½ years

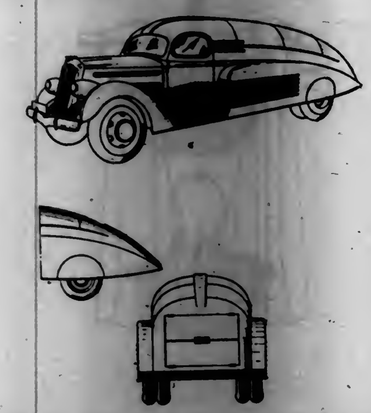
The ornamental design for a dress, substantially as shown and described.

106,266
DESIGN FOR A DISPLAY CASE OR SIMILAR ARTICLE
Augustine J. Long, Jr., Cincinnati, Ohio, assignor to The A. Nash Company, Cincinnati, Ohio, a corporation of Ohio
Application March 19, 1937, Serial No. 66,277
Term of patent 7 years



The ornamental design for a display case or similar article, substantially as shown.

106,267
DESIGN FOR A DRESS
Josephine Miracky, New York, N. Y.
Application December 20, 1937, Serial No. 73,969
Term of patent 3½ years



The ornamental design for a dress, substantially as shown.

106,268
DESIGN FOR AN AIRPLANE
Arthur E. Raymond, Santa Monica, and Edward F. Burton, Los Angeles, Calif., assignors to Douglas Aircraft Company, Inc., Santa Monica, Calif., a corporation of Delaware
Application January 15, 1937, Serial No. 67,079
Term of patent 7 years

The ornamental design for an airplane substantially as shown and described.

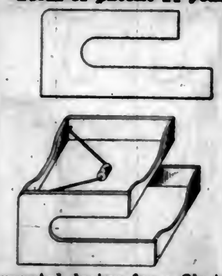
106,269
DESIGN FOR A GASOLINE TANK VEHICLE
Alexis de Sakhnoffsky, Philadelphia, Pa., assignor to The White Motor Company, Cleveland, Ohio
Application January 21, 1937, Serial No. 67,190
Term of patent 7 years

The ornamental design for a gasoline tank vehicle, as shown and described.

106,270
DESIGN FOR A DRESS
Philip Schlamel, New York, N. Y.
Application December 8, 1937, Serial No. 73,450
Term of patent 3½ years

The ornamental design for a dress, substantially as shown and described.

106,271
DESIGN FOR A DRESS
Mary G. Strangand, New York, N. Y.
Application December 30, 1937, Serial No. 73,972
Term of patent 3½ years

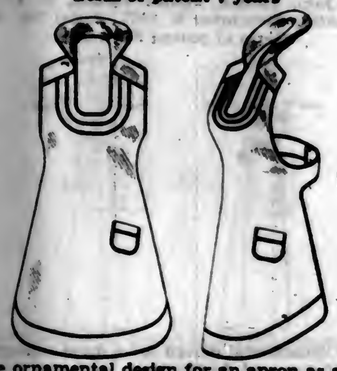


The ornamental design for a dress, substantially as shown.

106,272
DESIGN FOR A DRESS
John Tuman, Mount Vernon, N. Y.
Application December 9, 1937, Serial No. 73,487
Term of patent 3½ years

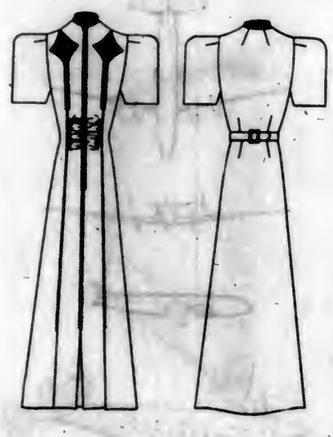
The ornamental design for a dress substantially as shown and described.

106,273
DESIGN FOR A FILE TRAY
Enoch R. Winstrom, Long Beach, Calif.
Application July 21, 1937, Serial No. 70,569
Term of patent 14 years



The ornamental design for a file tray as shown.

106,274
DESIGN FOR A COMBINED CLOCK FACE AND METRONOME
Albert H. Weinfeld, Philadelphia, Pa.
Application October 27, 1937, Serial No. 72,439
Term of patent 7 years



The ornamental design for a combined clock face and metronome, as shown.

106,275
DESIGN FOR AN APRON
Gertrude T. Bell, Auburn, Wash.
Application September 14, 1937, Serial No. 71,615
Term of patent 7 years

The ornamental design for an apron as shown.

106,276
DESIGN FOR A DRESS
Tera Coleman, New York, N. Y.
Application January 10, 1938, Serial No. 74,164
Term of patent 3½ years

The ornamental design for a dress substantially as shown.

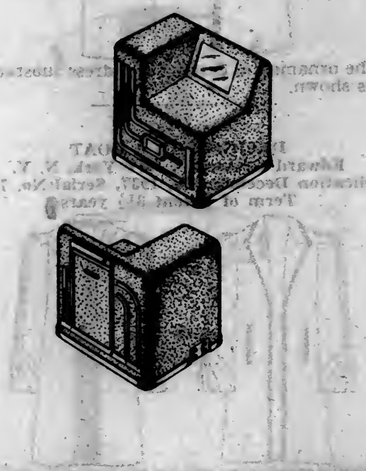
106,277
DESIGN FOR A DRESS
Tera Coleman, New York, N. Y.
Application January 10, 1938, Serial No. 74,165
Term of patent 3½ years

The ornamental design for a dress substantially as shown and described.

106,278
DESIGN FOR A DRESS ENSEMBLE
Sylvia Connell, New York, N. Y.
Application December 8, 1937, Serial No. 73,451
Term of patent 3½ years

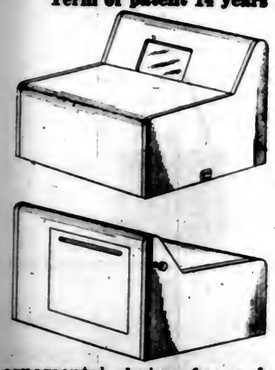
The ornamental design for a dress ensemble, substantially as shown and described.

106,279
DESIGN FOR A HANDBAG
Henri Felmann, Chicago, Ill.
Application December 20, 1937, Serial No. 73,721
Term of patent 3½ years



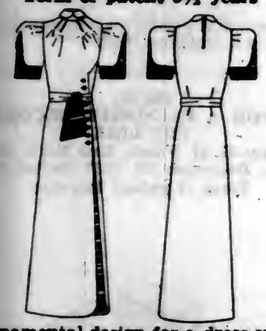
The ornamental design for a handbag, substantially as shown and described.

106,280
DESIGN FOR A HANDBAG
Henri Felmann, Chicago, Ill.
Application December 20, 1937, Serial No. 73,724
Term of patent 3½ years



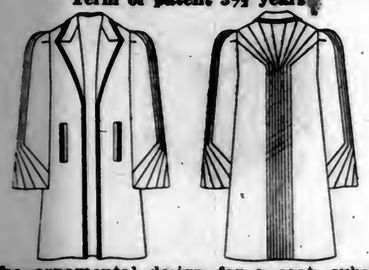
The ornamental design for a handbag, substantially as shown and described.

106,281
DESIGN FOR A FACSIMILE RECORDER OR THE LIKE
William G. H. Finch, New York, N. Y.
Application December 27, 1937, Serial No. 73,885
Term of patent 14 years



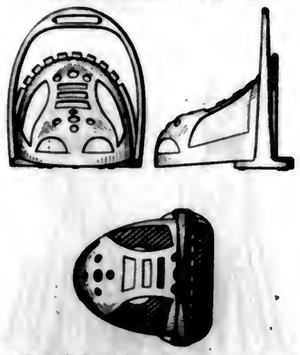
The ornamental design for a facsimile recorder or the like, as shown.

108,282
DESIGN FOR A FACSIMILE RECORDER OR THE LIKE
William G. H. Finch, New York, N. Y.
Application December 27, 1937, Serial No. 73,886
Term of patent 14 years



The ornamental design for a facsimile recorder or the like, as shown.

108,283
DESIGN FOR A DRESS
Louise George, New York, N. Y.
Application January 10, 1938, Serial No. 74,163
Term of patent 3½ years



The ornamental design for a dress substantially as shown.

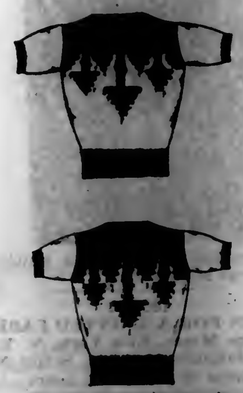
108,284
DESIGN FOR A COAT
Edward Gressman, New York, N. Y.
Application December 30, 1937, Serial No. 73,970
Term of patent 3½ years

The ornamental design for a coat, substantially as shown.

108,285
DESIGN FOR A COMBINED STIRRUP AND TOE GUARD
Aubrey F. Hart, New York, N. Y.
Application June 22, 1937, Serial No. 70,024
Term of patent 14 years

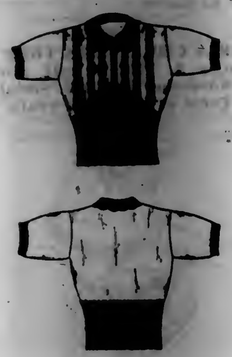
The ornamental design for a combined stirrup and toe guard, as shown.

108,286
DESIGN FOR A SOLE OR SIMILAR ARTICLE
Don C. Hubbard, Auburn, Maine
Application April 25, 1936, Serial No. 62,309
Term of patent 14 years



The ornamental design for a sole or similar article, as shown.

108,287
DESIGN FOR A TEXTILE FABRIC OR SIMILAR ARTICLE
Adolph C. Jaeger, Port Chester, N. Y.
Application June 16, 1937, Serial No. 69,874
Term of patent 7 years



The ornamental design for a textile fabric or similar article substantially as shown and described.

108,288
DESIGN FOR A SWEATER
Charles Levine, New York, N. Y.
Application January 13, 1938, Serial No. 74,257
Term of patent 3½ years

The ornamental design for a sweater, substantially as shown.

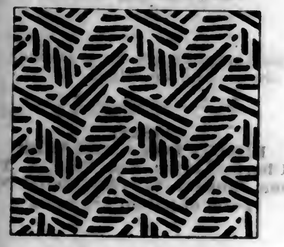
108,289
DESIGN FOR A SWEATER
Charles Levine, New York, N. Y.
Application January 13, 1938, Serial No. 74,258
Term of patent 3½ years

The ornamental design for a sweater, substantially as shown.

108,290
DESIGN FOR A SWEATER
Charles Levine, New York, N. Y.
Application January 13, 1938, Serial No. 74,259
Term of patent 3½ years

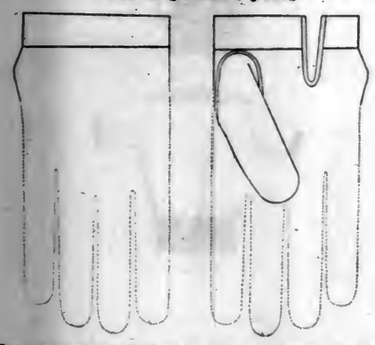
The ornamental design for a sweater, substantially as shown and described.

108,291
DESIGN FOR A SWEATER
Charles Levine, New York, N. Y.
Application January 13, 1938, Serial No. 74,260
Term of patent 3½ years



The ornamental design for a sweater, substantially as shown.

108,292
DESIGN FOR A DRESS
Albert E. Levy, New York, N. Y.
Application December 23, 1937, Serial No. 73,810
Term of patent 3½ years



The ornamental design for a dress substantially as shown and described.

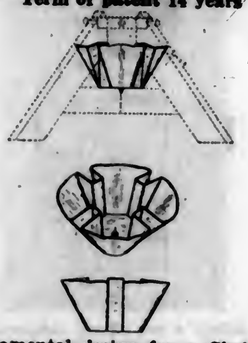
108,293
DESIGN FOR A TEXTILE FABRIC
Sterling B. McDonald, Chicago, Ill.
Application January 4, 1938, Serial No. 74,093
Term of patent 7 years

The ornamental design for a textile fabric, substantially as shown.

108,294
DESIGN FOR A GLOVE
Wallace E. Meyers, New York, N. Y.
Application November 30, 1937, Serial No. 73,264
Term of patent 7 years

The ornamental design for a glove, substantially as shown and described.

108,295
DESIGN FOR A KNITTED FABRIC
Harry Moses, New York, N. Y.
Application January 11, 1938, Serial No. 74,198
Term of patent 3½ years



The ornamental design for a knitted fabric, substantially as shown.

108,296
DESIGN FOR A KNITTED FABRIC
Harry Moses, New York, N. Y.
Application January 11, 1938, Serial No. 74,199
Term of patent 3½ years

The ornamental design for a knitted fabric, substantially as shown.

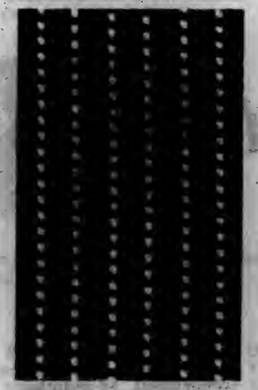
108,297
DESIGN FOR A CHRISTMAS TREE SUPPORT
Stanley A. Pitt, Detroit, Mich.
Application November 22, 1937, Serial No. 73,108
Term of patent 14 years

The ornamental design for a Christmas tree support, substantially as shown.

108,298
DESIGN FOR A HAT
Alice Raimes, New York, N. Y.
Application January 6, 1938, Serial No. 74,106
Term of patent 3½ years

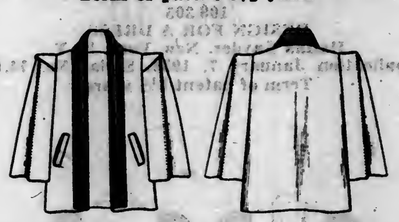
The ornamental design for a hat, substantially as shown.

108,299
DESIGN FOR A HAT
Alice Raimes, New York, N. Y.
Application January 6, 1938, Serial No. 74,107
Term of patent 3½ years



The ornamental design for a hat, substantially as shown.

108,300
DESIGN FOR A HAT
Alice Raimes, New York, N. Y.
Application January 12, 1938, Serial No. 74,212
Term of patent 3½ years



The ornamental design for a hat substantially as shown.

108,301
DESIGN FOR KNITTED FABRIC
David Siegel, New York, N. Y.
Application November 18, 1937, Serial No. 72,984
Term of patent 7 years

The ornamental design for knitted fabric substantially as shown and described.

108,302
DESIGN FOR A COAT
Jacob A. Silverman, New York, N. Y.
Application December 13, 1937, Serial No. 73,573
Term of patent 3½ years

The ornamental design for a coat, substantially as shown.

108,303
DESIGN FOR A COAT
Jacob A. Silverman, New York, N. Y.
Application December 17, 1937, Serial No. 73,673
Term of patent 3½ years

The ornamental design for a coat, substantially as shown.

106,304
DESIGN FOR A DRESS
Hanna Snyder, New York, N. Y.
Application January 7, 1938, Serial No. 74,131
Term of patent 3½ years

The ornamental design for a dress substantially as shown.

106,305
DESIGN FOR A DRESS
Hanna Snyder, New York, N. Y.
Application January 7, 1938, Serial No. 74,133
Term of patent 3½ years

The ornamental design for a dress substantially as shown.

106,306
DESIGN FOR A SAIL TOP
Allan W. Steele, Seattle, Wash.
Application June 29, 1937, Serial No. 70,166
Term of patent 14 years

The ornamental design for a sail top, as shown.

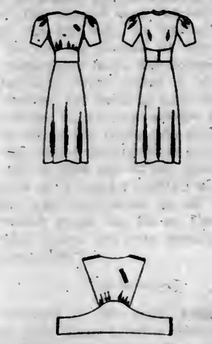
106,307
DESIGN FOR A TEXTILE FABRIC
Mark Turpan, West New York, N. J.
Application January 8, 1938, Serial No. 74,156
Term of patent 3½ years

The ornamental design for a textile fabric substantially as shown.

106,308
DESIGN FOR A TEXTILE FABRIC
Mark Turpan, West New York, N. J.
Application January 12, 1938, Serial No. 74,232
Term of patent 3½ years

The ornamental design for a textile fabric, substantially as shown.

106,309
DESIGN FOR A TEXTILE FABRIC
Hans W. Wilde, North Bergen, N. J.
Application January 12, 1938, Serial No. 74,230
Term of patent 3½ years



The ornamental design for a textile fabric substantially as shown.

106,310
DESIGN FOR LACE
John H. Worrall, New York, N. Y., assignor to Liberty Lace and Netting Works, New York, N. Y., a corporation of New York
Application December 18, 1937, Serial No. 73,713
Term of patent 3½ years

The ornamental design for lace, substantially as shown and described.

106,311
DESIGN FOR A COMBINATION DRESS
Oscar Zaretsky, New York, N. Y.
Application December 11, 1937, Serial No. 73,536
Term of patent 3½ years

The ornamental design for a combination dress substantially as shown and described.

Patents Nos. 2,107,265 to 2,108,080

United States Patent Office

Vol. 487—No. 2 TUESDAY, FEBRUARY 8, 1938 Price—$16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $18.75; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Disclaimers

1,846,875.—*Alfred D. Kerr*, Newark, N. J., and *Karl D. Perkins*, New York, N. Y. AIR CONDITIONING. Patent dated February 23, 1932. Disclaimer filed January 13, 1938, by the assignee, *Auditorium Conditioning Corporation*.

Hereby makes this disclaimer of claims 1, 2, and 7 of said Letters Patent.

1,919,959.—*Paul H. Minton*, Chatham, N. J. ABSORBENT FILTER FOR SMOKING APPLIANCES. Patent dated July 25, 1933. Disclaimer filed January 8, 1938, by the assignee, *Minton Manufacturing Company*.

Hereby enters this disclaimer to claim 8 of the aforesaid Letters Patent.

1,996,830.—*Klaas Posthumus*, Eindhoven, Netherlands. AMPLIFIER. Patent dated April 9, 1935. Disclaimer filed January 19, 1938, by the assignee, *Radio Corporation of America*.

Hereby enters this disclaimer to claim 6 in said specification and to the methods covered by claims 7, 8, 9 and 10 of said patent, except when each of the methods of said claims is limited to detection by means of an asymmetrical conducting device for producing desired frequency changes in current.

2,002,234.—*Willard L. Morrison*, Lake Forest, Ill. AIR COOLING AND CIRCULATING DEVICE AND PROCESS. Patent dated May 21, 1935. Disclaimer filed January 8, 1938, by the patentee.

Hereby disclaims from claim 6 of the said Letters Patent all processes except such where the cooling of the air which is dropped by gravity into the bottom of the defined area in which the portion of the air is isolated is "cooled at the top of said defined area, so that the movement of the air into the defined area is produced entirely by the cooling thereof at the top of the defined area," as is illustrated in all the figures of the drawings; and also disclaims from claim 7 of the said Letters Patent all devices for cooling and circulating air in a segregated portion of a room, except such devices where the means for filling the receptacle with artificially cooled air, so that the cooled air displaces warmer air and causes the warmer air to pass out of the open top of the receptacle, "consists of a means located at the top of receptacle" of the type illustrated in all the figures of the drawings, "which cools the air at the top of the receptacle and which forms the only means of circulating the air in the receptacle".

2,002,235.—*Willard L. Morrison*, Lake Forest, Ill. AIR COOLING AND CIRCULATING DEVICE. Patent dated May 21, 1935. Disclaimer filed January 8, 1938, by the inventor.

Hereby enters this disclaimer to claims 18 and 19 of the said patent.

2,037,875.—*Frank Benedict*, Rutherford, N. J., and *Paul E. Carter*, Bronxville, N. Y. TRAIN DISPATCHING SYSTEM FOR RAILROADS. Patent dated April 21, 1936. Disclaimer filed January 17, 1938, by the assignee, *General Railway Signal Company*.

Hereby enters this disclaimer to claims 2, 6, 19, 21, 22, and 24 of said Letters Patent.

Communications to the Patent Office

RULE 8. A separate letter should in every case be written in relation to each distinct subject of inquiry or application. Assignments for record, final fees, and orders for copies or abstracts must be sent to the Office in separate letters.

Briefs in Appealed Cases

All briefs filed in this Office should have conspicuously printed thereon a statement designating the particular tribunal of the Patent Office to which the brief is addressed.

Condition of Applications Under Examination at Close of Business January 22, 1938

(Total number of applications awaiting action, excluding Trade-Mark Division, 43,844; Trade-Mark Division, 1,668. Oldest new case, July 24, 1937; oldest amended, July 3, 1937.)

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

FILDES *v.* WILLIAMSON

No. 3,861. Decided December 6, 1937

[92 F.(2d) 94]

(1) INTERFERENCE — APPLICANT AND PATENTEE — APPEALS—MOTION TO DISMISS.

Where in an applicant-patentee interference the Board of Appeals in awarding priority to applicant held that he had the right to make the claims in issue and that the patentee had derived the invention from him and the patentee on appeal to the Court raised only the question of applicant's right to make the claims, a motion by the applicant to dismiss the appeal was *Denied* as the question is ancillary to that of priority and if determined adversely to applicant the testimony as to priority and originality becomes immaterial.

(2) SAME—SAME—PRIORITY.

Held that the applicant W. has the right to make the claims in issue and that being the only question raised in the appeal of the patentee F., the award of priority to W. was affirmed.

APPEAL from the Patent Office. Affirmed.

Messrs. Fraley & Paul for Fildes.

Mr. Joseph Harris for Williamson.

LENROOT, *J.*:

This is an appeal in an interference proceeding from a decision of the Board of Appeals of the United States Patent Office, affirming a decision of the Examiner of Interferences awarding priority of invention of the subject matter in issue to appellee.

The issue embraces four counts, numbered 1 to 4, inclusive, of which count 1 is illustrative; it reads as follows:

1. A shipping container of the character described having side walls, top and end walls of sheet metal, separate horizontal and vertical binding strips terminating short of the upper corners of the container and connecting its top and side walls with the end walls and corner pieces continuous with the horizontal and vertical binding strips aforesaid, connecting the top, side and end walls of the container and completely filling in the intervals between the binding strips, the said corner pieces being integrally formed with hooks for engagement by lifting tackle.

The interference is between a patent, No. 1,868,633, issued to appellant, and an application filed by appellee. Appellant's patent was issued on July 26, 1932, upon an application filed January 23, 1931. Appellee's application was filed on April 22, 1931. Inasmuch as appellee's application was copending with appellant's application at the time of the issue of said patent, appellant derived no advantage from such issue.

The invention involved, as set forth in appellant's patent and in appellee's application, relates to improvements in containers for use with railroad equipment in the transportation of merchandise. Appellant's patent states:

This invention relates to shipping containers such as are used in making shipments in separate consignments by railroad, and which are separately removable from special cars designed to support them in transit.

Containers of the type referred to are ordinarily constructed with sheet metal top, side and end walls; and it has been the practice heretofore to connect these side walls, top and end walls by angle strips which extend continuously around their perimetric edges meeting at opposite ends of the structures.

The bending of these continuous binding strips into conformity with the upper corners of the container was extremely difficult of accomplishment in view of the sharpness of the angle and often precluded the formation of weathertight junctures.

One object of my invention is to overcome the above indicated drawbacks through use of separate horizontal and vertical strips terminating short of the upper corners of the containers, and through provision of corner pieces to connect the container walls in the intervals between the separate binding strips aforesaid.

In addition to the foregoing, I aim to embody in the corner pieces, hooks for engagement by lifting tackle incident to placement and removal of the containers with respect to the supporting cars.

Other objects and attendant advantages of this invention will be manifest from the detailed description following in connection with the attached drawing, whereof Fig. 1 is a view showing, in side elevation, a fragmentary portion of a shipping container embodying the present improvements.

Appellee copied, for the purpose of interference, the four claims from appellant's patent corresponding to the counts here in issue.

Following the declaration of interference both parties filed preliminary statements, and thereafter appellant moved to dissolve the interference upon the ground that appellee's application does not support the counts.

This motion was denied by the Primary Examiner. Thereafter testimony was taken by both parties. Inasmuch as appellant claimed that the evidence submitted was relevant to the question of appellee's right to make the claims corresponding to the counts, raised upon appellant's motion to dissolve, the Examiner of Interferences re-examined that question and held that all of the elements of the involved counts were disclosed in appellee's application.

Upon the merits of the case he held that appellee was the first to conceive the invention and that he fully disclosed it to appellant. He therefore awarded priority of invention as to each of the counts in issue to appellee.

Upon appeal the Board of Appeals affirmed the decision of the Examiner, expressly holding that appellee's application supports the counts, and that appellant derived the invention from appellee.

[1] Appellant has appealed to this court. Before us he does not contest the finding of the Patent Office tribunals that he derived the invention from appellee, but expressly confines his appeal to the question of whether appellee's application discloses the subject matter of the counts in issue, and his reasons of appeal relate wholly to that subject.

Appellant's notice of appeal reads as follows:

And now comes Frederick K. Fildes, by Fraley & Paul, his attorneys, and gives notice to the Commissioner of Patents of his appeal to the United States Court of Customs and Patent Appeals from the decision of the Board of Appeals rendered on or about June 23, 1936, awarding priority of invention to Clarence H. Williamson in the above entitled case, and assigns as his reasons of appeal the following:

1. The Board of Appeals erred in holding that Williamson's application discloses the subject matter of the counts in issue.

2. The Board of Appeals erred in holding that the "slip effect" or "slip joint", which is the essence of the invention, could be presumed to be disclosed in Williamson's application, although not shown or described therein, because such a joint would be selected as a matter of course.

3. The Board of Appeals erred specifically in holding that a disclosure can be predicated upon pure speculation.

Notice is hereby given that the party Fildes in the presentation of this appeal confines the issue to the matter of disclosure of the invention in Williamson's application; and that in preparing the record for the Court of Customs and Patent Appeals, the party Fildes will ask that only such of the testimony and exhibits as bear directly upon the issue of disclosure shall be incorporated in the printed record.

Prior to the hearing of this case upon its merits, appellee moved to dismiss the appeal upon the ground that this court is without jurisdiction to entertain the appeal. This motion was heard by us at the same time that oral arguments were presented upon the merits of the case, and decision upon such motion was reserved.

It is appellee's position that the reasons of appeal do not assign any error of the Board of Appeals in awarding priority of invention to appellee, and that in his reasons of appeal appellant deliberately excluded the issue of priority and confined the issue to the matter of disclosure of the invention in appellee's application. Appellee also contends that the reasons of appeal are not sufficiently specific to comply with the statute, section 4911 R. S.

The motion to dismiss the appeal is denied. In an interference proceeding, where there has been an award of priority, the question of the right of one of the parties to make claims corresponding to the counts is a question ancillary to the question of priority and is properly considered upon an appeal from a decision awarding priority of invention to one of the parties. This is so well established and constantly observed as to require no citation of authority. While appellee contends that, under the peculiar facts existing in this case, this rule should not prevail, we see no reason why it should not. If appellee's application does not support the involved counts, any testimony with respect to priority of invention, or as to whether appellant derived the invention from appellee, is wholly immaterial, for if appellee cannot make the claims corresponding to the counts, there never was any interference in fact between the parties.

Upon the question of whether appellant's reasons of appeal are sufficiently specific to comply with the statute, section 4911 R. S., we hold that the first reason of appeal, hereinbefore quoted, is sufficiently specific to present the only issue before us, and it is therefore unnecessary to consider appellant's other reasons of appeal, for they all bear upon the subject matter of appellant's first reason of appeal.

[2] This brings us to a consideration of the merits of appellant's appeal, and the only question before us for determination is whether appellee's application discloses the elements of the counts such as

"separate horizontal and vertical binding strips terminating short of the upper corners of the container * * * and corner pieces * * * completely filling in the intervals between the binding strips,"

as set forth in count No. 1.

Appellee discloses a container having four corner posts, Z-bar end plates and Z-bar side plates. It is conceded that the corner posts constitute vertical binding strips, and that the Z-bar side plates constitute horizontal binding strips, but it is appellant's contention that there is no disclosure in appellee's application that such horizontal and vertical binding strips terminate short of the upper corners of the container, and that there is no disclosure that the corner pieces completely fill in the intervals between the binding strips.

Appellee's application states:

At the upper corners, the side and end Z-bar plates and the corner posts are secured together by other castings 29—29, the details of which are best illustrated in Figures 1, 3, and 4. As clear from the drawings, each of the side and end Z-bar plates is arranged with the web 30 thereof disposed horizontally, the inner flange 31 extending vertically upward and the outer flange 32 extending vertically downward. Each of the corner castings 29 is conformed to the Z-bar plates, as clearly shown in Figures 3 and 4 and also to the slope or pitch of the side plates, as shown, said castings being riveted both to the vertical flanges 31 of the Z-bars, as indicated at 33—33 and to the depending flanges 32, as indicated at 34—34. Each of said castings 29 is also provided with a depending right angular corner section conforming to the angular corner post 21 and to which the latter are riveted, as indicated at 35—35. The corner castings 29 are each formed with an upstanding lifting hook 36 to permit of the attachment of a sling and the handling of a container by a crane in the usual manner.

Figure 4, referred to in the above quotation, clearly discloses that the horizontal Z-bar side plate terminates short of the corner of the container, for between the end of said last named plate and the corner is plainly seen the end of the Z-bar end plate. In said figure a vertical corner post is shown, which, as we view the drawing, terminates short of the corner of the container because in the drawing the corner consists wholly of the corner piece, the end of the Z-bar end plate and the wall of the container. The drawing shows an offset in the corner piece at the point that it comes in contact with the corner post, indicating that at such point the upper end of the corner post terminates. With respect to the question of whether the corner pieces completely fill the intervals between the binding strips, we are of the opinion that appellee's application discloses this feature. Again referring to Figure 4 of appellee's drawings, assuming that the Z-bar end plates terminate at the upper corner of the container, the corner piece as shown in said drawing completely fills such interval as exists between appellee's vertical corner post and the end of his horizontal Z-bar plate.

It is our opinion that appellee's application, taken as a whole, supports the counts here involved.

We are not unmindful of the rule that, with certain exceptions, in interference cases counts will be given the broadest interpretation that their terms may reasonably permit, but express limitations should not be ignored; neither are we permitted to read into counts limitations not there expressed.

Much of appellant's argument is directed to the contention that the invention here involved lies in a "slip joint" corner construction for a railway container, and that appellee does not disclose such a "slip joint." With respect to this contention we would observe that there is nothing in the counts with respect to a "slip joint", nor is any construction described therein that would necessarily result in a "slip joint." While not material, it may be observed that a "slip joint" is not mentioned in appellant's patent. Irrespective of whether or not appellee discloses a "slip joint", we are satisfied that his disclosure supports each element of the counts here involved, and he is therefore entitled to make the claims corresponding to the involved counts.

For the reasons herein stated, the decision of the Board of Appeals is affirmed.

Affirmed.

GRAHAM, *P. J.*, sat during the argument of this case, but died before the opinion was prepared.

Des. 107,050, P. Fracchia, Dress, filed Nov. 24, 1937, D. C., S. D. N. Y., Doc. E 86/82, *Rosenthal & Kalman Co., Inc.*, v. *Jomas Frocks, Inc.* Doc. E 86/84, *Rosenthal & Kalman Co., Inc.*, v. *Trussel Dress Co., Inc.*

Des. 107,192, I. Lampel, Dress, filed Nov. 27, 1937, D. C., S. D. N. Y., Doc. E 86/98, *Cecele Dance Frocks, Inc.*, v. *Columbia Dance Frocks, Inc.*

T. M. 177,026, H. Jevne Co., Foods and ingredients of foods, D. C. Tex. (Corpus Christi), Doc. E 97, *The Arkansas City Flour Mills Co.* v. *A. M. Cain et al.* Dismissed Nov. 24, 1937.

Adverse Decisions in Interference

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 2,014,134, R. B. Ivandick, Locking gas cap, decided December 1, 1937, claims 1, 4, and 5.

Pat. 2,050,210, N. B. Griffin, Shoe sole construction, decided January 14, 1938, claim 1.

Pat. 2,064,343, W. H. Finley and C. H. Hamilton, Pressure operated valve structure, decided January 14, 1938, claims 1, 2, and 3.

Pat. 2,085,936, F. F. Wolf, Can washing machine, decided January 19, 1938, claims 3, 6, 28, and 29.

Adjudicated Patents

(D. C. Mich.) Thomas patent, No. 1,179,476, for metal punching machinery, claims 1 and 2 *Held* invalid. *Whitman & Barnes* v. *Allied Products Corporation*, 21 F. Supp. 195.

(D. C. Conn.) Eden patent, No. 1,408,869, for wringer for washing machine, claims 8, 9, 10, and 11 *Held* valid and infringed. *Apex Electrical Mfg. Co.* v. *Landers, Frary & Clark*, 21 F. Supp. 241.

(D. C. Conn.) Dietenberger patent, No. 1,712,755, for washing machine, claim 1 *Held* invalid. *Id.*

(D. C. Conn.) Kirby patent, No. 1,842,030, for laundry machine, claim 8 *Held* invalid. *Id.*

(D. C. Conn.) Kirby patent, No. 1,927,665, for dishwashing machine, claim 8 *Held* invalid. *Id.*

(D. C. Conn.) Kirby patent, No. 1,960,178, for laundry machine, claims 3, 30, and 32 *Held* invalid. *Id.*

(D. C. Conn.) Maus patent, No. 2,021,097, for washing machine, claims 16, 18, 20, and 22 *Held* invalid. *Id.*

(D. C. Conn.) Kirby reissue patent, No. 18,280, for clothes washing machine, claims 24, 25, and 29 *Held* invalid. *Id.*

(D. C. Mich.) Richard reissue patent, No. 18,395, for punch and die retainer, claims 1–6 *Held* invalid. *Allied Products Corporation* v. *Whitman & Barnes*, 21 F. Supp. 186.

(D. C. Mich.) Richard reissue patent, No. 18,401, for punch and die retainer, claims 2, 3, 5, 6, and 7 *Held* valid. Claims 2, 5, and 6 *Held* not infringed. Claims 3 and 7 *Held* infringed. *Allied Products Corporation* v. *Whitman & Barnes*, 21 F. Supp. 186.

(D. C. Conn.) Prachar reissue patent, No. 19,217, for ironing machine, claims 14, 19, 20, 21, and 24 *Held* invalid. *Apex Electrical Mfg. Co.* v. *Landers, Frary & Clark*, 21 F. Supp. 241.

TRADE-MARKS

OFFICIAL GAZETTE, FEBRUARY 8, 1938

[VOL. 487. No. 2]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1

Raw or Partly Prepared Materials

Ser. No. 396,944. JUD YOHO, doing business as Yoho & Hooker, Youngstown, Ohio. Filed Aug. 30, 1937.

Applicant disclaims the words "Aromatic Cedar" and "Kennel Bedding."

For Kennel Bedding.

Claims use since Jan. 1, 1937.

Ser. No. 398,373. SALOMON & PHILLIPS, New York, N. Y. Filed Oct. 11, 1937.

SCAMOZA

For Leather.

Claims use since June, 1937.

Ser. No. 399,941. SHOE FORM CO., INC., Auburn, N. Y. Filed Nov. 19, 1937.

NON-FLAM

For Plastic Cellulose Derivative, a Raw Material in Sheet Form.

Claims use since August, 1937.

Ser. No. 400,334. W. ATLEE BURPEE COMPANY, Philadelphia, Pa. Filed Dec. 1, 1937. Under 10-year proviso.

Burpee's

For Seeds, Bulbs, Roots, and Plants of All Kinds.

Claims use since 1877.

Ser. No. 400,351. OLD BEN COAL CORPORATION, Chicago, Ill. Filed Dec. 1, 1937.

CAL-X

For Coal.

Claims use since Feb. 15, 1937.

Ser. No. 400,357. TAINTOR TRADING COMPANY, New York, N. Y. Filed Dec. 1, 1937.

For Clay in Bulk, White Clay, Ground Clay, Crude Chalk, and Cliffstone.

Claims use since January, 1931.

Ser. No. 400,512. A. C. LAWRENCE LEATHER COMPANY, Peabody, Mass. Filed Dec. 6, 1937.

CHEVRITA

For Leather.

Claims use since Jan. 30, 1912.

CLASS 3

Baggage, Animal Equipments, Portfolios, and Pocketbooks

Ser. No. 398,969. MARIZON & ROSENBERG CO., INC., New York, N. Y. Filed Oct. 28, 1937.

The word "Original" is disclaimed apart from the mark shown.

For Ladies' Handbags.

Claims use since Sept. 30, 1937.

CLASS 4

Abrasive, Detergent, and Polishing Materials

Ser. No. 399,690. TURCO PRODUCTS, INC., Los Angeles, Calif. Filed Nov. 12, 1937.

TECNIK

For Cleaning Compounds for General Industrial and Household Use.
Claims use since Sept. 15, 1937.

Ser. No. 399,717. R. H. MACY & CO., INC., New York, N. Y. Filed Nov. 13, 1937. Under section 5b of the act of 1905 as amended in 1920.

MACY'S

For Enamel and Porcelain Cleaner, Soaps, Shoe Polish and Cleaner, Cleaning Fluid for Garments and Textile Fabrics, Cleaning Compounds for Floors, Walls, Tile, Marble, Porcelain, China, Glass, Silverware, Metalware, and Painted Wood Work, Washing Powder, Steel Wool, Metal Polish, Cleaning and Polishing Cloths, Top Dressing, Shaving Soap, Scouring Powder, Shaving Cream.
Claims use on cleaning fluid since 1928; on shaving soap since 1930; on enamel and porcelain cleaner, soaps, cleaning compounds, washing powder, and metal polish since 1931; on top dressing since March, 1932; on shoe polish and cleaner since 1932; on steel wool since 1933; on cleaning and polishing cloths since 1934; on shaving cream since April, 1935; and on scouring powder since Oct. 8, 1932.

Ser. No. 400,462. MIDLAND CHEMICAL LABORATORIES, INC., Dubuque, Iowa. Filed Dec. 4, 1937.

FIBRELENE

For Paste Dry Cleaning Soap.
Claims use since Nov. 13, 1937.

Ser. No. 400,491. MARCIA BLIER, New York, N. Y. Filed Dec. 6, 1937.

ALO

For Liquid Aluminum Cleanser.
Claims use since Nov. 27, 1937.

Ser. No. 400,928. SHULTON, INC., New York, N. Y. Filed Dec. 16, 1937.

For Saponaceous Compounds for Cleaning the Hands, Shaving Cream, Shaving Sticks, Shaving Powder, Outfit Packages Containing Soap and Towel; Soap Powder for Bathing, Washing, and Cleaning Purposes; Laundry Soaps, Soap Flakes, Hand Soaps, Toilet Soaps, Soap Pastes, Washing Tablets, Bath Tablets, and Shampoo Soaps.
Claims use since Apr. 2, 1937.

Ser. No. 400,931. SHULTON, INC., New York, N. Y. Filed Dec. 16, 1937.

For Saponaceous Compounds for Cleaning the Hands, Shaving Cream, Shaving Sticks, Shaving Powder, Outfit Packages Containing Soap and Towel; Soap Powder for Bathing, Washing, and Cleaning Purposes; Laundry Soaps, Soap Flakes, Hand Soaps, Toilet Soaps, Soap Pastes, Washing Tablets, Bath Tablets, and Shampoo Soaps.
Claims use since Apr. 2, 1937.

Ser. No. 400,933. SHULTON, INC., New York, N. Y. Filed Dec. 16, 1937.

For Saponaceous Compounds for Cleaning the Hands, Shaving Cream, Shaving Sticks, Shaving Powder, Outfit Packages Containing Soap and Towel; Soap Powder for Bathing, Washing, and Cleaning Purposes; Laundry Soaps, Soap Flakes, Hand Soaps, Toilet Soaps, Soap Pastes, Washing Tablets, Bath Tablets, and Shampoo Soaps.
Claims use since Apr. 2, 1937.

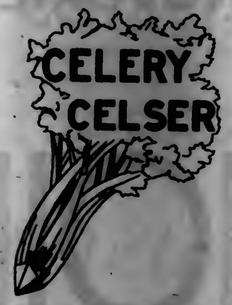
Ser. No. 401,090. SHULTON, INC., New York, N. Y. Filed Dec. 18, 1937.

For Saponaceous Compounds for Cleaning the Hands, Shaving Cream, Shaving Sticks, Shaving Powder, Outfit Packages Containing Soap and Towel; Soap Powder for Bathing, Washing, and Cleaning Purposes; Laundry Soaps, Soap Flakes, Hand Soaps, Toilet Soaps, Soap Pastes, Washing Tablets, Bath Tablets, and Shampoo Soaps.
Claims use since Apr. 2, 1937.

CLASS 5

Adhesives

Ser. No. 397,007. STAR CHEMICAL CO. INC., Chicago, Ill. Filed Sept. 1, 1937.



✡STAR✡

For Wood and Marble Cement in Stick Form.
Claims use since Jan. 1, 1913.

CLASS 6

Chemicals, Medicines, and Pharmaceutical Preparations

Ser. No. 363,330. KOCH BROS. INC., Union City, N. J. Filed Apr. 2, 1935.

The word "Celery" and the word "Celser" are disclaimed apart from the mark.
For Preparation to Relieve Headache and Indigestion.
Claims use since Mar. 26, 1935.

Ser. No. 385,796. MONSANTO CHEMICAL COMPANY, St. Louis, Mo. Filed Nov. 20, 1936.

SANTOCEL

For Organic and Inorganic Aerogels, Such as Silica Aerogel, Having Sub-microscopic Porosity, Being of Low Apparent Specific Gravity, Possessing Marked Heat Insulating Properties, and Having a General Use in the Industrial Arts.
Claims use since April, 1936.

Ser. No. 387,817. EWEN CAMERON, Wellington, New Zealand. Filed Jan. 15, 1937.

TAKT

For Effervescent Mouth Wash Tablets, Deodorants, Depilatories, and Deodorant Powders.
Claims use since Nov. 18, 1936.

Ser. No. 396,614. SAPEWA PHARMAZEUTISCHE PRÄPARATE ERNST F. P. WESCHE, Berlin, Germany. Filed Aug. 20, 1937.

Viperin

The word "Viperin" is disclaimed apart from the mark.
For Medicinal Preparation for Injection or Embrocation in Form of Solutions or Ointments Taken From Snake Oil, and Used in the Treatment of Rheumatism, Lumbago, Myalgia, Neuralgia, Asthma, Etc.
Claims use since June 2, 1937.

Ser. No. 397,429. ROY ZIMMERMAN, doing business as The Marvalin Co., Compton, Calif. Filed Sept. 14, 1937.

MARVALIN

For Liniment and Salve.
Claims use since Dec. 4, 1934.

Ser. No. 397,632. HENRY K. WAMPOLE AND COMPANY, INCORPORATED, Philadelphia, Pa. Filed Sept. 21, 1937. Under section 5b of the act of 1905 as amended in 1920.

WAMPOLE'S

Applicant is owner of T. M. Reg. No. 87,022 for the word "Wampole's", effected under the 10-year proviso.
For Antacid Tablets, Antiseptic Solutions, Cholagogue and Biliary Stimulant Tablets, Cough Mixture, Liquid Diuretic, Diuretic Pills, Liquid Hypnotic and Sedative, Capsules for Treatment of Menstrual Disorders, Liquid Tonics for General Use, Tonic Pills for General Use, Suppositories, Vaginal Cones, and a Product for Use in the Treatment of Diarrhea and Irritated Conditions of the Gastrointestinal Tract.
Claims use since 1880, on liquid tonics; since 1901, on capsules for treatment of menstrual disorders and tonic pills; since 1902, on antiseptic solutions, diuretic pills, liquid hypnotic and sedative, suppositories, and vaginal cones; since 1903, on antacid tablets and cough mix-

ture; since 1904, on a product for use in the treatment of diarrhea and irritated conditions of the gastrointestinal tract; and since 1905, on cholagogue and biliary stimulant tablets and liquid diuretic.

Ser. No. 398,246. FRANK W. HORNER, LIMITED, Montreal, Quebec, Canada. Filed Oct. 7, 1937.

CALHALOL-E

The letter "E" is disclaimed apart from the mark.
For Capsules Containing Wheat Germ Oil, Halibut Oil, and Calcium Monophosphate Equivalent to Vitamins A, D, and E.
Claims use since Dec. 1, 1936.

Ser. No. 398,480. HYMAN MILLER, doing business as Myam Products Co., Arlington, Mass. Filed Oct. 14, 1937.

MYAM

For Medicinal Preparation Used Principally for the Treatment of Arthritis, Neuritis, Sciatica, Lumbago, Rheumatism, and Muscular Contraction of Every Description.
Claims use since Oct. 1, 1937.

Ser. No. 398,754. ORAH CARDIN, Miami, Okla. Filed Oct. 21, 1937.

ORAH CARDIN'S
"B.I.T.W." TREATMENT

The portrait is that of applicant and the name Orah Cardin is a reproduction of applicant's signature.
For Preparation for Treating Rheumatism, Diabetes, and Dropsy.
Claims use since April, 1935.

Ser. No. 398,955. JAMES L. YOUNGHUSBAND, Chicago, Ill. Filed Oct. 25, 1937.

SMOOTHIE

For Lipsticks, Rouge, Face Powder, Eyelash and Eyebrow Mascara, Creams for the Hands and Face, Preparations for Skin, Hair, and Fingernails, and Perfumes.
Claims use since July 10, 1936.

Ser. No. 399,061. STANDARD DRUG CO., doing business as Elars Products, Richmond, Va., and New York, N. Y. Filed Oct. 28, 1937.

SUPER ALBA

For Medicinal Preparation for Treating Constipation and Sluggish Bowels and Containing Medicinal Mineral Oil and Agar With Phenolphthalein.
Claims use since Sept. 29, 1937.

Ser. No. 399,214. SAMUEL H. WILLIAMS, Burlington Junction, Mo. Filed Nov. 1, 1937.

The portrait is that of the proprietor.
For Medicine Used in the Treatment of Rheumatism.
Claims use since Sept. 29, 1931.

Ser. No. 399,620. PARFUMS REVILLON, Paris, France. Filed Nov. 11, 1937.

CARNET DE BAL

For Products of Perfumery, Hygiene, and Beauty—Namely, Perfumes, Toilet Waters and Powders, Toothpaste and Powders, Hair Tonics and Lotions, Face Creams, Face Lotions, Face Powders, Rouge, Lipstick, and Nail Polish.
Claims use since Jan. 21, 1935.

THIALIXIR

For Vitaminic Preparations.
Claims use since Dec. 1, 1937.

CLASS 12

Construction Materials

Ser. No. 400,390. THE SPONGE RUBBER PRODUCTS COMPANY, Derby, Conn. Filed Dec. 2, 1937.

CELL-TITE

For Structural Material of Rubber Composition Used for Vibration Absorption, and for Heat and Sound Insulation, and in Jackets and Coverings for Conduits and Valves, and in Closure Sealing Gaskets and Door Bumpers.
Claims use since Nov. 10, 1937.

Ser. No. 400,558. I. F. LAUCKS, INC., Seattle, Wash. Filed Dec. 7, 1937.

ROTOPLY

For Plywood.
Claims use since Nov. 30, 1937.

CLASS 13

Hardware and Plumbing and Steam-Fitting Supplies

Ser. No. 398,842. FISHER SCIENTIFIC COMPANY, Pittsburgh, Pa. Filed Oct. 23, 1937.

FLEXAFRAME

For Metal Pipe and Adjustable Aluminum Alloy Pipe Clamps for Holding Two or More Pipes at Different Angles, for Constructing Frames, Stands, Racks, and the Like.
Claims use since Oct. 16, 1937.

Ser. No. 396,322. NORTHERN EQUIPMENT COMPANY, Erie, Pa. Filed Nov. 4, 1937.

FLOWMATIC

For Boiler Feed Water Regulators.
Claims use since Oct. 15, 1937.

Ser. No. 399,931. KEYSTONE BRASS & RUBBER CO., Philadelphia, Pa. Filed Nov. 19, 1937.

SEAL MASTER

For Flush Valve Balls of Tanks of Toilet Bowls.
Claims use since Oct. 14, 1937.

CLASS 15

Oils and Greases

Ser. No. 396,068. THE FREEDOM OIL WORKS COMPANY, Freedom, Pa. Filed Aug. 6, 1937.

VULCAN

For Lubricating Oils and Greases.
Claims use since June 16, 1925.

Ser. No. 400,407. FLOYD COMMADORE FORESTER, doing business as Independent Oil Co. of N. C., North Wilkesboro, N. C. Filed Dec. 3, 1937.

FONSE

For Gasoline, Motor Oil, Lubricating Oils and Greases, Kerosene, and Naphtha.
Claims use since May 5, 1928.

CLASS 16

Paints and Painters' Materials

Ser. No. 394,366. ATLANTIC RESEARCH ASSOCIATES, INC., Newtonville, Mass. Filed June 22, 1937.

ARA

For Paints in Ready Mixed, Paste, and Powdered Form, Paint Pigments, and Casein Coating Materials.
Claims use since Sept. 1, 1935.

Ser. No. 394,367. ATLANTIC RESEARCH ASSOCIATES, INC., Newtonville, Mass. Filed June 22, 1937.

ARAPASTE

For Paints in Ready Mixed, Paste, and Powdered Form, and Casein Coating Materials.
Claims use since Mar. 1, 1937.

CLASS 19

Vehicles, Not Including Engines

Ser. No. 399,352. THE B. F. GOODRICH COMPANY, New York, N. Y., and Akron, Ohio. Filed Nov. 5, 1937.

The drawing is lined for red.
For Automobile Seat Covers.
Claims use since May 1, 1937.

Ser. No. 400,198. ALBERT L. LUCE, doing business as Blue Bird Body Company, Fort Valley, Ga. Filed Nov. 27, 1937.

No claim is made to the words "Bodies Steel" apart from the mark.
For Steel Vehicle Bodies.
Claims use since July, 1935.

CLASS 21

Electrical Apparatus, Machines, and Supplies

Ser. No. 399,216. ZENITH RADIO CORPORATION, Chicago, Ill. Filed Nov. 1, 1937.

RADIO NURSE

The word "Radio" is disclaimed apart from the mark.
For Radio Frequency and Audio Frequency Transmitting and Receiving Apparatus, and Parts Thereof.
Claims use since Oct. 29, 1937.

Ser. No. 399,884. ELECTRIC DISTRIBUTING CO., INC., Chicago, Ill. Filed Nov. 18, 1937.

OMNILITE

For Electric Flood-Lights, Shades, Globes, Lamps, Reflectors, and Other Electric Lighting Fixtures.
Claims use since Oct. 21, 1937.

REISSUES

FEBRUARY 8, 1938

20,649

THERMOSTATIC OVERLOAD SWITCH

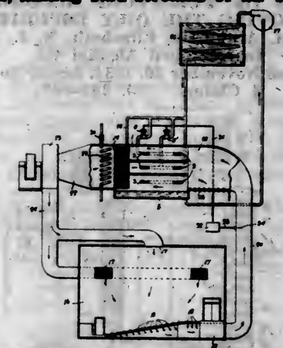
Herman J. Hammerly, New Britain, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a corporation of Connecticut

Original No. 2,038,105, dated April 21, 1936, Serial No. 758,913, December 24, 1934. Application for reissue November 2, 1937, Serial No. 172,467

21 Claims. (Cl. 200—116)

1. In a toggle action thermostatic switch, an insulating support, a metal frame carried thereby and having a toggle action device, a freely pivoted catch carried by one part of the toggle action device and a thermostatic latch coacting with the catch.

20,650



METHOD OF AIR CONDITIONING

Thomas Chester, Detroit, Mich.

Original No. 1,968,264, dated January 15, 1935, Serial No. 510,349, January 22, 1931, which is a division of application January 30, 1928, Serial No. 250,489, now Patent No. 1,791,751, dated February 10, 1931. Application for reissue August 31, 1935, Serial No. 38,811

13 Claims. (Cl. 261—115)

13. The method of air conditioning an enclosure which consists in drawing fresh air from the outdoor atmosphere in desired volume, withdrawing return air from the enclosure, passing said fresh air and said return air in a plurality of streams through a plurality of conditioning zones, subjecting different numbers of said streams passing through said zones to the action of conditioning medium in accordance with variations in heat load, subjecting at least one of said streams to the action of conditioning medium at all times, mixing said streams of air subsequent

to their passage through said zones and supplying said air mixture to said enclosure.

20,651

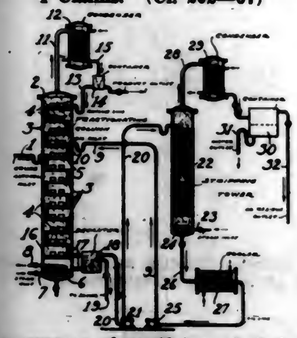
AUTOMATIC DECELERATION CONTROL DEVICE

Albert G. H. Vanderpoel, Wilmar, Calif., assignor of one-third to James O'Laverty and one-third to David E. Seward, both of Los Angeles, Calif.

Original No. 2,017,378, dated October 22, 1935, Serial No. 719,888, April 10, 1934. Application for reissue November 10, 1936, Serial No. 110,135

19 Claims. (Cl. 123—97)

1. The combination with a carbureter and intake manifold, of a gaseous fuel conduit leading from the carbureter to the intake manifold, a valve arranged for operation within said conduit, a spring connected to said valve and normally tending to close the same, means for normally holding said valve from closing, and means actuated by the vacuum produced within the intake manifold when the flow of gaseous fuel thereto is decelerated, for releasing said valve holding means to permit said valve to close.



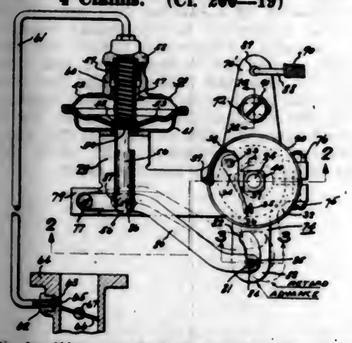
PATENTS

GRANTED FEBRUARY 8, 1938

2,107,265
PROCESS OF PURIFYING ALCOHOLS BY REMOVING THE OILY IMPURITIES

Francis M. Archibald, Elizabeth, N. J., assignor to Standard Alcohol Co.

Application November 20, 1934, Serial No. 753,807
4 Claims. (Cl. 202—67)



1. In a process of purifying alcohols derived from unsaturated hydrocarbons and containing oily impurities in solution by removing the oily impurities, the improvement which comprises passing vapors of an alcohol containing oily impurities in countercurrent flow with a liquid highly refined petroleum oil, separating the vapors of the alcohol from the liquid petroleum oil and condensing the vapors of the alcohol separately.

2,107,266
IGNITION CONTROL APPARATUS

James L. Arthur, Anderson, Ind., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware

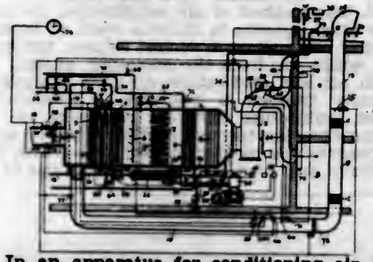
Application May 3, 1934, Serial No. 723,643
4 Claims. (Cl. 200—19)

1. In ignition control apparatus for internal combustion engines having a housing provided with a shank and rotatably supported for altering the time relation of the engine, the combination with the housing comprising a plate pivotally mounted upon said shank providing for manual distributor adjustment, a second plate rigidly mounted upon the shank, and means operatively connecting the plates comprising, a cam slot in the rigid plate, a cam follower riding in the cam slot and pivoted upon said first plate, and a member carried by said first plate and connected to said cam follower.

2,107,267
LADLE

Carl P. Astrom, East Orange, N. J.

Application March 14, 1936, Serial No. 68,954
4 Claims. (Cl. 22—81)

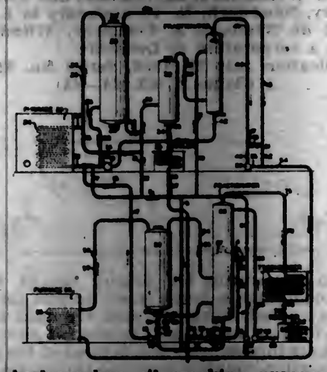


1. A ladle comprising a tubular metallic shell having a bottom and an open top, the tubular wall of the shell having vertically extending trunnion carrying portions on opposite sides thereof and intermediate portions connecting the trunnion carrying portions, the trunnion carrying portions having their lower ends attached to and spaced apart by the bottom and being individually substantially resistant to flexure under the influence of lifting forces applied at the trunnions, and the intermediate portions, not subjected to such forces, being of lighter construction.

2,107,268
APPARATUS FOR CONDITIONING AIR

Lester T. Avery, Shaker Heights, and Hugh Lenane, Euclid Village, Ohio, assignors to Avery Engineering Company, Cleveland, Ohio, a corporation of Ohio

Application November 29, 1935, Serial No. 52,140
8 Claims. (Cl. 257—3)

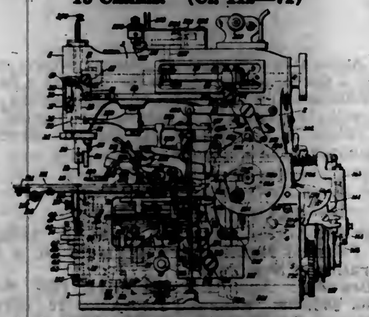


1. In an apparatus for conditioning air, the combination of a water-cooled cooling means for initially cooling the air, a refrigerating system for further cooling the air, said system having a condenser supplied with water from said cooling means, means responsive to a function of the psychrometric condition of the air for regulating the flow of water through said cooling means and for operating said refrigerating system, and means responsive to the temperature of said condenser for supplying to said condenser cooling water additional to that supplied from said cooling means.

2,107,269
HYDROCARBON OIL CONVERSION

John B. Barnes, Chicago, Ill., assignor, by mesne assignments, to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware

Application March 16, 1931, Serial No. 522,865
Renewed March 4, 1936
2 Claims. (Cl. 196—60)

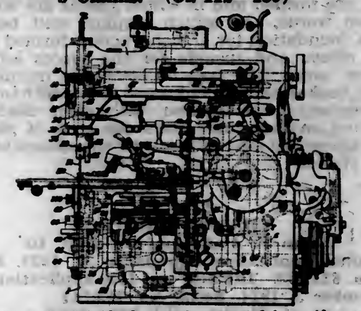


1. A hydrocarbon oil cracking process which comprises subjecting the oil to cracking conditions of temperature and pressure and separating the same into vapors and unvaporized oil, flash distilling the unvaporized oil by pressure reduction, dephlegmating the flashed vapors and returning resultant reflux to the cracking step, combining the flashed vapors uncondensed by the dephlegmation with the first-mentioned vapors, heating the commingled vapors to vapor phase cracking temperature, dephlegmating the thus heated vapors to condense heavier fractions thereof, blending such condensed fractions with the residue of the flash distillation and recovering the resultant blend as a product of the process, and finally condensing the dephlegmated vapors.

2,107,270
BUTTONHOLE SEWING MACHINE

Edward B. Allen, deceased, late of Newtown, Conn., by Josephine W. Allen, administratrix, Newtown, Conn., and Maurice D. Knox, Devon, and Harold C. Faulkner, Long Hill, Conn., assignors to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey

Application November 10, 1936, Serial No. 110,026
15 Claims. (Cl. 112—71)

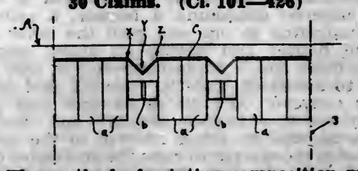


1. A lock-stitch buttonhole sewing machine having, in combination, stitch-forming instrumentalities including an endwise reciprocatory and laterally vibratory needle, a loop-taker, and a bobbin within the field of action of said loop-taker, a work-holder, feeding means to relatively move the stitch-forming instrumentalities and work-holder to sew around a buttonhole, means to turn the stitch-forming instrumentalities about an axis normal to the plane of the work in sewing around one end of the buttonhole, and means to cut the buttonhole.

2,107,271
ZIGZAG STITCH-FORMING MECHANISM FOR SEWING MACHINES

Edward B. Allen, deceased, late of Newtown, Conn., by Josephine W. Allen, administratrix, Newtown, Conn., and Maurice D. Knox, Devon, and Harold C. Faulkner, Long Hill, Conn., assignors to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey

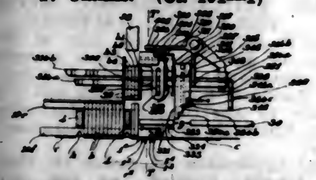
Original application November 10, 1936, Serial No. 110,026. Divided and this application March 18, 1937, Serial No. 131,618
5 Claims. (Cl. 112—159)



1. In a lock-stitch sewing machine, the combination with a reciprocatory and laterally vibratory needle, of a circularly moving loop-taker, a bobbin, a rotary driving shaft, a driving gear carried thereby, a driven shaft, a pinion of half the size of said driving gear mounted on said driven shaft and meshing with said driving gear, a carrier for said driven shaft mounted for oscillatory movement about the axis of said driving shaft, means on said driving shaft and connections to oscillate said carrier, and means actuated by said driven shaft for imparting circular movement to said loop-taker.

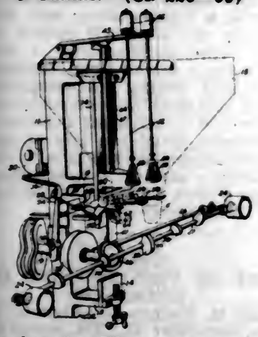
2,107,272
METHOD OF PRINTING AND DEVICE THEREFOR

Leon H. Amdur, Brooklyn, N. Y.



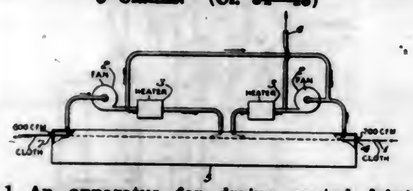
Application December 13, 1934, Serial No. 757,305
30 Claims. (Cl. 101—426)

1. The method of printing composition-matter which method employs a ribbon upon which duplicative characters may be formed, and backers as a foundation for the characters formed on the ribbon and spacers for the spaces left between words, the step of forming the characters upon the ribbon, the step of crimping the



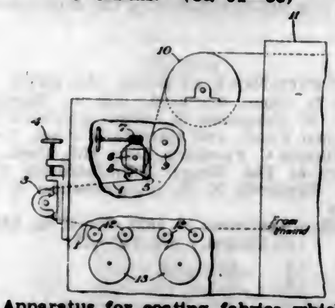
ribbon at the spaces left between words, and the step of placing individual backers in association with each character formed on the ribbon and placing the spacers in association with the crimpings made in the ribbon.

2,107,273
PRINTING METHOD AND MACHINE
Leon H. Amdur, Brooklyn, N. Y.
Application September 12, 1935, Serial No. 40,251
17 Claims. (Cl. 101—1)



1. The method of printing characters which employs a ribbon upon which duplicative characters are formed and in which spaces are left between words, and which employs unit backers as a foundation for the characters formed upon the ribbon and spacers for the spaces left between words, the step of placing a number of unit backers dependent upon the width of the character, in association with each character formed on the ribbon, and the step of placing the spacers in association with the spaces left on the ribbon.

2,107,274
FILLING MACHINE
Swan F. Anderson, Rockford, Ill.
Original application September 30, 1932, Serial No. 635,482. Divided and this application December 3, 1934, Serial No. 755,714
8 Claims. (Cl. 226—99)



1. Mechanism for filling a succession of cups with material combining a hopper, a cylinder communicating at one end with the lower end of said hopper and having an outlet opening at the other end, a plunger movable in said cylinder to discharge material through said opening, a conveyor operable to advance said cups one by one to a position beneath said opening, means operable in timed relation to the movement of said conveyor to raise the successive cups toward said opening, spring means tending to move said plunger toward said outlet, power driven means operable in timed relation to the upward movement of each cup to permit lowering of said plunger, latch means normally tending to assume active position and when in such position to lock said plunger in raised position, and a feeler disposed in the path of each cup presented to said outlet and acting upon movement by the cup to render said latch means ineffectual.

2,107,275
DRYING EQUIPMENT
William T. Andersen, Eggertsville, and James M. Henry, Newburgh, N. Y., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application July 28, 1936, Serial No. 92,988
3 Claims. (Cl. 34—48)

1. An apparatus for drying coated fabrics which comprises a long tunnel, means for passing the coated fabric through the said tunnel, means for heating air and means for circulating the hot air through the first portion of the tunnel in a direction countercurrent to the travel of the coated fabric, and means for passing hot air in a direction concurrent with the travel of the cloth in the latter section of the tunnel and means for passing a portion of the air circulating in the latter portion of the tunnel to the air circulating in the first portion of the tunnel.

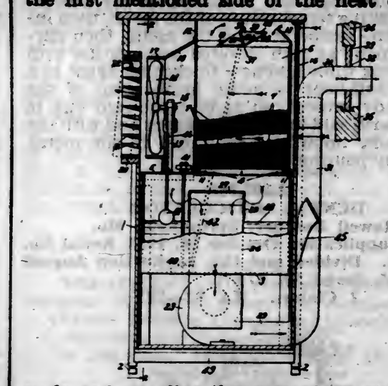
2,107,276
VERTICAL COATING EQUIPMENT
William T. Andersen, Eggertsville, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application July 28, 1936, Serial No. 92,989
8 Claims. (Cl. 91—53)

1. Apparatus for coating fabrics which comprises a doctor knife, means for passing a fabric in a substantially horizontal direction before contact with the knife, and means for moving the said fabric in a substantially vertical direction after contact with the said knife.

2,107,277
TANTALUM RECOVERY
Miner M. Austin, Highland Park, Ill., assignor to Fansteel Metallurgical Corporation, a corporation of New York
No Drawing. Application April 14, 1932, Serial No. 605,358. Renewed December 19, 1934
12 Claims. (Cl. 75—84)

1. A method of recovering commercial tantalum from tantalum scrap, which comprises hydrogenating tantalum scrap, grinding the hydrogenated scrap and heating the hydrogenated powder to substantially 900° C. while exhausting the gases released from the powder by the heat.

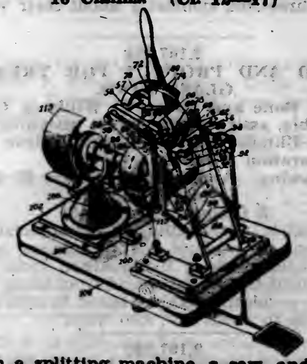
2,107,278
METHOD OF FORMING EXPANDED METAL
Herbert K. Baker, Kokomo, Ind.
Application December 23, 1935, Serial No. 55,884
11 Claims. (Cl. 164—6.5)



11. The method of forming expanded metal comprising slitting the sheet substantially parallel to the longitudinal edges thereof to form overlapping bonded strands in an arrangement to leave diagonally across the sheet uninterrupted continuities of bonds between series of said strands, and deflecting the strands out of the plane of the slitted sheet to dispose continuities of bonds in edgewise arrangements during expansion into an open meshwork.

2,107,279
PRODUCTION OF REFRACTORY METALS AND ALLOYS
Clarence W. Balke and Claire C. Balke, Highland Park, Ill., assignors to Fansteel Metallurgical Corporation, a corporation of New York
No Drawing. Application June 17, 1935, Serial No. 26,924
16 Claims. (Cl. 75—84)

1. A method of recovering metals of the group consisting of at least one of the refractory metals of the Fourth Group, alloys consisting of at least one of the refractory metals of the Fourth Group and at least one of the refractory metals of the Fifth Group, and alloys consisting of at least one of the refractory metals of the Fourth and Fifth Groups and minor proportions of at least one of the refractory metals of the Sixth Group, which comprises hydrogenating solid metallic pieces rich in the desired refractory metal or alloy, grinding the hydrogenated pieces, and heating the hydrogenated powder to the dehydrogenating temperature while exhausting the gases released from the powder as a result of the heating.

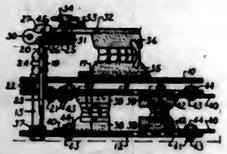


2,107,280
AIR COOLING APPARATUS
John R. Ballard, San Francisco, Calif., assignor to George Van Seabock, Syndicate Manager, of Duo-Syndicate, New York, N. Y.
Application July 5, 1934, Serial No. 733,742
12 Claims. (Cl. 62—129)

11. The method of conditioning the air of a room that comprises moving a relatively large volume, per minute, of the air of the room in contact with one side of a plurality of heat exchange surfaces and back into the room for re-passage in contact with said surfaces while moving an appreciably smaller volume, per minute, of the air of the room across the other side of said surfaces and to outside the room, and periodically moistening said other surfaces with a relatively thin sheet of moisture whereby the air moved across the moistened surfaces will cause evaporation of the moisture to thereby effect a cooling of the first mentioned side of the heat exchange

surfaces for cooling the room-air moved in contact therewith and back into the room.

2,107,281
SPLITTING MACHINE
Lewis J. Barnoni, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application December 30, 1935, Serial No. 56,737
18 Claims. (Cl. 12—17)



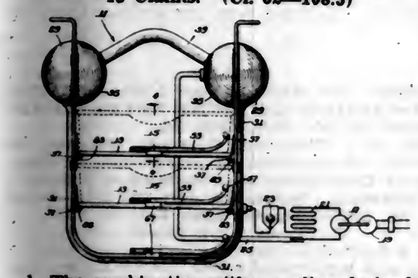
1. In a splitting machine, a saw, and mechanism constructed and arranged to locate a sole in a predetermined position and rigidly to support the positioned sole, said saw and said mechanism being mounted for relative movement to split a heel-breast covering flap from the sole and to remove a layer of material from the sole whereby to form a heel-breast receiving shoulder upon the sole.

2,107,282
METHOD OF REMELTING AND REFINING MAGNESIUM AND LIGHT METAL ALLOYS CONTAINING MAGNESIUM
Adolf Beck, Bitterfeld, Germany, assignor, by mesne assignments, to Magnesium Development Corporation, a corporation of Delaware
No Drawing. Application July 16, 1936, Serial No. 90,606. In Germany July 19, 1935
7 Claims. (Cl. 75—67)

1. A method of re-melting and refining magnesium and light metal alloys containing magnesium and more particularly high percentage magnesium-base alloys, which comprises melting the

metal in the presence of a thinly fluid saline flux having a melting point not substantially exceeding the melting temperature of the metal, then increasing the temperature of the metal, then stirring the metal at such elevated temperature with the said flux while adding a thickening agent in a quantity sufficient to cause inspissation of the flux already present, so as to cause said flux to combine with said inspissating agent and with the non-metallic impurities contained in the metal, and finally pouring said metal.

2,107,283
DENTAL ARTICULATOR
Howell Boatner, Springfield, Mo.
Original application October 28, 1933, Serial No. 695,711. Divided and this application August 26, 1935, Serial No. 37,872
2 Claims. (Cl. 32—32)



1. A dental articulator comprising an adjustable jaw denture model holder, a stationary jaw denture model holder with respect to which said first holder may be adjusted, and means to adjust said first holder, said means consisting of prisms having cooperative guiding faces disposed in trigonal or three-fold symmetry about their vertical axes.

2,107,284
METHOD AND PRODUCT FOR TREATING GLASS WOOL
Hugh M. Bone and Robert C. Williams, Columbus, Ohio, assignors, by mesne assignments, to Owens-Illinois Glass Company, Toledo, Ohio, a corporation of Ohio
No Drawing. Application February 20, 1936, Serial No. 64,938
5 Claims. (Cl. 87—9)

1. An oil-in-water emulsion for application to glass wool to produce an oleaginous coating thereon comprising a hydrocarbon from about 20% to about 40%, a fatty acid from about 12.6% to 18.5%, a volatile alkaline agent in appreciable amount up to about 4%, and water.

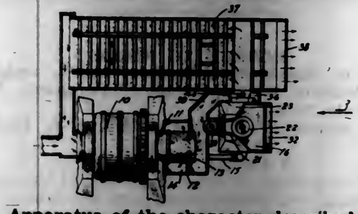
2,107,285
ICE TRAY SUPPORTING AND RELEASING MEANS
Arthur R. Constantine, River Forest, Ill., assignor, by mesne assignments, to Reconstruction Finance Corporation, Chicago, Ill., a corporation
Application February 23, 1934, Serial No. 712,563
15 Claims. (Cl. 62—108.5)

1. The combination with a cooling device having supporting means adapted to carry supportable means in heat-exchange relationship with said cooling device, of means comprising a wedge carried by said supporting means and shiftable thereon between said supporting and supportable means in order to break an ice bond therebetween.

2,107,286
ROCK OR EARTH DRILL BIT
John P. Cunningham, Kingman, Ariz.
Application October 7, 1936, Serial No. 104,509
2 Claims. (Cl. 255—64)

1. A drill bit comprising a body having an active cutting end, cross cutters integral with the cutting end of the body and each of triangular shape in cross section and each slotted to define closely related and spaced cutting edges, and peripheral cutters formed on said body.

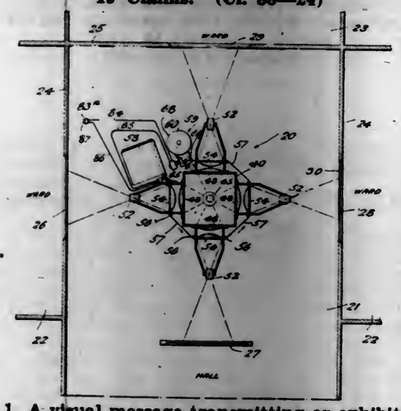
2,107,287
LIQUID DEGREASING COMPOSITION
Alton F. Curran, Malden, Mass., assignor to The Curran Corporation, Malden, Mass., a corporation of Massachusetts
No Drawing. Application January 10, 1936, Serial No. 58,535
5 Claims. (Cl. 87—5)



1. A liquid degreasing composition of a substantially stable and physically homogeneous character comprising water-soluble "Tallol" soap, liquid hydrocarbon grease solvent, and alkali-metal phenolate, the liquid hydrocarbon grease solvent content of said composition ranging from about 25% to 75% of the weight of its "Tallol" soap content but said composition being capable of being diluted greatly with more of said liquid hydrocarbon grease solvent while retaining its substantial stability and physical homogeneity.

2,107,288
LIQUID COMPOSITION FOR DEGREASING SURFACES AND PROCESS OF PREPARATION
Alton F. Curran, Malden, Mass., assignor to The Curran Corporation, Malden, Mass., a corporation of Massachusetts
No Drawing. Application January 11, 1936, Serial No. 58,758
9 Claims. (Cl. 87—5)

1. A substantially anhydrous, alkaline liquid composition for degreasing and cleaning purpose, said composition being possessed of homogeneity and stability characteristics comparable to those of a true solution and comprising water-soluble soap, alkali in free, water-soluble condition and combined as phenolate, and liquid hydrocarbon grease solvent, said composition being substantially devoid of water other than that incident to the formation of said soap and phenolate.

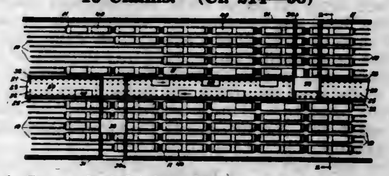


8. A process of preparing an alkaline, substantially homogeneous and stable liquid composition for degreasing and otherwise conditioning surfaces, which comprise admixing with liquid, fatty-acid-containing, soap-forming substance a substantially anhydrous organic liquid solvent containing dissolved therein water-soluble alkali in a form combinable with said substance to form water-soluble soap and in amount in excess of that necessary for saponifying said substance; said organic liquid solvent being miscible with the other ingredients of the resulting composition; and diluting the resulting liquid composition with liquid hydrocarbon grease solvent compatible therewith.

2,107,289
CONCENTRATION OF MINERALS
John J. Denny, Schumacher, Ontario, Canada, and Arthur C. Daman, Denver, Colo., assignors, by mesne assignments, to Mining Process and Patent Company, a corporation of Delaware
Application October 29, 1934, Serial No. 750,442
10 Claims. (Cl. 209—12)

1. Apparatus of the character described comprising in combination a pulp cell having adjacent its bottom a rotary impeller carried on a vertical shaft, means for feeding pulp to the cell and discharging it in the cell at a point over the impeller, said impeller having a closed bottom so that all pulp delivered to the impeller must pass through and be acted upon thereby before reaching the body of the pulp in the cell, means for feeding air to the impeller to be incorporated thereby in the pulp, said cell having a pocket in its bottom below and closely adjacent said impeller to receive oversize particles of ore too heavy to be elevated by the pulp currents generated by said impeller, said impeller having vanes on its under surface to develop a pulsating to carry entrapped sands from said pocket.

2,107,290
PROJECTING APPARATUS AND SYSTEM
August D. Eitzen, Rockville Centre, N. Y., assignor to News Projection Corporation, New York, N. Y., a corporation of New York
Application March 20, 1930, Serial No. 437,304
Renewed September 26, 1936
19 Claims. (Cl. 88—24)

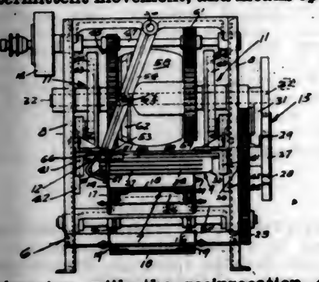


1. A visual message transmitting or exhibiting system, comprising a transmitter and a plurality of distributed projecting mechanisms each including a tape printer, a source of light, a plurality of sets of projecting lenses in generally radial arrangement about said light-source, and a plurality of screens each positioned to receive the projected beam from one of the lens sets, and means for automatically advancing the tape from the printer to and through the projector in accordance with the action or rate of operation of the transmitter, the printers being included in an electrical circuit with, and arranged for simultaneous operation by, said transmitter.

2,107,291
TREATMENT OF HYDROCARBON OIL
Seymour W. Ferris, Aldan, Pa., assignor to The Atlantic Refining Company, Philadelphia, Pa., a corporation of Pennsylvania
No Drawing. Application April 19, 1935, Serial No. 17,262
20 Claims. (Cl. 196—13)

1. In the art of refining mineral oils, the process which comprises separating a viscous oil containing paraffinic and naphthenic hydrocarbons into fractions respectively richer in paraffinic and naphthenic compounds by extracting said oil with a selective solvent for naphthenic hydrocarbons, said solvent containing a polyhydroxy cyclic compound in sufficient quantity to substantially increase the miscibility temperature of said selective solvent with said oil.

2,107,292
FREIGHT HANDLING APPARATUS
Benjamin F. Fitch, Greenwich, Conn., assignor to Motor Terminals Company, New York, N. Y., a corporation of Delaware
Application January 22, 1934, Serial No. 707,707
15 Claims. (Cl. 214—38)



14. In a freight-handling apparatus, including two groups of vehicle supporting tracks, the combination of a pair of conveyors mounted between said groups, means respectively driving the same in a manner to move demountable bodies thereby in opposite directions parallel with tracks, and a traveling crane adapted to transfer a demountable body from a vehicle on one of the tracks onto either conveyor.

2,107,293
MACHINE FOR DICING FRUIT AND THE LIKE
Herbert E. Gray, San Jose, Calif.
Application October 12, 1931, Serial No. 568,293
21 Claims. (Cl. 146—78)

2. In an apparatus of the character described, a conveyor, a reciprocating cutter above the conveyor to cut the material carried by said conveyor, guides through the cutter, a set of blades movable through said guides across the cutter to cut transversely through the material confined in said cutter, means to intermittently move the conveyor so that each movement of the conveyor advances the conveyor surface to a distance substantially equal with the length of the cutter,

means operated in synchronism with the conveyor to lower the cutter onto the conveyor after each intermittent movement, and means operated

in synchronism with the reciprocation of the cutter to swing the set of transverse blades across the cutter when the latter is in cutting position on the conveyor.

2,107,294
PRINTING MEMBER AND METHOD OF PRODUCING SAME
Wade E. Griswold, New York, N. Y.
Application June 30, 1936, Serial No. 88,099
8 Claims. (Cl. 41—43)

4. A method of making a photogravure printing plate from a metal member having a surface layer of a first metal, which consists in applying a resist to the outer surface of said surface layer and in accordance with the shape of the walls of cells which are to be etched in said surface layer, then etching the exposed portion of said surface layer so as to form etched cells therein having laterally continuous walls made of said first metal, then filling the etched cells with a second metal while preventing any deposit of the second metal on the outer surfaces of said lateral cell walls, then removing the resist, then applying a print resist to said outer surface, and then etching only the second metal in accordance with the varying tone of said print resist.

2,107,295
BRAKE LINING AND METHOD OF MAKING SAME
Jesse G. Hawley, Painted Post, N. Y., assignor to Hawley-Jones Corporation, Riverside, N. Y., a corporation of New York
Application August 26, 1933, Serial No. 687,009
9 Claims. (Cl. 139—420)

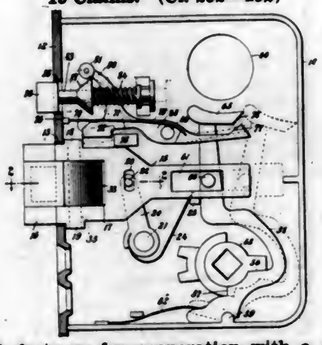
1. A brake lining provided on one side thereof with graphite to reduce its coefficient of friction on that side, the other side of said lining being free of said material.

2,107,296
TRUCK
Jesse F. Holloway, Aldan, Pa.
Application August 25, 1934, Serial No. 741,357
9 Claims. (Cl. 105—190)

1. A railway truck comprising, in combination, a truck frame, a swing bolster, means for supporting said bolster including longitudinally spaced auxiliary springs supported by said frame, a pivot pin supported on said springs, a pair of swing links supported on said pin and extending

downwardly between said springs, a spring plank, main springs interposed between said plank and bolster, and means for pivotally supporting the lower end of said links to said spring plank.

2,107,297
BLEACHING FIBER
Hans O. Kauffmann, Buffalo, N. Y., assignor to Buffalo Electro-Chemical Company, Inc., Buffalo, N. Y.
No Drawing. Application March 8, 1934, Serial No. 714,735
3 Claims. (Cl. 8—2)

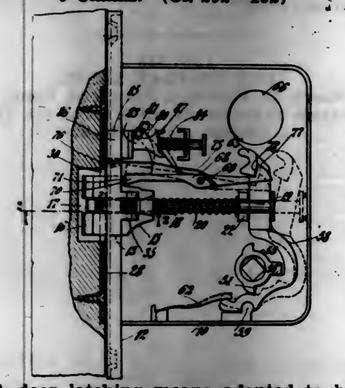


1. The process of bleaching goods of the group consisting of artificial, animal and vegetable fibers which comprises saturating the fibers with a bleaching solution comprising a high concentration of peroxide, eliminating the excess of the bleaching solution from the fibers so that the goods are damp, thereafter stacking the goods to maintain the fibers damp, and permitting the fibers to bleach in the damp condition.

2,107,298
INSECTICIDE
Lowell B. Kilgore, Washington, D. C., assignor to Kilgore Development Corporation, East Falls Church, Va., a corporation of Virginia
No Drawing. Application March 27, 1934, Serial No. 717,676
11 Claims. (Cl. 167—22)

1. An insecticide comprising in solution an organic compound the molecular structure of which has the following tautomeric grouping as an integral part thereof;

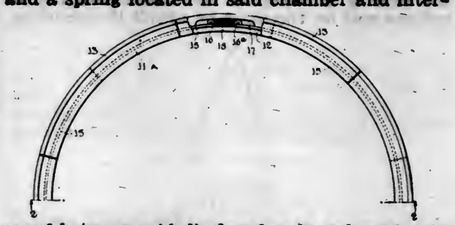
$$-CO-CH_2-CO \rightleftarrows -CO-CH=C(OH)-$$



2,107,299
LATCH
Howard M. Kilpatrick, New York, N. Y.
Application May 20, 1929, Serial No. 364,650
Renewed January 16, 1933
19 Claims. (Cl. 292—192)

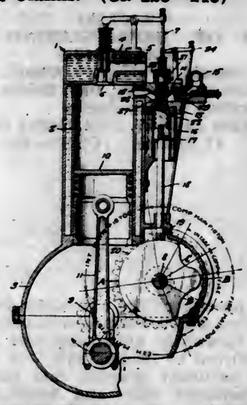
2. A fastener for cooperation with a striking plate having an opening provided with a rear

locking shoulder, said fastener comprising a casing having a face plate having an opening; a lever in said second opening having one end of the lever pivotally connected with said casing, the opposite end being free; said lever having an overhanging part adapted to engage behind said rear locking shoulder; the pivot end and the free end of the lever having projecting shoulders engaging the inner face of said face plate when the lever is projected.



2,107,300
JIMMYPROOF LOCK-LATCH
Howard M. Kilpatrick, New York, N. Y.
Application July 27, 1932, Serial No. 625,123
9 Claims. (Cl. 292—192)

1. A door latching means adapted to be secured to a door for use with a striking member having an outer engagement portion facing in door opening direction and at the part most remote from said portion an inner shoulder facing away from the door, said member having a locking edge facing in door closing direction between said shoulder and said portion; said latching means comprising a casing; a yieldably projected member carried by the casing and engageable with said engagement portion as the door moves to closing position to automatically retract the member into the casing as the casing moves to latching position; said member being engageable with said locking edge and having a projection disposable far behind said shoulder when the member is projected and the casing is in latched position; and means for positively holding said member behind said shoulder.

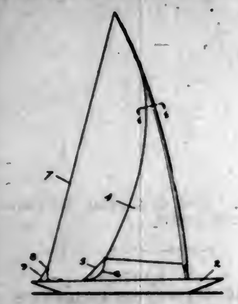


2,107,301
PISTON RING
Emil A. Koether, Baltimore, Md., assignor, by mesne assignments, to Koppers Company, a corporation of Delaware
Application August 1, 1935, Serial No. 34,277
10 Claims. (Cl. 309—44)

1. A piston ring comprising two annuli standing in facewise relation, said annuli being free to move relatively to each other, and said annuli each having a groove in the adjacent faces thereof forming a channel extending through the ring, said channel terminating in an enlarged chamber; a non-resilient restraining element mounted in said channel, said element having its ends extending into said chamber and displaced with reference to the body of the element and also to the channel so as to limit the bodily endwise movement of said element by contact of said displaced ends with the end walls of the chamber; and a spring located in said chamber and inter-

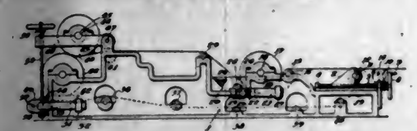
posed between said displaced ends and serving to spread the ends apart.

2,107,302
IGNITION APPARATUS
Victor A. Le Blanc, New Orleans, La., assignor of one-twentieth to William H. Hartsen, New Orleans, La.
Application November 12, 1935, Serial No. 49,427
2 Claims. (Cl. 123—143)



1. In combination with an internal combustion engine, a fuel compressing and firing cylinder mounted on said engine, a head for said cylinder and having a fuel passage connected at one end with the engine and connected at the other end with a fuel intake manifold, a cage mounted in said head and communicating with the cylinder and passing through the fuel passage and having ports aligning with said passage to permit fuel from one end of said passage to pass to the other end of said passage and to enter said cylinder, a valve mechanism controlling the communication of the cage with said cylinder and for controlling the ports of the cage, a timing mechanism for operating the valve mechanism and driven by the engine, and a piston driven by the engine and operating in the cylinder for compressing and firing fuel in said cylinder and thereby ignite fuel in the engine.

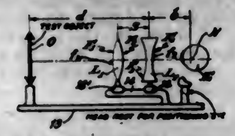
2,107,303
RIG FOR SAILBOATS
Fredrik Ljungström, Lidingo Brevik, Sweden
Application September 11, 1935, Serial No. 40,014
In Sweden September 17, 1934
15 Claims. (Cl. 114—106)



1. In a boat, a sail rig comprising a single mast, means pivotally mounting the mast in the boat for rotation about the axis of the mast, a

sail carried by said mast, and means for rotating the mast a plurality of revolutions whereby to roll the sail on the mast or unroll it therefrom,

the portion of said mast above the level of the lower marginal portion of the sail being free from exterior support against lateral movement.



2,107,304
PROCESS OF IMPREGNATING FIBROUS MATERIALS
Imader J. Novak, Bridgeport, Conn., assignor to Raybestos-Manhattan, Inc., Bridgeport, Conn., a corporation of New Jersey
Application June 27, 1934, Serial No. 732,607
11 Claims. (Cl. 92—40)

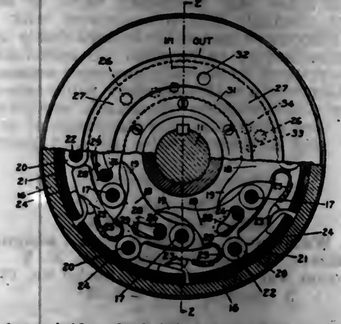
6. In a process of the character described, the improvement which comprises incompletely saturating a forwardly advancing wet fibrous web with a saturant by feeding said web into contact with said saturant, passing said saturated web between pressure rolls and winding said web upon itself on one of said rolls in the presence of an excess of the saturant expressed from said web whereby to cause an interfelting of the adjacent plies.

2,107,305
ADJUSTABLE LENS SYSTEM
Kenneth N. Ogle, Hanover, N. H., assignor to Trustees of Dartmouth College, Hanover, N. H., a corporation of New Hampshire
Application March 2, 1934, Serial No. 713,701
10 Claims. (Cl. 88—20)

7. A device of the character described for testing or exercising ocular defects involving the magnification of an ocular image of a test object observed at a given distance from the eyes, comprising a lens support, means for holding separate test lens elements arranged on said support for adjustment relatively to each other in alignment for observation of said test object through such lens elements, a lens system having two lens elements each mounted on respective ones of said holding means and each formed of lens medium of a given index of refraction and having surface powers computed according to said indices and according to the spaced relation of said elements, with the surfaces of each of said elements being dependent upon the other, said object distance and the distance of said system from the eye, to produce at certain values of separation, within the range of said adjustment of said holding means on said support, varying magnifications of said ocular image while maintaining the vergence power of said system within

physiologically substantially ineffective limits, and means operatively associated with said holding means for indicating the amount of said ocular image magnification corresponding to said separation values.

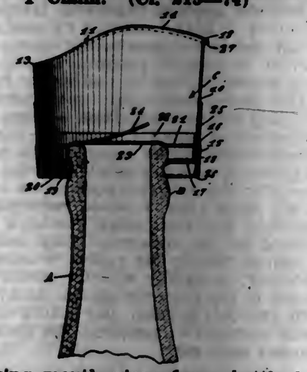
2,107,306
SHOE DISPLAY EASEL
Morris D. Pellinger, Stamford, Conn.
Application November 24, 1936, Serial No. 112,477
5 Claims. (Cl. 211—37)



1. A shoe display easel including an elongated body of sheet material upon one surface of which the tread portions of the shoe are adapted to rest, rearwardly directed prop means for supporting the same at an angle to a supporting surface, and oppositely disposed upstanding lugs on opposite side edges of said body, spaced above the lower supporting edge thereof and having their inner surfaces diverging towards the upper end of the body for engagement with the opposite sides of the arcuate rear portion of the shoe heel.

2,107,307
POLYHYDROXY POLY SECONDARY ALKYL PHENOL GERMICIDES
Albert L. Rawlins, Detroit, and Herbert C. Hamilton, Grosse Ile, Mich., assignors to Parke, Davis & Company, Detroit, Mich., a corporation of Michigan
No Drawing. Application September 18, 1933, Serial No. 690,026
19 Claims. (Cl. 260—154)

1. A germicide comprising essentially a polyalkyl polyhydroxy phenol having two secondary alkyls with the same number of carbon atoms greater than four, a viscous liquid only slightly soluble in water but quite soluble in alcohol, ether and acetone and possessing high phenol coefficient toward *Staphylococcus aureus* and *Streptococcus hemolyticus*.

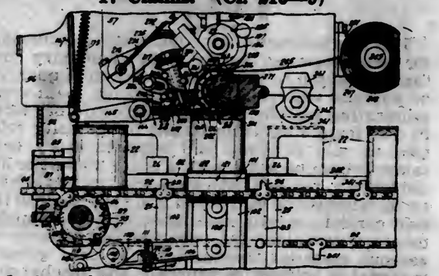


9. Di secondary hexyl resorcinol.
10. Di secondary heptyl resorcinol.
11. Di secondary amyl pyrogallol.

2,107,308
CLUTCH
Grover C. Reyne, Vallejo, Calif.
Application August 20, 1936, Serial No. 96,926
6 Claims. (Cl. 192—105)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A centrifugal clutch comprising a rotatable spool carried by a driving shaft; a rotatable drum carried by a driven shaft and surrounding said spool; a plurality of levers carried by said spool; and a plurality of friction shoes carried by said levers for movement into driving engagement with said drum under centrifugal force produced by the rotation of said spool, said shoes being engageable with one another to cause them to move in unison.

2,107,309
DRINKING MOUTHPIECE FOR BOTTLES OR THE LIKE
Charles H. Smith, St. Petersburg, Fla.
Application April 10, 1937, Serial No. 136,202
1 Claim. (Cl. 215—74)



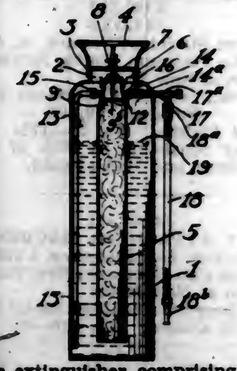
A drinking mouth piece for a bottle having an external annular rim and a spaced bead contiguous to its mouth, comprising a slightly tapered substantially cup-shaped body formed with a serpentine edge for effecting a mouth engaging area, an opposite upper lip seating area and opposed arched cheek contacting areas, respectively, an inwardly turned annular flange at the opposite smaller end of the body for effecting an internal seat therein, a rimmed coupling head telescoped over the flanged smaller end of the body and having its rim exteriorly of the latter, the said head having a central circular opening formed with a flexing edge for frictionally embracing the bottle mouth between the rim and bead thereof and separably coupling the body and bottle together, an abutment disk interiorly of the body and at rest upon the flange of the head and having an annular out-turned flange fixedly engaged with the inner surface of said body, said abutment disk having a central discharge opening for registry with the bottle mouth with the edge of said latter opening contacting with the rim of the bottle mouth, and an out-turned flow control baffle formed with said abutment disk and arranged at the last-mentioned opening.

2,107,310
ALLOYS
Johann Simon Streicher, Newark, N. J., assignor to American Platinum Works, Newark, N. J., a corporation of New Jersey
No Drawing. Application March 21, 1936, Serial No. 70,112
4 Claims. (Cl. 75—172)

1. An alloy consisting of 60% of palladium, 30% of platinum and 10% of gold.

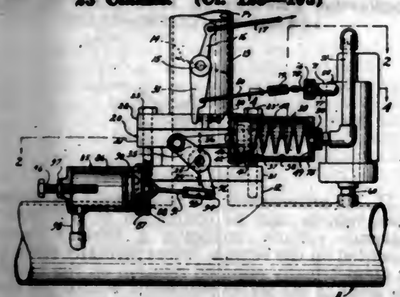
2,107,311
KEY ATTACHING MACHINE
John C. Strickler, San Francisco, Calif., assignor to American Can Company, New York, N. Y., a corporation of New Jersey
Application December 24, 1936, Serial No. 117,631
17 Claims. (Cl. 216—9)

1. A machine for attaching keys to containers, the combination of a key feeding device, and a tape feeding device, said feeding devices arranged to deliver a key and the tape into assembled relation onto a container with the tape over the top of the key for securing it in place on the container.



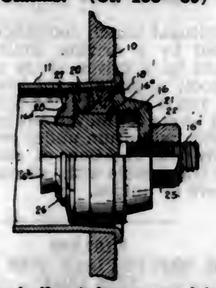
2,107,312
ATTACHMENT FOR APPREHENDING MOTOR VEHICLES
Joseph W. Thompson, Portland, Oreg.
Application February 25, 1936, Serial No. 65,736
11 Claims. (Cl. 280—33.15)

11. An attachment for motor vehicles whereby such vehicle may be connected at will with an advance vehicle, including a tubular member mounted on the vehicle, levers pivotally connected in diametrically opposed relation on the member, the ends of the levers extending within the member, a plunger movable longitudinally of the member to engage the ends of the levers within the



member and move the opposing ends of the levers into operative position, and an impact member connected to the plunger and arranged in advance of the member to engage a portion of the advance vehicle and compel lever operative movement of the plunger.

2,107,313
HAND OPERATED FIRE EXTINGUISHER
Radcliffe M. Urquhart, Philadelphia, Pa.
Application September 7, 1934, Serial No. 743,031
6 Claims. (Cl. 169—31)

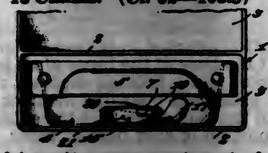


5. A fire extinguisher comprising a container for foam forming liquids, a supplementary container adapted to hold under pressure a quantity of gaseous materials, a conduit for foam communicating with the liquids in the container when in use, foam stabilizing means in operative relation to said conduit, said supplementary container communicating with a space above the liquid when in use and with an ejector means adapted to exhaust the said liquid and said gas into the said conduit, means associated with the supplementary container for releasing the pressure of gaseous material therein whereby said gaseous material is utilized to generate and discharge a fire extinguishing foam.

2,107,314
MEANS FOR AUTOMATICALLY CONTROLLING FLOW OF FUEL MIXTURE TO INTERNAL COMBUSTION ENGINES
Albert G. H. Vanderpoel, Wilmar, Calif., assignor of one-third to James O'Laverty and one-third to David E. Seward, both of Los Angeles, Calif.
Application November 14, 1936, Serial No. 110,874
23 Claims. (Cl. 123—103)

1. In combination with an internal combustion engine carbureter having a throttle valve, and the intake manifold to which said carbureter is connected: a secondary valve located in the connection between said throttle valve and the intake manifold; suction responsive means actuated by the abnormally high depression in the intake manifold which attends closure of the throttle valve with the engine running at above idling speed to move said secondary valve to closed position; yieldable means associated with said suction responsive means for automatically opening said secondary valve when the manifold depression returns to normal; governor means operable to actuate said secondary valve only to a partially closed position when said throttle valve is open, and means limiting the range of actuation of said secondary valve by said governor means.

2,107,315
PLUG FOR TUBES
Walter Wainwright, Brooklyn, N. Y., assignor to Harry W. Hardie, New York, N. Y.
Application November 25, 1936, Serial No. 112,790
5 Claims. (Cl. 138—89)

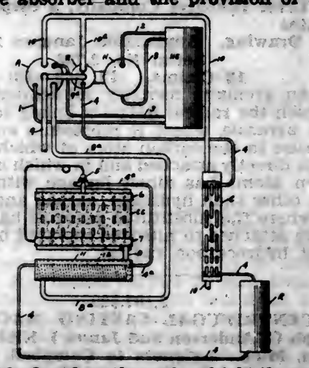


1. A plug for boiler tubes comprising, in combination, a swedge block including a body portion, a wedge portion at one end thereof, and a threaded bolt portion extending from the other end thereof, a gasket carried by said body portion and operative upon compression in the direction of its axis to expand radially, plug anchoring means carried by said wedge portion and operative upon relative axial movement therebetween, said means comprising a segmental ring, the segments of which are movable radially from a retracted position to a position in which their outer edges are adapted to bite into the inner tube surface whereby to secure themselves to the tube, a gasket back ring disposed between the segmental ring and the gasket, the back ring being positioned by the segmental ring and having a face against which the gasket is adapted to be compressed, an axially movable pressure element operative to compress the gasket, and means carried by the bolt portion and acting through the pressure element to compress the gasket against the gasket back ring.

2,107,316
ESTER-CONTAINING LUBRICANTS AND PROCESS OF MAKING THE SAME
Peter J. Wiezevich, now by judicial change of name Peter J. Gayler, and Luther B. Turner, Elizabeth, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application September 20, 1933, Serial No. 690,235
13 Claims. (Cl. 87—9)

1. An improved process for producing valuable ester type lubricants, blending oils and the like from esters both fatty and non-fatty, saturated and unsaturated, comprising the steps of polymerizing the ester by the action of high voltage electric discharge, whereby an unsaturated and unstable polymer is obtained, then stabilizing the polymer by hydrogenation.

2,107,317
REFRIGERATING APPARATUS
Henry Wiggers, Chandler, Ind., assignor, by mesne assignments, to Reconstruction Finance Corporation, Chicago, Ill., a corporation
Application August 22, 1933, Serial No. 686,298
13 Claims. (Cl. 62—106.5)



1. A refrigerating apparatus including an evaporating shelf, an ice cube tray removably supported on said shelf, and means positioned in a depression between said shelf and tray to break the adhering ice-seal or bond existing between said shelf and tray, said depression having an inclined cam surface, said means comprising a rotary cam within the depression and normally flush with the walls defining said depression and having an inclined cam surface to coact with the inclined cam surface in the depression, and means to rotate the said cam to force the two inclined cam surfaces together to force the tray out of contact with said shelf.

2,107,318
WHITE COATING ON ALUMINUM
Harold K. Work, Oakmont, and Martin Testerud, Arnold, Pa., assignors to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application August 15, 1934, Serial No. 739,926
6 Claims. (Cl. 204—1)

2. A method of producing an opaque oxide coating having a milky white color substantially resistant to permanent staining by adsorption on an aluminum surface, comprising forming an oxide coating on said surface by electrolytic oxidation in an electrolyte of the class consisting of aqueous solutions of sulfuric acid and oxalic acid, and thereafter simultaneously removing colored constituents from said oxide coating and rendering the oxide coating substantially nonporous and non-adsorbent by subjecting said oxide coating to treatment with a solution containing about 1 to 10 per cent of an aluminum salt of a strong mineral acid at a temperature above about 80° C.

2,107,319
ABSORPTION REFRIGERATING APPARATUS
Glenn F. Zellhoefer, Bloomington, Ill.
Application February 22, 1935, Serial No. 7,662
1 Claim. (Cl. 62—119)

In an absorption refrigerating apparatus including an absorber, a heater, a heat exchanger between the absorber and the heater, a cooling coil, a condenser between the heater and cooling coil, with means for passing the solution of refrigerant and solvent through the heat exchanger into the heater and means for passing the refrigerant liberated from the solution from the heater through the condenser and cooling coil to the absorber while returning the solvent from which the refrigerant has been liberated in the heater through the heat exchanger to the absorber to form solution therein with the returned refrigerant, the provision of a chamber opening into the cooling coil through which the refrigerant passes on its way from the cooling coil to the absorber and the provision of a coil

within said chamber through which the refrigerant passes on its way from the condenser to the cooling coil, whereby flooding of the cooling coil is prevented and the cooling effect produced within the chamber by the liberation of refrigerant from the solution collected therein by the passage of the refrigerant and carried over solution through the coil within the chamber reduces the temperature thereof as it leaves said coil on its way to the cooling coil.

2,107,320
REFRIGERATION
Glenn F. Zellhoefer, Bloomington, Ill.
Application December 5, 1935, Serial No. 53,027
3 Claims. (Cl. 62—118)

1. In a heater or generator for an absorption refrigeration apparatus, employing a volatile, chemically stable, halogenated hydrocarbon, forming a dense vapor in the heater, as the refrigerant, and a solvent therefor having a low surface tension, the combination of means within the heater for freeing such vaporous solvent and solution from the vaporous refrigerant distilling from the solution and allow the freed solvent and solution to descend by gravity into the heater,

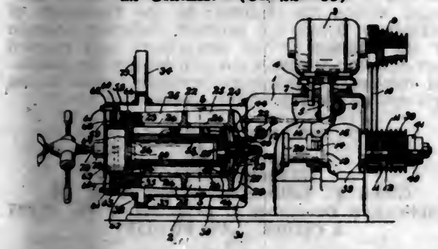
said means including an eliminator spaced apart from the top of the heater comprising a plurality of closely spaced spherical bodies of glazed refractory material.

2,107,321

ORGANIC MERCURY COMPOUNDS

Carl N. Andersen, Watertown, Mass., assignor to Lever Brothers Company, a corporation of Maine

No Drawing. Application January 21, 1935, Serial No. 2,758
13 Claims. (Cl. 260—13)



1. An aromatic mercury substituted pyrazole in which the radical RHg— is linked to a substituted pyrazole, where R represents an aromatic structure to the carbon atom of which the mercury is directly attached and in which none of the carbon atoms has direct linkage with any element other than hydrogen, carbon and mercury, and where the substituted pyrazole has any hydrogen attached to nitrogen replaced by a monovalent hydrocarbon radical.

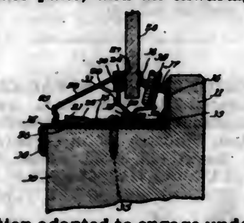
2,107,322

CENTRIFUGAL CASTING MACHINE

Adolph G. Anderson and James I. Kibbe, Muskegon, Mich., assignors to Campbell, Wyant & Cannon Foundry Company, Muskegon Heights, Mich., a corporation of Michigan

Application May 3, 1937, Serial No. 140,368
12 Claims. (Cl. 22—65)

1. In a machine of the class described, a rotating cylindrical housing adapted to receive an elongated flask enclosing a mold therein, a flask comprising a cylinder and a disk at each end secured thereto, the peripheral edge surfaces thereof being of tapered form, a yielding member at the inner end of said housing including a cup-like end having inner sides with surfaces of conical form corresponding to the peripheral surface of the annular disk at the inner end of the flask, said cylindrical housing at its outer end having an inner conical surface corresponding to the surface at the periphery of the disk at the outer end of the flask, and means for forcing said flask with the mold therein inwardly until the outermost disk at its edges engages with the conical surface at the outer end of the flask thereby centering the flask and holding it firmly in the housing, as specified.



2,107,323

STORE FRONT CONSTRUCTION

John J. Bosshard, Chicago, Ill., assignor to Brasco Manufacturing Company, Harvey, Ill., a corporation of Illinois

Application August 17, 1936, Serial No. 96,371
5 Claims. (Cl. 20—56.4)

1. A store front construction comprising an inner glass pane engaging member having a base, a wall and an outwardly extending web portion, the base portion having an inclined portion on its inner side and a flange portion along its outer edge, a screw mounted in said web portion, an outer glass pane engaging member having a web portion having an inner rounded contact portion for the glass pane, and an inwardly extending

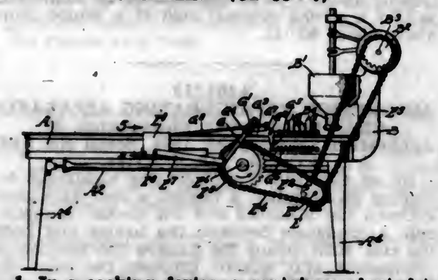
flange portion adapted to engage under the flange portion of the base of the inner glass pane engaging member, and a holding member mounted in the outer glass pane engaging member adapted to coact with the said screw and to contact with the inclined portion of said base member.

2,107,324

DISPENSING CAP

James C. Boyle, Cincinnati, Ohio

Application February 1, 1936, Serial No. 61,975
12 Claims. (Cl. 221—116)



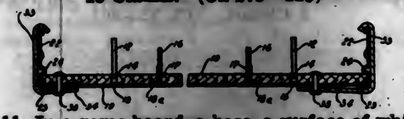
1. A dispenser cap comprising a plurality of segmental compartments having a given appreciable depth, an upper and lower closure for said compartments comprising plates, said plates being mounted on and movable by a common shaft, two segmental openings in each of said plates on opposite sides thereof, the openings in said lower plate being on a line at right angles to the line of the openings on said upper plate, an arm keyed to said shaft for movement of both the plates, stops coacting with said arm to position said plates so that the openings are all in perfect register with the segmental compartments.

2,107,325

DOUGHNUT COOKING MACHINE

Charles E. Carpenter, Chicago, Ill.

Continuation of application Serial No. 669,641, May 6, 1933. This application January 21, 1935, Serial No. 2,726
30 Claims. (Cl. 53—7)



1. In a cooking device, a container adapted to receive a cooking fluid, means for heating said fluid, an endless conveyor chain and means for moving said chain through a predetermined path, and conveying flights on said chain, said flights being secured at one end only to said chain and being positioned in operative relation to articles cooking in said fluid.

2,107,326

GAME BOARD

Clarence F. Cookson, Shelton, Conn.

Application January 26, 1937, Serial No. 122,356
15 Claims. (Cl. 273—118)

11. In a game board, a base, a surface of which provides a playing field, a wall about the edges of said base and extending above the playing surface thereof, and said wall of sheet metal and including spaced portions located substantially below its upper edge and overlying the upper and lower surfaces of the base whereby the edge of the base is received between said portions.

2,107,327

METHOD FOR CEMENTING WELL CASINGS

Thomas A. Creighton, Long Beach, Calif., assignor of one-half to Jesse C. Wright, Los Angeles, Calif.

Application October 1, 1937, Serial No. 166,790
9 Claims. (Cl. 166—31)

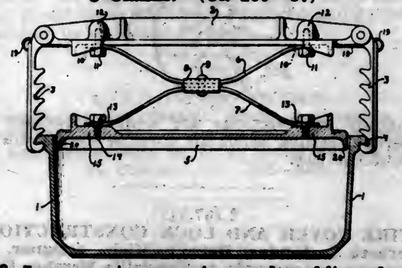
1. The method of cementing a casing in a well comprising, depositing a body of plastic cement in the well, and then running the casing into the well to enter it in the cement.

2,107,328

TREATMENT OF STEEL

Morris G. Fowler and Lyle M. Barker, Clarkdale, Ariz., assignors, by mesne assignments, to Phelps Dodge Corporation, New York, N. Y., a corporation of New York

No Drawing. Application November 23, 1934, Serial No. 754,496
6 Claims. (Cl. 148—14)



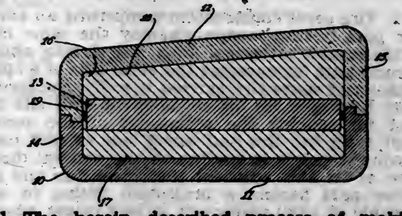
1. The method of shaping copper steel which comprises incorporating nickel in the surface portions only of the steel in such amount that the surface portions of the resulting product contain copper and nickel in proportions suitable for forming a copper-nickel alloy having a melting point substantially higher than the melting point of copper, and subjecting the resulting product to a shaping operation at a temperature higher than the melting point of copper.

2,107,329

MEAT PROCESSING AND MOLDING DEVICE

Stanley F. Gleason, Philadelphia, Pa.

Application January 13, 1936, Serial No. 58,880
Renewed August 12, 1937
3 Claims. (Cl. 100—57)



3. In a meat processing and molding device comprising a mold, a pressure plate adapted to move therein, a cross bar adapted to straddle said mold, and means carried by said cross bar for adjustable engagement with said mold, a pair of leaf-springs secured centrally to each other, the ends of one of said springs being adapted to be secured to said cross bar, and the ends of the other of said springs being adapted to be secured to said pressure plate, said pair of leaf-springs constituting means for adjustable engagement with and adapted to apply pressure to said pressure plate.

2,107,330

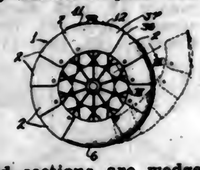
METHOD OF MAKING LAMINATED METAL BLANKS HAVING A LAMINATION OF VARYING THICKNESSES

Roy C. Ingersoll, Chicago, Ill., assignor to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois

Application April 30, 1936, Serial No. 77,090
13 Claims. (Cl. 29—189)

1. The herein described process of making laminated metal blanks, comprising the steps of forming a tapered laminated ingot including a preformed lamination of substantially uniform thickness, a lamination tapering in thickness cast against one side of said preformed lamination and a lamination of substantially uniform thickness cast against the opposite side of said preformed lamination and rolling said ingot on opposite sides flatwise of said laminations until said ingot is of substantially uniform thickness.

2,107,331



TIRE COVER

Herbert S. Jandus and Theodore J. W. Tyson, Detroit, Mich., assignors, by mesne assignments, to Houdaille-Hershey Corporation, Detroit, Mich., a corporation of Michigan

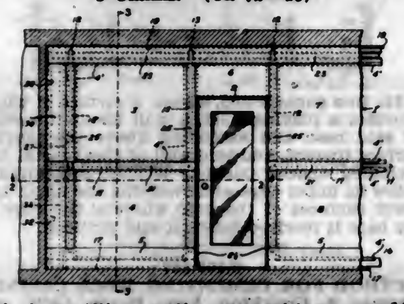
Application August 11, 1930, Serial No. 474,612
9 Claims. (Cl. 150—54)

1. A tire cover for encircling the tread of a tire and means for drawing said cover into firm

engagement with the tire, said cover including a plurality of overlapped tread engaging sections connected by means of pins and inclined slots,

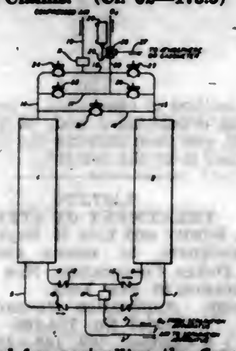
whereby said sections are wedged together to prevent rattling when the cover is tightly drawn about the tire.

2,107,232
TIRE COVER AND LOCK CONSTRUCTION
Herbert S. Jandus, Detroit, Mich., assignor, by mesne assignments, to Hendaille-Hershey Corporation, Detroit, Mich., a corporation of Michigan
Application December 9, 1932, Serial No. 646,447
9 Claims. (Cl. 152—54)



1. Tire cover construction comprising an adaptor part having means whereby the same may be releasably attached to a wheel hub and a second part for covering the outer side of a spare wheel and spare tire carried thereby, the second part having a rib for engagement with the tire and for spacing the remainder of the second part from the tire and wheel, one of said parts having a recess extending in the general direction of its axis adjacent the wheel hub and the other part having a projection fitting in and capable of axial movement in said recess, whereby said second part may be employed in connection with spare tires of different widths, and key operated means for locking one of said parts to the hub.

2,107,233
ELECTRON DISCHARGE DEVICE
Johan Ledewyk Hendrik Jonker, Eindhoven, Netherlands, assignor to N. V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands
Application July 30, 1936, Serial No. 93,352
In the Netherlands August 14, 1935
4 Claims. (Cl. 250—27.5)

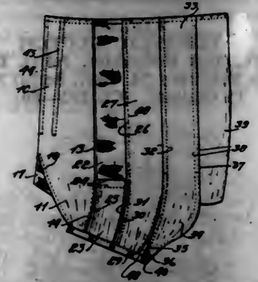


3. An electron discharge tube having an envelope containing a cathode surrounded by a signal grid and a pair of screen grids, a pair of semi-cylindrical electrically separate grid segments between said screen grids and a pair of semi-cylindrical anode segments surrounding said cathode and grids and grid segments, and registering with the semi-cylindrical grid segments.

2,107,234
PARTITION
Louis L. Lovano, Merrick, N. Y.
Application December 9, 1933, Serial No. 701,626
5 Claims. (Cl. 72—46)

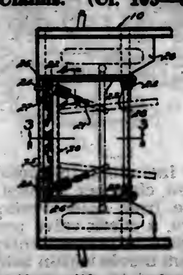
4. A partition section comprising a molded block and a member of lesser width than the thickness of the block molded in the block and embracing a corner of the block, the member including a continuous central protruding portion and a recessed channel portion on each side of the protruding portion.

2,107,235
METHOD OF AND APPARATUS FOR OPERATING COLD ACCUMULATORS
Richard Linde, Munich, and Carl Peter Hochgesand, Solln, near Munich, Germany, assignors to The Linde Air Products Company, a corporation of Ohio
Application April 17, 1936, Serial No. 74,940
In Germany May 17, 1935
14 Claims. (Cl. 62—175.5)



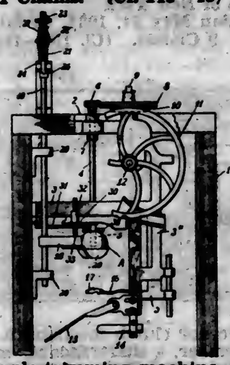
1. A method for controlling the flow of gas in a pair of cold accumulators which comprises causing two gases under different pressures to flow in opposite directions in said pair for a desired period of time the one gas flowing from the warm portion to the cold portion of one of said pair, and the other gas flowing from the cold to the warm portion of the other of said pair; stopping said flows at the end of said period; effecting a transfer of gas from the accumulator having the higher pressure to the other of said pair until the pressures therein are substantially equalized; and causing the resumption of flow in opposite directions in said pair to begin a new period of operation whereby the gas so transferred is not lost.

2,107,236
HINGED TIRE COVER FOR USE WITH FENDERWELL
George Albert Lyon, Allenhurst, N. J., assignor to Lyon Incorporated, Asbury Park, N. J., a corporation of Delaware
Application January 2, 1932, Serial No. 584,552
3 Claims. (Cl. 224—29)



1. A spare tire cover construction for a spare tire in a fenderwell, a cover including a side portion for disposition over an outer side wall of the tire and a tread covering portion for disposition over the tread of the tire, said side portion being hinged to the fender along the outer longitudinal side of the well so as to be swung up and over the tire after the tire has been disposed in the well, and means for pressing the tire downwardly in the well and having a connection to said cover for holding the cover in position on the tire.

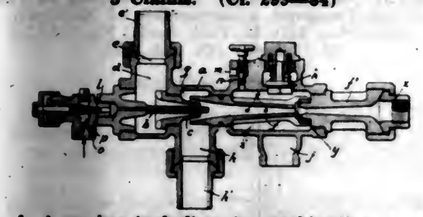
2,107,237
GIRDLE GARMENT
Mathilda G. Moore, St. Paul, Minn.
Application October 9, 1937, Serial No. 168,112
3 Claims. (Cl. 2—43)



1. In a girdle, a front section having a bifurcated lower portion forming a pair of diverging leg covering members, a gore of transversely elastic webbing secured between the upper portions of the leg covering members, a back section, side sections at each side of the girdle connecting the lateral edges of the upper parts of the front and back sections, a band of elastic webbing at the lower edge of said back sections, the side sections at each side of the front section consisting of long strips of laterally elastic webbing, said elastic side sections having depending leg covering members attached to their lower ends, the remaining side sections having depending portions forming leg covering members, and a pair of elastic leg bands, the leg covering members at each side of the girdle being connected in spaced and gathered relation to a respective band.

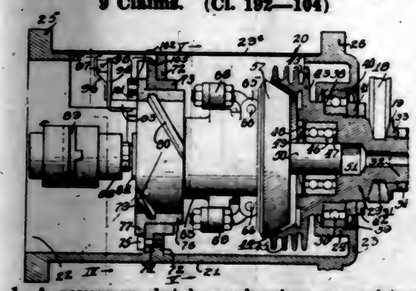
2,107,238
CAR LOADING DEVICE
Sulo M. Nampa, Detroit, Mich., assignor to The Worth Company, a corporation of Michigan
Application July 18, 1934, Serial No. 735,772
10 Claims. (Cl. 105—368)

9. In combination with an automobile supporting frame comprising longitudinally extending members for receiving the wheels of an automobile, a pair of rods at one end of the frame extending longitudinally thereof adjacent the inner sides of said members respectively and having their ends rigidly secured to the frame, anchoring devices slidable on the rods, said rods being adapted to anchor said devices in at least one position along the respective rods for anchoring an automobile on the frame, and housing means carried by the frame between the members for receiving the anchoring devices when not in use.



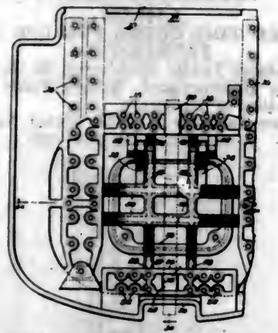
2,107,239
APPLE PARING AND TRIMMING MACHINE
John W. Pease, Rochester, N. Y.
Application July 28, 1936, Serial No. 93,068
11 Claims. (Cl. 146—45)

1. In an apple trimming machine, the combination with a rotatable spindle having apple supporting means thereon capable of a yielding axial movement but returnable automatically to initial normal position, of a stop associated with the supporting means but independent thereof and adapted to control the degree of application of an apple to the supporting means, and a



knife adapted to engage an apple on the support when the latter yields and to trim it at one end of its core when the support returns.

2,107,340
WASHER
Ireneé P. Pedrick, Philadelphia, Pa., assignor to William Sellers & Company, Incorporated, Philadelphia, Pa., a corporation of Pennsylvania
Application October 9, 1934, Serial No. 747,559
5 Claims. (Cl. 299—84)

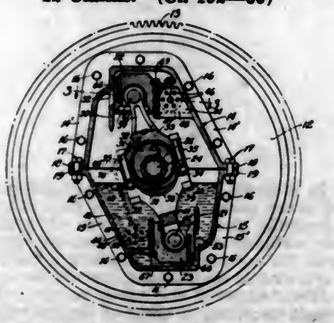


1. A washer including, in combination, a casing, an overflow chamber in said casing, a discharge passage from said overflow chamber to the atmosphere, a check valve positioned in said discharge passage to prevent entry of air therethrough, a steam nozzle within said casing adapted to be connected to a source of live steam, a forcing tube provided with a port in communication with said overflow chamber and adapted to receive steam from said nozzle, separate conduits for the supply of solvent and water to said forcing tube under the influence of vacuum created by the jet of steam from said nozzle, said conduits preventing the solvent and water from mingling until they reach the forcing tube, a second passage formed in said casing and affording communication between said overflow chamber and the atmosphere, and a needle valve adapted to regulate the amount of air flowing through said second passage.

2,107,341
GOVERNOR CLUTCH
Ralph F. Pee, Buffalo, N. Y., assignor to Houde Engineering Corporation, Buffalo, N. Y., a corporation of New York
Application May 31, 1935, Serial No. 24,307
9 Claims. (Cl. 192—104)

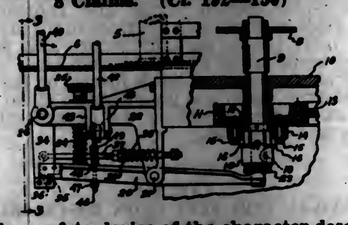
1. A governor clutch mechanism comprising a driving member, a shaft slidably mounted within said driving member, a driven member keyed to said shaft, means for sliding said driven member along said shaft to engage the driven member with the driving member, means operative by centrifugal force to disengage the driven member from the driving member, and means for manually sliding said shaft to control the operation of said clutch mechanism.

2,107,342
DIPPER DOOR FOR EXCAVATING BUCKETS
Thomas A. Rathkowski, Chicago Heights, Ill., assignor to The American Brake Shoe and Foundry Company, a corporation of Delaware
Application September 2, 1936, Serial No. 99,079
6 Claims. (Cl. 214—145)



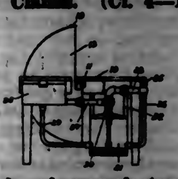
1. In a dipper door, a relief door movably carried by the main body of the dipper door, the main body of said dipper door having an opening normally closed by said relief door and bridging reinforcing means integrally formed with the main body of said dipper door and extending across said opening on the outer side of said door.

2,107,343
PROCESS OF TREATING PAPER
Chester D. Rockwood and Kenneth L. Osmun, Cincinnati, Ohio, assignors to The Union Selling Company, Cincinnati, Ohio, a corporation of Ohio
No Drawing. Application April 14, 1936, Serial No. 74,341
5 Claims. (Cl. 8—20)



1. A method of treating paper stock to produce a parchment-like effect which comprises conducting said stock through a bath of a solution of commercial grade zinc chloride in commercial forty per cent grade formaldehyde, said solution being prepared by dissolving the zinc chloride in the formaldehyde solution.

2,107,344
HYDRAULIC CLUTCH
Frederick Redeghier, Joliet, Ill.
Application February 24, 1937, Serial No. 127,484
12 Claims. (Cl. 192—60)



1. In a hydraulic clutch of the type described, the combination of a drive shaft, a driven shaft aligned with said drive shaft, a casing fast with said drive shaft, said casing containing a central chamber and a pair of cylinders disposed respectively on opposite sides of said chamber and open at their inner ends to the latter, plungers in said cylinders, connections between said plungers and said driven shaft operative to idle said plungers in said cylinders when the clutch is in non-driving condition and to lock said plungers to said cylinders when the clutch is in driving condition, a body of liquid in said casing, filler ports in the walls of said cylinders and overrun by said plungers through which ports liquid flows into the outer ends of said cylinders when said ports are uncovered, throttle valves controlling the return flow of liquid from the outer ends of said cylinders to said central chamber, and a pressure equalizing duct connecting the outer ends of said cylinders.

2,107,345
SAFETY DEVICE FOR CONTAINER MOVING MACHINERY
Stanley R. Rosendale, Mount Healthy, Ohio, assignor to The Karl Kiefer Machine Company, Cincinnati, Ohio, a corporation of Ohio
Application September 16, 1936, Serial No. 101,111
8 Claims. (Cl. 192—150)

1. In a safety device of the character described a shaft to be driven, driving means rotatably mounted on said shaft, a collar slidably but non-rotatably mounted on said shaft and interengagement means on said driving means and on said collar, at least one of said interengagement means being beveled so that relative rotation of said driving means and said shaft causes displacement of said collar axially of said shaft, and means for urging said collar toward said driving means with a predetermined force, said means comprising a lever and adjustable spring means bearing against said lever, a clutch, operating means for said clutch including an arm, said arm being located in a position of latching engagement with said lever when said clutch is in motion-transmitting engagement.

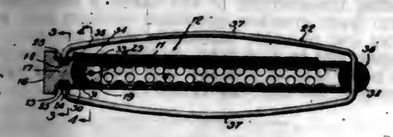
2,107,346
STEAM TABLE
Betsy P. Skjerven, Brooklyn, N. Y.
Application January 15, 1936, Serial No. 59,182
4 Claims. (Cl. 4—163)

1. An article of manufacture comprising a table, a hood adapted to cover a person reclining on said table and to cooperate with the table top to form a vapor bath cabinet, a hood-supporting shaft mounted on said table, hood-supporting arms mounted on said shaft, end plates mounted on said arms for movement through slots extending transversely of the table, a semi-cylindrical body member supported between said end plates and movable through a longitudinally extending slot in said table and means for moving the hood formed thereby into and out of operative position over the table.

2,107,347
REVERSIBLE HANDBAG COVER
Nathan Sloane and Max Sloane, Brooklyn, N. Y.
Application June 5, 1937, Serial No. 146,596
5 Claims. (Cl. 150—28)

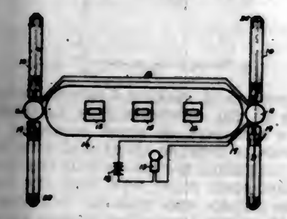
4. The method of making a reversible cover for a handbag of the envelope type, including providing two members of sheet material, folding the members to provide short and long sections, disposing the folded members with the short sections against each other and with the long sections on the outside and with the fold lines alongside of each other, providing inward folds along the fold lines from the opposite ends thereof to points spaced from the central portions of the fold lines, marginally securing the members together including the inner and outer sections and the said inward folds, turning the resulting structure inside out so that the inner and outer sections become outer and inner sections respectively, and finally turning a short, now external section, inside out and so as to lie alongside of the companion short section so that both of the latter lie at one side of the long sections.

2,107,348
RINGLET CURLER
Nathan L. Solomon, Brooklyn, N. Y.
Application January 10, 1936, Serial No. 58,568
16 Claims. (Cl. 132—40)



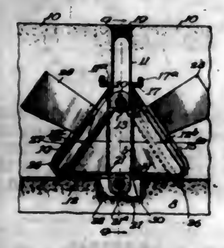
1. In a ringlet hair curler, the combination of, a handle comprising spaced extensions, and rotatable and separable jaws carried by said extensions for gripping a portion of the hair to be coiled therebetween and about said gripped portion.

2,107,349
HAIR WINDER
Nathan L. Solomon, Brooklyn, N. Y.
Application July 23, 1936, Serial No. 92,205
14 Claims. (Cl. 132—41)



1. In combination, a bearing, a bushing having an annular raceway, a loop swingably connected to said bearing and having relatively enlarged terminals disposed in said raceway for guiding displacement of said bushing relative to said

bearing, hair clamping components connected to said bushing, a compressible stay mounted on said loop and adapted to removably interlock with

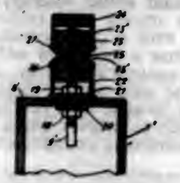


one of said components, and compression means carried by said bushing for normally holding said complements closed.

2,107,250
SIGNAL DEVICE
John Thomas Stubbins, Youngstown, Ohio
Application June 19, 1936, Serial No. 86,118.
14 Claims. (Cl. 200—86)

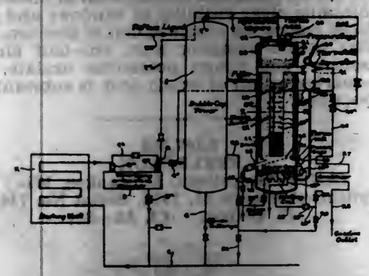
1. In combination with a flexible collapsible pneumatic tube, means for securing one end of said tube to the surface of a roadway comprising a plate having a lower portion to engage the surface of the roadway and upstanding flanges adapted to be swaged over to engage the side walls of the tube, said flanges being spaced from the end of the tube, a strap hinged at one end to said bottom portion and extending beyond the end of the tube, and means to secure the other end of the strap to the roadway.

2,107,251
JOINT FOR CONCRETE STRUCTURES
Henry A. Taubenseo, Chicago, Ill., assignor of one-half to Ernest H. Geyer, Chicago, Ill.
Application November 1, 1935, Serial No. 47,743
12 Claims. (Cl. 94—18)



1. The combination of contiguous horizontally extending concrete slabs, a bar between the upper portions of the slabs extending from one side of the slabs to the other depending and supported by portions of the slabs, separately formed hangers spaced along and carried by the bar, and load-transfer brackets having members bonded to one of the slabs and base-members slidably supported by the hangers.

2,107,252
PHOTOTUBE
Marten Cornelis Teves and Jan Hendrik de Boer, Eindhoven, Netherlands, assignors to N. V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands
Application March 10, 1936, Serial No. 68,015
In Germany March 14, 1935
5 Claims. (Cl. 250—27.5)



1. The method of manufacturing a photoelectric cathode for a light sensitive device having an envelope and an electrode positioned within said envelope, comprising forming a non-photoelectric metal and photoelectric-metal-oxide base within said envelope, releasing a getter material within said envelope, establishing a discharge between the non-photoelectric metal and photoelectric metal oxide base and said electrode in the presence of an inert gas to partially reduce said photoelectric metal oxide whereby a thin layer of adsorbed photoelectric metal is formed on the non-photoelectric metal and photoelectric metal oxide base, said getter absorbing the oxygen released during said discharge.

2,107,253
LEAD-IN FOR ELECTRON DISCHARGE DEVICES
Hans Vatter, Berlin-Charlottenburg, Germany, assignor to Siemens & Halske Aktien-Gesellschaft, Berlin-Siemensstadt, Germany, a corporation of Germany
Application January 16, 1935, Serial No. 2,060
In Germany January 25, 1934
2 Claims. (Cl. 250—27.5)

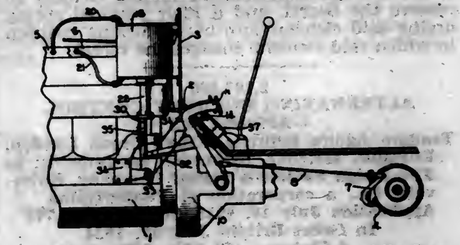
1. An electron discharge device having a metal envelope provided with an aperture, an insulating bushing in said aperture having lips engaging opposite sides of the envelope, a rigid lead-in extending thru said envelope and supported by said bushing on said envelope, means for securing said bushing and said lead-in to said envelope for providing a mechanical support for said lead-in, said envelope having a collar-like extension surrounding said lead-in on the exterior of the envelope, a cap on the outer end of said lead-in and an insulating cylinder surrounding said lead-in and having a metal coating on its opposite ends and filling the space between said lead-in and said collar-like extension, said cap and said collar-like extension being soldered to the metal coating on said insulating cylinder to form a vacuum tight seal for said lead-in.

2,107,254
APPARATUS FOR DECOLORIZING OR DESULPHURIZING HYDROCARBONS
James M. Wadsworth, Tulsa, Okla.
Application December 20, 1933, Serial No. 327,446
22 Claims. (Cl. 196—28)

1. In an apparatus of the class described, a chamber containing a catalyst, a perforated screen in the chamber supporting the catalyst, a cross pipe near the upper end of said chamber for the discharge of filtered vapors from the chamber, a pipe arranged within the chamber and extending downwardly from said cross pipe, a vapor outlet arranged at the lower end of the downwardly extending pipe and formed by perforated walls of the last mentioned pipe, means for introducing vapors into the top of said chamber, and means for discharging polymers from the lower portion of said chamber.

19. In combination, a shell, a column arranged within said shell and forming a chamber therewith, means within said chamber for supporting solid adsorptive treating material for free drainage, said chamber having communication with the lower portion of said column, a vapor inlet into said chamber, a vapor outlet from said column, and means within said column for removing polymers entrained in the vapor passing through the column.

2,107,255
CLOSURE FOR COLLAPSIBLE TUBES
Friedrich Winkler, Toronto, Ontario, Canada
Application October 6, 1937, Serial No. 167,522
3 Claims. (Cl. 221—60)

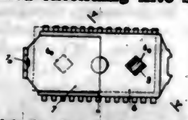


1. In combination, a collapsible tube having a neck and a discharge orifice opening therethrough, an edge portion of the neck defining said opening having a lip and an opposite edge portion having a recess of an arcuate cross section, a jaw closing said opening and having an edge portion forming a lip engaged with the aforesaid lip and having an opposite edge provided with a boss of a similar cross section to the said recess and seated therein to hingedly mount the jaw on the neck without physical connection therewith, and a spring band fitted over the jaw and secured to the neck such as to retain the boss in the recess and to tension the lip of the jaw against that of the neck.

2,107,256
DISPLAY DEVICE FOR WEARING APPAREL
Mervyn F. Wittenberg, Rochester, N. Y.
Application March 12, 1934, Serial No. 715,114
11 Claims. (Cl. 35—56)

1. A display device of the character described embodying in combination a body element simulating a body garment and provided with a necktie shaping means embodying two upwardly diverging walls and a horizontal wall connecting the lower ends thereof, of a necktie support about which a necktie may be folded and movable relatively to the body element to bring a tie so supported into cooperation with the shaping means to simulate a knot.

2,107,257
VACUUM ACTUATED AUTOMOBILE CONTROL
Garfield A. Wood, Detroit, Mich.
Application June 16, 1932, Serial No. 617,561
Renewed July 15, 1937
4 Claims. (Cl. 192—.01)

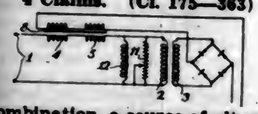


1. The combination with an automobile having a clutch operator and an engine accelerator, of a power device connected to actuate said clutch operator, means to control actuation of said power device, a pedal arranged to actuate said engine accelerator, connections between said pedal and said control means whereby movement of said pedal actuates said control means, and yieldable means associated with said connections arranged to permit movement of said pedal without actuation of said control means.

2,107,258
SAFETY RAZOR
Marco Aglietto, Turin, Italy
Application April 16, 1935, Serial No. 16,989
In Italy May 7, 1934
3 Claims. (Cl. 30—44)

1. Safety razor comprising in combination, a handle, a guard, a blade on said guard being formed with a cutting edge and with a square hole, the sides of which extend at an acute angle to the cutting edge of said blade, and a pair of

resilient tongues mounted on said handle at a similar angle and extending into said hole so as



to guide said blade for reciprocatory movement on said handle in a direction at an acute angle to the cutting edge of said blade.

2,107,359
BARREL-HOLDING DEVICE FOR AUTOMATIC PISTOLS
Ernst Altenburger, Oberndorf on the Neckar, Germany, assignor to Mauser-Werke A-G., Oberndorf on the Neckar, Germany, a joint-stock company of Germany
Application December 9, 1935, Serial No. 53,645
In Germany May 6, 1935
3 Claims. (Cl. 42—75)

1. A pistol comprising a frame, a barrel removably mounted in the frame and having a recess in the periphery thereof and a trigger guard forming a part of said frame and defining an opening therein, a barrel-locking element movably mounted in the frame and extending approximately tangentially to a side of said opening but intersecting the opening sufficiently for manual manipulation of said element to remove the barrel, and a high powered spring urging said element into barrel-locking position in which said element engages the recess.

2,107,360
ALTERNATING CURRENT CONTROL APPARATUS
Teodoro Adolfo Behrens, King's Cross, London, England, assignor, by mesne assignments, to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application July 16, 1935, Serial No. 31,743
In Great Britain July 17, 1934
4 Claims. (Cl. 175—363)

1. In combination, a source of alternating current, a rectifier for supplying current to a load, a transformer having its input winding energized from said source and having its output winding connected across the input terminals of said rectifier, a choke coil and a resistor connected in parallel with each other across the input winding of said transformer for causing an initial current to be furnished from said source at such time as the load on the output circuit of said rectifier is zero, a saturable reactor having its impedance winding included in the input circuit of said transformer between said source and said choke coil and resistor connection, and a control winding of said reactor connected in the output circuit of said rectifier for controlling the saturation of said reactor in accordance with the current supplied to said load.

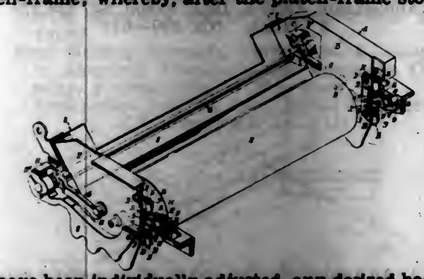
2,107,361
ANTIFOGGING COMPOSITION
James T. Benten, Spokane, Wash.
No Drawing. Application April 27, 1937, Serial No. 139,261
1 Claim. (Cl. 134—27)

The herein described composition of matter for maintaining clear visibility of windows and glass surfaces, consisting of one gallon of glycerin, one-quarter pound camphor gum, one-half pint of turpentine, one pound potassium oxalate, and one-quarter pound of oxalic acid, is substantially as described.

2,107,362
REFLECTOR
Carl V. Bergstrom, Milwaukee, Wis.
Application March 21, 1934, Serial No. 716,579
16 Claims. (Cl. 88—82)

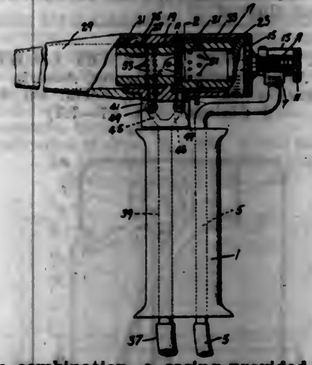
1. In a device of the character described, the combination of a button lens having an annular flange, a reflector, and a rubber casing having a socket in which said reflector and lens are mounted and fitted, said socket having an annular groove adapted to receive said flange, said reflector retained in position by said lens and the tensioned engagement of the bottom of said socket.

2,107,363
CLIMBING DEVICE FOR SKIS
Anna Binder, Buchau, Germany
Application September 4, 1936, Serial No. 99,338
In Germany January 18, 1935
1 Claim. (Cl. 280—11.13)



A climbing device for skis, comprising a sleeve member transversely secured on the upper surface of the ski, a frame member being composed of an upper transverse element across said upper surface arranged in said sleeve, a first downhanging side element at one end of said upper element, a lower transverse element underneath the ski, and a second side element pivoted on the free end of said lower transverse element, a releasable connection between the free ends of said upper transverse element and said second side element, of said frame respectively, a grip member secured on said lower transverse element having a base surface adapted to rest against the lower surface of the ski and a pointed end opposite thereof, said upper transverse element being adapted to be moved out of, or into, said sleeve element by a sliding motion when said connection is released and said second side element is turned below the lower surface of the ski on its pivoted connection with the lower transverse element.

2,107,364
TYPEWRITING MACHINE
Ernest M. R. Berg, Hartford, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y., a corporation of Delaware
Application April 19, 1935, Serial No. 17,169
12 Claims. (Cl. 197—31)



7. In a case-shifting stop-mechanism for a typewriting machine, the combination with a carriage, a platen, and a shiftable platen-frame,

of a horizontal main abutment or stop mounted upon an inclined mount at each end of the carriage, either main stop being adjustable independently along its inclined mount to raise or lower the main abutment and platen at either end, and a pair of individual stops mounted on each end of the platen-frame, for individual up and down independent adjustment, for co-operation with said main abutments to arrest the platen-frame; whereby, after the platen-frame stops

have been individually adjusted, any desired bodily readjustment of the platen-frame and platen at either end may be secured, without disturbing any individual platen-stop adjustment, by a lifting or lowering readjustment of one or both of the main abutments along their inclined mounts, the previous individual adjustment of each upper and lower platen-frame stop being maintained, notwithstanding the readjustment of the abutments.

2,107,365
HEATING APPARATUS SUITABLE FOR USE IN SHOEMAKING
William Neil Bray, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application February 11, 1935, Serial No. 5,898
In Great Britain April 21, 1934
3 Claims. (Cl. 126—110)

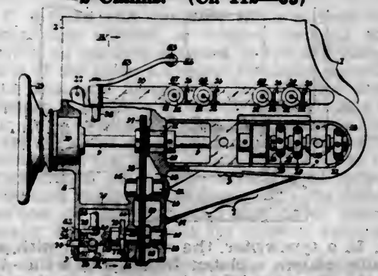
1. In combination, a casing provided with an internal flange, a cap closing an end of the casing and having an internal flange, a tubular member supported by the cap-flange, a second tubular member communicating with the first and supported by the casing-flange in spaced relation to said casing, the two members overlapping in contact at their adjacent ends, a perforated partition lying within one member and abutting against the end of the other member, and means for supplying gas and air to the interior of one member and air to the interior of the other member.

2,107,366
ORGANIC COMPOUNDS CONTAINING ETHER AND THIO ETHER LINKAGES
Herman A. Bruson, Philadelphia, Pa., assignor to Röhm & Haas Company, Philadelphia, Pa.
No Drawing. Application December 24, 1936, Serial No. 117,516
11 Claims. (Cl. 260—150)

5. A compound having the general formula

$$(R—A—(C_nH_{2n}—O)_x—C_nH_{2n})_2S$$

in which R is an organic cyclic group selected from the group consisting of aromatic, alicyclic and heterocyclic radicals, A is a member of the group consisting of oxygen and sulfur, x is one to two and n is two to three, the radical represented by R being attached to the atom represented by A by means of a nuclear carbon atom.

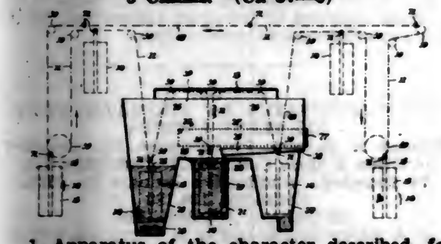


2,107,367
POLYSULPHONATES OF AROMATIC POLYALKYLENE ETHERS
Herman A. Bruson, Philadelphia, Pa., assignor to Röhm & Haas Company, Philadelphia, Pa.
No Drawing. Application January 12, 1937, Serial No. 120,180
10 Claims. (Cl. 260—150)

2. A water-soluble salt of a compound which, in the acidic form, has the general formula

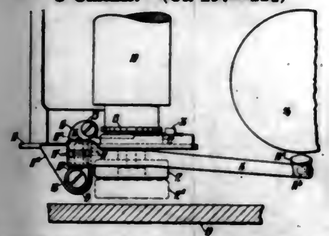
$$R—O—(C_nH_{2n}—O—)_x—C_nH_{2n}—SO_3H$$
$$(SO_3H)_y$$

wherein n, x and y are small integers, n being 2 to 3; x is 1 to 2; y being 1 to 2; and R is an aromatic nucleus of the benzene and naphthalene series which can contain as a nuclear substituent a member of the group consisting of hydrocarbon, acyl, halogen, alkoxy, and nitro groups; C_nH_{2n} being an alkylene group in which at least two carbon atoms separate alternate ether oxygen atoms —O—; said salt being a member of the group consisting of alkali metal, ammonium and amine salts.



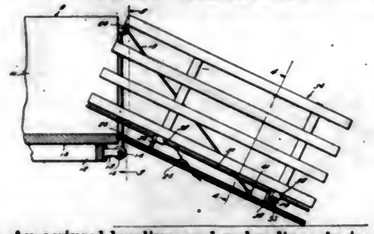
2,107,368
SEWING MACHINE
Norman V. Christensen, Chicago, and Hans Hacklander, Tinley Park, Ill., assignors to Union Special Machine Company, Chicago, Ill., a corporation of Illinois
Application June 12, 1936, Serial No. 84,862
2 Claims. (Cl. 112—63)

1. In a feed-off-the-arm sewing machine, a frame having an elevated horizontal portion terminating in a hollow head, and a work supporting arm underreaching said head; a longitudinal drive shaft extending along the elevated longitudinal frame portion; a needle bar confined to vertical reciprocation in the head; a needle actuating shaft substantially parallel to the longitudinal shaft and journalled within the head; a



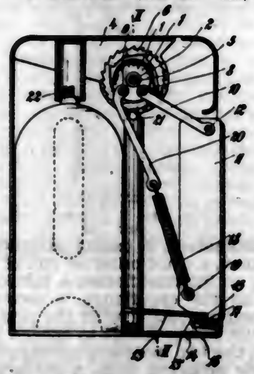
train of gears connecting the needle actuating shaft with the drive shaft; operating connections within the head through which the needle bar is reciprocated from the needle actuating shaft; and partitioning within the head setting apart an oil chamber for the gear train to prevent splash oil from reaching the needle bar.

2,107,369
APPARATUS FOR TREATING THINGS WITH VOLATILE SOLVENTS
Clarence F. Dinley, Detroit, Mich., assignor to James H. Bell, Philadelphia, Pa.
Application December 13, 1934, Serial No. 757,319
3 Claims. (Cl. 87—6)



1. Apparatus of the character described, for treating things or work with volatile solvent whose vapor is heavier than air, comprising in combination an air-excluding treating vessel open at its upper portion for the introduction and removal of work, and provided with means affording in said vessel separate solvent wells, one for hot solvent, one, unheated, for liquid solvent condensate, and one for solvent vapor; means for heating and vaporizing liquid solvent in said hot solvent well, and thus supplying solvent vapor to said solvent vapor well; means above the wells for retaining and condensing the solvent vapor; and means for collecting the condensate and supplying it to said unheated well to the exclusion of the solvent vapor well.

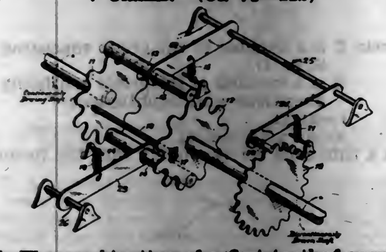
2,107,370
TYPEWRITING MACHINE
William A. Dobson, Wethersfield, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y., a corporation of Delaware
Application April 24, 1935, Serial No. 17,979
5 Claims. (Cl. 197—114)



3. In a typewriter, the combination with a rotatable platen, a platen-frame, and a line-space wheel within the plate-frame, of a knob outside of the platen-frame and rotatably connected with the platen, a line-spaced pawl for said wheel, a bracket-support mounted on and extending outside the frame, an arm pivotally mounted on said support, means driven by said arm to actuate said pawl, and an integral one-piece line-space lever overlying said knob and having finger-clearance therefrom, and having an upright finger-piece and hinged on the upper face of said arm between its ends and outside the end wall of said frame, whereby said arm may be turned in a plane to actuate said pawl, and whereby said finger-piece may be collapsed.

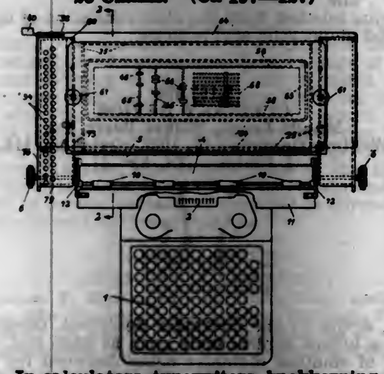
2,107,371
STOCK LOADING CHUTE
Earl H. Donnan, Chestnut, Ill., assignor of one-half to Orville John Heft, Chestnut, Ill.
Application April 1, 1937, Serial No. 134,379
2 Claims. (Cl. 296—61)

1. An animal loading and unloading chute construction of the class described comprising a longitudinally elongated gang-plank provided along opposite longitudinal edges with eye-equipped brackets, a pair of duplicate spaced parallel side walls, said side walls being foldable into overlapping relationship with respect to said gang-plank, the lower edge portions of said side walls being provided with eyes registrable with the eyes on said brackets, assembling and pivoting rods extending through the eyes to hingedly mount the sides on the longitudinal edge portions of said plank, said rods being slidably and rotatably arranged in the eyes of the brackets and fastened in the eyes of the side walls, coiled springs anchored on said plank and attached to the hinged portions of said sides to automatically lift and swing the sides to vertical usable position, and check devices rigidly mounted on said gang-plank and cooperable with the hinged portions of said sides to limit the outward swinging movement thereof.



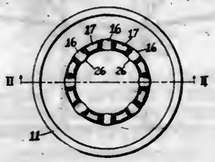
2,107,372
FRICTION WHEEL POCKET LIGHTER
Josef Edenburg, Vienna, Austria
Application May 18, 1936, Serial No. 80,232
3 Claims. (Cl. 67—7.1)

1. A friction wheel pocket lighter, comprising in combination a casing, a friction wheel carrier in said casing, a closing cap connected with said friction wheel carrier, a bearing formed in said casing and open towards the outer side thereof,



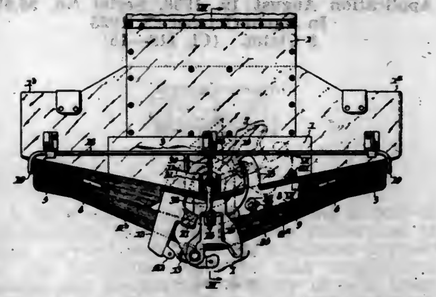
a pressure lever oscillatably mounted in said bearing and forming one of the side walls of said casing, a spring continually pulling said lever towards said bearing and holding it therein, and means connecting said lever with said carrier adapted to transmit the movement of said lever to said carrier and to said closing cap.

2,107,373
APPARATUS FOR CONVERTING CONTINUOUS MOTION INTO INTERRUPTED MOTION
Paul Griffith Edwards, Verona, N. J., assignor to American Telephone and Telegraph Company, a corporation of New York
Application July 16, 1935, Serial No. 32,075
7 Claims. (Cl. 74—112)



1. The combination of a first toothed movable element, a second toothed movable element arranged so as to move in the same direction as said first element, means including a member movable substantially transversely with respect to the direction of motion of said movable elements for producing a lost motion coupling between said elements, means for moving the first element continuously, and means including said first named means and responsive to the motion of the first element for moving the second element in finite steps in the direction of motion of the first element.

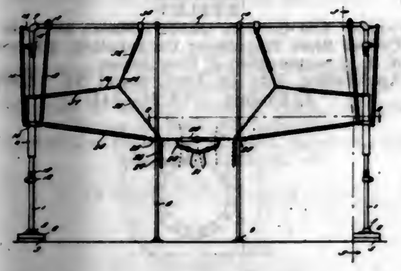
2,107,374
DEVICE FOR CALCULATING MACHINES, ACCOUNTING MACHINES, WRITING AND LIKE MACHINES
Heinrich Konrad Friedrich Ewald, Chemnitz, Germany, assignor to Wanderer-Werke vorm. Winklhofer & Jaenicke Akt.-Ges., Schonau-Chemnitz, Germany
Application August 12, 1935, Serial No. 36,010
In Germany August 17, 1934
23 Claims. (Cl. 197—127)



1. In calculators, typewriters, bookkeeping and similar machines a device for setting writing sheets to any desired line, comprising adjustable stops one for each line selective to be encountered by the writing sheets when fed and adjusting means, one for each stop, cooperating with said stops for bringing them into operative position.

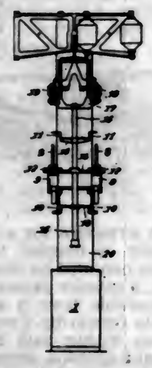
2,107,375
EYELET
Sylvester Leo Gookin, Quincy, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application July 19, 1935, Serial No. 32,305
12 Claims. (Cl. 24—141)

10. A roll-clenched eyelet the clenched end of which is an annulus comprising alternate high and low segments arranged to be embedded to unequal depths in the material against which they are clenched, the outer perimeters of said low segments having relatively thin fins connecting said high segments.



2,107,376
PILOT AND COUPLER STRUCTURE
Harry A. Hoke, Altoona, Pa., assignor to The Pennsylvania Railroad Company, Philadelphia, Pa., a corporation of Pennsylvania
Application July 17, 1936, Serial No. 91,157
3 Claims. (Cl. 213—4)

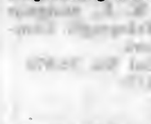
1. A front end structure for a railway vehicle comprising a pilot, a coupler housing therein having an opening bounded by the deflecting surfaces of the pilot, a coupler pivotally mounted on said pilot and movable from a service position, wherein it projects forwardly through said opening, to a position within said housing, and a cover plate for said opening mounted for movement about the same pivotal axis as that of the coupler, said cover plate when closed forming a deflecting surface continuous with the deflecting surfaces of the pilot, and said cover plate and coupler having capacity for relative vertical adjustment.



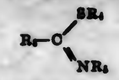
2. A front end structure for a railway vehicle comprising a pilot, a coupler housing therein having an opening bounded by the deflecting surfaces of the pilot, a coupler pin within said housing, a coupler pivotally mounted on said pin and movable from a service position to a position within said housing, and a cover plate for said opening, said cover plate being mounted for independent rotation on said coupler pin and serving to close the opening of the coupler housing.

2,107,377
APPARATUS FOR TEACHING TUMBLING
Omar O. Howland, Eagle, Colo.
Application October 30, 1937, Serial No. 172,010
3 Claims. (Cl. 272—69)

1. In a device of the class described, an upright frame including end posts and intermediate posts, a member slidably arranged on each end post, a clevis slidably arranged on each intermediate post, a spring arrangement including a plurality of springs connecting each clevis with the slidable member, body encircling straps flexibly connected with the clevises and spring means for moving the slidable members upwardly.



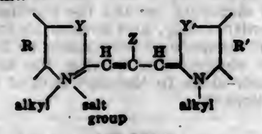
2,107,378
FINE SPINNING FRAME
Etsuro Kato, Meguro-ku, Tokyo-shi, Japan
Application August 19, 1936, Serial No. 96,884
In Japan October 25, 1935
1 Claim. (Cl. 118—15)



A fine spinning frame comprising, in combination, a frame, two parallel rows of vertical spindles arranged on opposite sides of the frame, two parallel rows of drafting apparatus arranged on opposite sides of the frame and comprising parallel rows of vertically arranged drafting rollers to draft slivers vertically in substantial coaxial relation to said spindles, vertically slideable rods mounted in the frame and disposed intermediate the rows of spindles, ring rails and guide rails secured in spaced apart relation on said vertical rods, actuating means operably connected to said rods for simultaneously moving said rods vertically, and individual motor driving means for each of the spindles.

2,107,379
MANUFACTURE OF CARBOCYANINE DYES
Robert Keslewsky, Dessau-Ziebigk in Anhalt, Germany, assignor to Agfa Ansco Corporation, Binghamton, N. Y., a corporation of New York
No Drawing. Application January 14, 1933, Serial No. 651,811. In Germany January 18, 1932
26 Claims. (Cl. 260—44)

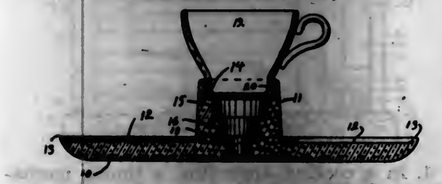
1. The process which comprises acting while heating upon a quaternary ammonium salt corresponding with the formula



wherein Y is a member of the group consisting of S, Se, O,
R is a member of the group consisting of phenylene and naphthylene,
r=alkyl,
x=an acid radical,
with a thioimide corresponding with the formula

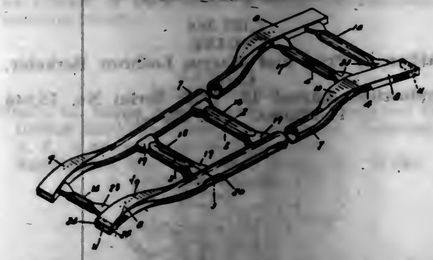
wherein R_3 is a member of the group consisting of alkyl radicals and monocyclic aryl radicals
R_4=alkyl
R_5=a phenyl.

22. Trimethinecyanine dyes having the general formula



wherein
Y and Y' are selected from the class consisting of S, Se and O,
R and R' are selected from the group consisting of phenylene, naphthylene, alkyl phenylene, alkoxy phenylene, amino phenylene and alkyl amino phenylene,
Y being different from Y' when R is the same as R' and
R being different from R' when Y is the same as Y'; and
Z being selected from the class consisting of alkyl and monocyclic aryl radicles.

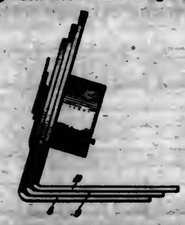
2,107,380
CULINARY DEVICE
Maude Leach, Wilkes-Barre, Pa.
Application December 17, 1936, Serial No. 116,417
1 Claim. (Cl. 53—6)



A device of the character described, comprising a hollow conical body open at each end, the end of smallest diameter being designed for extension through an opening in a pie top crust, and outwardly extending wing-like members forming integral struck-out portions of the material of said body to rest upon the top of a pie top crust when the adjacent end of the body is extended through the said opening in the top crust, the openings resulting in the body from the striking out of said portions being between said portions and the narrow end of the body to be located immediately beneath the undersurface of the said crust when the device is in position for use.

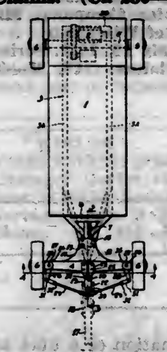
2,107,381
SERVING DEVICE
Louis A. Loppke, Omaha, Nebr.
Application April 8, 1937, Serial No. 135,725
4 Claims. (Cl. 65—15)

1. A serving device comprising a plate having a central integrally formed supporting member upstanding therefrom a distance substantially greater than the thickness of the plate, and having an opening therein, and a plurality of stepped shoulders in said opening, said steps extending progressively inward from the top.



2,107,382
VEHICLE FRAME
Robert H. Maddock, Cleveland, Ohio, assignor to The Midland Steel Products Company, Cleveland, Ohio, a corporation of Ohio
Application November 27, 1933, Serial No. 699,822
10 Claims. (Cl. 280—106)

7. In a motor vehicle, means for reducing the extent to which side rails of automobile frames must be curved vertically to form kickups of sufficient degrees to establish the required axle clearance and low center of gravity of the automobile comprising tubular or box section side rails having its ends curved vertically and flattened horizontally to spread the kickup portions laterally beyond the vertical sides of the intermediate portions of the rails to reduce the degree of kickup below that required to curve rails without said flattened portions.

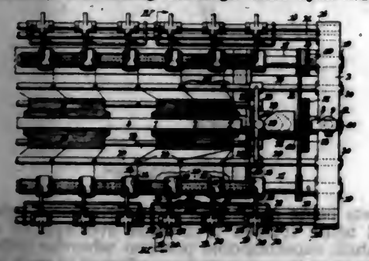


2,107,383
ORNAMENTAL MOUNTING
Gustave F. Mattmann, Cincinnati, Ohio, assignor to The Cincinnati Advertising Products Company, Cincinnati, Ohio, a corporation of Ohio
Application August 1, 1936, Serial No. 93,831
3 Claims. (Cl. 41—10)

1. As a new article of manufacture, a decorative mounting for a clock, picture, or the like, said mounting comprising at least two sheets of translucent material provided with angularly disposed sections providing for standing up the sheets on a supporting surface in display position, the

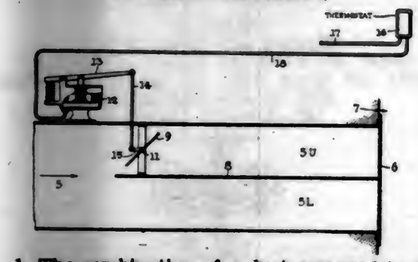
sheets being positioned in superimposed relation and being formed to provide overlapping areas in their superimposed position whereby different degrees of translucency are effected in such areas.

2,107,384
TRUCK
Glenn J. McQueen, Portland, Oreg., assignor to The Hardie Manufacturing Company, Hudson, Mich., a corporation of Michigan
Application March 31, 1936, Serial No. 71,969
5 Claims. (Cl. 280—111)



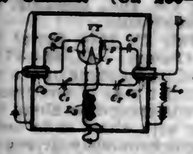
1. In a vehicle, a frame including a pair of longitudinal beams, said beams converging at their forward ends, a frame extension disposed in the horizontal plane of said longitudinal beams and projecting forwardly of said beam ends, an axle pivotally mounting said frame extension, and means to brace said axle against horizontal movement with respect to said frame, said means rotatably mounting said frame.

2,107,385
YARN WINDING MACHINE
Robert E. Moser, Reading, Pa., assignor to Rosedale Knitting Co., Inc., Reading, Pa., a corporation of Pennsylvania
Application July 11, 1934, Serial No. 734,584
10 Claims. (Cl. 28—17)



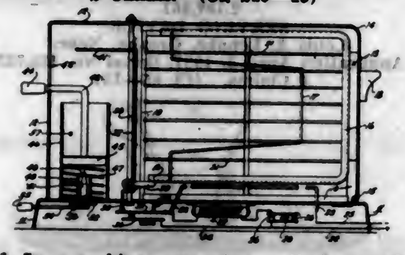
1. A back winding machine of the character described comprising a pair of end frames; longitudinal fulcrum rods extending along opposite sides of the machine with their ends secured in said end frames; synchronously-driven longitudinal rotor shafts inward of the fulcrum rods and journaled in said end frames; a series of arms pivoted on each of the fulcrum rods and individually sustaining, for free rotation, yarn receiving spools resting by gravity on the rotor shafts, said arms being individually swingable outward to a retracted position for convenience of interchange of

spools; a longitudinal overhead beam supported by the end frames centrally over the machine and provided with means whereby rows of stocking blanks may be hung from its opposite sides; a longitudinally-traversing carriage with eyes for di-



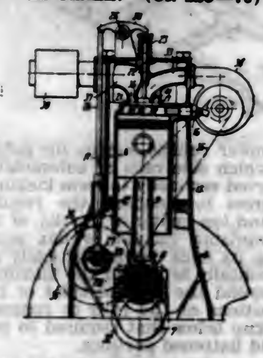
recting the yarns raveled from the stocking blanks and distributing them on the respective receiving spools along opposite sides of the machine; and means for reciprocating the traversing carriage.

2,107,286
AIR CONDITIONING
Arthur J. Otis, Milwaukee, Wis., assignor to Johnson Service Company, Milwaukee, Wis., a corporation of Wisconsin
Application July 15, 1937, Serial No. 153,869
3 Claims. (Cl. 98—37)



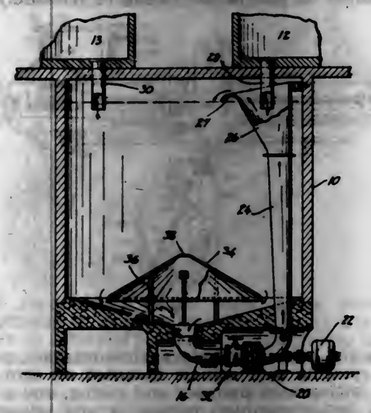
1. The combination of a duct arranged to deliver cooled air horizontally into a room or the like above the zone of occupancy; a partition dividing said duct into a lower constantly open portion and an upper portion; and a damper adjustable to vary the flow through said upper portion.

2,107,287
VACUUM TUBE WITH TANK CIRCUITS
Ralph Kimball Potter, Madison, N. J., assignor to American Telephone and Telegraph Company, a corporation of New York
Application June 12, 1936, Serial No. 84,967
12 Claims. (Cl. 250—36)



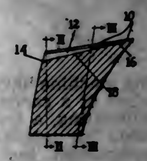
1. In an amplifier circuit, an amplifier tube having cathode, anode and control electrodes, a substantially closed conducting vessel enclosing said tube and constituting a tank whose inner surface acts as an inductance with respect to high frequency currents flowing over it, two of said electrodes being connected to points of different potential on the inner surface of said tank so that the tank serves as an inductance connected to said electrodes, and a connection from the third electrode to said tank.

2,107,288
TOASTER
August C. Purpura, Chicago, Ill.
Application November 16, 1934, Serial No. 753,335
2 Claims. (Cl. 219—19)



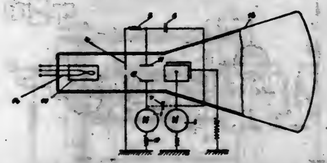
1. In a cooking apparatus, a timing mechanism including a member adapted to be initially set and then returned slowly for a portion of its travel and rapidly for the last part of its travel, a control element normally held in inoperative position by said member, a switch adapted to be closed by said element when the latter is released by said member in the initial setting of said timing mechanism, and a bread carrier normally in inoperative position and adapted to be moved manually into operative position, said member in the last portion of its return movement imparting a sharp blow to said control element to move said bread carrier into inoperative position and allow said switch to be opened.

2,107,289
ENGINE
Nathan C. Price and Marcus Lothrop, Berkeley, Calif.
Application August 13, 1935, Serial No. 35,940
11 Claims. (Cl. 123—79)



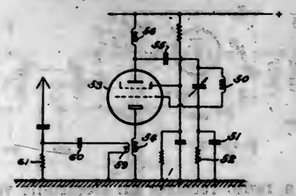
1. An engine comprising a combustion chamber, an intake duct leading to said combustion chamber, a separate exhaust duct leading from said combustion chamber, a valve for controlling flow between both of said separate ducts and said combustion chamber, and means effective during the operation of said engine for maintaining a current of air flowing from said intake duct over the surface of said valve and into said exhaust duct.

2,107,290
APPARATUS FOR AND METHOD OF AGITATING PULP STOCK
John A. Rossmiil, Manistee, Mich.
Application December 13, 1935, Serial No. 54,157
9 Claims. (Cl. 92—37)



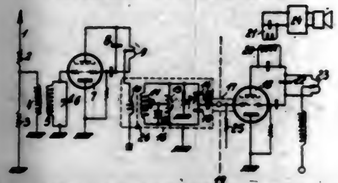
1. In apparatus for storing and agitating pulp stock, a storage chest, a pump having an intake communicating with the lower end of the chest to withdraw pulp stock therefrom and having an outlet connected with the upper end of the chest to discharge pulp stock thereinto, said outlet provided with a flaring portion adjacent to its discharge end, and a pulp stock receptacle having an outlet leading into said flaring portion of the pump outlet to deliver additional pulp stock thereinto counter the direction of flow of the stream of pulp stock flowing therethrough from the pump.

2,107,291
WOOD HEEL
Simon G. Ross, Marblehead, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application May 11, 1936, Serial No. 78,983
1 Claim. (Cl. 36—34)



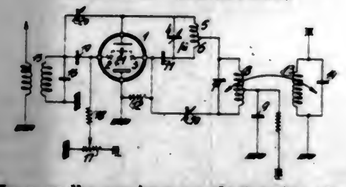
A wood heel having a concave rim around its attaching face arranged to contact with the overlasted margin of the upper materials around the heel seat of a shoe over a substantial portion of the width of said margin, said heel having also a deeper and sharper concavity in its attaching face dropping from the inner edge of said rim, the depth of said concavity corresponding to the shape of the breast portion of an outsole at the breast of the heel and tapering uniformly from a substantial depth at the breast of the heel to zero at the rear central part of the inner edge of said rim, the longitudinal central line of the concavity being substantially straight over the major portion of its length.

2,107,292
TELEVISION ARRANGEMENT
Kurt Schlesinger, Berlin, Germany
Application June 1, 1934, Serial No. 728,526
In Germany June 3, 1933
2 Claims. (Cl. 178—7.7)



1. An arrangement for deflecting the cathode ray in a Braun tube having a source of electrons, an anode, a fluorescent screen and two pairs of deflecting plates, one pair serving for the line deflection of the cathode ray produced in said tube and the second pair serving for the framing deflection, comprising two scanning oscillation generators, means for connecting one of said generators with said line deflecting plates, means for connecting the other of said generators with said framing deflecting plates, a condenser connected between said line scanning oscillation generator and one plate of said second pair for applying a potential of the same amplitude and reversed phase as compared with the potential causing disturbing capacitative influences between said line scanning oscillation generator and said other plate of said second pair of deflecting plates.

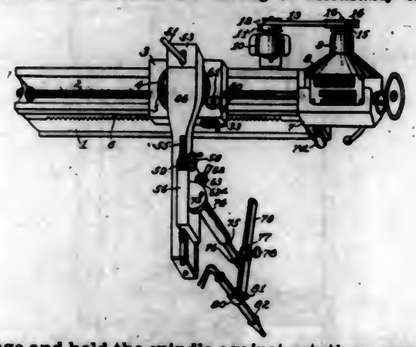
2,107,293
RADIO RECEIVING SYSTEM
Kurt Schlesinger, Berlin, Germany
Application June 28, 1934, Serial No. 733,070
In Germany July 1, 1933
4 Claims. (Cl. 250—20)



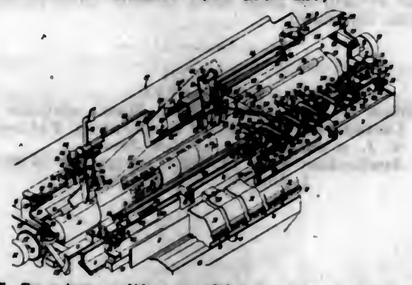
1. In a television reception arrangement operated according to the superheterodyne principle, the combination of an aerial input coupling and an oscillatory device for receiving, signal modulated carrier frequencies, means for generating a heterodyning frequency and means for mixing said carrier frequencies with said oscillator frequency comprising an aerial, a first coupling condenser, a coupling choke possessing a middle-tapping point, said condenser being connected between said aerial and said tapping point, an oscillator-modulator valve having a cathode, a control grid, a screening grid and an anode, a second condenser connected between the one end of said choke and an electrode of said oscillator valve, the other end of said choke being earthed, an oscillating circuit tuned to the heterodyning frequency comprising a coil and an adjustable condenser, a third condenser, a resistance, said third condenser and said oscillating circuit being connected in series across the anode and control grid of said oscillator valve, said resistance being connected between said grid and earth.

2,107,294
RADIO RECEIVING SYSTEM
Kurt Schlesinger, Berlin, Germany
Application November 21, 1934, Serial No. 754,049
In Germany November 24, 1933
6 Claims. (Cl. 250—20)

1. In a radio receiving system having an antenna circuit, an oscillator-modulator including an electron discharge tube having a tunable input circuit coupled to said antenna circuit and an oscillation circuit tunable to a predetermined very high frequency whereby to set up oscillations in said tube of such a frequency that when heterodyned with the incoming signal-modulated oscillations the sum and difference frequencies are derived, an output circuit coupled to said oscillation circuit and comprising a selection circuit and a piezo-electric crystal tuned to the derived sum frequency, the constants of the oscillator-modulator circuits having such values and the sum frequency being so high relative to its modulation frequencies that the latter are accommodated within the half value width of the resonance curve of said piezo-electric crystal.



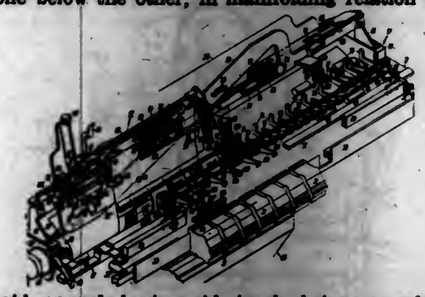
2,107,295
RADIO RECEIVING SYSTEM
Kurt Schlesinger, Berlin, Germany
Application December 13, 1934, Serial No. 757,300
In Germany December 13, 1933
7 Claims. (Cl. 250—20)



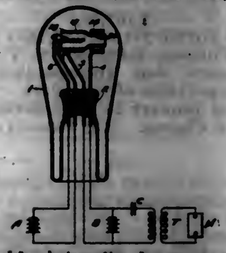
1. In a radio-receiver an electronic valve having a cathode, an anode and at least two control-grids, a receiving input circuit coupled with an aerial circuit and connected with said cathode and one of said control grids, an oscillatory circuit tuned to a frequency greater than the receiving frequencies and connected with said anode and the other of said control grids, a back-coupling circuit for the receiving frequency connected with a tapped-point of said oscillatory circuit and an anode current source and firmly coupled with said receiving input circuit.

2,107,396
SHAPE CUTTING MACHINE
Otto A. Scheitz, Waterloo, Iowa
Application February 14, 1936, Serial No. 63,921
10 Claims. (Cl. 266—23)

1. In a shaping machine of the character described, an elongated track, a carriage movable to and fro thereon, an arm having an end positioned upon and supported movably on said carriage to be swung to and fro in one plane parallel with said track and having a rack extending longitudinally therealong, a carrier chamber alongside said arm, an adjusting gear-wheel mounted on said chamber and meshed with said rack to travel with the frame therealong, a casing on and in communication with said chamber, a rotatable spindle mounted in said casing, a braking device mounted on and in the casing to releasably engage and hold the spindle against rotation, means for rotating said spindle mounted on said arm and within said chamber and casing, and a cutting device mounted releasably and adjustably on the spindle for various angular adjustments relative thereto and for spacing it apart from the spindle and securing it in adjusted positions relative thereto in spacing it bodily away therefrom.



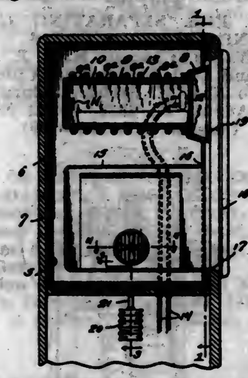
2,107,397
TYPEWRITING MACHINE
Jesse A. B. Smith, Stamford, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y., a corporation of Delaware
Application January 3, 1933, Serial No. 649,902
22 Claims. (Cl. 197—127)



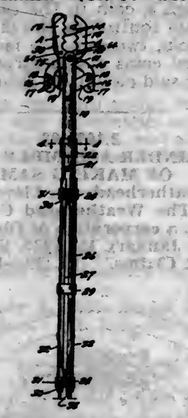
7. In a typewriting machine having a printing-point, the combination of a carriage movable in one direction for tabulating, a truck movable in the opposite direction for tabulating, and column-tabulating mechanism including a plurality of keys, each key determining a certain column-position related to said printing-point, and also including means co-operating with any key, whereby, upon operation of the latter, the carriage and truck are jointly tabulated in their respective directions to the column-position determined by the operated key.

2,107,398
TYPEWRITING MACHINE
Jesse A. B. Smith, Stamford, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y., a corporation of Delaware
Application December 29, 1933, Serial No. 704,425
24 Claims. (Cl. 197—127)

7. In a typing machine, the combination with the types, of a tabulating carriage arranged to present to the types a record-sheet having a multiplicity of item-classifying columns spaced different distances apart crosswise of the record-sheet, a truck for presenting a bill-sheet, having a single item-column in which items are typed one below the other, in manifolding relation to said record-sheet, said truck being movable lengthwise of the carriage for locating the bill-truck at different positions, corresponding to the unequally-spaced record-sheet columns, lengthwise of the carriage, and means whereby the movements of the truck in its shifts to successive unequally-spaced positions automatically causes the bill to be uniformly line-spaced.



2,107,399
GLOW LAMP
Percy L. Spencer, West Newton, Mass., assignor, by mesne assignments, to Raytheon Production Corporation, a corporation of Delaware
Application December 18, 1933, Serial No. 326,716
Renewed November 20, 1931
2 Claims. (Cl. 176—16)



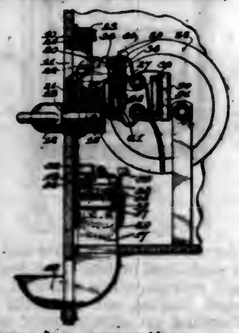
1. A variable intensity lamp comprising the combination with an envelope, of an attenuated atmosphere within the envelope, a filament to emit actinic rays, and concentric cylindrical electrodes adjacent the filament forming a path therethrough and so positioned that upon activation a glow discharge is produced between the electrodes and in the vicinity of the said source of rays, whereby some of the actinic rays emitted from the said source will be absorbed by the said glow.

2,107,400
REFRIGERATOR
Oscar John Stabbal, Lakewood, Ohio
Application February 3, 1936, Serial No. 62,193
7 Claims. (Cl. 62—116)

1. A refrigerator comprising a hermetically closed casing containing a refrigerating chamber and a food or like chamber and affording a refrigerating space in surrounding relation to said chambers, said chambers being accessible from the exterior but hermetically closed from the refrigerating space, means to close said chambers from the exterior and to seal said chambers from each other, a refrigerating element hermetically sealed within said refrigerating space adjacent said refrigerating chamber, and a gaseous refrigerating medium sealed within the refrigerating space for circulating in thermal contact with the wall of said food or like chamber and the surface of said refrigerating element, said food or like chamber having an inwardly offset upper portion affording an enlargement of said refrigerating space within which the refrigerating element and the refrigerating chamber are arranged.

2,107,401
TREE PRUNER
Luke S. Stripling, Amarillo, Tex.
Application December 1, 1936, Serial No. 113,683
3 Claims. (Cl. 30—245)

1. In a tree pruner, a supporting pole including a series of telescopically adjustable sections, a pair of cutting jaws at the upper end of the pole, operating means for said jaws including pull means housed entirely within said pole, said pull means being provided with a plurality of elements adjustable longitudinally of each other and having coacting means for securing them in adjusted relation, one of said telescopic sections being longitudinally slotted to permit access to the said coacting means, the element at the lower end of the pull means being a chain and the element above the chain forming a hook for selectively engaging the links of the chain, a wind-



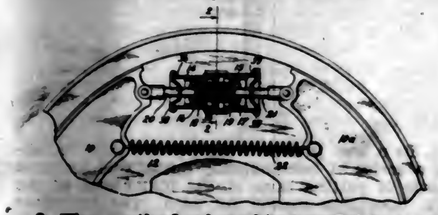
ing drum supported from the lower end of said pole and having one end of the chain attached thereto, and a crank for rotating said winding drum.

2,107,402

APPARATUS FOR SEPARATING GENUINE AND SPURIOUS COINS

Fred E. A. Wallin, Chicago, Kurt T. Johnson, Palatine, and Carl G. Johnson, Chicago, Ill., assignors to Neal M. Seeburg, Chicago, Ill.

Application August 17, 1936, Serial No. 96,412
12 Claims. (Cl. 194—100)



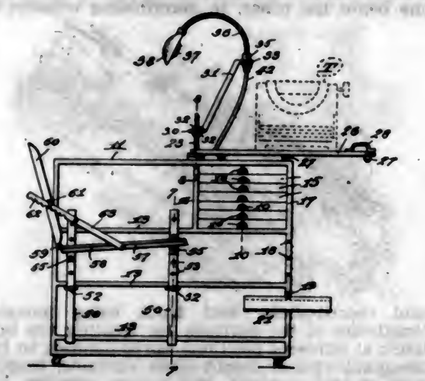
1. Apparatus for separating genuine and spurious coins comprising a cabinet, a carriage in the interior of the cabinet for receiving an inserted coin, a handle on the exterior of the cabinet for moving said carriage into coin discharge position, a contact on said carriage adapted to be engaged by said coin, means for heating said contact, means for receiving a coin discharged from said carriage, means completing a circuit through a coin in the carriage and said contact, a gate controlling the disposition of the discharged coin, two separate means for receiving discharged coins and electromagnetic means controlled by said circuit for actuating said gate.

2,107,403

BRAKE CYLINDER ASSEMBLY AND METHOD OF MAKING SAME

Albert J. Weatherhead, Jr., Cleveland, Ohio, assignor to The Weatherhead Company, Cleveland, Ohio, a corporation of Ohio

Application January 15, 1935, Serial No. 1,908
12 Claims. (Cl. 29—152.1)



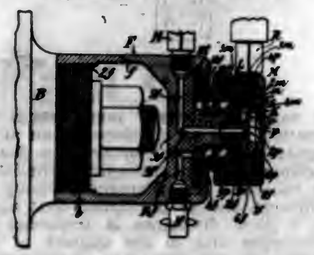
3. The method of making a fluid pressure brake cylinder which comprises telescoping two tubular steel parts together, positioning a saddle-like steel member over the outer of said tubular parts where the tubular parts overlap, copper brazing the three parts together to form a fluid tight connection throughout the areas of contact and thereafter forming passageways through said member and tubular parts in the zone of the copper brazed joints therebetween.

2,107,404

COMBINATION DESK AND CHAIR

Arthur J. Wilkin, San Pedro, Calif.

Application September 2, 1936, Serial No. 99,112
3 Claims. (Cl. 155—183)



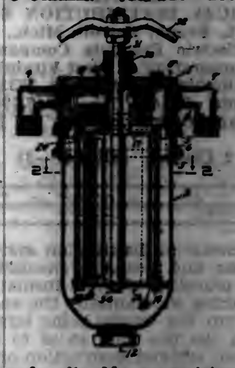
1. A knockdown article of furniture, comprising a spaced pair of cabinets provided with inwardly facing shelves and storage compartments, opposed and vertically disposed seat mounting hangers removably secured to shelves of each cabinet, a seat removably and adjustably secured to said hangers between said cabinets, said cabinets having the same over-all size and shape to permit the consolidation thereof into a compact assembly for convenient storage upon the removal of said seat.

2,107,405

ROTATING JOINT FOR RUNNING INFLATION

Selden T. Williams, Bellerose, N. Y., assignor to A. Schrader's Son, Incorporated, Brooklyn, N. Y., a corporation of New York

Application January 25, 1934, Serial No. 708,185
8 Claims. (Cl. 152—11)



1. A device of the character described comprising two coaxially disposed, relatively rotatable units, each having means for connection with a source or reservoir of fluid pressure, one of said units having an impervious, flexible, peripherally held diaphragm therein, the other unit having an axial extension with an end face against which said diaphragm engages, said diaphragm and axial extension having aligned openings therethrough, and said units being assembled together in a manner to normally hold said diaphragm in fluid-tight engagement against said end face independently of the fluid pressure or any supplemental spring means.

2,107,406

FILTER

Edward L. Wood, Detroit, Mich.

Application May 6, 1936, Serial No. 78,199
Renewed June 29, 1937
8 Claims. (Cl. 210—167)

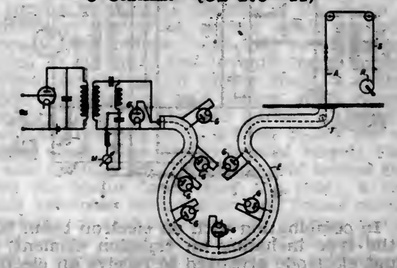
1. A filter for liquids comprising, a filtering medium through which liquid flows, a series of wall members on the outgoing side of the medium substantially dividing the medium into sections, a spring actuated member on the outgoing side of the medium arranged to contact with the wall members, means for causing relative movement between the spring actuated member and the wall members whereby the spring actuated member wipes across the wall members, said spring actuated member being successively tensioned and released as it wipes across the wall members, said spring actuated member having angularly disposed portions arranged to cooperate with the wall members when the member is tensioned to define a compartment, the tension of the spring actuated member serving to collapse the compartment as the spring actuated member wipes across the top of a wall, whereby to force some of the liquid entrapped in the compartment through the medium in a direction reverse to the normal flow therethrough.

2,107,407

SCAFFOLDING COUPLING

John Burton, Edgbaston, Birmingham, England

Application June 4, 1935, Serial No. 24,884
In Great Britain June 6, 1934
8 Claims. (Cl. 189—36)



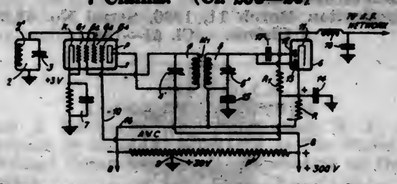
5. A scaffolding clamp for securing together two scaffolding members in transverse relationship comprising in combination, a pair of jaws, said jaws having each a portion adapted for clamping engagement with one of the scaffolding members on opposite sides thereof, one at least of said jaws being adapted partially to embrace said scaffolding member, means connecting the two jaws, said jaws each having also an abutment part adapted for engagement with the other scaffolding member, a cap adapted to co-operate with each of said abutment parts in gripping said other scaffolding member, said jaw connecting means being adapted to permit of said jaws each pivoting relative to said cap about an axis which is substantially parallel to the longitudinal axis of the scaffolding member which the jaw portions engage and of said jaw portions moving towards and away from each other, means adapted to secure said cap in clamping engagement with said other scaffolding member, and simultaneously to apply pressure to both of said jaws to pivot the latter relative to said cap about the said axis and bring said jaw portions towards each other into clamping engagement with said first mentioned scaffolding member.

2,107,408

METHOD OF MATCHING THE IMPEDANCE OF A LOAD TO A SOURCE OF POWER

Werner Buschbeck, Berlin, Germany, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a corporation of Germany

Application July 25, 1936, Serial No. 92,534
In Germany August 26, 1935
3 Claims. (Cl. 178—44)



1. In a high frequency system, a transmission line, an adjustable load at one end of said line adapted to be excited over a range of wavelengths, a source of power at the other end of the line, a plurality of rectifiers across said line at intervals so arranged as to insure that at least one rectifier will be acted upon by a voltage substantially equal to the anti-nodal voltage of a standing wave of any wavelength in the range of wavelengths to be employed, and a direct current indicator circuit connected in shunt to said line.

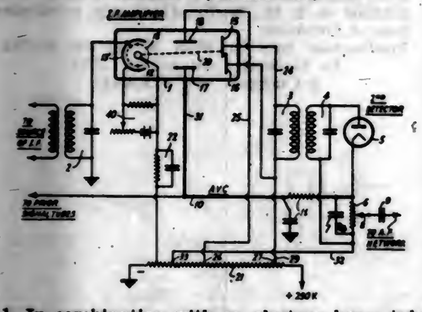
2,107,409

AUTOMATIC VOLUME CONTROL CIRCUITS

John F. Dreyer, Jr., Brooklyn, N. Y., assignor to Radio Corporation of America, a corporation of Delaware

Application October 2, 1934, Serial No. 748,495
7 Claims. (Cl. 250—20)

6. In a signaling system, an amplifier having a cathode and a signal control electrode and having its electrodes geometrically related so as to impart a negative mutual conductance characteristic to the amplifier, a rectifier coupled to said amplifier, said rectifier including at least an anode and a cathode, means for maintaining said cathode normally negative relative to said amplifier cathode, means for causing said cathode to



become more positive in the presence of an amplified signal, and a direct current connection between said control electrode and said cathode whereby the control electrode becomes less negative, and the amplification of said amplifier is regulated automatically to decrease, in the presence of amplified signals, means for normally maintaining the said signal control electrode of the amplifier at a substantially high negative potential with respect to the amplifier cathode.

2,107,410

AUTOMATIC GAIN CONTROL CIRCUIT

John F. Dreyer, Jr., Brooklyn, N. Y., assignor to Radio Corporation of America, a corporation of Delaware

Application July 30, 1936, Serial No. 93,361
7 Claims. (Cl. 250—20)

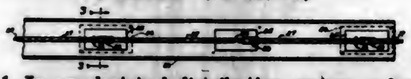
1. In combination with an electron beam tube of the type including an emission element, an output electrode arranged to receive an electron beam from the emission element, and a control electrode, said tube having a negative mutual conductance characteristic, means for impressing signals upon the control electrode of the tube, an output circuit connected to the output electrode of the tube, a signal rectifier coupled to the output circuit, at least one electron waste electrode disposed within the tube, a beam deflection electrode disposed within the tube, and a direct current voltage connection from the beam deflection electrode to the signal rectifier such that the electron beam is deflected from the output electrode to said waste electrode as the signal amplitude increases.

2,107,411

SANDING WHEEL

Ernest Dunford, St. Louis, Mo., assignor to Landis Machine Company, St. Louis, Mo., a corporation of Missouri

Application March 11, 1936, Serial No. 68,202
3 Claims. (Cl. 51—194)



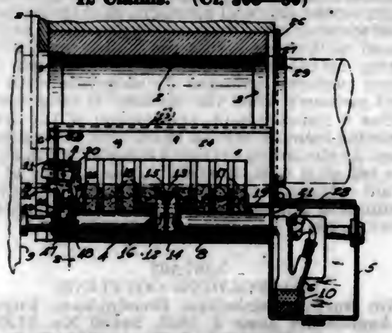
1. In a device of the class described, segments movable towards each other to form a sanding wheel, segment clamping collars at opposite annular faces of said segments and having overlapping sleeves slidable axially over each other, a radial stud on one of said sleeves, the other of said sleeves having a stud-receiving slot inclined longitudinally of the length of the sleeve to cam said collars towards each other when they are rotated relatively.

2,107,412

ELECTRICAL DISTRIBUTION SYSTEM

Harrison J. L. Frank, Detroit, Mich., assignor to Bulldog Electric Products Company, Detroit, Mich., a corporation of West Virginia

Original application February 15, 1932, Serial No. 592,912, now Patent No. 2,043,796. Divided and this application January 10, 1936, Serial No. 58,695
2 Claims. (Cl. 247—3)



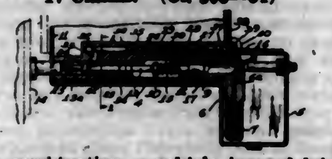
1. In an electrical distribution system, a long run of bus bar, and means for insulating the run including a plurality of short insulating sleeves on, and covering substantially the entire length of said bus run, the sleeves being larger in cross section than the bus bars so as to be slidable along the run, without destruction or alteration of themselves or the bus bar, to expose the bus bar at desired points on the run, and to insulate the bus bar at other points.

2,107,413

JOURNAL WIPING MEANS

James J. Hennessy, New York, N. Y.

Application February 19, 1934, Serial No. 711,933
12 Claims. (Cl. 308—36)



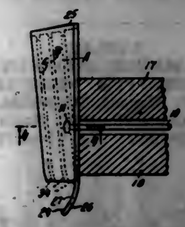
1. Railway journal lubricant wiping means applicable to the end portion of a journal box cellar member to underlie the journal on both sides of an end wall of the cellar and including a rib element disposed to engage the journal along a line extending longitudinally thereof and having an inclined recessed passage for conducting the recovered lubricant along said element.

2,107,414

RAILWAY JOURNAL LUBRICATOR

James J. Hennessy, New York, N. Y.

Application June 30, 1934, Serial No. 733,229
17 Claims. (Cl. 308—34)



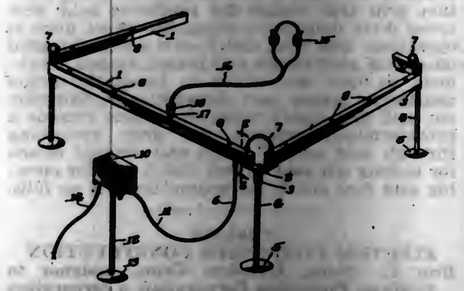
1. In combination, a vehicle journal lubricant cellar structure having a removable wall part, a journal lubricator including an actuating member operable by an adjacent element movable relative thereto during normal operation of the vehicle, and means rendered operable by assembly of said removable part with the rest of the structure for limiting the extent of movement of said actuating member.

2,107,415

WEDGE FOR CONCRETE FORM TIES

Daniel C. Hungerford, Chalfont, Pa., assignor, by mesne assignments, to Star Expansion Bolt Company, New York, N. Y., a corporation of Illinois

Application November 27, 1934, Serial No. 754,939
1 Claim. (Cl. 25—131)



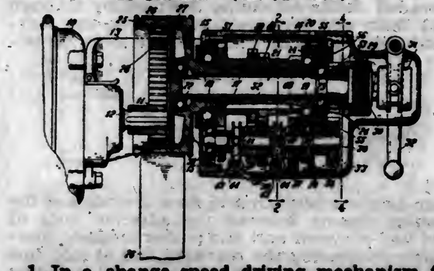
A wedge having a base and a plurality of inclined surfaces disposed in different planes, spaced from each other and angularly disposed relative to the base, the inclined surfaces being so spaced and so inclined that the distance between the inner end of each surface and the base is greater than the distance between the base and the entering end of the next outer inclined surface.

2,107,416

ELECTRICAL SOUND TRANSMITTING AND DISTRIBUTING APPARATUS

Walter H. Huth, Chicago, Ill., assignor to Aurex Corporation, Chicago, Ill., a corporation of Illinois

Application June 22, 1936, Serial No. 86,504
5 Claims. (Cl. 247—1)



1. In a telephonic apparatus, a plurality of members each formed with opposite ends, hinges between ends of said members, electrical circuit connections carried by said members, means for detachably bridging an input instrument on said circuit, and devices on said members for detachably bridging a plurality of output instruments on said circuit, together with means for supporting said members in a suitably elevated position above the floor, all forming a folding rack about which listeners may conveniently assemble for the use of said output instruments.

2,107,417

CHANGE SPEED DRIVING MECHANISM

Alexander F. Kaptuller, Chicago, Ill.

Application October 21, 1936, Serial No. 106,717
10 Claims. (Cl. 74—375)

1. In a change speed driving mechanism for a motor, the combination of a frame member, a hollow shaft rotatably mounted on said frame member, means for mounting said frame member in position for supporting said hollow shaft in parallel relation to the axis of the motor eccentrically thereof, a second shaft extending through said hollow shaft and revolubly supported at its outer end by said frame member beyond the end of the hollow shaft, a cylinder rigidly mounted on said hollow shaft concentrically thereof at the end portion adjacent to the motor serving as a driving pulley for said hollow shaft, gear means located largely inside of said cylinder for connecting said second shaft with the motor for driving the shaft, a third shaft revolubly mounted on said frame member alongside of said hollow shaft, driving connections between said second and third shafts, and change speed driving connections between said hollow shaft and said third shaft.

2,107,418

MEANS FOR ATTACHING WALL PANEL UNITS TOGETHER

Harry H. Keller, Ventnor, N. J., assignor to Bitting, Incorporated, New York, N. Y., a corporation of Delaware

Application November 25, 1935, Serial No. 51,496
13 Claims. (Cl. 189—34)

1. A construction as described, comprising a wall panel unit, including side frame members constructed in the form of thin walled hollow sections, the outer faces of said side members being inclined to the plane of the unit and having longitudinal grooves formed therein.

2,107,419

LOCOMOTIVE TENDER

Paul A. Ketchpel, West Englewood, N. J., assignor, by mesne assignments, to The Standard Stoker Company, Inc., a corporation of Delaware

Application October 26, 1933, Serial No. 695,333
Renewed March 12, 1936
4 Claims. (Cl. 198—15)

1. A locomotive tender having a fuel bin with a floor having an opening therein and an inclined rear wall, a fuel conveyor positioned on said tender below said floor to receive fuel through said opening, fuel advancing means in said fuel

bin mounted on said rear wall including a transverse pusher member and a plurality of longitudinally extending threaded shafts arranged in parallelism on said rear wall and being in threaded engagement with said pusher member, said threaded shafts extending downwardly through said floor and terminating adjacent the rearward end of said fuel conveyor, and drive mecha-

nism disposed beneath said floor rearward of the opening therein between the adjacent ends of said fuel conveyor and said pusher member operatively connecting the rearward end of said fuel conveyor with said threaded shafts and including clutch elements arranged to permit independent operation of the fuel conveyor and fuel advancing means.

2,107,420

WHIP STOCK REMOVING DEVICE

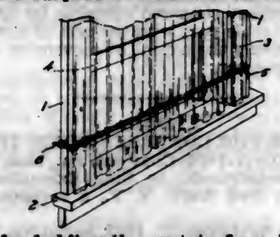
Gottlank L. Kothny, Strafford, Pa., assignor to Sperry-Sun Well Surveying Company, Philadelphia, Pa., a corporation of Delaware

Application September 28, 1937, Serial No. 166,064

9 Claims. (Cl. 255—1)

1. The combination with a whipstock comprising a body arranged to penetrate the bottom of a bore hole and provided with a sloping drill guiding surface and a collar at the upper portion of the body, of a device arranged to be included in a drill string, said device being arranged to pass through said collar, and being provided with means expandible outwardly to engage said collar whereby the whipstock may be removed from a hole by means of a drill string including said device.

2,107,421



CURTAIN HOLDER

Florence L. Lennox, Ann Arbor, Mich.

Application July 12, 1936, Serial No. 90,283

3 Claims. (Cl. 156—33)

1. A curtain helder comprising, means for attachment to opposite sides of a window frame, and elastic means for connection to said attachment means and adapted to be stretched taut between the attachment means, said elastic means having two runs arranged to extend substantially from one attachment means to the other and in close proximity to each other, said two runs adapted to receive a curtain therebe-

tween for holding the curtain from blowing inwardly and outwardly relative to the window frame.

2,107,422

AUTOMATIC CHANGE SPEED GEARING FOR AUTOMOTIVE VEHICLES

George B. Merom, Woodside, N. Y.

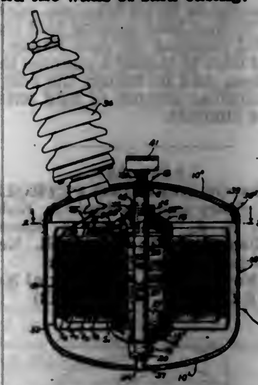
Application January 26, 1933, Serial No. 653,558

3 Claims. (Cl. 74—337)

1. In an automatic gear shift, a driving and a driven shaft, a two part friction grip type clutch connecting said shafts for direct drive, reduction gearing around said clutch for slow speed drive, one of the gears of said reduction gearing constituting one part of said clutch, a one-way friction grip type clutch for rendering said slow speed drive inoperative when the direct drive is operating, said gear clutch part being threaded on one of said shafts and biased against movement to open said clutch to constitute torque responsive means for automatically throwing out said first clutch when the torque exceeds a predetermined amount, the drive remaining through said second clutch and manual means for locking out said second clutch and for opening said first clutch for engine braking on hills.

2,107,423

ELECTRIC CONDENSER CONSTRUCTION



Bror G. Olving, Hamden, Conn., assignor to Products Protection Corporation, a corporation of Delaware

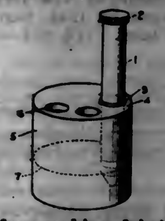
Application March 9, 1932, Serial No. 660,662

3 Claims. (Cl. 175—41)

1. In condenser construction, in combination, a casing having extending therethrough a substantially centrally positioned supporting member, means forming a hollow but externally cylindrical core supported by said supporting member with its inner walls spaced from the latter, thereby to form an annular passage therebetween, a condenser comprising a plurality of annular concentric condenser sections, the innermost of

which is supported by said core, said sections being connected in series and the outermost section being of highest voltage, the outside diameter of said outermost section being less than the inside dimension of said casing, thereby to form a space therebetween, metallic means about said outermost section forming an electrostatic shield between it and the walls of said casing, and an insulating and cooling medium within said casing for circulation through said passage and through the space between the outermost section and the walls of said casing.

3. In condenser construction, in combination, a casing, a condenser supported within said casing, a shield member surrounding said condenser having a tube-like center portion and end portions, said shield being centrally located within said casing, said center portion of said shield being spaced a distance from said casing over its entire outer surface and said end portions of said shield being spaced from said casing said distance at the points where said end portions are adjacent to said center portion and being spaced progressively greater distances from said shield at points remote from said center portion, said condenser having one of its terminals attached to said casing.



2,107,424

MARKING DEVICE

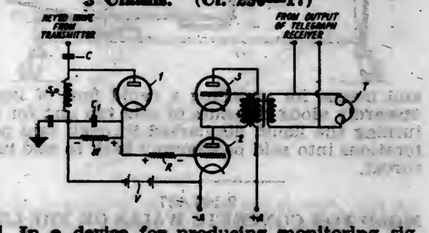
Herbert Platt, Cumberland, Md., assignor to Celanese Corporation of America, a corporation of Delaware

Application July 16, 1936, Serial No. 91,270

1 Claim. (Cl. 120—43)

In a device for marking fabrics and the like with a lacquer-like ink, the combination with a holder having an opening therein and adapted to contain a non-volatile solvent for said ink, of a well for receiving a charge of ink, a head on said well, a writing attachment connected to said head and having a conduit therein leading from said head to the writing point of said attachment, a bearing surface at the end of said conduit, a spring-pressed ball cooperating with said bearing surface for normally sealing said well against the atmosphere and for permitting a flow of ink when pressure is applied to the point of said device, and a projection on the outer surface of said well adapted to limit the extent to which said well may enter the opening in said holder, the construction and arrangement being such that the writing point of the device, when it is not in use, dips just below the surface of the non-volatile solvent in the holder.

2,107,425



MONITOR

Curt Pretze, Berlin, Germany, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a corporation of Germany

Application August 20, 1936, Serial No. 96,980

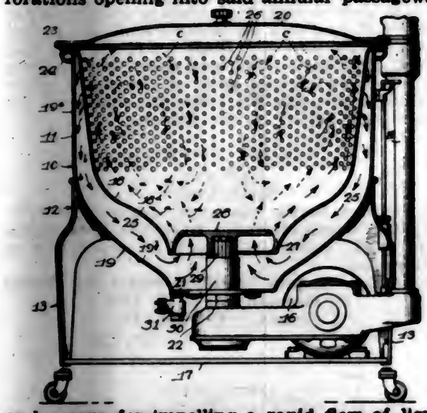
In Germany July 13, 1935

3 Claims. (Cl. 250—17)

1. In a device for producing monitoring signals indicative of the operativeness of a transmitter and for controlling the intensity of the signals produced, an oscillator including an electron discharge tube having electrodes connected in oscillation producing circuits, one of which circuits includes a source of potential sufficient to produce oscillations in said tube and circuit, a second electron discharge device having its impedance connected with said one of said circuits and source of potential to control the value of the potential applied by said circuit to one of said electrodes, said discharge device having a control grid and a circuit therefor including means for normally biasing said device to a point at which said second device impedance is high and oscillations are cut off in said first tube and circuit, a resistance connected with said control grid, rectifying means connected with said resistance for producing a potential therein opposing the normal potential applied to said control grid whereby oscillations may be produced in said oscillation generator tube and circuits, means for impressing wave energy to be monitored on said rectifier, and additional means for producing an additional potential drop which opposes said potential drop produced in said resistance when direct current flows in to the grid of said second named device.

2,107,426

WASHING MACHINE



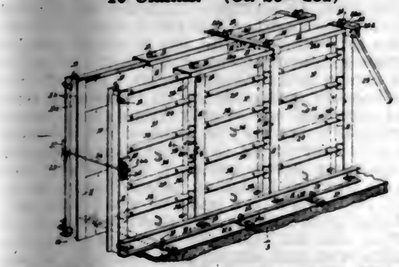
Roy E. Reed, Ripon, Wis., assignor of one-fourth to Horace Hull, Denver, Colo., one-fourth to Louis B. Reed, Greeley, Colo., and one-fourth to William E. Haseltine, Ripon, Wis.

Application January 17, 1936, Serial No. 59,555

11 Claims. (Cl. 68—37)

1. A washing machine comprising a tub having inner and outer walls, the inner wall terminating above the tub bottom in an annular inlet throat, said inner and outer walls being formed to provide an annular passageway between them increasing in cross sectional area from the top

to the bottom of the tub, where it communicates with the space below said inlet throat, the upper part of the inner wall being provided with perforations opening into said annular passageway,



and means for impelling a rapid flow of liquid upwardly along the sides of said tub and for returning the liquid discharged through said perforations into said passageway back to said inlet throat.

2,107,427

MOLD FOR CONCRETE WALLS OR THE LIKE

Albert J. Schwarzler, New York, N. Y.

Application April 25, 1936, Serial No. 76,323
10 Claims. (Cl. 25—131)

1. Molds for concrete walls and the like comprising a plurality of concrete-retaining plates, a framework for supporting said plates and means for securing the plates to the framework, said means comprising longitudinal recesses in the sides of substantially parallel framework members, outwardly extending flanges on the plates extending into said recesses and means for locking said flanges against substantial movement within said recesses, said latter means comprising surfaces on inner sides of said flanges engaging inside surfaces of said recesses to limit the inward displacement of the plates, open slots in outer sides of said flanges and wedges disposed in said slots, coacting therewith and with inside surfaces of said recesses to limit the outward displacement of the plates.

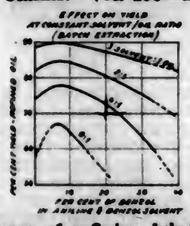
2,107,428

BAIL EAR FOR SHEET METAL VESSELS AND METHOD OF MAKING THE SAME

Isaac E. Sexton, Winchester, Mass.

Application December 24, 1935, Serial No. 55,971
11 Claims. (Cl. 113—120)

8. The method of securing to a piece of sheet metal an element of sheet metal which comprises forming an upstanding boss on said piece of sheet metal so that the side wall of said boss is substantially perpendicular to the portions of the piece immediately surrounding said boss, forming on said element a flange extending radially outward and an extension on said flange having a length approximately equal to the height of the boss and



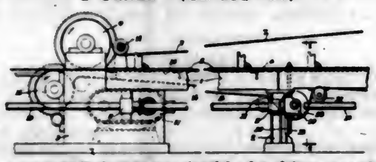
inclined inwardly to fit its terminal edge against the side wall of said boss, placing said element on said boss, and pressing on said flange to cause said terminal edge to indent a channel in the side wall of the boss and to flatten the boss so as to pinch the marginal portion of said extension in said indented channel.

2,107,429

PROCESS OF REFINING PETROLEUM

Bertrand W. Story and Vladimir A. Kalichevsky, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York

Application November 24, 1934, Serial No. 754,554
6 Claims. (Cl. 196—13)



1. In a process of refining lubricant oil stock containing ingredients of low viscosity index, the steps which comprise intimately mixing with the oil a reagent consisting of aniline to which has been added not less than one and not more than fifteen per cent of benzol, and separating a substantial portion of said low viscosity-index ingredients from the oil as an extract.

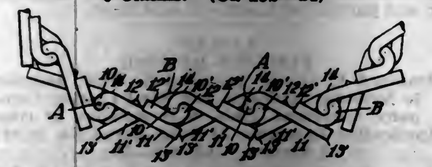
2,107,430

CORRUGATED PAPERBOARD MAKING MACHINE

George W. Swift, Jr., Bordentown, N. J., assignor to George W. Swift, Jr., Inc., Bordentown, N. J., a corporation of New Jersey

Application April 16, 1935, Serial No. 16,542
1 Claim. (Cl. 154—30)

A corrugated paper double-backing machine, having an upper series of flexible endless friction-conveyor members disposed side by side across substantially the entire active width of the machine, and with their lower passes in position to overlie and frictionally advance the upper surface of a corrugated paper web traveling through the machine, a driving roll around which said frictional conveyor members run, and an idler roll located at the entrance end of the machine around



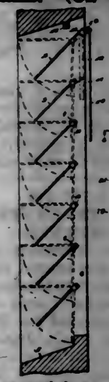
which said frictional conveyor members also run, means being provided whereby the position of said idler roll may be adjusted toward and away from the entrance end of the machine to maintain longitudinal tension in said conveyor members, an abutment member adjustable along the machine for limiting the longitudinal movement of said idler roll, and means for adjusting the longitudinal position of the roll relatively to said abutment member.

2,107,431

ANTISKID CROSS CHAIN

Edward Winthrop Tayler, Hammond, Ind., assignor to S. G. Tayler Chain Co., Hammond, Ind., a corporation of Illinois

Application January 27, 1937, Serial No. 122,612
6 Claims. (Cl. 152—14)



1. A link for an anti-skid chain consisting of two substantially U-shaped members each having legs of unequal length, the short leg of each member being overlapped on and secured to the long leg of the other.

2,107,432

WINDOW AND ITS ASSOCIATED SHADE

Andrew C. Thompson, Miami, Fla.

Application September 29, 1936, Serial No. 103,186
13 Claims. (Cl. 189—64)

1. A window comprising a vertical bank of horizontally hinged and overlapping sections, each of said sections comprising a glass pane and framing members along its sides and top, the lower edge of the glass pane being free and being adapted to lie against the top member of the next lowermost window section.

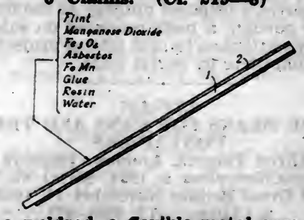
2,107,433

LONG DRAFT SPINNING CRADLE

James L. Truslow and Robert J. McConnell, Whitinsville, Mass., assignors to Whitin Machine Works, Whitinsville, Mass., a corporation of Massachusetts

Application December 5, 1935, Serial No. 52,970
6 Claims. (Cl. 19—131)

1. A long draft belt cradle comprising side plates rigidly united by a single cross bar which serves also as the bearing or support for the drafting belt, such belt being removable from the



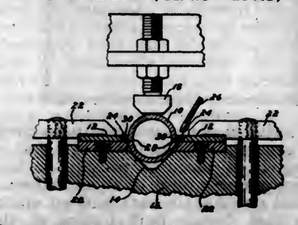
bar by passing it over one of said side plates and means for attaching said plates in fixed position in relation to a draft roll.

2,107,434

WELDROD

Lincoln B. Wilson, Barberton, Ohio, assignor to The Babcock & Wilcox Company, Newark, N. J., a corporation of New Jersey

Application July 13, 1933, Serial No. 680,183
6 Claims. (Cl. 219—8)



1. In a weldrod, a flexible metal core, and an enshrouding covering containing a metallic compound, and a nitrogen-free gum or resin-like component in an amount sufficient to render the covering cold plastic to a degree permitting bending through at least ninety degrees without separation of core and covering.

2,107,435

WELDING FINS TO TUBES

Thomas F. Birmingham, Hammond, Ind., assignor to The Superheater Company, New York, N. Y.

Application August 24, 1935, Serial No. 37,690
3 Claims. (Cl. 29—157.3)

1. The method of welding a fin on a tube and preventing consequential distortion of the fin and tube due to a contraction of the fin and tube at unequal rates upon cooling which comprises providing a welding groove between the fin and tube, depositing welding material in the groove, and flowing a cooling medium through the tube in contact with the interior thereof immediately adjacent the weld to cool the tube and the weld as the latter is laid.

2,107,436

ARTIFICIAL BAIT OR LURE

George W. Flanagan, Chicago, Ill.

Application September 24, 1934, Serial No. 745,269
4 Claims. (Cl. 43—39)

2. An artificial bait or lure comprising a rearwardly tapered body portion having a flat bottom, said body portion having a transversely

curved back and sides, and an integral head portion disposed in an upwardly inclined relation relative to the body portion and having convexly curved back and sides merging into the back and sides of the body portion, the head portion terminating in a short nose having a flat under surface, the under side of the head portion having a concave recess therein with a line attaching eye dis-

posed centrally thereof and in substantially spaced relation to the nose portion of the head, a bottom plate secured upon the flat bottom portion of the body, said plate having laterally projecting portions disposed midway of the length of the body portion, a hook mounted on said body, and spoons attached to said lateral projections of said bottom plate by swivel links.

2,107,437
CLOSURE MEANS FOR CANS AND THE LIKE CONTAINERS

Alfred Forsyth, London, England

Application November 9, 1934, Serial No. 752,248
In Great Britain November 14, 1933
3 Claims. (Cl. 220—42)

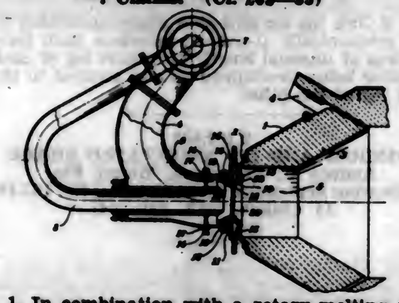
1. For closing a container having a neck with smooth substantially cylindrical internal surface terminating in a circular mouth, a lever lid formed from a single piece of sheet material comprising a flat diaphragm part and an upstanding circumferential flange part including the following external features arranged in the order named: an outwardly projecting annular bead at the junction of the flange part and diaphragm part, an annular depression, an outwardly projecting annular bulge flattened to present a narrow cylindrical surface of greater diameter than any other part of the lid and thereby adapted to lodge tightly in the cylindrical neck of the container, a second annular depression and a terminal outwardly projecting bead.

2,107,438
HAIR WAVING PAD

Ernest O. Frederics, Bronxville, N. Y.

Application January 23, 1935, Serial No. 3,065
12 Claims. (Cl. 132—36.2)

2. A hair waving pad which comprises a paper pulp sheet having a plurality of lines of stitching extending through the same to prevent undue expansion of the pulp when moistened, certain

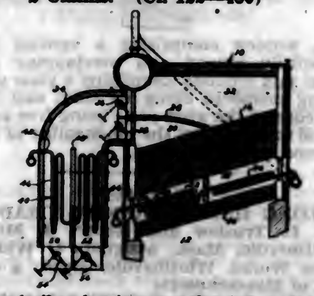


of said lines of stitching being closely adjacent to and parallel with edges of said sheet.

2,107,439
FURNACE BURNER

Beauford E. Gavin, Indianapolis, Ind., assignor to National Malleable and Steel Casting Company, Cleveland, Ohio, a corporation of Ohio

Application December 31, 1935, Serial No. 56,867
7 Claims. (Cl. 263—33)

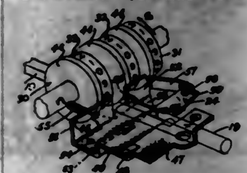


1. In combination with a rotary melting furnace, a pivotally mounted burner, a burner end-flange and means for adjustably mounting said burner end-flange in a plurality of fixed angled positions with respect to said burner.

2,107,440
COMPENSATING REHEATER AND SUPERHEATER

Charles W. Gerdes, Munster, Ind., assignor to The Superheater Company, New York, N. Y.

Original application September 3, 1934, Serial No. 743,175. Divided and this application February 8, 1936, Serial No. 62,951
2 Claims. (Cl. 122—480)



1. In a boiler having a reheater and superheater and having two gas paths in which said superheater and reheater lie, said superheater and reheater each having sections in both paths

but each having its surface unequally divided between said paths and having its larger section in a given path, and means whereby the ratio of gas flow over one section of the superheater to that over the other may be varied as compared to the ratio of gas flow over one section of the reheater to that over the other.

2,107,441
AUTOMATIC SHUT-OFF FOR METERS

Albert J. Granberg, Berkeley, Calif., assignor to Ralph N. Brodie Company, Oakland, Calif., a corporation of California

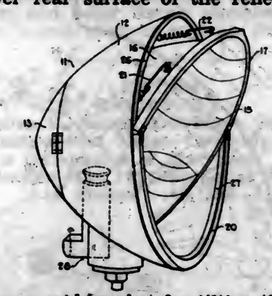
Application August 2, 1933, Serial No. 683,313
3 Claims. (Cl. 235—132)

1. In a mechanism of the character described, latching means, a plurality of rotatable discs, each of said discs having a notch in its edge, and a member associated with said latching means and movable into said notches when they are in alignment, a portion of said member being movable upon further movement of one of said discs to release said latching means.

2,107,442
FEEDING BOTTLE AND DEVICE THEREFOR

Cecil Hughes, Tuffley Crescent, Gloucester, England, assignor to Sure Feed Limited, Cardiff, South Wales, a British company

Application May 28, 1936, Serial No. 82,570
In Great Britain July 23, 1935
5 Claims. (Cl. 215—11)



1. A device for use in connection with feeding bottles having an elastic-walled teat, comprising a fitment for application to the mouth of the bottle to divide the bottle and the teat into two chambers, a passage or passages connecting the inner and outer parts of the fitment, a non-return valve associated with said passage or passages to allow flow of liquid food from bottle to teat but to prevent return of liquid to the bottle, and means for passage of air through the fitment, said means allowing air to pass from the teat to the bottle, but substantially preventing passage of liquid from teat to bottle, said parts operating so that the teat when alternately extended and contracted operates as a force pump to deliver liquid through the teat delivery orifice or orifices.

2,107,443
HEADLIGHT FOR AUTOMOBILES

Ramón Castro Jiménez, Boston, Mass.

Application April 21, 1936, Serial No. 75,618
3 Claims. (Cl. 240—41.6)

1. An automobile headlight comprising a casing, a reflector, a lens mounted in the latter, a semi-annular rim portion, a catch securing said lens to the reflector, said semi-annular rim being formed with grooves in each end thereof, a counterpart to said semi-annular rim being integrally secured to the casing, said counterpart being at its upper ends provided with pivots therein adapted to engage the grooves in the first said semi-annular rim portion, a bracket secured to the lower rear surface of the reflector, a bolt

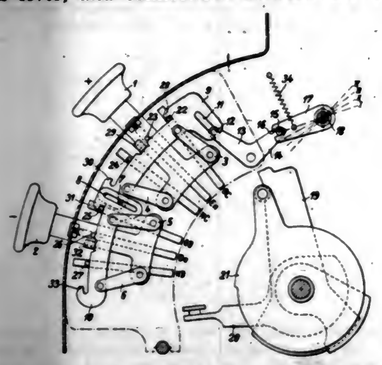
acting upon said bracket for tilting the reflector, and spring actuated hooks connected between the casing and the reflector, and adapted to move the reflector to its normal position, when it is not urged into a tilting position.

2,107,444
LIPSTICK HOLDER

Nathan Kasdan, New York, and Richard F. Landwehr, Woodside, L. I., N. Y., assignors to Majestic Metal Specialties, Inc., New York, N. Y., a corporation of New York

Application February 13, 1932, Serial No. 592,690
19 Claims. (Cl. 206—56)

4. A dispensing holder comprising a casing, a carrier for material to be discharged and slidable within said casing, a pivotal closure for said casing where the material is ejected, an actuating knob projecting from said casing, means connecting said closure with said knob whereby the closure may be positively opened and closed by movement of said knob and said carrier simultaneously moved to eject material from said casing, said means including an inner casing slidable in the first mentioned or outer casing by means of said knob, both of said casings being provided with slots which do not coincide throughout their lengths whereby the inner casing may be movable by said knob to close the slot in the outer casing when said closure is shut, said slots being parallel and inclined, the inner slot being provided with a transverse offset portion at its end remote from the closure.



2,107,445
CONTROLLING MECHANISM FOR CASH REGISTERS AND BOOKKEEPING MACHINES

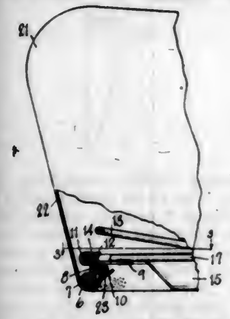
Albert Klaar, Bielefeld, and Friedrich Arndt and Helmut Berning, Essen, Germany, assignors, by mesne assignments, to The National Cash Register Co., Dayton, Ohio, a corporation of Maryland

Application August 30, 1934, Serial No. 742,998
In Germany August 31, 1933
12 Claims. (Cl. 235—130)

1. In a machine of the class described, two motor bars, locking means associated therewith

to lock either bar in its undepressed position, a total lever, and connections between the total

lever and locking means to render the latter ineffective by movement of the lever.



2,107,446

SPRING CUSHION STRUCTURE

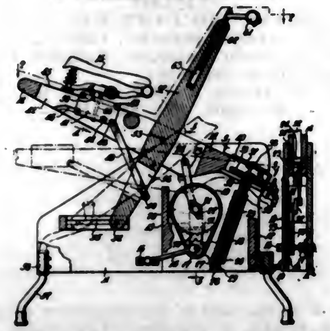
Thomas Koliba, Detroit, Mich., assignor to L. A. Young Spring and Wire Corporation, Detroit, Mich.

Application September 24, 1936, Serial No. 102,296

14 Claims. (Cl. 155—180)

1. In a spring cushion structure, the combination of a border frame comprising fixedly connected side and end members formed of metal strips, the strips being folded longitudinally to provide a bottom bight enclosing a wire reinforcing element, the arms above the bight being disposed side by side to provide an upstanding web, the inner arm terminating in a horizontal flange having hook-like upholstery securing members struck downwardly therefrom, the outer arm terminating in an outwardly offset inwardly facing U-shaped spring supporting channel spaced from said reinforced bottom bight, cross bars extending between said side members arranged upon and welded to said inwardly projecting flanges thereof, a spring supporting wire grid disposed upon said cross members with their ends lapped upon and welded to said inwardly projecting flanges, coiled body springs arranged on said grid, the bottom coils of certain of said body springs being clamped within the inwardly facing spring supporting channel, and an upholstery covering for said springs having a depending skirt wrapped around the bottom of said border frame and having a beaded edge engaged with said upholstery securing members.

2,107,447



EXERCISING MACHINE

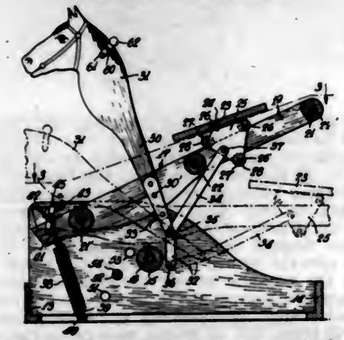
Harold J. Marlowe, New Rochelle, N. Y., assignor to Marlowe Products Inc., New York, N. Y., a corporation of Delaware

Application July 3, 1934, Serial No. 733,546

Renewed May 13, 1937

8 Claims. (Cl. 272—73)

1. An exercising machine comprising a support base, a handle bar and a seat bar hingedly connected together, a seat slidable along said seat bar and having a linkage connection to said base, a pedal device having a linkage connection with respect to said seat bar, resilient means storing energy at one phase of the operation of said pedal and releasing said energy at another phase thereof to cause movement of said bars and sliding of said seat with alternations of resistance and relief in the operation of the device.



2,107,448

HOBBYHORSE

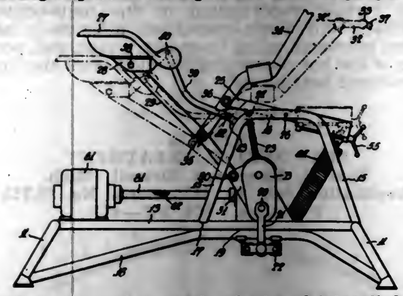
Harold Jay Marlowe, New Rochelle, N. Y.

Application September 20, 1935, Serial No. 41,388

19 Claims. (Cl. 272—52)

1. A hobby horse comprising a support frame, a sliding seat, a moving head, and means interlinking said seat and said head with respect to said frame, said means including a toggle limiting the movement of one of said elements, said toggle having setting means rigid with the other of said elements.

2,107,449



EXERCISING MACHINE

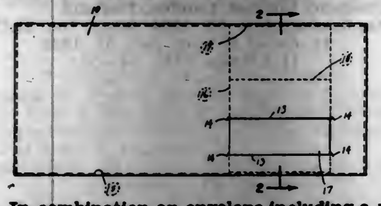
Harold J. Marlowe, New Rochelle, N. Y., assignor to Marlowe Products Inc., New York, N. Y., a corporation of Delaware

Application December 6, 1935, Serial No. 53,124

28 Claims. (Cl. 128—33)

1. An exercising machine comprising a support base, a handle member, a seat member, and pedal cranks on said support, an electric motor having a speed reducing connection for propelling

said cranks and a speed reducing driving linkage between said motor, said handle member and said seat member, to move the latter two members alternately toward and away from each other.



2,107,450

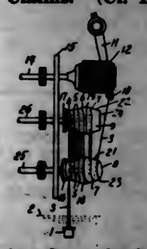
COMBINATION ENVELOPE AND RETURN MAILING DEVICE

Chauncey Kenneth Miller, Indianapolis, Ind.

Application June 18, 1936, Serial No. 86,017

11 Claims. (Cl. 229—73)

1. In combination an envelope including a pair of adjacent slits, an article loosely mounted therein of substantially the same outline as and of slightly lesser area than the envelope, and an addressed reply structure in the envelope and threaded through the slits for exposure of an address portion between the slits, the effective length of the slits being slightly greater than the width of the exposed structure, one end of the structure being turned back upon the same, the article being nested between the structure and its turned-back end.



2,107,451

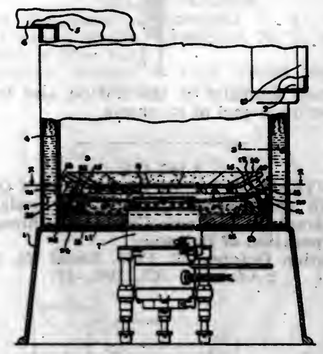
MANUFACTURE OF RAYON AND THE LIKE

Oskar Oppenlaender, Rome, Ga., assignor to Tubize Chatillon Corporation, New York, N. Y., a corporation of Delaware

Application September 28, 1935, Serial No. 42,604

7 Claims. (Cl. 18—8)

1. In apparatus for spinning rayon and the like, the combination with a spinnerette and a collecting device of a plurality of power-driven rotors over which the thread is looped in its travel from the spinnerette to the collecting device, said rotors having serrated surfaces of conical form and being fixedly mounted in spaced relation to each other on separate shafts.



2,107,452

OIL BURNER

Theophilus H. Smoot, Baltimore, Md., assignor to Anchor Post Fence Company, Baltimore, Md., a corporation of Maryland

Application May 17, 1934, Serial No. 726,139

16 Claims. (Cl. 158—4)

1. A heater having a combustion chamber, an oil burning equipment comprising a horizontal refractory hearth forming the floor of the combustion chamber and an oil burner having a head centrally located with respect to the hearth and rotating about a vertically extending axis and provided with means for centrifugally delivering oil horizontally and outwardly above the hearth and with means for delivering air outwardly over the hearth to provide and maintain an air stratum below the centrifugally delivered oil, and a fire brick structure arranged upon the hearth and comprising a base portion having an inner lower air deflecting face and an upper oil striking face, and an upper air and oil vapor controlling deflector set at an inclination and extending upwardly and outwardly and supported above and in spaced relation to the base portion, the inner portion of the deflector overlying the lower inner air deflecting face of the base portion and projecting inwardly past the same.

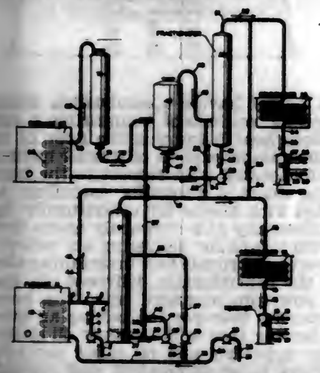
2,107,453

HOSE SUPPORTER BUTTON

Henry J. Stuart, New Haven, Conn.

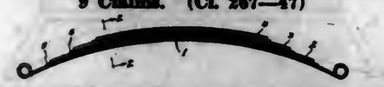
Application February 16, 1935, Serial No. 6,776

4 Claims. (Cl. 24—245)



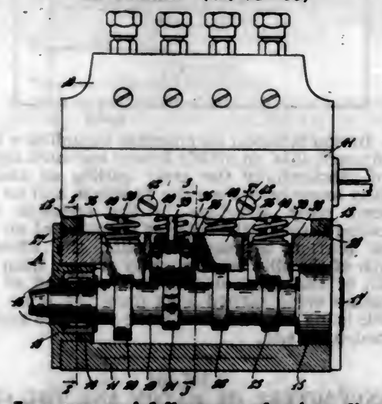
1. In a hose supporter button, a body including a head and a shank, a pair of spaced openings through said button, said button including a bar-like body portion between said openings, a tape threaded through both of said openings whereby to dispose the button on an intermediate portion of the tape with the tape looped about the bar-like portion of the button, said bar-like body portion having its shank end shortened for a distance substantially equal to the thickness of a layer of tape, and said shank having a notch opposite one of said openings and of the width

of the tape and of a depth equal to the thickness of two layers of the tape whereby the tape may



be carried laterally of the button and be flush with the inner end of its shank.

2,107,454
CONVERSION OF HYDROCARBON OILS
Kenneth Swartwood, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application October 26, 1933, Serial No. 695,267
2 Claims. (Cl. 196—48)

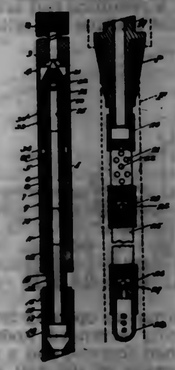


1. A process for the conversion of hydrocarbon oils which comprises subjecting charging stock for the process to fractional distillation by commingling the same with hot conversion products from a heating coil whereby the commingled conversion products and charging stock are separated into fractionated vapors, comprising desirable low-boiling fractions which are condensed and collected, intermediate fractions and high-boiling fractions supplying the intermediate fractions to the heating coil for conversion, subjecting the high-boiling fractions to further vaporization, subjecting the resulting vapors to fractionation, subjecting reflux condensate resulting from said fractionation to conversion temperature at superatmospheric pressure in a separate heating coil and communicating reaction chamber, subjecting the resulting liquid conversion products to further vaporization at substantially reduced pressure, together with the aforementioned high-boiling fractions, subjecting the vaporous conversion products to said fractionation, together with the vapors resulting from said further vaporization of the liquid conversion products and high-boiling fractions, subjecting fractionated vapors of the desired end-boiling point to condensation and collecting the resulting products, the process being further characterized in that said further vaporization of the high-boiling fractions and liquid conversion products is assisted by commingling therewith a regulated portion of the hot conversion products from the first mentioned heating coil.

2,107,455
LEAF SPRING TREATMENT
Tom H. Thompson, Detroit, Mich.
Application July 22, 1935, Serial No. 32,725
9 Claims. (Cl. 267—47)

1. A leaf spring liner comprising a fibrous body, foliate mineral material embedded in the body in the form of flakes or scales, and a lubricant in solid form for which said mineral material has an affinity.

2,107,456
CAM AND FOLLOWER MECHANISM
George Joseph Trapp, Merton Park, London, England, assignor to Automotive Products Company Limited, London, England
Application July 21, 1936, Serial No. 91,775
In Great Britain July 31, 1935
11 Claims. (Cl. 74—55)



1. In a cam and follower mechanism, disposed within a structure serving as the body of a pump or equivalent device, a housing having a hole providing parallel guiding surfaces for a reciprocatory sliding follower, said housing itself being fitted within the body by means of slides extending at right angles to the movement of the follower, and being inserted in place by movement along its slides.

2,107,457
APPARATUS FOR MAKING CASING AND FORMATION TESTS IN WELLS
Clifford E. Van Stone, Taft, Calif., assignor to Don Shaffer Tool Corporation, a corporation of California
Application June 15, 1936, Serial No. 85,187
15 Claims. (Cl. 166—1)

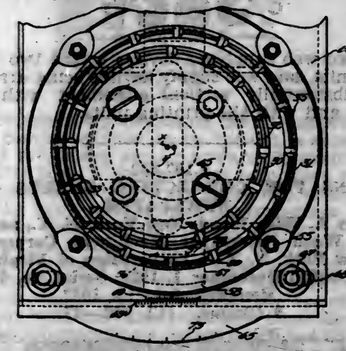
1. A well testing tool having a tubular string with a formation or casing packer, a specimen

barrel having self-closing valve means to trap well fluid, and said string having above said means a test-flow valve for closing the string thereabove so that it may be lowered into the well hole empty and being openable for permit-

ting inflow of well fluid to the barrel under its own pressure from below the set packer to the empty string above the valve; said trapping means operative to hold a specimen while the string is being drawn with the flow valve open to drain the string above the trapping means.

2,107,458
TEXTILE MANUFACTURE
Patrick H. Walsh, East Orange, N. J., assignor to Geo. S. Harwood & Son, Boston, Mass., a copartnership composed of John H. Harwood and John H. Harwood, Jr.
Application March 21, 1935, Serial No. 12,185
3 Claims. (Cl. 19—105)

3. The combination with a fiber weighing mechanism having means operative to deposit successive batches of fibrous material in elongate windrows, and a support for the reception of such windrows, of a pusher extending longitudinally of the windrows, actuating means to advance said pusher bodily in a direction substantially perpendicular to the length of a windrow positioned as when first deposited on the support, said actuating means also being operative to orient the pusher as it advances, the pusher being constructed and arranged to exert force in a direction lengthwise of the windrow with which it contacts, thereby to elongate the windrow simultaneously with orientation of the latter.

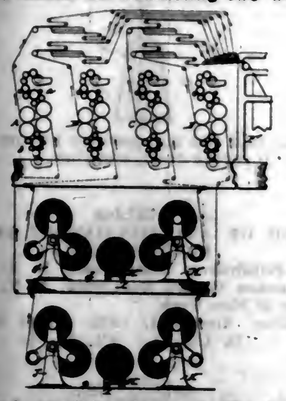


2,107,459
TASSEL
Ernest E. Weller, Providence, R. I.
Application March 23, 1934, Serial No. 716,862
21 Claims. (Cl. 2—273)

1. A tassel comprising a cap, a tuft of a plurality of strands, a securing member having an abutment to prevent it from passing through

said tuft, said cap and member having engaging surfaces to secure them together.

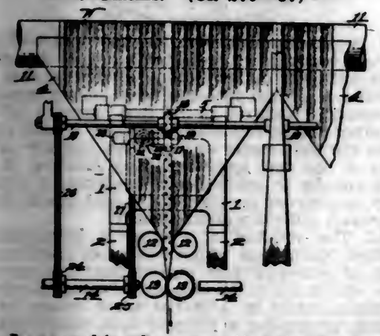
2,107,460
METHOD OF AND MECHANISM FOR PRODUCING GEARS
Ernest Wildhaber, Irondequoit, N. Y., assignor to Gleason Works, Rochester, N. Y., a corporation of New York
Application August 1, 1935, Serial No. 34,238
24 Claims. (Cl. 90—4)



1. A mechanism for cutting longitudinally curved tooth gears comprising a tool spindle, a face-mill gear cutter rigidly secured to said tool spindle, a second face-mill gear cutter mounted in eccentric relation to the first cutter, a driving member operatively connecting the second cutter with the first cutter and movable radially of the axis of the tool spindle during rotation of the tool spindle to maintain said operative connection, and means for driving the tool spindle to rotate both cutters simultaneously.

11. The method of cutting a longitudinally curved tooth gear which comprises employing a pair of face-mill gear cutters that are mounted one within the other and spaced so as to operate simultaneously in adjacent tooth spaces of the blank, producing a relative feed movement between said cutters and the blank while rotating the blank in one direction to rough cut the tooth spaces and, after full depth position is reached, reversing the direction of rotation of the blank and rolling the blank relative to the cutters to finish cut opposite sides of a tooth of the blank.

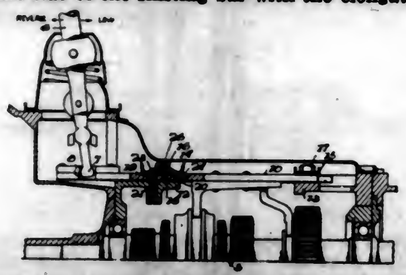
2,107,461
WEB SUPPLY ARRANGEMENT OF PRINTING PRESSES
Henry A. Wise Wood, New York, N. Y., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a corporation of Virginia
Application March 10, 1934, Serial No. 714,917
1 Claim. (Cl. 270—5)



In a printing press, the combination of two printing units adjacent each other, two web supply devices, including each a magazine reel

for carrying a plurality of web rolls, both located below the printing units and one below the other, means for conducting two webs from

the two web supplying devices to the two printing units, said web supply devices being arranged in substantially vertical alignment with each other and with the printing units.



2,107,462
MEANS FOR CONNECTING SHEETS OF A NEWSPAPER
Henry A. Wise Wood, New York, N. Y., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a corporation of Virginia
Application December 1, 1934, Serial No. 755,541
Renewed July 13, 1937
9 Claims. (Cl. 270—37)

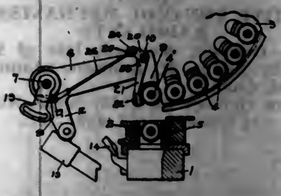
1. In a machine for connecting the sheets of a newspaper, the combination of means for directing a plurality of webs over a course, and means for projecting a small portion of one web entirely through another web while the webs are traveling.

2,107,463
GEARING
Elmer J. Woltersdorf, Van Horne, Iowa
Application April 7, 1937, Serial No. 135,558
4 Claims. (Cl. 74—475)

1. In transmission gearing, a reverse and first speed shifting bar having reverse, neutral and first speed recesses formed upon one side thereof in a longitudinal group, a spring pressed detent to enter the recesses in succession, said bar being provided upon its opposite side with a recess having a width corresponding to the width of the reverse recess and an elongated recess, the last named recesses being arranged in a longitudinal group, and the elongated recess having a length substantially equal to the distance between the outer sides of the neutral and first speed recesses, a retaining rail arranged upon the same side of the shifting bar with the elongated

recess and having an opening formed therein, a stout leaf spring arranged upon the retaining rail and attached thereto, and a detent arranged within the opening of the rail and engaged by the leaf spring and moved thereby toward the bar to enter the second named recesses formed upon the same.

2,107,464
TELEVISION SYSTEM
Vladimir K. Zworykin, Philadelphia, Pa., assignor to Radio Corporation of America, a corporation of Delaware
Application August 5, 1932, Serial No. 627,565
Renewed September 12, 1936
13 Claims. (Cl. 178—6.5)



1. In television apparatus, a transmitting station having thereat a plurality of scanning devices, means for causing each of the scanning devices to analyse alternately adjacent elemental sections of a subject of which an image is to be produced, means to produce by the analyzing operation image scanning currents, a receiving station, a communication channel between the transmitting and receiving stations, a single cathode ray image reconstructing device at the receiving station responsive to the signal currents of each of the plurality of transmitter scanning devices and adapted to reproduce in the sequence of the transmitting station the scanning paths, and a grating interposed between the image reconstructing device and an observer thereof so that the image reconstructing device when viewed through the grating appears to represent a three-dimensional image of the subject located at the point of transmission.

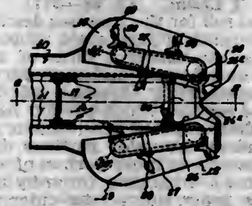
2,107,465
HAND TRUCK CONVEYER
Clarence S. Berggaard, Somerville, Mass.
Application April 5, 1937, Serial No. 135,673
18 Claims. (Cl. 104—171)

1. An inclined elongated platform; a pair of channel irons longitudinally disposed thereon; a pair of sprocket wheels at the opposite ends of each of said channel irons; endless chains on said sprocket wheels; means for transmitting motion to said chains; a plurality of transversely disposed shafts carried by each pair of chains; a roller revoluble on each shaft; and spools at the opposite ends of and revoluble on said shafts, said spools being adapted to travel over the flanges of said channel irons.

2,107,466
BOBBIN CHANGING LOOM
Carl D. Brown, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a corporation of Maine
Application November 3, 1937, Serial No. 172,554
8 Claims. (Cl. 139—251)

1. In a filling replenishing mechanism for automatic bobbin changing looms, the combination of a transferrer, a bobbin supporting device movably mounted on said transferrer for movement into and out of bobbin supporting position, and means for moving said device out of said position prior to operative movement of said transferrer and returning said device to said position after said movement of said transferrer is completed.

2,107,467
FINISHING WELT
Henry W. Buhler, Gloucester, Mass.
Application November 23, 1934, Serial No. 754,450
3 Claims. (Cl. 36—36)



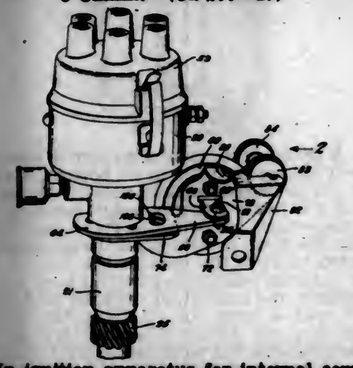
1. Hard-surfaced glossy decorative trimming of the class described which is strong, flexible and capable of bending sharply without breaking and of retaining its shape after bending, comprising hard glossy strands of regenerated cellulose so concatenated as to form a flexible close-textured tubular jacket substantially devoid of tendency to twist, and a flexible stuffer of thin cellulosic sheet material filling said jacket and held in a state of radial compression by the jacket.

2,107,468
TEMPERATURE MEASURING DEVICE
Irving Lorenzo Canuteson, Beaumont, Tex., assignor to Precision Scientific Company, Chicago, Ill., a corporation of Illinois
Application April 29, 1937, Serial No. 139,808
11 Claims. (Cl. 73—354)

9. A temperature measuring device comprising a bowl having an inlet in its bottom, a suspension rod projecting axially upward through the top of the bowl, a thermometer associated with the suspension rod with its lower end disposed within the bowl, a valve upon the suspension rod adapted to close the inlet in the bottom of the bowl, a spring tending to move the bowl along the suspension rod and retain the inlet closed by the valve, and a latch for retaining the bowl and suspension rod displaced against the action of the spring with the valve separated from the inlet, said latch including a detent supported by the bowl and engaging a ledge upon the suspension rod, means for shifting the detent out of engagement with the ledge upon a jerk of the suspension rod and permit the bowl to rise and close the inlet, a floating valve slidably associated with the suspension rod above the bowl and adapted to close an inlet in the top of the bowl, and a stop retaining the floating valve out of engagement with the inlet in the top of the bowl when the bowl is latched in its lowered position, said floating valve upon release of the latch being designed to close said last-mentioned inlet by its own weight.

2,107,469
LOADING MACHINE
Frank Cartlidge, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application November 9, 1935, Serial No. 49,004
3 Claims. (Cl. 198—8)

3. In a loading machine, a gathering and loading element comprising an inclined endless conveyer, an apron mounted on each side of said conveyer a substantial distance thereabove and



extending therealong beyond the forward end thereof to the ground, a gathering device mounted on each of said aprons and extending therealong, each of said gathering devices including an orbitally guided endless chain having laterally projecting gathering arms, and the space between said aprons forming an open channel substantially below the path of movement of said gathering arms and inclined upwardly from the ground in substantially the same plane as said conveyer.

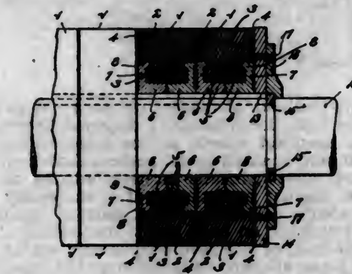
2,107,470

IGNITION DISTRIBUTOR

James M. Crawford, Detroit, and Henry A. Schwager, Royal Oak, Mich., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware

Application August 7, 1933, Serial No. 684,026
5 Claims. (Cl. 200—19)

1. In ignition apparatus for internal combustion engines comprising a housing having a shank and a shaft extending through said shank and into the housing for operating an interrupter, means for oscillating the housing relative to the shaft, comprising in combination, an arm attached to the shank, a bracket pivotally supported by the shank, means carried by said bracket and connected with said arm for varying the angular relation of the bracket and arm, a second bracket adapted to be fixed to the engine frame, and means for manually adjusting the first bracket relative to the second bracket and for securing the first bracket in the desired position of adjustment.



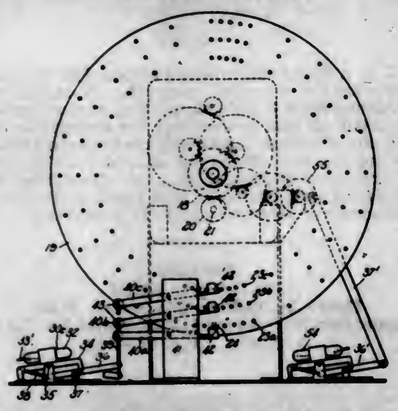
2,107,471

SECTIONAL ROLL

H. Stanley Crysler, Lowell, and Robert J. Wilkie, Newton, Mass.

Application March 20, 1937, Serial No. 132,074
1 Claim. (Cl. 68—277)

A sectional roll for the purposes described comprising a plurality of juxtaposed rubber sections, each having the inherent form of a solid of revolution, and having an outer portion, constituting substantially one-half of the radial depth of the section, which portion has a cylindrical periphery exposed at the active surface of the roll, and annular side portions disposed in radial planes and an inner portion of lesser axial width defining overhanging, inwardly facing surfaces at the inner side of the outer portion, a central shaft on which the sections are mounted, a series of metallic members carried by the shaft, each having a hub portion non-rotatably associated with the shaft and an annular flange disposed adjacent the inner portion of the rubber section, received beneath the overhanging surface thereof and having a substantially cylindrical surface underlying and supporting the said overhanging surface, said metallic members being pressed together axially along the shaft to press said flanges in compressing gripping relation



against the inner portions of the rubber sections, providing a frictional grip resisting relative circumferential movement, the outer parts of said rubber sections being of relatively soft rubber and the inner parts being of relatively hard rubber, the parts merging substantially at the location of the outer peripheries of the flanges.

2,107,472

SELECTIVE CONTROL MECHANISM FOR RADIO SETS

James H. Denison, deceased, late of Hartford, Conn., by Alvina M. Denison, administratrix, Hartford, Conn.

Application October 24, 1933, Serial No. 694,980
14 Claims. (Cl. 250—20)

1. In a selective control mechanism for radio sets and in combination with a tuning device of the set, a clock mechanism, dial means driven thereby and having a plurality of circles of openings, control plugs adapted to be selectively positioned in said openings, a plurality of switches respectively associated with said circles of openings, an operative connection between each switch and the control plugs carried by the respective circle of openings, each of said connections including a pivoted lever having a cam surface of predetermined length representing a predetermined length of time and adapted to be engaged by the respective plug to hold the switch

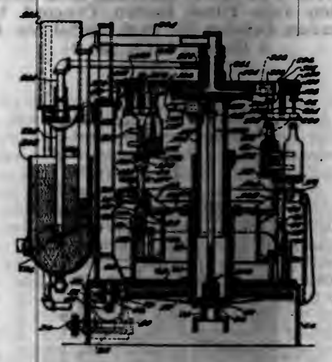
in operated position, and a plurality of electromagnets respectively associated with said switches and operatively connected to said tuning device and arranged to move said tuning device differentially to several predetermined positions.

2,107,473

COMPOSITION AND METHOD FOR THE TREATMENT OF HYDROCARBON EMULSIONS

William E. Elliott, Youngstown, Ohio

No Drawing. Application September 12, 1934, Serial No. 743,713
2 Claims. (Cl. 196—4)



2. The method of treating emulsified hydrocarbons to demulsify the same, which comprises incorporating therein naphthalene, sodium carbonate and iron sulphate with the naphthalene predominating the sodium carbonate and iron sulphate.

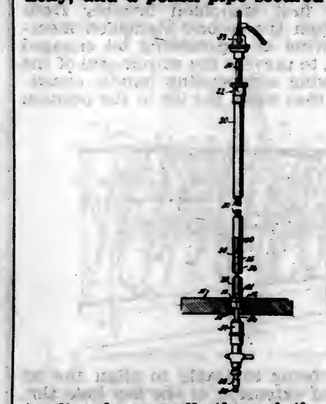
2,107,474

RECEPTACLE CLEANING AND FILLING MACHINE

Arthur Clarence Everett, Boston, Mass., assignor to Pneumatic Scale Corporation, Limited, Quincy, Mass., a corporation of Massachusetts

Application April 13, 1935, Serial No. 16,175
12 Claims. (Cl. 226—68)

1. A receptacle cleaning and filling machine having, in combination, means for moving a plurality of receptacles through the machine in a plurality of concentric but spaced circular paths, pneumatic cleaning means for the receptacles being moved in the outer path, filling means adapted to fill the receptacles being moved in the inner path, and means for transferring receptacles after having been cleaned from the outer to the inner path, all of said means being operatively connected to operate in timed relation.



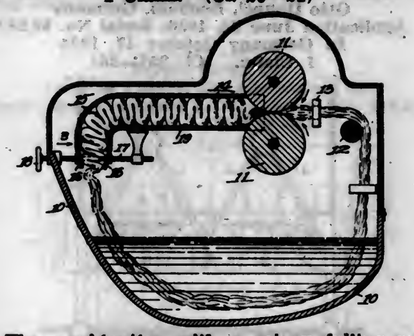
2,107,475

ROTARY WELL DRILLING APPARATUS

David Thomas Foster, Khaur, Punjab, India, assignor to Regan Forge & Engineering Company, a corporation of California

Application January 18, 1937, Serial No. 120,977
10 Claims. (Cl. 255—23)

1. In a rotary well drilling device, a rotary table, a torque tube of sufficient length to house a kelly connected to the table and rotatable therewith, a kelly non-circular in cross section, means on the torque tube engaging the kelly, and a polish pipe secured to the kelly extending downwardly through the torque tube and rotary table.



2,107,476

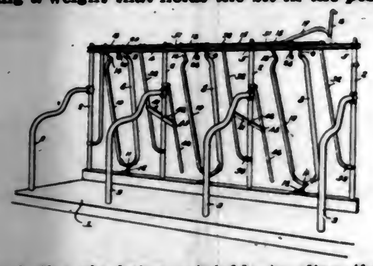
FULLING CANAL

Tom Frusher, Jr., Groton, Conn., assignor to Rodney Hunt Machine Company, Orange, Mass., a corporation of Massachusetts

Application December 9, 1935, Serial No. 53,459
1 Claim. (Cl. 26—21)

The combination with a rotary fulling mill and its friction rolls, of a fulling canal of uniform and constant shape from the friction rolls to a point near the other end thereof, said canal being straight for a material distance and curved downwardly at said other end, and control gates at the bottom of the curved section provided with means for moving them toward or from each other to control the discharge and the fulling.

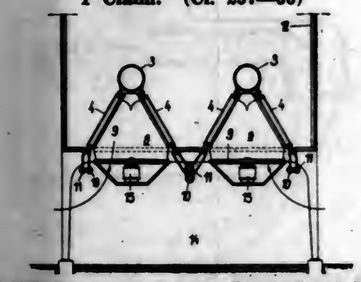
2,107,477



STALL

Herbert H. Grubb, Baraboo, Wis.

Application July 25, 1936, Serial No. 92,660
3 Claims. (Cl. 119—148)



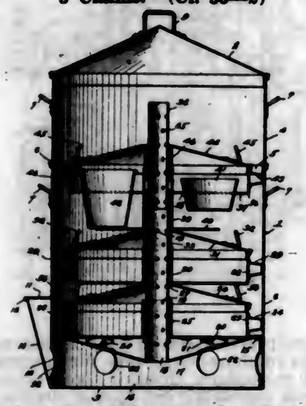
1. In a stall, a guide comprising upper rails having openings, first and second stanchion members, the first stanchion member being movable between the rails, toward and away from the second stanchion member, means for attaching the second stanchion member to the guide, a hollow head secured to one rail and having a key hole slot comprising a main part and a reduced extension, a locking pin mounted in the

openings and in the main part of the key hole slot and engaged with the first stanchion member to prevent the first stanchion member from moving away from the second stanchion member, the pin having an upstanding bit engaged within the head, to prevent the withdrawal of the pin, the pin having a depending handle constituting a weight that holds the bit in the position

stated, the pin being rotatable to align the bit with the reduced extension of the key hole slot, whereupon the pin may be withdrawn from engagement with the first stanchion member, the pin having a terminal enlargement of such size as to pass through the openings but to engage in the main part of the key hole slot, thereby leaving the pin hanging from the head.

2,107,478
AIR-COOLED SURFACE CONDENSER
Otto Happel, Bochum, Germany
Application June 22, 1936, Serial No. 86,682
In Germany October 17, 1934
1 Claim. (Cl. 257—36)

A high vacuum surface condenser for stationary steam engines and turbines operating under high vacuum, comprising a foundation having a suction chamber, a main distributing pipe in a space above the chamber and through which the exhaust steam passes from the turbine, groups of ribbed tubes of which each tube is of small cross-section connected to and extending in pairs down from the distributing pipe to form an acute angle, and a plurality of fans arranged in a row under the tube elements to draw a large volume of air from the suction chamber up and around the tube elements.

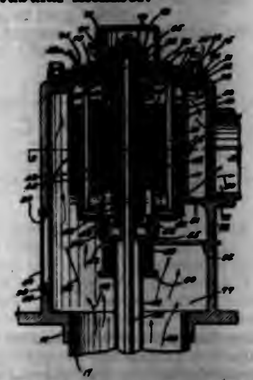


2,107,479
WINDOW LOCK
Walter F. Hinderer and Louis C. Hinderer, Kankakee, Ill.
Application July 15, 1936, Serial No. 90,770
1 Claim. (Cl. 292—60)

A window lock comprising a cylindrical casing open at one end and substantially closed at its other end and having a mounting plate at the open end, said casing being further provided with an internal longitudinal guide-way having laterally and correspondingly directed latching terminals, a helical compression spring extending longitudinally and centrally of the said casing and secured at its inner extremity to the said substantially closed end of the casing, a tubular plunger slidable and rotatable in said casing and circumposed on the said spring, a pin on said plunger engaging in the guide-way of the casing, a separately formed plunger head provided with

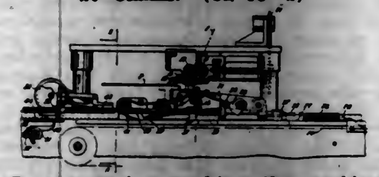
a reduced boss having a forced fit in and closing the outer end of the plunger, said boss providing a bearing surface against which the outer end of the spring is pressed to normally urge the plunger outwardly of the casing, and fingers on the inner end of the boss in engagement with the spring and holding the latter in a state of torsion effective to rotate the plunger at the end of its inward and outward travel for automatically seating the pin of the plunger in a latching terminal of the said guideway.

2,107,480
STEAM COOKING BOILER AND BAKER
Abby Jane Tilton Holten, Concord, Vt.
Application October 23, 1936, Serial No. 107,278
5 Claims. (Cl. 53—2)



1. In a device of the class described, a casing having a steam chamber in its lower portion, a dish in the casing and disposed above the steam chamber, and a cover on the dish, the cover having an opening, the bottom of the dish being supplied with an upstanding sleeve terminated in spaced relation to the cover, the steam chamber being provided with a flue which extends upwardly through the sleeve and through the opening, the flue having a perforation which communicates with the dish.

2,107,481
WATER COOLED MOTOR
Carl E. Johnson, Pasadena, Calif., assignor to Sterling Electric Motors, Inc., Los Angeles, Calif., a corporation of California
Application February 20, 1928, Serial No. 255,723
17 Claims. (Cl. 103—102)

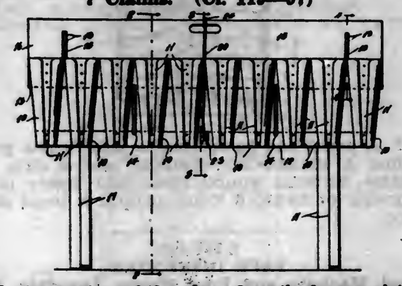


1. In combination in a pump head: a pump

head casing; a motor shell secured to said pump head casing; a stator in said shell; a rotor adapted to rotate adjacent said stator, said stator and rotor cooperating to define a motor structure; a hollow shaft on which said rotor is mounted; a tubular member mounted in fluid-tight relationship with said shell and extending upward through said hollow shaft to a point above the surface level of a neutral liquid contained in said shell, said surface level being above said motor structure; pump means for forcing a cooling medium in contact with the periphery of said shell in a manner to absorb heat generated in said motor structure and transmitted to said shell through said neutral liquid; and means preventing entry of said cooling medium into the lower end of said tubular member.

10. In a pump head for a deep-well turbine pump, the combination of: a pump head casing providing a chamber and intake and discharge passages communicating with said chamber, said turbine pump forcing a stream of cooling liquid through said passages and said chamber; a shell extending into said chamber and into the path of travel of said stream of liquid entering said intake passage and leaving said discharge passage, there being an annular space between said casing and said shell through which said liquid moves in an arcuate path; an oil-filled electric motor in said shell; a shaft operatively connecting said electric motor and said pump; and means above said discharge passage for suspending said shell in said casing.

2,107,482
WRAPPING OR PACKING MACHINE
William Joseph Kemp, Deptford, London, England, assignor to Molins Machine Company, Limited, London, England
Application June 25, 1935, Serial No. 28,381
In Great Britain July 25, 1934
20 Claims. (Cl. 93—2)

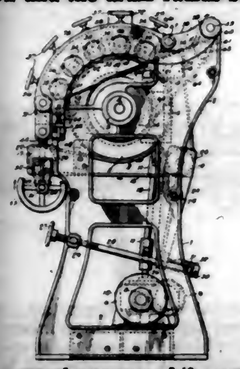


1. In a wrapping machine, the combination with web feeding means, of means to sever unequal lengths of material from a web, and means to assemble portions of material of unequal length to form a composite wrapper blank of desired length.

2,107,483
VARIABLE SPEED TRANSMISSION
Albert Breakenridge Knight, Fairmont, W. Va.
Application June 12, 1936, Serial No. 84,941
9 Claims. (Cl. 74—230.17)

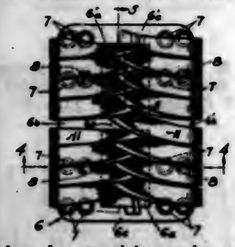
1. A transmission unit comprising a shaft, a pair of coacting transmission members relatively longitudinally slidable on said shaft and provided with conical adjacent faces adapted to receive a belt therebetween, said transmission members being provided with slots forming fingers therebetween inter-engageable to render said transmission members movable to relative positions with their peripheral portions in close proximity, and a coaxial supporting sleeve member carried by each transmission member for supporting it with respect to said shaft, each sleeve member extending approximately to the inner end of its associated transmission member.

2,107,484
FOWL HOLDER
John B. Lesher, Chambersburg, Pa.
Application December 3, 1936, Serial No. 114,049
7 Claims. (Cl. 119—97)



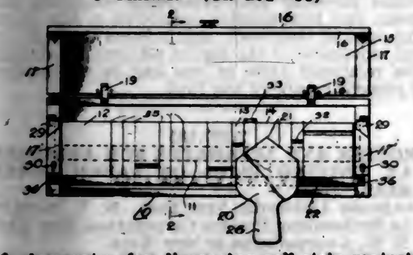
6. Apparatus of the class described comprising a support, hooks on said support, a batten having means pivotally and detachably engaging said hooks, and fowl holders connected to the batten and open at both ends, said holders through pivotal movement of the batten adapted for disposition relatively close at one end to the support to prevent escape of the fowl.

2,107,485
PROCESS AND APPARATUS FOR ADHESIVELY UNITING PLIES OF FABRIC MATERIAL
Benjamin Liebowitz, New York, N. Y., assignor to Trubenizing Process Corporation, New York, N. Y., a corporation of New York
Application July 11, 1936, Serial No. 90,232
3 Claims. (Cl. 154—1)



3. In apparatus for adhesively uniting an assembly of fabrics which has been treated with

a solvent, a rotary drum, an endless belt having a reach bearing under tension against the face of the drum throughout an arc of the path of movement thereof, the relationship between the belt tension and the drum radius being such as

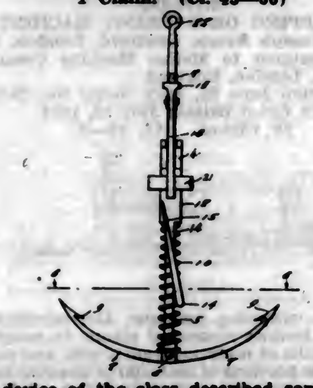


to cause a normal pressure of the order of twenty pounds per square inch, and a plurality of rollers bearing on the face of the drum at spaced intervals through a succeeding arc of the rotary path of movement of the drum.

2,107,486
RESILIENT PEDAL PAD
William J. Lutey, Seattle, Wash.
Application August 7, 1937, Serial No. 157,965
5 Claims. (Cl. 74—563)

1. A pedal pad comprising a base frame providing a window-like opening, and a strip of pliable material wound upon said frame in a plurality of figure 8 loops to form a tread surface.

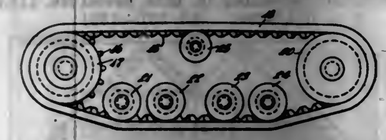
2,107,487
TAPE DISPENSER
Fred Machato and Fred Mason, Lansdale, Pa.
Application November 16, 1936, Serial No. 111,153
9 Claims. (Cl. 164—36)



1. Apparatus for dispensing roll strip material comprising in combination, an axle support for receiving a plurality of rolls of different widths, means on the axle support for indicating the position at which each roll shall be assembled thereon, a cutter member movable relative to said rolls, and means for locating and holding the cutter at the median portion of each individual roll on the support whereby a strip may be severed therefrom.

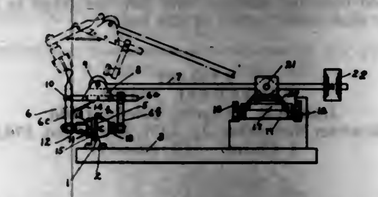
2,107,488
PUMP ROD HANGER
August R. Maier, Dallas, Tex., assignor to Oil Well Supply Company, Dallas, Tex., a corporation of New Jersey
Application November 6, 1936, Serial No. 109,691
14 Claims. (Cl. 255—18)

1. A beam hanger for well pumps which comprises a support having an arcuate surface centered approximately on the pivotal axis of the beam, a pair of spaced brackets on said support above said arcuate surface, a pair of cables secured to said brackets and depending downwardly on said arcuate surface, a yoke secured to said cables below said surface, a depending rod supported on the yoke between said cables, and means to adjust individually the distance between the connection of the yoke with each of said cables and the connection of each of said cables with its respective bracket while said connections are assembled.



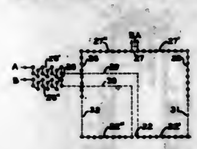
2,107,489
FISHING HOOK
Nicholas T. Marcelli, Collinsville, Calif.
Application May 6, 1936, Serial No. 78,210
1 Claim. (Cl. 43—36)

A device of the class described comprising a bait hook, a sleeve fixedly carried by the shank



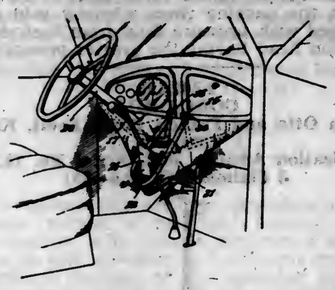
of said hook, a ring member encircling the sleeve and secured thereto against movement, said ring member having portions spaced from the sleeve, a rod slidably mounted in said sleeve, a plurality of hooks pivotally carried at the lower end of said rod and arranged with their free ends engaged in the ring when said rod is in a retracted position, a spring carried by the rod and contacting the pivoted hooks to project the same downwardly and outwardly and trip means releasably connecting the rod to the shank of the bait hook.

2,107,490
TRACK FOR TRACTORS
Robert Mayne, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application August 4, 1934, Serial No. 738,393
11 Claims. (Cl. 305—10)



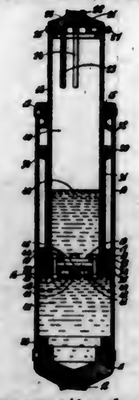
11. A self-laying track comprising tension cables, cross members secured to said cables at intervals along the same for cooperating with a driving means, and a rubber tread upon the cables and cross members, said cross members being held completely out of contact with the cables by an intervening layer of rubber and being secured to the cables solely by adhesion of the rubber to the cross members and cables without clamping pressure of said members upon the cables.

2,107,491
DECORATING APPARATUS
Frederick R. McQuiston, Crafton, Pa., assignor to The O. Hommel Company, a corporation of Pennsylvania
Application November 24, 1936, Serial No. 112,546
2 Claims. (Cl. 91—12)



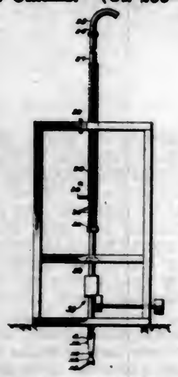
1. Apparatus for decorating a round object having a handle on its side, the combination of a printing device including a surface bearing a film of decorating material, the length of said film-bearing surface being substantially equal to the circumference of the object to be decorated less the breadth of said handle, a carriage, rotary means borne by said carriage for supporting said object, said rotary means being movable in transverse plane with respect to the film-bearing surface of said printing device, into work-receiving position, and said carriage being movable in a direction extending angularly to such plane, whereby the supported object is rolled upon said film-bearing surface and decorating material applied in predetermined pattern to the surface of said object from one side of said handle to the other.

2,107,492
METHOD OF HEATING FLUIDS
Lev A. Mekler, Chicago, Ill., assignor, by mesne assignments, to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application January 6, 1932, Serial No. 584,968
Renewed August 15, 1935
1 Claim. (Cl. 196—47)



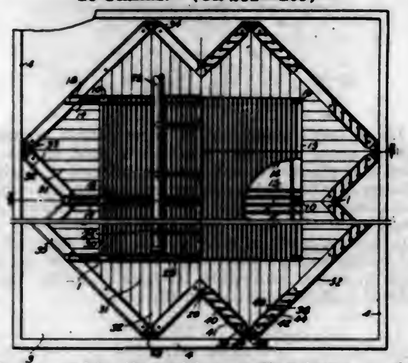
A method for heating hydrocarbon oils in a cracking process comprising subdividing the oil to be heated into two streams, advancing each stream through a bank of heating tubes wherein the oil is heated by convection, thence passing each stream through a bank of tubes disposed adjacent the floor of the furnace wherein the oil is subjected to radiant heat, thence advancing one of said streams through a bank of tubes adjacent one wall of the furnace and the other of said streams through a bank of tubes adjacent the opposite wall of the said furnace in each of which banks of tubes the oil is subjected to radiant heat and finally passing each stream through a bank of tubes adjacent the roof of the furnace to be subjected therein to further radiant heat treatment and thereafter combining the separate streams.

2,107,493
LAP ROBE FOR MOTOR VEHICLES
Geffrod B. Oliver, Springfield, Mass., assignor to Nashua Manufacturing Company, Boston, Mass., a corporation of New Hampshire
Application March 30, 1936, Serial No. 71,771
1 Claim. (Cl. 296—31)



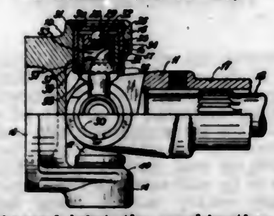
A lap robe including an apron adapted to be secured at its forward margin to the instrument panel of a motor vehicle supporting the apron in active position to overlie the lap of the driver of the vehicle and at its rear end also provided with means for suspending the rear portion of the apron from said panel when in inactive position removed from the lap of the driver and a bight portion formed by said apron when in inactive position, and a flexible sleeve contained in said bight portion and attached to said apron around and enclosing an opening formed therein for receiving a vehicle operating lever for manipulation by the driver when the robe is in active or inactive position.

2,107,494
SHOCK ABSORBENT STRUT FOR AIRCRAFT
John Henry Onions and Peter Warborn Thornhill, Leamington Spa, England; said Thornhill assignor to said Onions
Application August 19, 1936, Serial No. 96,872
In Great Britain October 15, 1935
9 Claims. (Cl. 267—64)



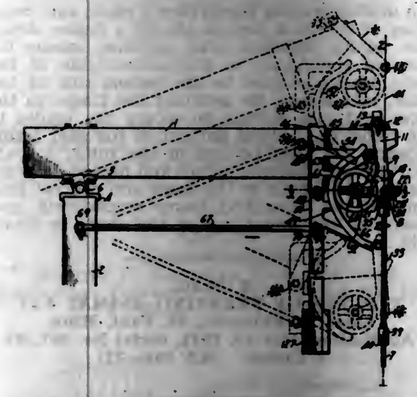
1. An oleo-pneumatic shock absorbing strut comprising a cylinder tube, a plunger tube slidably mounted therein, a piston head on the inner end of the plunger tube and having a cavity, both of said tubes having means to close their outer parts so as to enclose a working space of variable volume, a flutter valve within a cavity formed in the piston head and adapted to move to either end of the cavity away from that side of the piston head which is acted upon by the greater fluid pressure, packing means around the piston head and comprising a pair of packing rings which are forced into contact with the cylinder by fluid pressure within a space between them, and a passageway leading from the middle portion of the flutter valve cavity to the space between the packing rings whereby said space is charged with pressure fluid from that side of the piston head having the greater pressure.

2,107,495
CORE DRILL
William Otto and Francis Elmer Scott, Kansas City, Mo.
Application April 8, 1936, Serial No. 73,222
3 Claims. (Cl. 255—39)



1. A core drill comprising a hollow stem having a cutting bit attached to the lower end thereof, lift means applied to the stem medially of its ends and so operable as to periodically lift the stem, a rig which has means to guide the stem, a spring carried by the stem, said stem having an abutment with which one end of the spring is in engagement to resist the lifting effort of said lifting means, and a screw sleeve against which the other end of the spring abuts, said sleeve slidably carrying the stem, said rig having a support in which said sleeve is screwed for adjustment to vary the tension of the spring.

2,107,496
LOUVER CONSTRUCTION FOR COOLING TOWERS
Robert R. Pabodie, Kansas City, Mo., assignor to J. F. Pritchard & Company, Kansas City, Mo., a corporation of Missouri
Application November 16, 1936, Serial No. 111,031
10 Claims. (Cl. 261—109)

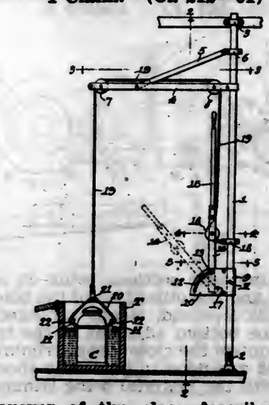


1. In combination with a cooling tower, a plurality of superimposed catch pans having triangular shaped projections, means supporting the catch pans at the sides of the tower, louver bars supported along the marginal edges of the triangular shaped projections and arranged in spaced parallel relation, and battens fixed to the inner and outer edges of the bars.

2,107,497
UNIVERSAL JOINT
Joseph E. Padgett, Toledo, Ohio
Application November 23, 1931, Serial No. 576,665
1 Claim. (Cl. 64—17)

In a universal joint, the combination of a pair of relatively movable members one having an opening therein and the other having a journal portion extending into said opening, means for closing said opening outwardly of said journal portion, an apertured retaining member disposed in said opening outwardly of said closing means to prevent displacement of the latter, said closing means having a portion thereof deflected into the aperture of said retaining member, and a thrust element associated with said journal portion and engaging the deflected portion of said closing means.

2,107,498
WELL PUMPING APPARATUS
Albert N. Porter, Tulsa, Okla., assignor to J. F. Darby, Tulsa, Okla.
Application October 10, 1936, Serial No. 105,011
12 Claims. (Cl. 74—103)



1. In combination with a pumping apparatus including a pivoted beam, a straight lift attachment including a rod hanger movably carried by the beam, a cam member having vertical support relatively to the rod hanger and curved reversely to the arcuate travel of the end of the beam, and a wheel carried by the beam and operable on the cam member to retain the rod hanger in a vertical plane during actuation of the walking beam.

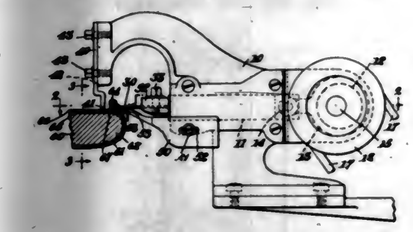
2,107,499
STIRRUP BEARING FOR PITMANS
Albert N. Porter, Tulsa, Okla., assignor to J. F. Darby, Tulsa, Okla.
Application November 4, 1936, Serial No. 109,114
4 Claims. (Cl. 308—21)

1. In combination with an oscillatory member and an actuating pitman having a stirrup through which a portion of the oscillatory member extends and provided with a cross bar portion extending across the oscillatory member, a bearing member mounted on the oscillatory member, a bearing member having a groove for seating the cross bar portion of the stirrup, means rigidly clamping the last named bearing member to the stirrup, a knife edge bearing on one of said members and pivotally engaged with the other bearing member, said knife edge bearing extending in parallel relation with the cross bar portion of the stirrup, and means for retaining said knife edge bearing in pivotal engagement.

2,107,500
MILK CAN CONVEYER
Floyd Price and Adelbert F. Palmer, Wellsboro, Pa.
Application June 23, 1937, Serial No. 149,971
1 Claim. (Cl. 212—61)

A conveyer of the class described including a post, an arm supported thereby and mounted to swing about the longitudinal axis of the post, a bracket extending from the post and including spaced wings having arcuate slots, a stop connecting the wings, a lever movably mounted between the wings, a member carried by the lever and movable within the slots during the actuation of the lever, said lever being movable against the stop to be fulcrumed thereon during said actuation, a lifting cable, a can engaging means at one end thereof, means for attaching the other end of the cable to the post, a pulley carried by the lever for holding the cable thereto, and spaced cable supporting pulleys on the arm.

2,107,501
SHOEMAKING METHOD
Edward Quinn, Brooklyn, N. Y., assignor to The Del-Mac Shoe Process Corporation, New York, N. Y.
Application September 18, 1935, Serial No. 41,082
12 Claims. (Cl. 12—142)



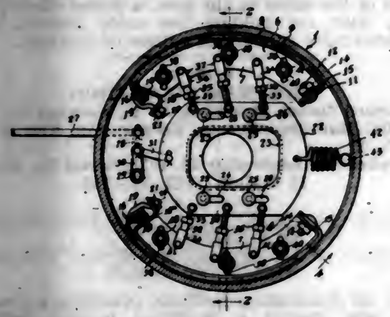
1. In shoemaking methods, providing a rounded sole having a marginal feather defined by a shoulder, a lip channel inwardly of and parallel with said shoulder, and a groove extending inwardly at the base of said shoulder; adhesively securing the edge margin of an upper against the walls of said groove, and sewing the upper to the sole by means of stitching extending through the upper and the between substance of the sole lying intermediate the walls of said groove and said channel.

2,107,502
INSEAM TRIMMING MACHINE
Edward Quinn, Brooklyn, N. Y., assignor to The Del-Mac Shoe Process Corporation, New York, N. Y.
Application April 30, 1936, Serial No. 77,105
4 Claims. (Cl. 12—82)

1. A trimming machine of the character described comprising a trimming blade arranged to operate on the bottom of a lasted shoe to trim

surplus material therefrom, mechanism for imparting reciprocatory motion to said blade, said blade having a free end and a plurality of sharp cutting edge sections on one side thereof extending at divergent angles to each other and obliquely to the path of reciprocation, the bezel

of said cutting edge sections being on one face of the blade and the other face of the blade being tapered to its free end, means arranged to engage the shoe bottom adjacent to the trimming locality to control the closeness of trimming, and an abutment arranged to guide the shoe by engagement with the material being trimmed.



2,107,502

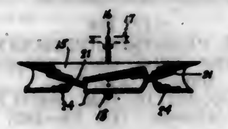
QUICK RELINING BRAKE

Thomas D. Rader, Glendale, Calif., assignor of one-half to Richard Macintosh, Los Angeles, Calif.

Original application November 13, 1934, Serial No. 752,823. Divided and this application June 1, 1936, Serial No. 82,728

3 Claims. (Cl. 188—234)

1. In an automobile brake having a brake-drum, a brake-shoe with means for mounting the same for outward movement against the drum, said means attached to the brake-shoe at intermediate points on the length of the shoe so as to leave the ends of the shoe clear and unobstructed, said brake-shoe having flanges at its ends, a detachable brake lining unattached to the shoe at intermediate points on its length, a bolt passing through one of the flanges for securing one end of the brake lining to the flange at one end of the shoe, a hook disposed in a substantially radial direction at the other end of the shoe and hooked into the adjacent end of the brake lining, said hook having a threaded shank passing through the adjacent flange of the brake-shoe with a nut seating on the flange for exerting tension on the lining to tighten the same on the shoe.



2,107,504

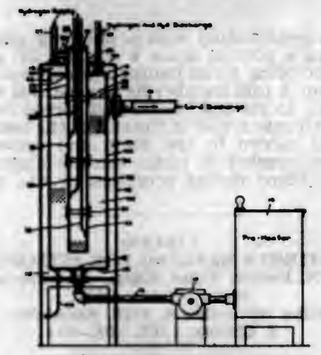
DRAFT PROMOTER FOR FURNACES

Arthur A. Rea, La Grande, Oreg.

Application October 9, 1936, Serial No. 104,884

1 Claim. (Cl. 230—134)

A draft promoter comprising a rotor, said rotor being of inverted conical shape, a frame structure having diverged arm portions, means for securing the frame to the bottom side of the rotor, blades secured to the bottom side of the rotor, said means for securing the frame to the rotor and also serving to secure the blades to the rotor, the central portion of the said frame crossing the apex portion of the rotor, a shaft provided with bearing means and having its lower ends secured both to the apex and central portions of the rotor and frame respectively, and means at the upper end of the shaft to rotate said rotor.



2,107,505

PROCESS OF TREATING ANIMAL FAT

Lloyd H. Reyerson, St. Paul, Minn.

Application July 20, 1933, Serial No. 681,305

7 Claims. (Cl. 204—81)

1. A process of treating animal fat to make lard which consists in moving semi-fluid animal fat in a relatively thin and expanded sheet slowly between two electrodes for a relatively long period of time and over a considerable extent of said electrodes, passing electric current independently to different sections of one of said electrodes, and progressively increasing their extent and area to cause electric current from said several sources to pass therefrom through the sheet of animal fat as the same is being moved to the other electrode.

2,107,506

VEHICLE OF THE TRICYCLE OR VELOCIPEDE TYPE

Mayo E. Ree, Elyria, and Wilbur Henry Adams, Cleveland, Ohio, assignors to The Colson Corporation, Elyria, Ohio, a corporation of Ohio

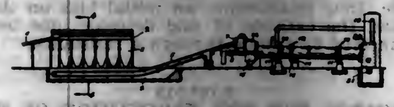
Application August 3, 1936, Serial No. 94,018

8 Claims. (Cl. 280—274)

1. In a vehicle of the class described, a front head construction, a pair of tubular body elements secured at forward end portions to the head

construction and extending rearwardly and divergingly downwardly therefrom and at their rear end portions extending forwardly, a frame comprising a plurality of transverse members rigidly

welded together and welded to the said rear end portions of the tubular body elements and a pair of aligned rear wheel axles extending oppositely from the frame and supported thereby.



2,107,507

INCINERATOR

Maurice L. Rees, San Francisco, Calif.

Application February 25, 1935, Serial No. 7,936

1 Claim. (Cl. 110—14)

In an apparatus for destructively disposing of garbage; a combustion chamber; an inclined rotary retort for advancing the refuse to be burned toward said combustion chamber; means in communication with the end of said retort opposite said combustion chamber for feeding thereinto materials to be burned; an explosion chamber in communication with said last mentioned end of said retort; a furnace; a passage way connecting said furnace with the combustion chamber; a conduit connecting the said furnace with said explosion chamber; a blower for maintaining a circulation through the conduit, passage way, combustion chamber, retort and explosion chamber, said blower creating a forced draft circulation through the system; means for moving the refuse through the retort in moisture extracting relation with the hot gaseous products in opposite relation to the direction of movement of the products of combustion therethrough; means for continuously burning in and venting to the atmosphere through the furnace a selected portion of the gas given off in the reduction of the refuse; and means for discharging from the combustion chamber the final products resulting from the termination of the incineration process.

2,107,508

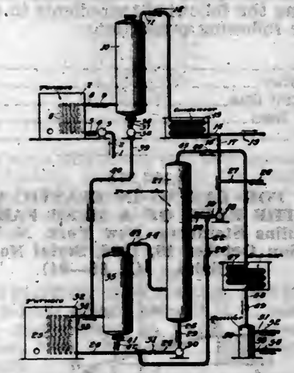
SULPHONATED HYDROGENATED ABIETYL DERIVATIVES AND METHOD OF PRODUCING

Alfred L. Rummelsburg, Wilmington, Del., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application March 16, 1934, Serial No. 715,941

19 Claims. (Cl. 260—99.12)

1. The sulphonation product of a hydrogenated abietyl halide.



2,107,509

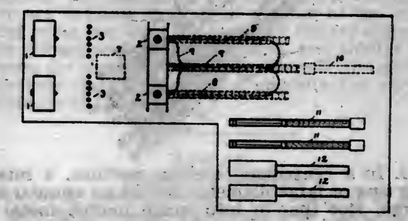
CONVERSION OF HYDROCARBON OILS

Jean Delattre Segny, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware

Application May 16, 1933, Serial No. 670,375

6 Claims. (Cl. 196—48)

1. A process for producing motor fuel which comprises subjecting hydrocarbon oil heavier than gas oil in a heating zone to relatively mild cracking conditions of temperature and pressure such as to produce gas oil therefrom, separating the thus treated oil into a residue heavier than gas oil and a distillate containing the gas oil, passing such distillate through a second heating zone and heating the same therein to higher cracking temperature than the oil in the first-mentioned heating zone to produce gasoline therefrom, then commingling the thus heated distillate with residue from the first-named cracking treatment, separating vaporous from unvaporized reaction products, and fractionating and condensing the separated vapors.



2,107,510

METHOD OF MANUFACTURING EXTRUDED ARTICLES

Chame D. Skinner, Springdale, and Leo C. Bradley, New Kensington, Pa.

Application May 23, 1936, Serial No. 81,428

4 Claims. (Cl. 207—10)

4. The herein described method which includes reducing an aluminum base metal to homogeneous liquid state, casting the metal into hot billet-forming molds, cooling the billets in such molds to approximately extruding temperature and then removing the billets and introducing them to a press at substantially the temperature at which they were removed from the molds and shaping the billets in such press into the desired articles.

2,107,511

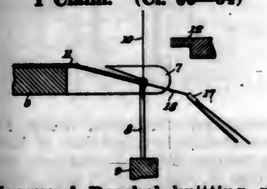
WATERPROOF COATING OR PAINT AND THE METHOD OF MAKING SAME

Charles Elbert Spooner, Arkansas City, Kans. No Drawing. Application December 28, 1936, Serial No. 117,019

1 Claim. (Cl. 134—17)

A re-surfacing and waterproofing compound comprising the following ingredients in substantially the following proportions:

	Parts
Coal tar	50
Raw rubber	3
Air-slacked lime	2
Sugar of lead	1
Gasoline	5



2,107,512

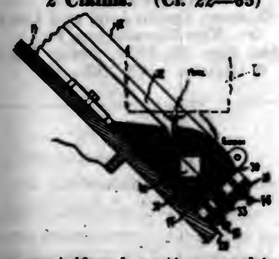
MEANS FOR LAYING-IN ELASTIC STRAND IN THE EDGE OF A MESH FABRIC

Julius Steinberg, New York, N. Y.

Application October 19, 1936, Serial No. 106,325

1 Claim. (Cl. 66—84)

In a Jacquard Raschel knitting machine, a bank of needles and associated sinkers, and means for directing a length of elastic strand first to one side and then to the other of the end needle of said bank whereby a tubular selvage edge is formed on the fabric knitted by said needles and sinkers and said elastic is positioned within said selvage, said means comprising a guide for the elastic strand positioned below the sinkers, a bar carrying the strand guide and a rotary cam for actuating said bar.



2,107,513

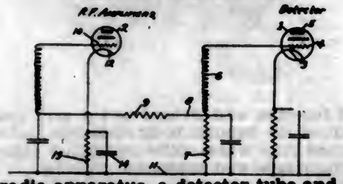
CENTRIFUGAL CAST

William Sweger, Ferndale, Mich.

Application October 21, 1935, Serial No. 45,934

2 Claims. (Cl. 22—65)

1. In a centrifugal casting machine, a rotating ring of large diameter having an annular internal slot therein into which molten metal is poured, the slot being of uniform cross section, which cross section is such as to define and divide the slot into a plurality of different and distinct portions, one of which, nearest the center of rotation of the ring, is a mouth portion, and another of which, furthest from the center of rotation of the ring, is an ingot-shape defining portion, and a third of which, a gate portion, connects these two portions, the axis of rotation of the ring being at an angle of substantially 45° from the horizontal, and the lowest portion of the slot mouth being substantially vertical whereby molten metal dropped vertically into the said lowest portion of the slot mouth can flow into the gate portion of the slot without touching the walls of the mouth.



2,107,514

AUTOMATIC VOLUME CONTROL SYSTEM

Louis F. Willging, Cincinnati, Ohio, assignor to The Crosley Radio Corporation, Cincinnati, Ohio, a corporation of Ohio

Application May 24, 1930, Serial No. 455,353

1 Claim. (Cl. 250—20)

In radio apparatus, a detector tube and a controlled tube, the grid of said detector tube being connected to ground through a resistance, the ungrounded end of said resistance being connected through a resistance to the grid circuit of said controlled tube and also to a point of potential more negative than the electron emitting device of said detector tube and said controlled tube, thus establishing an initial bias on these tubes, the cathode of said detector tube being connected to ground through a resistance.

2,107,515

PROCESS FOR THE PRODUCTION OF HYDRATED OLEFINES

Franklin A. Bent, Berkeley, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware

No Drawing. Application August 28, 1933, Serial No. 687,196

16 Claims. (Cl. 260—156)

1. A process for the production of a hydration product of an olefine comprising directly hydrating the olefine under superatmospheric pressure and at a temperature materially above room temperature but below about 374° C. in the presence of water and a salt of the class consisting of the sulfates of beryllium, magnesium and zinc.

2,107,516

TROUSER CLIP OR CLASP

John C. Bishop, Savannah, N. Y.

Application August 27, 1937, Serial No. 161,202

1 Claim. (Cl. 24—85)

In a trouser clip for holding a trouser leg when same is rolled at its lower end, a spring clip comprising a pair of normally converging arms joined by a bight and adapted to be slipped up over the rolled end of the trousers, the inner arm being straight from end to end, and the outer arm being curved outwardly adjacent the bight to accommodate the rolled trousers and then turned back inwardly to grip the trousers above the roll, the end of the outer arm being turned back on itself to form an outwardly disposed finger loop and the arm having an aperture below the said loop, and the extremity of the loop being pointed and projected through the aperture to engage the trousers.

2,107,517

ANTISKID CHAIN

John C. Bishop, Savannah, N. Y.

Application August 28, 1937, Serial No. 161,387

1 Claim. (Cl. 24—194)

A strap buckle including a buckle plate, ears turned up in spaced relation from the plate forming a channel therebetween to accommodate a strap, the said ears having slots adjacent one end and apertures spaced therefrom, a pressure pad pivotally mounted at one end in the slots and lying in the channel, the adjacent faces of the pad and plate being serrated crosswise, a buckle clamp of bell crank shape pivoted in the said apertures and comprising a cam adapted to engage the pressure pad, a lever on the buckle clamp, the said lever and cam having aligned slots extended crosswise to receive the strap, and catches turned inwardly from the said ears and terminating with a space between less than the width of the strap.

2,107,518

ELECTRON DISCHARGE DEVICE

Cabot Seaton Bull, Hillingdon, and Sidney Rodda, Enfield, England, assignors to Electric and Musical Industries Limited, Middlesex, England, a company of Great Britain

Application December 24, 1934, Serial No. 759,008. Renewed September 18, 1937. In Great Britain January 8, 1934

16 Claims. (Cl. 250—27.5)

1. An electron discharge device having an evacuated envelope and arranged within said envelope, in the order named, a cathode capable of electron emission, a control grid, a screen grid, an anode forming part of said envelope and having a surface directed towards said cathode and shielding means having a closed surface of substantial area impermeable to electrons and being disposed to shield from said cathode substantially one-half of said anode surface.

2,107,519

ELECTRON DISCHARGE DEVICE

Isaac Shoenberg, London, Cabot Seaton Bull, Hillingdon, and Sidney Rodda, Enfield, England, assignors to Electric and Musical Industries Limited, Middlesex, England, a company of Great Britain

Original application July 27, 1934, Serial No. 737,192. Divided and this application June 1, 1935, Serial No. 24,482. Renewed June 12, 1937. In Great Britain August 2, 1933

23 Claims. (Cl. 250—27.5)

11. An electron discharge device having, within an evacuated envelope arranged in the order named, a cathode, a control grid, a screening grid and an anode, said anode extending over a part of the space around said cathode, wherein said device also has within said envelope means which form a region of electron shadow in the

space between said anode and said screening grid and conducting shield means for substantially preventing the passage of secondary electrons from said anode to said screening grid through said region.

2,107,520

ELECTRON DISCHARGE DEVICE

Otto H. Schade, West Caldwell, N. J., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y., a corporation of Delaware

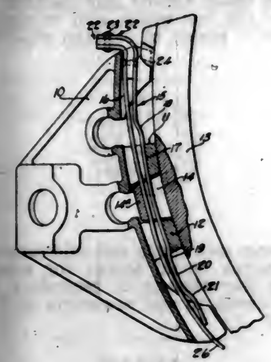
Application February 26, 1936, Serial No. 65,745

8 Claims. (Cl. 250—27.5)

1. An electron discharge device having a straight thermionic cathode oblong in cross section with a long and a short transverse axis, an anode having curved surfaces surrounding said cathode and coaxial therewith, a pair of concentric lenticular grids coaxial with said cathode and positioned between said cathode and said anode, each of said grids being provided with a pair of oppositely disposed side rods lying in a plane passing through the longer tranverse axes of said lenticular grids, the longer axes of said cathode and said grids coinciding, the radius of the arc defining the curved surface of the outer grid being less than the radius of the arc defining the curved surface of inner grid, and shields between the anode and the grid side rods, the curved surfaces of the anode lying opposite the curved surfaces of the grids.

2,107,521

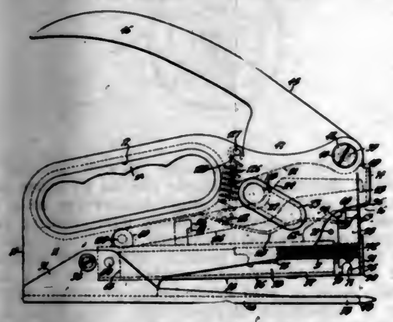
BRAKE SHOE KEY



Charles R. Busch, Orange, N. J., assignor to Buffalo Brake Beam Company, New York, N. Y., a corporation of New York

Application June 19, 1935, Serial No. 27,331

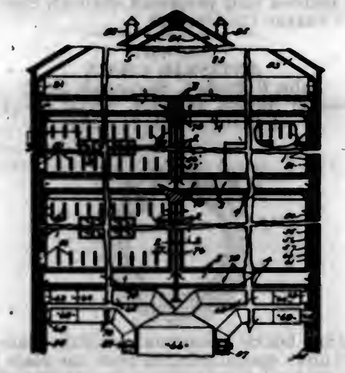
14 Claims. (Cl. 188—243)



1. In combination, a brake head and a shoe having a key-way and inter-engaged apertured members, the apertures registering with one another, and a key in the key-way and passing through the apertures, and including two broad legs of spring metal relatively arranged breadthwise at different distances from the shoe, and means connecting the legs, the leg further from

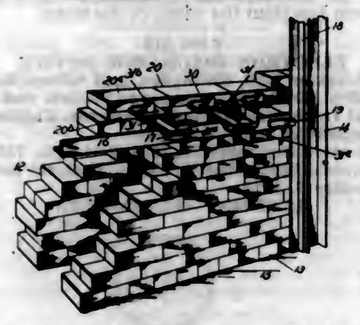
the shoe being so curved away from the other leg as to dispose its greatest curvature longitudinally

of the key at points below the apertured member of the shoe.



2,107,522
FASTENER-APPLYING DEVICE
John F. Cavanagh, Providence, R. I., assignor to Boston Wire Stitcher Company, Portland, Maine, a corporation of Maine
Application March 12, 1936, Serial No. 68,506
29 Claims. (Cl. 1—49)

1. In a device of the type indicated, fastener-applying means, a lever connected with the fastener-applying means, a second lever, means engaging between the levers and movable longitudinally of both levers, and means on one lever for moving the movable means longitudinally of the other lever to operate the fastener-applying means with a progressively increased mechanical advantage.

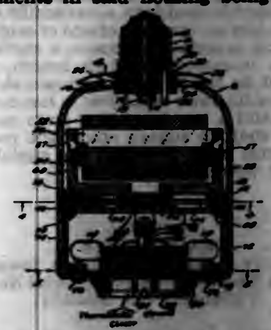


2,107,523
BUILDING STRUCTURE
Elbert H. Coe, Warners, N. Y.
Application November 15, 1935, Serial No. 49,993
9 Claims. (Cl. 237—53)

1. A hollow wall construction for a building comprising three vertical side portions separated by air spaces and connected at spaced intervals by vertically disposed bond portions which divide the air spaces into two series of vertically extending air ducts, said wall being provided with two series of horizontally disposed restricted air passages, one series of air passages for each series of air ducts whereby one series of air passages connect the interior of the building with one of the series of vertically extending air ducts and the other series of air passages connect the interior

of the building with the other series of vertically extending air ducts.

2,107,524
FIRE WALL CONSTRUCTION
George Crembie, Sr., Denver, Colo., assignor to The Stearns-Roger Manufacturing Company, Denver, Colo.
Application February 12, 1936, Serial No. 63,581
12 Claims. (Cl. 72—101)



10. In a fire wall, a recessed tile, and a wall-tie anchored in the recess and projecting therefrom, there being a passage from the recess to the exterior of the wall along a surface of the tie for circulating air across the same.

2,107,525
FIRE DETECTING AND ALARM MECHANISM
John H. Derby, Scarsdale, N. Y.
Application January 8, 1935, Serial No. 819
1 Claim. (Cl. 177—311)

A combined fire detector and alarm unit comprising, in combination, an electric socket connection by which said unit may be both supported from an electric socket and connected with a source of supply of alternating current, a housing carried by said socket connection, a sound diaphragm dividing said housing into two compartments, an alternating current magnet in one compartment, a magnet armature carried by said diaphragm in attractive relation to said magnet, a thermostatic circuit closer forming also a closure for said housing, a normally open circuit including said socket connection, said magnet,

and said thermostatic circuit closer, each of said compartments in said housing being vented to

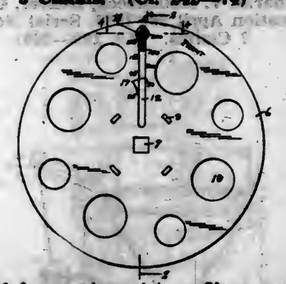
the atmosphere to permit sound waves to be propagated from both faces of said diaphragm.

2,107,526
TREATMENT OF TEXTILE AND OTHER MATERIALS
Henry Dreyfus, London, England
No Drawing. Application July 12, 1935, Serial No. 31,099. In Great Britain July 31, 1934
13 Claims. (Cl. 8—5)

1. Process for the colouration of textile materials, which comprises impregnating the material with a liquid containing a leuco compound of a vat dyestuff, partially drying the material so as to concentrate the impregnating liquid thereon, drying being conducted under such conditions that no substantial oxidation of the leuco compound occurs, and thereafter converting the leuco compound into the parent vat dyestuff.

2,107,527
PROCESS FOR CONCENTRATING ORGANIC ACIDS
Theodore Evans, Oakland, and Karl R. Edlund, Berkeley, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application November 21, 1933, Serial No. 699,032
28 Claims. (Cl. 260—122)

25. The process for continuously separating water from its solution with one or more of the lower fatty acids, in which the dilute acid or acids is extracted with a mixed ether having a normal boiling point between 80 and 105° C., the aqueous layer discharged after substantially complete exhaustion, the ether layer, containing substantially all of the acid or acids originally present and part of the water, passed to a column still in which the ether removes the water in an azeotropic distillation and the lower fatty acid or acids are discharged in a concentrated condition.



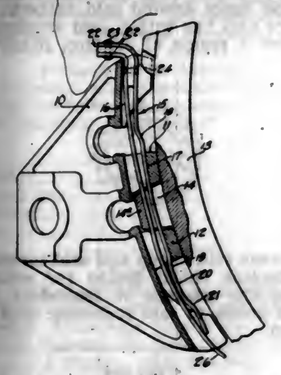
2,107,528
RENAPPING PROCESS
Benjamin G. Feinberg, New York, N. Y.
No Drawing. Application May 31, 1933, Serial No. 673,770
7 Claims. (Cl. 26—28)

1. The process of re-napping textile fabric which consists in moistening the fabric with an emollient solution containing casein in suspension, rubbing with an abrasive the surface of the fabric in the presence of the emollient solution and then cleansing the fabric in a non-aqueous cleanser.

2,107,529
MANUFACTURE AND USE OF MALT ADJUNCT FROM CORN
Walter R. Fetzer, St. Louis, Mo., assignor to Union Starch and Refining Company, Columbus, Ind., a corporation of Indiana
No Drawing. Application November 25, 1935, Serial No. 51,485
2 Claims. (Cl. 99—50)

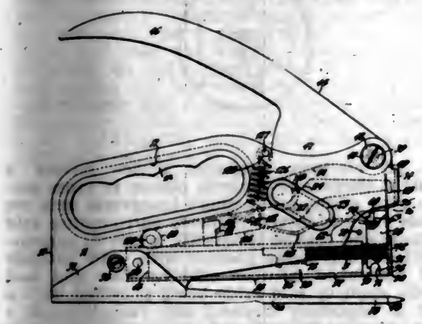
2. The method of making a malt adjunct which comprises treating corn kernels to elevate the moisture content, cracking the kernels to release the germ, floating away the germ, grinding the residual kernel, treating the product with water to remove soluble ash, soluble protein and corn acids, and to release free starch grains, combining free starch grains, corn kernel fiber and gluten in water, dewatering the mixture to form wet lumps, and drying the lumps, the gluten and fiber serving as binding agent to minimize formation of dust from the dry lumps.

2,107,530
FILM REEL AND FILM ATTACHING MEANS THEREFOR
Jacob M. Goldberg, Denver, Colo.
Application November 9, 1936, Serial No. 109,936
Renewed December 29, 1937
3 Claims. (Cl. 242—74)



1. A reel for moving picture films, comprising two disks, a hollow circular hub connecting the disks and provided with a peripheral opening, the disks having radially extending slots that register with the ends of the peripheral opening, and a film securing device mounted for movement in the slots, from a position within the peripheral area of the hub to a position adjacent the peripheries of the disks, the securing device comprising a strip of resilient material bent double into the form of a narrow elongated U, each side having a lug projecting from each of its edges, for engagement with the edges of the slots, the lugs having their outer ends bent over to engage the outer surfaces of the disks to limit sidewise movement of the securing device while permitting free longitudinal movement.

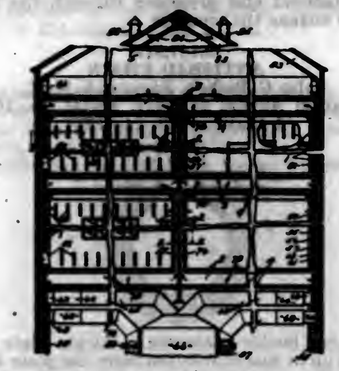
2,107,531
CIRCULAR LOOM
Frank Corbyn Hale and Robert Yeadon, Spondon, near Derby, England, assignors to Celanese Corporation of America, a corporation of Delaware
Application July 16, 1935, Serial No. 31,599
In Great Britain July 23, 1934
6 Claims. (Cl. 139—13)



1. A light vane wheel driving unit for a circular loom, comprising a casing, a vane wheel supporting shaft supported by said casing, a gear on said shaft within said casing, a driving spindle supported by said casing and disposed substantially

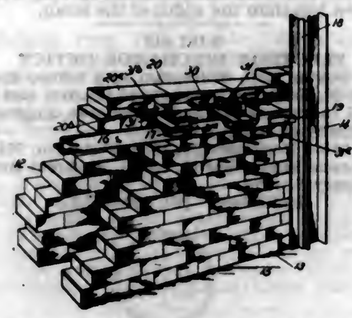
the shoe being so curved away from the other leg as to dispose its greatest curvature longitudinally

of the key at points below the apertured member of the shoe.



2,107,522
FASTENER-APPLYING DEVICE
John F. Cavanagh, Providence, R. I., assignor to Boston Wire Stitcher Company, Portland, Maine, a corporation of Maine
Application March 12, 1936, Serial No. 68,506
29 Claims. (Cl. 1—49)

1. In a device of the type indicated, fastener-applying means, a lever connected with the fastener-applying means, a second lever, means engaging between the levers and movable longitudinally of both levers, and means on one lever for moving the movable means longitudinally of the other lever to operate the fastener-applying means with a progressively increased mechanical advantage.

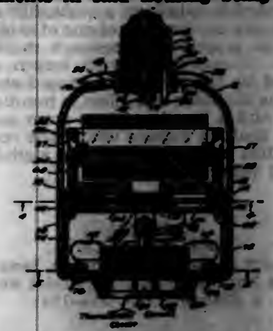


2,107,523
BUILDING STRUCTURE
Elbert H. Coe, Warners, N. Y.
Application November 15, 1935, Serial No. 49,993
9 Claims. (Cl. 237—53)

1. A hollow wall construction for a building comprising three vertical side portions separated by air spaces and connected at spaced intervals by vertically disposed bond portions which divide the air spaces into two series of vertically extending air ducts, said wall being provided with two series of horizontally disposed restricted air passages, one series of air passages for each series of air ducts whereby one series of air passages connect the interior of the building with one of the series of vertically extending air ducts and the other series of air passages connect the interior

of the building with the other series of vertically extending air ducts.

2,107,524
FIRE WALL CONSTRUCTION
George Crumbie, Sr., Denver, Colo., assignor to The Stearns-Roger Manufacturing Company, Denver, Colo.
Application February 12, 1936, Serial No. 63,581
13 Claims. (Cl. 72—101)



10. In a fire wall, a recessed tile, and a wall-tie anchored in the recess and projecting therefrom, there being a passage from the recess to the exterior of the wall along a surface of the tie for circulating air across the same.

2,107,525
FIRE DETECTING AND ALARM MECHANISM
John H. Derby, Scarsdale, N. Y.
Application January 8, 1935, Serial No. 819
1 Claim. (Cl. 177—311)

A combined fire detector and alarm unit comprising, in combination, an electric socket connection by which said unit may be both supported from an electric socket and connected with a source of supply of alternating current, a housing carried by said socket connection, a sound diaphragm dividing said housing into two compartments, an alternating current magnet in one compartment, a magnet armature carried by said diaphragm in attractive relation to said magnet, a thermostatic circuit closer forming also a closure for said housing, a normally open circuit including said socket connection, said magnet,

and said thermostatic circuit closer, each of said compartments in said housing being vented to

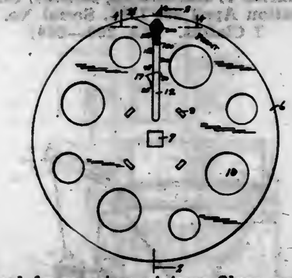
the atmosphere to permit sound waves to be propagated from both faces of said diaphragm.

2,107,526
TREATMENT OF TEXTILE AND OTHER MATERIALS
Henry Dreyfus, London, England
No Drawing. Application July 12, 1935, Serial No. 31,099. In Great Britain July 31, 1934
13 Claims. (Cl. 8—5)

1. Process for the colouration of textile materials, which comprises impregnating the material with a liquid containing a leuco compound of a vat dyestuff, partially drying the material so as to concentrate the impregnating liquid thereon, drying being conducted under such conditions that no substantial oxidation of the leuco compound occurs, and thereafter converting the leuco compound into the parent vat dyestuff.

2,107,527
PROCESS FOR CONCENTRATING ORGANIC ACIDS
Theodore Evans, Oakland, and Karl E. Edlund, Berkeley, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application November 21, 1933, Serial No. 699,032
33 Claims. (Cl. 260—122)

25. The process for continuously separating water from its solution with one or more of the lower fatty acids, in which the dilute acid or acids is extracted with a mixed ether having a normal boiling point between 80 and 105° C., the aqueous layer discharged after substantially complete exhaustion, the ether layer, containing substantially all of the acid or acids originally present and part of the water, passed to a column still in which the ether removes the water in an azeotropic distillation and the lower fatty acid or acids are discharged in a concentrated condition.



2,107,528
RENAPPING PROCESS
Benjamin G. Feinberg, New York, N. Y.
No Drawing. Application May 31, 1933, Serial No. 673,770
7 Claims. (Cl. 26—28)

1. The process of re-napping textile fabric which consists in moistening the fabric with an emollient solution containing casein in suspension, rubbing with an abrasive the surface of the fabric in the presence of the emollient solution and then cleansing the fabric in a non-aqueous cleanser.

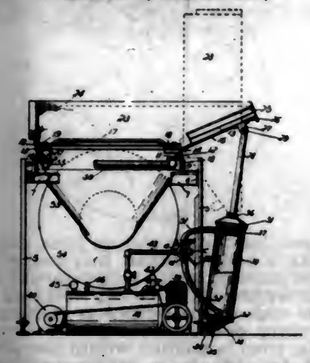
2,107,529
MANUFACTURE AND USE OF MALT ADJUNCT FROM CORN
Walter R. Fetzer, St. Louis, Mo., assignor to Union Starch and Refining Company, Columbus, Ind., a corporation of Indiana
No Drawing. Application November 25, 1935, Serial No. 51,485
2 Claims. (Cl. 99—50)

2. The method of making a malt adjunct which comprises treating corn kernels to elevate the moisture content, cracking the kernels to release the germ, floating away the germ, grinding the residual kernel, treating the product with water to remove soluble ash, soluble protein and corn acids, and to release free starch grains, combining free starch grains, corn kernel fiber and gluten in water, dewatering the mixture to form wet lumps, and drying the lumps, the gluten and fiber serving as binding agent to minimize formation of dust from the dry lumps.

2,107,530
FILM REEL AND FILM ATTACHING MEANS THEREFOR
Jacob M. Goldberg, Denver, Colo.
Application November 9, 1936, Serial No. 109,936
Renewed December 29, 1937
3 Claims. (Cl. 242—74)

1. A reel for moving picture films, comprising two disks, a hollow circular hub connecting the disks and provided with a peripheral opening, the disks having radially extending slots that register with the ends of the peripheral opening, and a film securing device mounted for movement in the slots, from a position within the peripheral area of the hub to a position adjacent the peripheries of the disks, the securing device comprising a strip of resilient material bent double into the form of a narrow elongated U, each side having a lug projecting from each of its edges, for engagement with the edges of the slots, the lugs having their outer ends bent over to engage the outer surfaces of the disks to limit sidewise movement of the securing device while permitting free longitudinal movement.

2,107,531
CIRCULAR LOOM
Frank Corbyn Hale and Robert Yeadon, Spondon, near Derby, England, assignors to Celanese Corporation of America, a corporation of Delaware
Application July 16, 1935, Serial No. 31,599
In Great Britain July 23, 1934
6 Claims. (Cl. 139—13)



1. A light vane wheel driving unit for a circular loom, comprising a casing, a vane wheel supporting shaft supported by said casing, a gear on said shaft within said casing, a driving spindle supported by said casing and disposed substantially

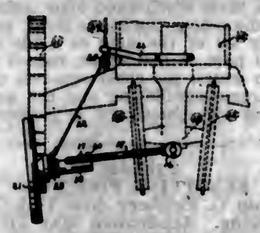
at right angles to said vane wheel supporting shaft, a gear on said driving spindle within said casing and in engagement with said gear on said

shaft, ball bearings for said shaft and said spindle, and a driving pinion on said spindle outside the casing.

2,107,532
DUMPING GRIZZLY
Charles V. Hallenbeck, Denver, Colo.
Application April 30, 1935, Serial No. 19,009
7 Claims. (Cl. 209—260)

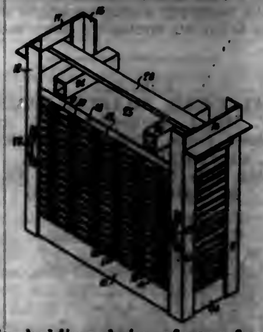
1. A normally horizontal grizzly having spaced bars, walls along one end and side, a spout at the other end thereof upwardly inclined from the normal horizontal position of the grizzly and movable therewith, said grizzly being mounted for pivotal movement to a substantially upright position, and pressure operated means for tilting the grizzly to effect a discharge of material therefrom across the spout.

2,107,533
AUTOMOBILE SIGNAL
William A. Hollingsworth, Fuente, Calif.
Application October 19, 1936, Serial No. 106,444
1 Claim. (Cl. 116—52)



The automobile signal herein shown and described, comprising a pair of sections slidably fitted together, a pair of vertically disposed lugs at the inner end of one of said sections, a pin pivotally mounted in said lugs, a vertically arranged segmental plate on the back of one of said sections provided with a series of recesses, a shaft pivoted to said pin intermediate of its length, a signal arm carried by the outer end of said shaft, said shaft having its inner end offset, a handle on said offset end and a lug depending from said offset end of the shaft to engage one of the recesses in the segmental plate to adjust the signal arm to the desired vertical position.

2,107,534
FACE METER
Harry P. Houser, Waterloo, Iowa
Application November 18, 1936, Serial No. 111,413
6 Claims. (Cl. 33—174)



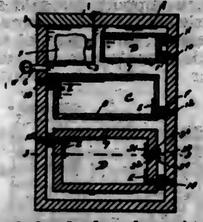
1. In a face meter, a supporting body, an indicator mounted for both longitudinal and horizontal adjustments therealong, and devices mounted on upper and lower end parts of the supporting body respectively, adjustable both longitudinally and horizontally therealong in relation to said indicator, said devices having furcations spaced from and for spanning opposite upper or lower deformed parts of the patient's head, and lacking means for securing said indicator and devices in their adjusted positions.

2,107,535
SELF-STEERING MECHANISM FOR TRACTORS
Frank J. Iribeck, Dedham, Iowa
Application May 24, 1937, Serial No. 144,343
3 Claims. (Cl. 97—49)

1. In combination with a tractor having two front guiding and supporting wheels, an auxiliary steering apparatus comprising a horizontal bar operatively connected near its center to said guiding wheels, a U-shaped member having its two ends vertically rotatably mounted on said bar, and a wheel rotatably mounted on and near the center portion of said U-shaped member.

2,107,536
MEANS FOR TREATING YARN
Edwin F. James and Lawrence E. Resnick, Mount Holly, N. C., assignors to Carolina Dyeing and Winding, Incorporated, Mount Holly, N. C., a corporation of Massachusetts
Application September 7, 1934, Serial No. 743,168
1 Claim. (Cl. 8—7)

Means for holding skeins of yarn for treatment in a treating bath comprising an elongated flat member which is longer and broader than a skein of yarn, an endless projection on one side of the flat member forming an enclosure, a second member of approximately the same size as the first member and adapted to lie on top of the first member after a skein of yarn has been spread on top of the first member and means for pressing the two members together to shield the portions of yarn disposed within said enclosure from the effects of a treating bath when the members and the yarn are immersed in a treating bath.



2,107,537
TREATMENT OF SOLID MATERIALS WITH LIQUIDS
John Edward Jones and David Robert Johnston, Spondon, near Derby, England, assignors to Celanese Corporation of America, a corporation of Delaware
Application January 20, 1934, Serial No. 707,504
In Great Britain January 24, 1933
2 Claims. (Cl. 260—102)

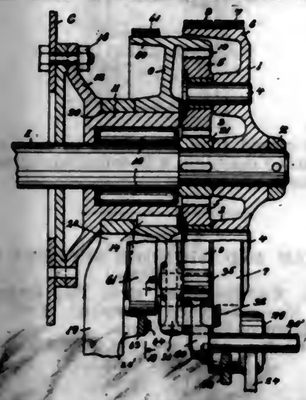
1. Process for the treatment of cellulose esters of organic acids in the form of loose granules or flakes or the like and which contain acid employed in the esterification of cellulose to the cellulose esters, which comprises continuously feeding the acid-containing cellulose ester into, positively propelling it along and discharging it from, an elongated passage and causing a countercurrent of treating liquid capable of dissolving said acid but unaffecting said cellulose ester to flow continuously through the body of the travelling cellulose ester so as to be in constant contact therewith, whereby the esterification acid is removed from the cellulose ester.

2,107,538
REFRIGERATOR
Clarence Irving Justheim, Salt Lake City, Utah
Application September 12, 1934, Serial No. 743,857
8 Claims. (Cl. 62—91.5)

1. In a refrigerator, the combination of a casing; means to introduce carbon dioxide gas thereinto to cool said casing; means to control the flow of said gas thermostatically; separately

insulated closed food chambers in said casing; and means to maintain a predetermined temperature in each chamber.

2,107,539
WRINGER AND WRINGER SUPPORT CONNECTION
Walter L. Kaufman, II, Erie, Pa., assignor to Lovell Manufacturing Company, Erie, Pa., a corporation of Pennsylvania
Application December 21, 1933, Serial No. 703,354
6 Claims. (Cl. 68—32)



1. A wringer frame comprising a side stile of box form having a shaft receiving slot on its inner side and a projection on the outer wall of the stile opposite the slot, said projection being adapted to engage a recess in a wringer support and having an opening for receiving a securing stud.

2,107,540
POWER TAKE-OFF
Erich H. Lichtenberg, Milwaukee, Wis., assignor to Keehring Company, Milwaukee, Wis., a corporation
Application December 23, 1933, Serial No. 703,655
12 Claims. (Cl. 82—73)

1. In combination with a mixing apparatus of the class described, which includes a frame, a mixing drum mounted on said frame, a driven shaft lying on the axis of rotation of said mixing drum, a prime mover mounted on said frame for rotating said shaft, a power take-off means for coupling said shaft to said drum for selective rotation of said drum, said power take-off including a gear carrier mounted on said shaft and freely rotatable with relation thereto, a plurality of planetary gears mounted on said gear carrier, a gear mounted on said main shaft and meshing with said planetary gears, a driven member mounted on said shaft and having a gear meshing with said planetary gears, a sleeve member encompassing said shaft and supporting said

driven member, said driven member being keyed thereto, a radial part on said sleeve member, instrumentalities for connecting said radial part to said drum, a support for said sleeve encompassing said sleeve between the radial part and the driven member, and a pair of friction bands, one of which is mounted on said driven member and the other of which is mounted upon said

gear carrier, and operating instrumentalities therefor, said first named friction band being effective to hold the said drum against rotation, said second named friction band being effective to hold said gear carrier against rotation and effect the drive of said drum through said planetary gearing, driven member and sleeve member.

2,107,541

WIPING DEVICE FOR ROLLING MILL ROLLS

Paul H. Long, Middletown, Ohio, assignor to The American Rolling Mill Company, Middletown, Ohio, a corporation of Ohio

Application September 6, 1934, Serial No. 742,949

4 Claims. (Cl. 80—1)

1. A combined coolant wiper and foreign-substance remover for a rolling-mill roll, comprising a member of softness and resiliency, having embedded in its surface that acts on the roll particles of abrasive material to effect the removal of the foreign substance from the roll.

2,107,542

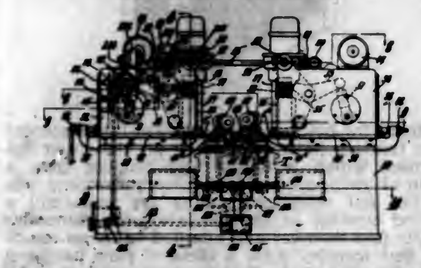
SAFETY EQUIPMENT FOR BOATS

Morris Mandel, Chicago, Ill.

Application June 9, 1937, Serial No. 147,223

5 Claims. (Cl. 9—4)

1. A safety appliance for boats comprising collapsible flexible side members fastened in a collapsed condition on the top of the gunwales of a boat, a waterproof cover member enclosing the same, a collapsible flexible back member fastened in a collapsed condition on the top of the back edge members of the boat, a waterproof cover member enclosing the same, means comprising rigid strap members for supporting said flexible side and back members in a raised position, each of said side members having a resilient meeting edge, fastening means to hold said edges together in a raised position, and means fastening said back member along its edges to said side members to form an enclosure over said boat.



2,107,543

PLURAL GEAR SHAPING MACHINE

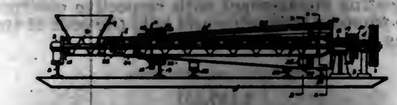
Edward W. Miller, Springfield, Vt., assignor to The Fellows Gear Shaper Company, Springfield, Vt., a corporation of Vermont

Application July 27, 1934, Serial No. 737,172

46 Claims. (Cl. 90—9)

3. In a gear generating machine, a plurality of gear shaper cutters each having teeth occupying less than the whole pitch circumference of the cutter and a gap at one side devoid of teeth, the number of such teeth being a multiple of the number of teeth to be cut in the work pieces and being arranged in series of which the second series are designed to cut the work additionally to the teeth of the preceding series, a turret rotatably mounted with its axis at an intermediate point between the cutter axes, a plurality of work spindles, adapted to carry gear blanks, rotatably mounted in said turret at such distances from the turret axis and from one another as to cause each spindle to be brought in turn, by rotation of the turret, into operative relationship with each cutter, means for rotating the cutter and work spindles in harmony for the generation of gears, and timing means organized to rotate the turret while the toothless gaps of the cutter are tangent to the spindle orbit and to cause pausing of the spindles in their working positions long enough to be acted on by all of the cutter teeth.

34. A gear generating machine comprising a rotatable turret, a plurality of work spindles rotatably mounted in the turret equidistant from and equiangularly spaced about the axis of the turret, means for periodically indexing the turret and stopping it with the spindles in turn in each of two working locations, a cutter spindle reciprocatively and rotatably mounted beside that one of the working locations in which the cutter spindles are first placed, a rounding tool carrier reciprocatively mounted beside the second working location, a tooth rounding tool mounted on said carrier in position to bevel the ends of teeth generated in the work pieces at the first working location, means for simultaneously rotating the work spindles in both working locations, and means for giving a back and forth reciprocation to the rounding tool carrier while the work spindle turns through the angle between two adjacent teeth of the work piece carried thereby.



2,107,544

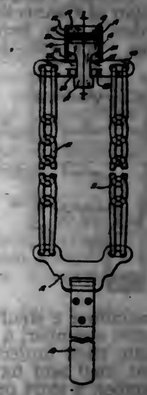
MIXER AND CONDITIONER

Weldon B. Moore, Corpus Christi, Tex.

Application January 2, 1934, Serial No. 704,879

4 Claims. (Cl. 210—60)

1. Apparatus for reconditioning a fluid drilling mud containing foreign bodies comprising spaced bearings, a conveyor shaft mounted in said bearings, means for rotating the shaft, a tubular stationary housing surrounding one end of the shaft and having a feed hopper, an intermediate bearing supporting one end of the housing, said intermediate bearing having an inside annular channel forming a collecting chamber, a drain leading from said chamber, a drum-like screen aligned with the housing, one end of which is supported in said intermediate bearing, and the other end of which is provided with a cage having an extended tubular shaft which surrounds the conveyor shaft, means for rotating said tubular shaft and screen, the adjacent ends of the screen and housing being provided, one with an annular collar whose free end is [illegible] and surrounds the other whereby the [illegible] through the joint between the housing [illegible] will be directed into said chamber, [illegible] surrounding the screen and flared [illegible] its discharge end, said collector having end bearings to receive and form a close fit with the screen, a drum-like guard adjacent the discharge end of the collector and surrounding and enclosing said cage, said collector and guard being provided with outlets, a conveyor on the conveyor shaft underneath said hopper, a conveyor on said shaft within the screen, mixing paddles on the conveyor shaft between said conveyors.



2,107,545

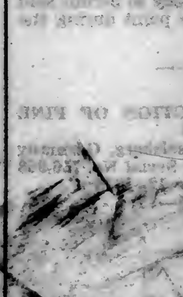
ANTISKID DEVICE

Frederick A. Olmstead, Cleveland Heights, Ohio, assignor to The Hodell Chain Company, a corporation of Ohio

Application April 16, 1934, Serial No. 720,678

13 Claims. (Cl. 24—193)

4. In a buckle of the character described, a frame having a base for receiving and supporting a strap member, strap clamping means secured to said base and including an operating lever having strap release and strap clamping positions, a set of primary lugs lying above and thereby securing a first portion of the strap in position over the lever to lock the same in clamping position, and a set of secondary lugs lying above and thereby securing the free end of the strap in a position folded back over the first portion thereof.



2,107,546

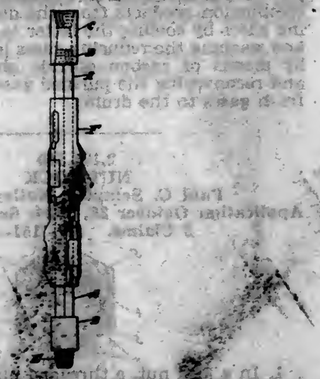
LIGHTER AND FUEL THEREFOR

Neil B. Purdy and Herman A. Schneider, Milwaukee, Wis.; said Purdy assignor to said Schneider

Application April 7, 1934, Serial No. 719,436

6 Claims. (Cl. 67—7.1)

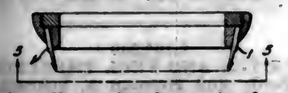
5. A lighter, comprising, an elongated fuel cartridge composed solely of dry carbonized cotton, and a tubular container of somewhat larger internal cross-sectional area than the greatest cross-sectional area of said cartridge providing an air passage between said cartridge and container and having an open end for the reception and ignition of the cartridge, said container also having an air admission opening remote from said end for delivering air to the ignition zone through the space surrounding said cartridge.



2,107,547

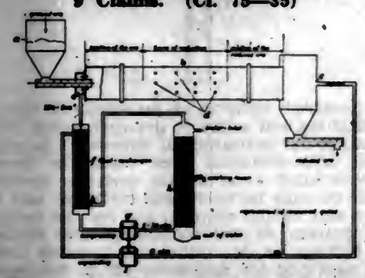
WELL REAMER

Thomas Myron Pyle, Oklahoma City, Okla.



Application October 19, 1936, Serial No. 106,331

1 Claim. (Cl. 255—73)

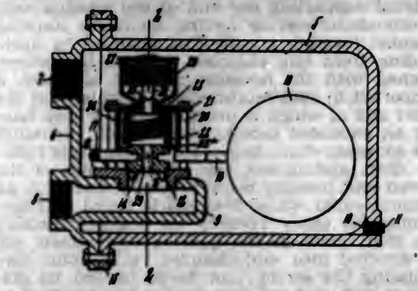


In combination with a drill string for rotary drilling, a reamer slidably mounted on said drill string, means to prevent relative rotation between said drill string and said reamer, and means to jar said reamer.

2,107,548
WORK TRANSFERRING DEVICE FOR KNITTING MACHINES
Clyde Alvin Riggs and Trester Byron Farmer, Chattanooga, Tenn.
Application March 16, 1936, Serial No. 69,064
6 Claims. (Cl. 66—148)

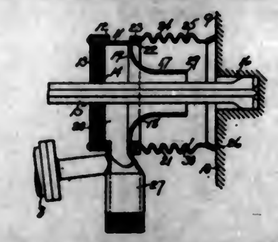
1. An impaling point for a circular quill ring for transferring knitted fabric to the needles of a circular knitting machine having an incut of relatively greater width than depth to engage a loop of the fabric therein, whereby to permit said loop to move lengthwise of the point during the transfer operation.

2,107,549
PROCESS FOR THE REDUCTION OF FINE IRON ORES
Hans Schmalfeldt, Cassel-Bracselberg, Germany
Application December 11, 1934, Serial No. 756,968
In Germany December 12, 1933
9 Claims. (Cl. 75—35)



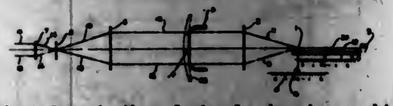
1. Process for the production of iron powder from fine iron ores in a rotary reduction drum comprising the step of bringing into contact the iron ores with reducing gases comprising carbon monoxide, introducing pure oxygen into the drum, the heat for heating the ores to 750° C. to 900° C. being produced by internal combustion of a part of the reducing gases by means of said pure oxygen, the further step of removing the combustion products from the discharged reducing gases by cooling the latter to 10° C. to 20° C. and washing the reducing gases leaving the drum by means of carbon dioxide absorbing liquids, and reconveying the purified gases together with fresh gases to the drum.

2,107,550
NUT LOCK
Paul C. Schmidt, Nutley, N. J.
Application October 23, 1934, Serial No. 749,395
2 Claims. (Cl. 151—26)



1. In a lock nut, a threaded nut having a bore extending transversely of the threads of the nut and having open ends, one side of the bore intersecting a portion of the threads of the nut, obstruction means formed solely upon the wall of the bore opposite the threads of the nut, said obstructions being positioned adjacent respective ends of the bore, a coiled spring within the bore normally of a length greater than the length of the bore and extending across and intersecting the threads of the nut, the ends of the spring having seating engagement with respective obstructions whereby to confine and hold the coils of the spring under compression.

2,107,551
STEAM TRAP AND BALANCED VALVE
William K. Simpson, Waterbury, Conn., assignor to Hoffmann Specialty Company, Waterbury, Conn., a corporation of Illinois
Application December 16, 1935, Serial No. 54,618
10 Claims. (Cl. 236—53)



5. The combination with a casing having an opening to the outside, of a valve controlling said opening and being exposed on one side to the fluid pressure outside of the casing, an expansible bellows mounted in the casing in internal communication with the external pressure and in exposure externally to the pressure within the casing means whereby the internal pressure acting on the bellows is applied to the valve in opposition to the external pressure to which the valve is exposed, and means for shifting the valve between closing and opening positions.

2,107,552
HOOD FOR ROCK DRILLS
Lester C. Smith, West Hartford, Conn., assignor to The Spencer Turbine Company, Hartford, Conn., a corporation of Connecticut
Application September 1, 1937, Serial No. 161,972
4 Claims. (Cl. 255—59)

1. A drill hood including a shell closed at one end creating an outlet chamber, a spout smaller in diameter than said shell projecting from the opposite end of said shell and having openings into said outlet chamber, a skirt projecting from said shell and surrounding said spout creating an annular chamber communicating with said openings, and an outlet from said outlet chamber.

2,107,553
OPHTHALMIC INSTRUMENT
Edgar D. Tillyer, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a voluntary association of Massachusetts
Application July 29, 1935, Serial No. 32,738
10 Claims. (Cl. 88—56)

10. A lens testing device having in combination, a projecting system embodying a source of illumination, a target and a standard lens for projecting, through a lens to be tested, rays of light of a vergence substantially equal to the angle of vergence of light rays coming from an object at a known near distance for which it is desired to obtain the effective focal power, an image forming lens system for producing a test image of said target, an optical system for viewing said image and an apparatus for measuring the focal power of a lens for said rays by changing the relative positions of some of the components of the projecting system.

2,107,554
HAIR TREATMENT
James Vagholsten, Toledo, Ohio
Application December 20, 1935, Serial No. 54,615
4 Claims. (Cl. 132—36)

1. In hair heating treatment and control, a holder for hair, said holder being of general cylindrical form and having along its cylindrical portion a hair-receiving way for parallel spiral wraps of hair extending therealong laterally therefrom for determining a position for the holder approximately parallel to the head having the hair being treated, treating means adapted to be located on the hair at the holder providing a region for heating, a radially set heater, and assembly means for the heater relatively to the holder and having clearance therealong for said hair-receiving way providing ready release for the heater independently of disturbing the located treating means.

2,107,555
STAPLING MACHINE ATTACHMENT
John Lee Walsh, Baltimore, Md., assignor to May Oil Burner Corporation, a corporation of Maryland
Application July 2, 1936, Serial No. 88,633
5 Claims. (Cl. 1—48)

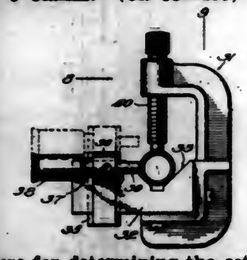
1. A portable stapling device, comprising a spring actuated stapler unit and a detachable extension device attached thereto, said extension device comprising an extension arm, a manually operable lever pivoted at one end of said arm, means at the other end of said arm for actuating said spring actuated stapler unit, and means for linking said manually operable lever with said arm actuating means, said arm actuating

means actuating said spring stapler unit when said manually operable lever is actuated.

2,107,556
DRILLING MECHANISM
Lesten Watson, Ardmore, Okla.
Application February 28, 1936, Serial No. 66,199
9 Claims. (Cl. 255—19)

1. A drilling mechanism adapted to be connected to a pile driver having a hammer and a follow block suspended from said hammer including, a drill stem suspended from the follow block, a drill bit on the lower end of the stem, and means for rotating the stem to rotate the bit, the suspension between the stem and block being such that the weight of the hammer may be placed on the stem to force the drill into the formation.

2,107,557
SCALP COOLING APPARATUS
Zebulon V. Wood and Guilford B. Melton, Gaffney, S. C., assignors of three-fourths to said Zebulon V. Wood and one-fourth to said Guilford B. Melton
Application March 16, 1936, Serial No. 69,159
2 Claims. (Cl. 132—36)



1. A head protecting shield for use in protecting the scalp in the art of permanent hair waving, said shield comprising a hollow resilient pad having an open ended slot therein which is adapted to encircle a bunch of hair adjacent the scalp,

the side of the pad disposed adjacent the scalp having a plurality of perforations adjacent the perimeter of said slot with the longitudinal axes of said perforations forming an acute angle with the longitudinal axis of said slot, and means for forcing air under pressure through said perforations to cool the scalp, the side of the pad remote from the scalp having secured thereto a pair of rigid members pivoted to each other at the closed end of the pad and being separable from each other at the open end of said pad.

2,107,553
GAUGING FIXTURE

Herman W. Zimmerman, Chicago, Ill., assignor to Automotive Maintenance Machinery Co., North Chicago, Ill., a corporation of Illinois

Application July 11, 1935, Serial No. 30,820
5 Claims. (Cl. 33—185)

1. A fixture for determining the setting of the cutting blade of a boring tool preliminary to boring a hole to fit the cylindrical portion of a predetermined part comprising in combination, a member having a substantially V-shaped groove adapted to successively engage said cylindrical portion and said boring tool, and a device adjustably mounted on the member so that a face thereof may be positioned to contact the surface of the portion when the same is engaged with the sides of said groove, the device being additionally shiftable on the member to move the face in a plane parallel to the plane which bisects the angle formed by the sides of the groove so as to contact the cutting blade of said boring tool when said tool is engaged with the sides of said groove, thereby determining the cutting position of the blade such that the hole bored thereby will fit the portion.

2,107,559
CARBONATED BEVERAGE

Clarence Edward Beck, Philadelphia, Pa., assignor of forty-seven percent to Albert T. Hanby, eight percent to Blanche Beck, and five percent to James H. Tait, all of Philadelphia, Pa.

No Drawing. Application November 14, 1935, Serial No. 49,858
7 Claims. (Cl. 99—78)

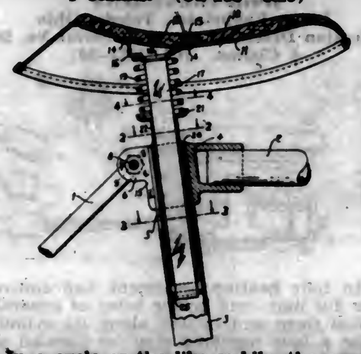
1. A carbonating tablet the essential ingredients of which are an alkali carbonate and an acid juxtaposed in alternate layers, the carbonate and the acid being intimately associated at the juncture of the layers and not elsewhere and the alternate layers being exposed at their edges.

2,107,560
ELECTRICAL INDICATING SYSTEM AND APPARATUS

Leonard Beddy, Ann Arbor, Mich., assignor to The Anderson Company, Gary, Ind., a corporation of Indiana

Application September 15, 1936, Serial No. 100,917
10 Claims. (Cl. 171—95)

4. An electrical indicator comprising a fixed support, a thermally responsive element comprising a pair of bi-metallic thermally warpable arms and an intermediate yoke, said arms extending in the same generally lateral direction from said yoke, spring means to maintain said yoke so positioned as to rock on a surface of



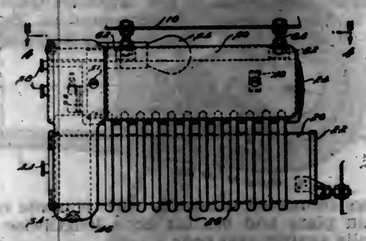
said support, an electrical heating element thermally associated with one of said arms, and an indicating element variably movably responsive to relatively differential thermally effected warping movements of one of said arms with respect to the other arm.

2,107,561
CYCLE SADDLE

John W. Brandt and Andrew J. Linder, Elyria, Ohio, assignors to The Trexel Manufacturing Company, Elyria, Ohio, a corporation of Ohio

Application December 9, 1935, Serial No. 53,491
3 Claims. (Cl. 155—5.19)

3. In a cycle or the like saddle, the combination with a cycle seat of a metal element rigidly secured to the under side of the seat, a tubular casing, a radially outwardly extending flange supported by the casing, the casing being adapted to be adjustably mounted in a cycle frame, a coiled spring having its lower convolution seating upon said flange and its upper convolution engaging the metal element to resiliently support the seat, a saddle post rigidly connected to the metal element and supported thereby, and the post lower portion being freely reciprocal in the casing but non-rotatable therewith.



2,107,562
REFRIGERATING APPARATUS

John C. Buchanan, Detroit, Mich., assignor to Borg-Warner Corporation, a corporation of Illinois

Application May 21, 1935, Serial No. 22,626
6 Claims. (Cl. 62—99)

2. In combination, a heat insulated compartment provided therein with cooling means spaced from the side walls thereof, said cooling means comprising a sleeve open at one end and providing a freezer compartment, a refrigerant

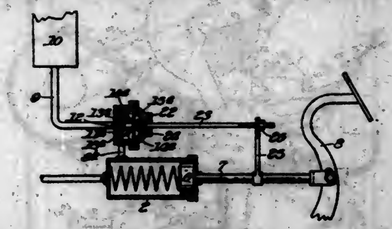
header disposed above said sleeve, a panel arranged forwardly of said sleeve and said header and having an opening aligned with the open end of said sleeve, and a closure member carried by

said panel and adapted for closing said freezer compartment, said panel being provided upon each side thereof with rearwardly extending integral flanges and being adapted to conceal the front of said header and said sleeve.

2,107,563
DISPENSING CAP

Edward L. Chott, Chicago, Ill., assignor of one-half to Hugo J. Chott, Chicago, Ill.

Application May 6, 1936, Serial No. 78,077
6 Claims. (Cl. 221—106)



6. A device of the character described comprising a container and a closure therefor, said closure having axially aligned filling and discharge ports, a dispensing cylinder between said ports, said cylinder having adjustable measuring recesses each being aligned with a pair of said ports, said recesses each having an adjustable measuring screw therein, a bore in said cylinder between said measuring recesses, and friction means in said bore to restrict the movement of said screws, said means comprising a spring, said spring having friction cap pins adapted to engage said measuring screws.

2,107,564
HYDRAULIC BRAKE

Edward A. Dickey, Allentown, Pa.

Application February 14, 1935, Serial No. 6,514
1 Claim. (Cl. 60—54.6)

In braking apparatus, in combination with a piping system and a pressure exerting master cylinder communicating therewith having a piston and actuating means therefor, a supply reservoir, a chambered valve casing having conduit connection with the reservoir and the master cylinder, an opening and closing diaphragm valve therein subject to static pressure of the reservoir adapted to establish circulation to the master cylinder when open and to discontinue circulation thereto when closed, an arm connected with the piston actuating means, a valve closing abutment having a stem extending through the valve casing slidably engaging the arm and provided with a retracting abutment at one side thereof to effect opening of the valve when the piston is in retracted position, and resilient means held under compression by the arm and retracting

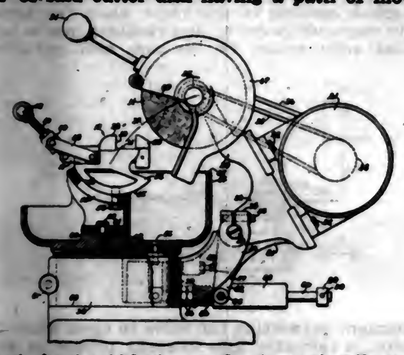
abutment permitting the valve to open when the piston is retracted and whereby release of such compression provides for reverse movement of the valve closing abutment and closing of the valve upon reverse movement of the piston-actuating means upon applying braking pressure.

2,107,565
HYDRAULIC MASTER BRAKE CYLINDER CONTROL

Charles E. Fiestle, Los Angeles, Calif.

Application October 28, 1936, Serial No. 108,031
2 Claims. (Cl. 188—142)

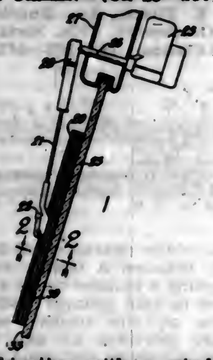
1. A device of the character set forth adapted to be placed between a towing vehicle and a trailer comprising a plunger body; a plunger slidably mounted in said plunger body adapted to apply brakes on the trailer; an internally threaded bore provided at one end of said plunger body; a spring adjusting nut mounted in said threaded bore; a friction washer resting against said adjusting nut; a spring cup slidably mounted at the bottom of said internally threaded bore to act as a guide for a tension spring which is interposed between said friction washer and said spring cup that absorbs any shock through the plunger; means slidably mounted in said internally threaded bore connecting said plunger so that when said plunger is actuated it causes the brakes of the trailer to operate.



2,107,566
CUT-OFF MACHINE

Ralph D. Gardner, Rockford, Ill., assignor to Whitney Metal Tool Company, Rockford, Ill., a corporation of Illinois

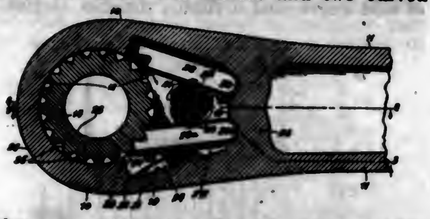
Application March 9, 1936, Serial No. 67,762
12 Claims. (Cl. 51—93)



1. A cut-off machine comprising, in combination, work supporting means including a fixed jaw and a movable jaw for holding a work piece, adjustable means for tilting said work supporting means about a horizontal axis, a rotatably mounted cutter disk, means for pivotally supporting said cutter disk to swing about a horizontal axis located below said work supporting means into and

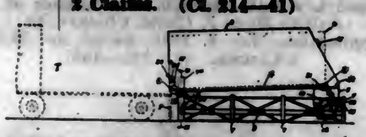
out of engagement with the work piece, the center of said cutter disk having a path of move-

ment about said last named axis passing through said fixed jaw.



2,107,567
WINDSHIELD WIPER BLADE
Harry H. Greco, Detroit, Mich.
Application August 12, 1936, Serial No. 95,581
8 Claims. (Cl. 15—250)

1. In combination with a windshield wiper blade composed of a holder and a plurality of resilient composition wiping strips held within said holder and depending therefrom, a tempered flexible thin metal scraper strip having its lower edge bent outward with respect to said wiping strips juxtaposed to said wiping strips and adapted to flex with the said wiping strips under usual operating pressure for permitting the said scraper strip as well as the said wiping strips to conform to any irregularities in the surface of a windshield scraped and wiped thereby.



2,107,568
RATCHET WRENCH
Foster A. Haist, Buffalo, N. Y.
Application June 12, 1935, Serial No. 26,266
4 Claims. (Cl. 81—62)

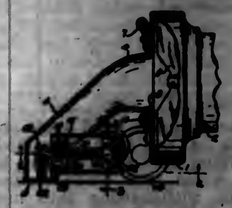
1. A ratchet wrench comprising: a body member having a socket; a rotatable ratchet head journaled in said body member and having ratchet teeth; a pawl disposed at its rear end within said socket and adapted to engage at its front end with said ratchet teeth; and restraining means for holding the front end of the pawl in engagement with the ratchet teeth and the rear end thereof in engagement with the bottom of said socket comprising a plate engaging with the outer side of said pawl and bearing against the front end thereof and two curved

springs connected integrally with opposite edges of said plate and bearing both lengthwise and laterally against said body.

2,107,569
LOADING DEVICE
Walter E. Hamlin, Cleveland, Ohio, assignor, by mesne assignments, to Consolidated Iron-Steel Manufacturing Company of 1932, Cleveland, Ohio, a corporation of Ohio
Application December 31, 1935, Serial No. 56,926
2 Claims. (Cl. 214—41)

1. A load transfer apparatus of the type comprising a main frame and a forwardly and rearwardly movable body adapted to carry a load, a wheel support on the frame for movably supporting the body, the wheel support comprising a frame element extending transversely of the main frame, means to guide the frame element to move vertically on the main frame, a pair of wheels rotatably supported on the frame element disposed under laterally spaced portions of the body, a pair of laterally spaced screws connected at upper end portions to laterally spaced portions of the transverse frame element, a nut on each screw, a frame support under each nut, a sprocket wheel connected to each nut, a sprocket chain connecting the sprocket wheels, a nut having means engageable by a tool to turn it to effect longitudinal propulsion of the screws to raise and lower the transverse frame element and wheels thereon.

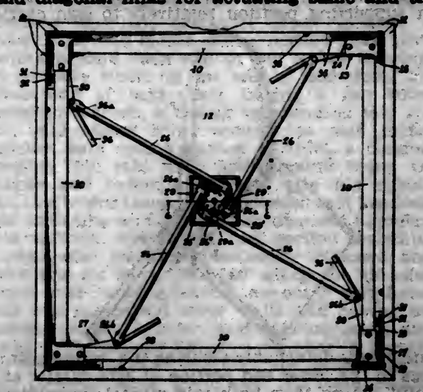
2,107,570
AUTOMATIC SWITCH LAMP SOCKET
John W. Hobbs, Chicago, Ill., assignor to The George W. Berg Corporation, Chicago, Ill., a corporation of Delaware
Application December 2, 1935, Serial No. 52,478
1 Claim. (Cl. 240—2)



In an automatic gravity operated electric lamp switch construction including a tubular casing open at its front end for the projection of light rays outwardly through said open end, a lamp socket sleeve frictionally fitted within said casing and having an end adapted to receive a lamp within said casing and adjacent its open end, a cup shaped cylindrical shell slidably mounted within said socket and having its closed end adjacent the lamp receiving end of said socket, an insulating sleeve between said socket and cup shaped shell, an insulating disc closing the other end of said cup shaped shell, a hot conductor connected to said disc and movable with said

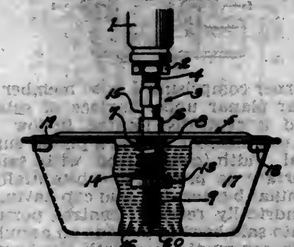
shell and having a head within said cup, spring means between said cupped shell and the rear end of said casing to urge said cupped shell towards the front end of the casing, a lamp within the lamp receiving end of said socket having a contact to bear against the closed end of said cupped shell and move the same inwardly when

the lamp is inserted in said socket, and freely movable gravity responsive conductor means within said cupped shell to adapt it to electrically connect said shell and the hot conductor when the casing is inclined in one direction and to electrically disconnect said shell and hot conductor when said casing is inclined in a different direction.



2,107,571
SUCTION CLEANER
James B. Kirby, West Richfield, Ohio
Application January 19, 1931, Serial No. 509,862
26 Claims. (Cl. 15—10)

1. The combination with the collecting nozzle of a vacuum cleaner of a supporting element pivoted thereto on an axis parallel to the plane of the inlet mouth, air suction means communicating with said nozzle, a brush carried by said element and located inside said inlet mouth, the pivot of said supporting element being spaced laterally from said brush, whereby said brush may rise and fall freely, and an eccentric and its driving motor carried by said suporting element and operatively connected to said brush in vibrating relation.



2,107,572
FOLDING TABLE
John Kovats, Fairfield, Conn.
Application August 21, 1936, Serial No. 97,123
19 Claims. (Cl. 311—23)

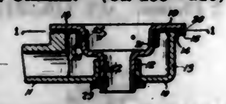
11. In a folding table, the combination of a rectangular table top; four legs; means for hinging the legs on the table top at the corners thereof for movement to and from extended and folded positions; toggle links connecting each leg with the table top; means acting on said toggle links for interconnecting the legs for simultaneous movement of all by one, said means including link members disposed diagonally of the table top, interconnecting diagonally opposite toggle links, and including means interconnecting the link members with each other; and a manually operable member pivotally carried by one of said diagonal links for actuating same and the

other links to break the toggles so that the legs may be folded.

2,107,573
POULTRY FOUNTAIN
Andrew H. Langdon, Los Angeles, John A. Langdon, Lancaster, and J. Spencer Langdon, La Habra, Calif.
Application April 13, 1936, Serial No. 74,130
3 Claims. (Cl. 119—81)

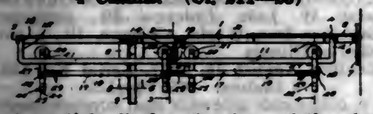
1. A poultry fountain fixed to a standpipe head and having a receptacle; means to support said receptacle on said standpipe head comprising a spider and a hollow stem slidably mounting said spider; said stem having threaded means at its top and bottom; an adjusting nut threaded near the bottom and on the stem that allows adjustment for a supporting spring that is interposed between said nut and an extension underneath said spider; a valve situated at the lower end of the stem in the passage, and means to operate the valve to keep the receptacle full of drinking water at all times.

2,107,574
COLLAPSIBLE SIDEWALK SIGN SUPPORT
Rudolph W. Lotz, Chicago, Ill., assignor to Schneider Iron Works, Chicago, Ill., a corporation of Illinois
Application August 16, 1937, Serial No. 159,260
6 Claims. (Cl. 40—125)



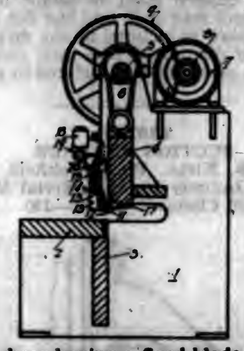
1. A collapsible sidewalk sign support comprising a sign carrying member, a pair of supporting legs pivotally secured at their ends to the same at points between the upper and lower ends thereof, a second pair of supporting legs pivotally secured to the first-named legs between the ends of the

latter and adapted to extend substantially perpendicularly thereto when said legs are disposed in supporting position relatively to said carrier



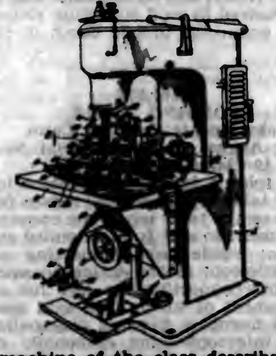
and means detachably securing the second pair of legs to the lower end portion of said carrier at a point spaced from both said pivotal connections.

2,107,575
BURNER
Richard L. Matthews, Lakewood, and John T. Marvin, Fairview Village, Ohio, assignors to The Patrol Valve Company, Cleveland, Ohio, a corporation of Ohio
Application December 28, 1934, Serial No. 759,454
2 Claims. (Cl. 158—116)



1. A burner comprising a bowl member having an annular planar upper surface of substantial width and a centrally located hollow tubular portion, a cap member having a planar surface of substantial width cooperating with said bowl planar surface to provide a substantially horizontal annular burner slot, said cap having a vertical cylindrically recessed central portion extending into said bowl to provide an annular passageway in communication with the burner slot and a cylindrically hollow tubular portion telescopically fitting said bowl tubular portion, and radially extending spacing means between said planar surfaces, said means having their outer extremities positioned a substantial distance inwardly of the outer edges of said surfaces and tapered to a sharp point in the direction of flow to permit the free flow of fuel in a continuous ring adjacent the outer edges of said planar surfaces to provide a continuous flame at the burner slot.

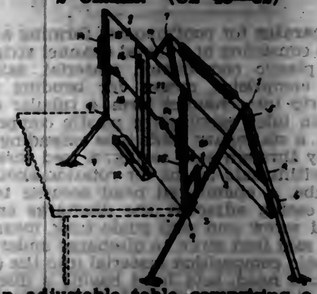
2,107,576
SUPPORTING AND DISPLAY RACK
Claude W. McAnally, Sr., Trinidad, Colo.
Application March 20, 1937, Serial No. 132,163
4 Claims. (Cl. 211—23)



1. An article display structure of the character described comprising a horizontally supported frame, a plurality of track bars secured to said frame in spaced parallel relation, and an article supporting hanger unit suspended from each bar and consisting of a pair of grooved wheels adapted to run on the bar, a hook frame carrying each wheel, and a connecting element between the frames, each of said hanger units being of an overall length materially less than the supporting bar whereby the unit may be moved a substantial distance forwardly with relation to associate hanger units, and means whereby the overall length of each unit may be changed to accommodate articles of various widths consisting of a plurality of apertures in the connecting element and a bolt for selective engagement therein and coupling the element with a frame.

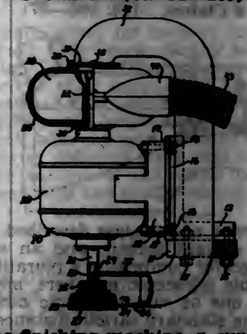
2,107,577
SHEARS
Samuel P. Moyer and Paul H. Long, Middletown, Ohio, assignors to The American Rolling Mill Company, Middletown, Ohio, a corporation of Ohio
Application September 6, 1935, Serial No. 39,462
5 Claims. (Cl. 164—47)

1. In a shear having a fixed blade and a reciprocating blade of the type described, positive means for wiping the reciprocating blade with oily material while said blade is moving, and mechanism for withdrawing said means from said blade before it begins its shearing function.



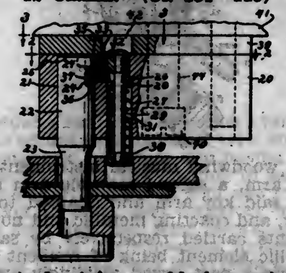
2,107,578
AUTOMATIC SHAPING MACHINE
Rudolph Onsrud, Chicago, Ill., assignor to Onsrud Machine Works, Inc., Chicago, Ill., a corporation of Illinois
Application May 24, 1937, Serial No. 144,398
4 Claims. (Cl. 144—145)

1. A machine of the class described comprising, a frame structure, a support pivoted for



oscillation on said frame structure, a cutter spindle mounted for rotation in said frame structure, a pair of turn tables mounted for rotation in the said pivoted support, a motor on said support and drive connections between said motor and turn tables, a clutch in said drive connections for making the drive effective for either of said turn tables, means for shifting said support to bring one or the other of the turn tables into cooperative relation with the cutter spindle, and said means including a clutch shifting element to insure the automatic operation of said clutch on each shift of said supporting structure.

2,107,579
ADJUSTABLE TABLE
Edmund J. Ouellette, Duluth, Minn.
Application March 25, 1935, Serial No. 12,831
2 Claims. (Cl. 45—82)

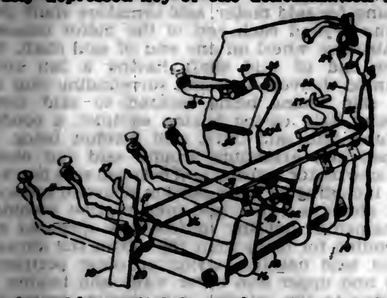


1. An adjustable table comprising a pair of leg sections pivotally united adjacent their upper ends, a table leaf pivotally secured at its lower corners to one of said leg sections intermediate of its ends, and a book shelf normally held in adjustable relation upon the under side of the table leaf, legs foldably attached to the upper corners of the table leaf for support thereof when extended for use as a table, and horizontal bracing members on the same side of both of said first mentioned leg sections so that when the table is fully folded said bracing members extend from one side of the folded structure and the book shelf and rack from the other side of the folded structure.

2,107,580
SHOE FINISHING APPARATUS
Harry H. Parks, Huntington Park, Lee A. Thomas, Maywood, and Howard S. Thomas, Huntington Park, Calif.
Application September 11, 1935, Serial No. 40,070
1 Claim. (Cl. 51—169)

In a shoe finishing machine, a support having a pair of brackets mounted thereon, a motor including a pedestal and an armature shaft, means to adjustably mount said pedestal on said brackets with the armature shaft vertical, a housing for said motor, said armature shaft projecting beyond each end of the motor housing, an abrasive wheel on one end of said shaft, the other end of said shaft having a fan rotor mounted thereon, a casing surrounding said rotor, said casing being secured to said motor housing, said casing having an inlet, a conduit opening into said inlet, said conduit being U-shaped and extending around said fan casing and said motor housing and between said brackets and including an inlet portion disposed adjacent said abrasive wheel, said inlet portion including a segmental housing horizontally disposed and extending for more than 180° about the abrasive wheel, said housing having an outer peripheral wall and upper and lower walls and having an opening to the interior, said opening being disposed adjacent said abrasive member, a closure for one end of said opening, the other end of said opening being open, said fan rotor casing having an exit therefrom and a flexible member communicating with said exit.

2,107,581
TOOL RETAINER
John H. Parsons, Bloomfield Hills, and Lawrence S. Lamb, Grosse Pointe Park, Mich.
Application October 31, 1932, Serial No. 640,466
Renewed July 9, 1937
12 Claims. (Cl. 164—118)



1. In a tool retainer, a block member having a tool socket therein and a depression in its rear surface adjacent and intersecting the socket, a backing plate arranged over the depression, a detent member slidable in the depression between and confined by the bottom of the latter and the backing plate which thus cooperate to form a slideway, said detent member having an inclined rear surface, an actuating member for the detent member movable laterally of the path of movement of the detent member having a wedging portion within the depression engageable with said inclined rear surface of the detent.

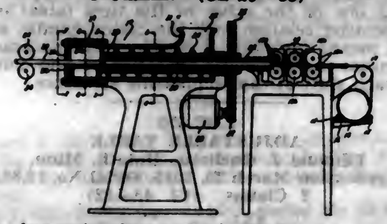
2,107,582
CALCULATING MACHINE
Walter J. Pasinski, Howell, Mich., assignor to Burroughs Adding Machine Company, Detroit, Mich., a corporation of Michigan
Application July 29, 1936, Serial No. 93,129
11 Claims. (Cl. 235—15)

1. In a cash register, a plurality of depressible keys of the desired denominations, and a key coupler having coupling portions adapted to latch said keys thereto upon partial depression of said keys, said coupling portions being so constructed and arranged that keys of denominations of other than those previously latched to said coupler may

be latched thereto, said coupling portions also being so constructed and arranged that a previously depressed key of one denomination may

be released by partial depression of a second key of the same denomination to latching position with said coupling portions.

2,107,583
KEY MECHANISM FOR WOODWIND INSTRUMENTS
Ford D. Platz, Fort Wayne, Ind., assignor to C. G. Conn, Ltd., Elkhart, Ind., a corporation of Indiana
Application May 2, 1936, Serial No. 77,491
8 Claims. (Cl. 84—382)



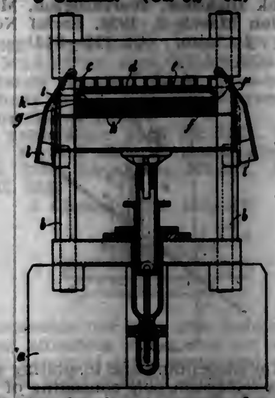
1. In a woodwind musical instrument, a movable key arm, a second movable arm arranged adjacent said key arm and adapted to actuate the latter, and coacting metallic and non-metallic elements carried respectively by said arms, the metallic element being of resilient material and having a part urged yieldingly away from the arm which carries it and held constantly in engagement with the non-metallic element.

2,107,584
KERF-CUTTING MACHINE
Thomas E. Pray, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application August 7, 1936, Serial No. 94,738
16 Claims. (Cl. 262—28)

1. In a mining machine, a frame, and a pair of cutter bars having cutter chains movable thereabout, mounted on said frame for simultaneous adjustable pivotal movement about coaxial vertical axes disposed adjacent their rearward ends, means for mounting said cutter bars for simultaneous vertical adjustment with respect to said frame and means interposed between said cutter bars for adjustably moving one of said cutter bars with respect to the other.

2,107,585
STRIP FORMING APPARATUS
James S. Reid, Shaker Heights, Ohio, assignor, by mesne assignments, to The Standard Products Company, Cleveland, Ohio, a corporation of Ohio
Application February 28, 1936, Serial No. 66,182
5 Claims. (Cl. 29—33)

1. Apparatus for continuously forming a tacking strip consisting of a metal channel strip containing plastic composition material, said apparatus comprising means for bending a flat metal strip into channel form, a tubular casing having an inlet opening for plastic composition material, a stationary guide tube extending longitudinally through said casing, a feed screw arranged within said casing for rotation about said guide tube, a chambered head secured to said tubular casing adjacent the discharge ends of said feed screw and said guide tube, means for rotating said feed screw to discharge under pressure plastic composition material into the chamber of said head, said head having a discharge opening in alignment with the passageway through said guide tube, means for continuously passing a flat metal strip through said bending means to give such strip a channel form and for continuously passing the channel strip thus formed through said guide tube, through the chamber of said head, wherein such strip is filled with plastic composition material, and through the outlet opening of said chamber, the passageway through said guide tube being of such size and shape as to support and guide said channel strip during its passage therethrough, and a die at the discharge end of said guide tube having an opening in alignment with the passageway through said guide tube, said die opening having a size and a channel shape corresponding to those of said channel strip.



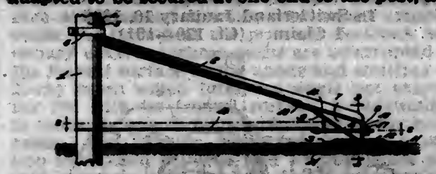
2,107,586
GLARE SHIELD STRUCTURE
Anthony M. Sauer, Cincinnati, Ohio
Application September 24, 1936, Serial No. 102,267
8 Claims. (Cl. 296—97)

7. In a device of the class described, the combination of a light screen, and an extendable standard therefor comprising a plurality of relatively movable telescopic members, means associated with one of said telescopic members for extending the standard various distances between upper and lower limits of travel, and means cooperating with the telescopic members to rotate one

of them through a predetermined arc of rotation as the telescopic members are moved from one limit of travel to the other.

2,107,587
FORMING OF PAPERBOARDS
Ewen Ross Smith, London, England, assignor to Papercrete Limited, London, England
Application August 19, 1935, Serial No. 36,925
In Great Britain August 20, 1934
3 Claims. (Cl. 92—61)

1. Apparatus for forming paper board by the paper making process comprising two platens movable relatively to one another and enclosing a space to which stuff water is admitted, a sieve carried by one of the platens on to which a layer of pulp is deposited by suction, and a member carried by the other platen and having a flexible surface adapted to be pressed into contact with the sieve to couch the layer of pulp thereon and transfer the same from the sieve to the flexible surface preparatory to the formation of a further pulp layer upon the sieve.



2,107,588
MUFFLER REPAIR JACKET
Joseph Leigh Smith, Glen Ellyn, Ill.
Application April 20, 1937, Serial No. 140,018
5 Claims. (Cl. 181—61)

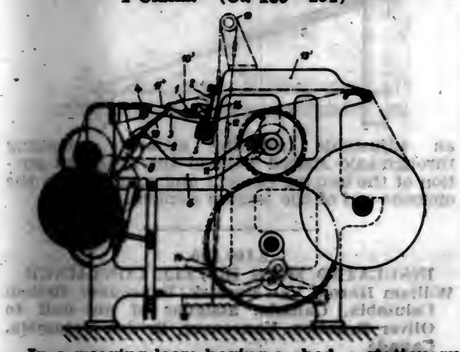
1. A repair jacket for mufflers comprising two sections each split longitudinally so as to adapt said sections for overlapping engagement with each other at their inner ends for longitudinal adjustment and each section adapted to overlap at their contiguous longitudinal edges for lateral adjustment, whereby said sections can be fitted to mufflers of different sizes, and means for securing the sections of the repair jacket in close engagement with the muffler casing.

2,107,589
FENCE POST BRACE
John Orville Trail, Forest City, Iowa
Application March 26, 1937, Serial No. 133,241
2 Claims. (Cl. 189—31.1)

1. A fence brace including a bracing member adapted to be secured at one end to a fence post and having its opposite end formed to provide a reinforcing abutment portion having opposed and relatively spaced walls, a tension element adapted to be secured at one end to the post, and

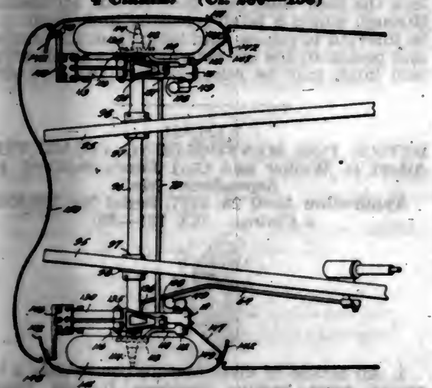
an adjustable fastening element extending through said spaced walls of the abutment portion of the bracing element and connected to the opposite end of the tension element.

2,107,590
INSULATED MILK BOTTLE CONTAINER
William Harold Van Buskirk, Vancouver, British Columbia, Canada, assignor of one-half to Oliver Beaulieu, Vancouver, British Columbia, Canada
Application July 30, 1936, Serial No. 93,469
1 Claim. (Cl. 232—41)



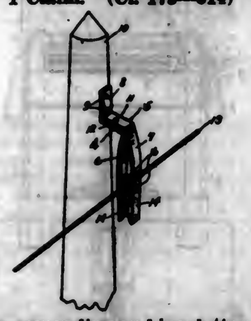
An insulated container including a hinged door, means to mount said container on a wall having an opening, said container also having an opening to register with the opening in said wall, a latch device carried by said door and including a spring bolt to enter said container opening to lock the door shut, said door having an opening through which a latch releasing implement may be inserted to release said latch from the outside, and means in the opening of said wall by which said latch may be released from the wall side.

2,107,591
DEVICE FOR MENTHOLIZING CIGARETTES
Albert O. Walker and Carl James Sanford, Independence, Mo.
Application April 28, 1937, Serial No. 139,536
6 Claims. (Cl. 131—55)



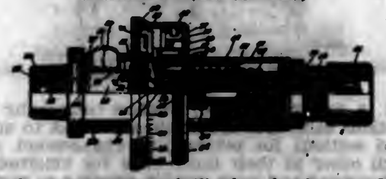
1. An article of manufacture comprising a recessed bowl having openings formed therethrough communicating with said recess; a hollow tapered insert, having an opening through the center thereof, and adapted to be fitted into the recessed bowl to form a chamber therebetween; and a fibrous medicated filler in said chamber formed between said bowl and insert, whereby air passing therethrough will be impregnated by any material suspended in the filler.

2,107,582
LOOM FOR WEAVING
Jakob Wolfensberger, Bauma, Switzerland
Application January 9, 1936, Serial No. 58,429
In Switzerland January 16, 1935
1 Claim. (Cl. 139—191)



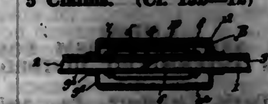
In a weaving loom having a shed, a stationary rake, a beating-up comb, thrust rods between the ends of which said comb is mounted, a shaft having rotary cranks to which one end of each of the respective thrust rods is connected, pivoted links to which the other end of each of the respective thrust rods is connected, in virtue of which the operative end of the prongs of said comb is caused to move in a pear-shaped path in making a beating-up movement, the path lying within the zone of the shed.

2,107,583
MOTOR VEHICLE
Frank C. Best, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a corporation of Michigan
Original application March 6, 1933, Serial No. 659,879. Divided and this application May 8, 1936, Serial No. 78,710
4 Claims. (Cl. 280—153)



4. In a motor vehicle, the combination with a vehicle frame, of road wheels disposed at opposite sides of said frame, independent suspension means supporting said wheels on said frame for steering movement and for independent rising and falling movement with respect thereto, fenders carried by said frame, said fenders affording covers for the upper periphery of said wheels and having lateral openings therein to permit angular displacement of said wheels for steering thereof, and wheel covers so supported by said suspension means as to follow steering movements of the wheels but not to partake of rising and falling movement therewith, said covers being so constructed and arranged as to fit within said apertures and to afford continuations of the adjacent lateral surfaces of the fenders.

2,107,584
POLE BRACKET AND INSULATOR
Frank Bicknese, Worthington, Minn.
Application March 3, 1936, Serial No. 66,937
1 Claim. (Cl. 172—314)

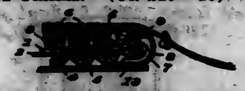


Means for suspending and insulating a conductor from a telegraph pole consisting of a pair of strap members having angularly extending upper ends secured to each other and provided at said upper ends with means for attaching the strap members in suspended spaced parallel relation to a pole, said strap members having free curved ends forming complemental jaws, heads of insulating material on the free ends of said jaws, said heads having inner beveled ends providing a substantially V-shaped groove therebetween to receive a conductor or line wire.

2,107,585
PRESSURE INDICATOR
Pierre Marcel Bourdon, Paris, France, assignor to Michelin et Cie., Clermont-Ferrand, France, a corporation of France
Application May 5, 1936, Serial No. 77,914
In France May 17, 1935
9 Claims. (Cl. 73—110)

1. A gas pressure indicator having a fixed hollow body portion, a relatively movable hollow body portion, coacting threads on each of said body portions whereby on relative rotation a relative longitudinal movement is imparted to said portions, an expansible gas chamber within said body portions the volume of which is changed by the longitudinal movement between said body portions, means including a check valve for introducing air into said gas chamber through said fixed body portion, a second chamber communicating with said expansible gas chamber, a pressure comparing member comprising an elastically supported piston in said second chamber and movable under force of air in said gas chamber, means for disclosing movement of said piston, and means on said fixed and movable body portions indicating the degree of relative movement therebetween, the degree of movement furnishing an index of the change in volume of the expansible gas chamber produced, said pressure comparing member having a known resistance to movement so that the change in volume of the gas chamber required to produce a predetermined movement of said piston is a constant function of the pressure to be measured.

2,107,586
PRESSURE COMPENSATING DEVICE FOR MULTIPLE GAS CHAMBERS
Pierre Marcel Bourdon, Paris, France, assignor to Michelin et Cie., Clermont-Ferrand, France, a corporation of France
Original application April 19, 1935, Serial No. 17,365. Divided and this application September 30, 1936, Serial No. 103,462. In France June 12, 1934
5 Claims. (Cl. 152—12)



5. A connector for two gas holding vessels comprising adjoining tubes one for communicating with each of said vessels and each having adjacent ports opening outwardly, an elastic sleeve covering both of said ports and secured to the tubes in an air tight manner and adapted to be raised by pressure of gas operating through said ports to connect said ports together, and means for directing the pressure of gas in one of said tubes on the exterior of said sleeve to resist raising by pressure in the other of said tubes and to prevent raising by pressure in the adjoining tube.

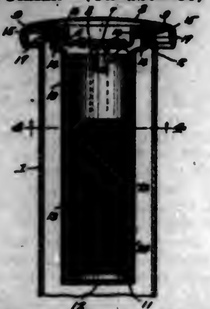
2,107,597
HIGH VOLTAGE DISCHARGE TUBE
Albert Bouwers and Jacob Hermanus van der Tuuk, Eindhoven, Netherlands, assignors, by mesne assignments, to N. V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands, a Dutch Company
Application June 26, 1933, Serial No. 677,703
In Germany June 27, 1932
7 Claims. (Cl. 250—35)

1. An X-ray tube for high voltages comprising an evacuated envelope, an anode member and a cathode member in said envelope, said cathode member comprising an electron-emitting filament and a metallic diaphragm surrounding said filament and serving to direct the primary electrons emitted by said filament towards the anode member, said metallic diaphragm having a plane frontal surface and said anode having a plane frontal surface opposing said first frontal surface and parallel thereto, said anode emitting under the impact of the primary electrons, secondary electrons whose paths are interrupted by the frontal surface of the anode and emitting an X-ray beam which forms an angle not exceeding 20° with its frontal surface, a ray-window in said envelope through which said X-ray beam passes, said metallic diaphragm having a portion interposed between said anode surface and said window, said portion being substantially transparent to the rays of the X-ray beam.

2,107,598
RUG OR CARPET
William Colvin, Jr., Troy, N. Y.
Application October 11, 1935, Serial No. 44,628
11 Claims. (Cl. 219—46)

1. A woven floor covering having a portion of the warp thereof composed of wire threads, groups of said threads being connected together at their ends, and the groups of connected threads being in turn connected to each other at their ends to form an electrical heating element, and a heat insulating backing secured on the underside of the woven body, the connected end portions of the wire threads being folded back against the underside of the woven body and disposed between the same and the heat insulating backing.

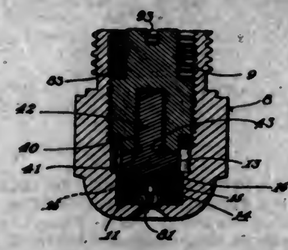
2,107,599
ELECTRIC BATTERY LAMP
Chan Ting Yu also known as T. Y. Chan, North Point, China
Application July 21, 1936, Serial No. 91,762
In Great Britain July 31, 1935
10 Claims. (Cl. 240—10.69)



1. An electric battery lamp of the kind in which the bulb is slidable along the optical axis for focussing purposes and including a casing, a slidable bulb socket, an external button axially slidable on the casing and having a shank projecting within the casing, a crossbar on said shank, lever means engaging said socket and comprising two parallel arms disposed on either side thereof, the ends of said crossbar engaging pivotally in the ends of said lever arms.

10. An electric battery lamp having an extensible casing permitting the increasing or decreasing of the battery capacity by the insertion or

withdrawal of at least one dry battery cell, said casing comprising inner and outer tubular members arranged to be slidable telescopically relatively to each other, one of said members having an integral engaging device, and the other of said members having at least two similar coacting integral engaging devices, positioned at different stations along the length of the last named member and alternatively engageable with the integral engaging device of the first named member to secure said members together in positions corresponding to the number of cells it is desired to use, a base part mounted on one of said casing members and a bulb socket, reflector and controlling mechanism mounted in the other casing member.



2,107,600
GAS KEEPER
John M. G. Darms, Carroll Park, Pa.
Application August 17, 1936, Serial No. 96,534
1 Claim. (Cl. 220—86)

The combination with the filling tube of a container, said tube having an inwardly and downwardly turned flange at its open end provided with diametrically opposed notches, of a gas keeper including a tubular body having an apertured end and an open end and having slots in its wall, inert tongues extending from opposed portions of the body and having inturned free ends, said tongues being bendable into position for engagement with the inturned flange on the filling tube, arms extending upwardly from the open end of the tubular body and offset laterally between their ends, said arms being insertible into the notches in the flange, a ring joined to the upper end of the arms and adapted to rest upon said flange, said ring having notches registering with the notches in the flange, the arms being offset laterally to hold the tubular body spaced inwardly from the filling tube to provide an annular space for the flow of fluid from the slots in the tubular body, a gasket interposed between said ring and the flange, a cap movable to position on the ring for closing the filling tube, and means carried by the cap for downward insertion through the notches and for cooperation with the inner edge of the flange to bind the cap upon the ring and to clamp the gasket between the ring and the flange when the cap is turned relative to the flange.

2,107,601
NOZZLE
John H. Davis, Ridgewood, N. J., assignor to Ballioffet Dies & Nozzle Co., Inc., Guttenberg, N. J.
Application July 15, 1937, Serial No. 153,860
4 Claims. (Cl. 299—120)

1. An atomizing nozzle comprising a body having an ejection orifice, a distributor in the body behind the orifice, a screw stem behind the distributor, the latter having lateral play with respect to the former, and means between the stem

and the distributor to prevent accidental separation of the stem and distributor, said means comprising a loosely interfitting axial plug and socket on said stem and distributor respectively.

2,107,602
PROCESS AND MECHANISM FOR SEPARATING INTERMIXED DIVIDED MATERIALS
Kenneth Davis, Edenburg, Pa., assignor, by mesne assignments, to Feale-Davis Company, Wilmington, Del., a corporation of Delaware
Application June 25, 1935, Serial No. 29,432
22 Claims. (Cl. 209—467)

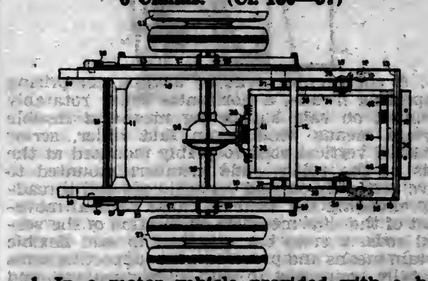
1. The process of separating intermixed divided materials varying relatively greatly in size and relatively little in their specific gravities which comprises acting on a bed of the intermixed materials, supported on an air pervious table, by upwardly directed air currents to loosen the materials and to stratify them by flotation of the lighter material while permitting the heavier material to come to rest on the table, impelling the lighter superior stratified material directly forwardly in a stream straight along the table to a place of discharge at the front while preventing lateral spillage thereof, and directing the inferior heavier material transversely of, and to an edge of the table and then along the edge of the table and to a place of discharge.

15. A mechanism for purifying coal including in combination a relatively long and narrow, air-pervious deck which is longitudinally reciprocable and is inclined upwardly from its feed to its delivery end, means for feeding intermixed materials to the rear end of said deck, a retaining wall along one side edge of the deck for preventing spillage of heavier material thereover, a plurality of side-by-side separating partitions extending forwardly and transversely toward the retaining wall but terminating short thereof, the front portion of the deck comprising an angularly-disposed arm, an unobstructed pathway for settled heavier material extending along the deck and angularly-disposed arms between the retaining wall and the ends of the separating partitions, means for delivering settled heavier material from the angular arm and means for delivering a flotant stratum of lighter material to the rear of said arm.

2,107,603
ROLL TAPE CONTAINER
Sanford J. Ellenburg, Berkeley, Calif., assignor to Handy-Roll Company, Oakland, Calif., a corporation of California
Application August 22, 1934, Serial No. 740,913
4 Claims. (Cl. 242—55.4)

4. A device for dispensing tape comprising a sheet metal container adapted to hold a roll of tape and having a slot through which the tape extends, a finger slot in the side wall of the container to expose the tape for movement by the finger, a guiding wall within the container under the finger slot guiding the tape close to said side wall, said guiding wall provided with an outwardly raised boss aligned with but of smaller area than said finger slot and falling within the outline of the slot and against which boss the tape is pressed by the finger when moving the tape, all so that the finger will be kept substantially out of the slot when moving the tape.

2,107,604
STAYBOLT
Ralph W. Friday, Pittsburgh, Pa.
Application October 4, 1932, Serial No. 636,152
Renewed July 6, 1937
14 Claims. (Cl. 85—1.5)



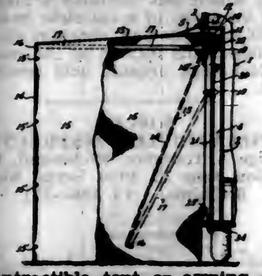
1. A staybolt comprising a head, a hollow bolt body and an electrical conducting element disposed in, and extending the length of, the hollow body and electrically insulated from the body along its length but electrically connected to the body at the head end of the hollow passage, said conducting element being of sufficient self-sustaining character and strength to be unaffected by fracture of the bolt body or by the resultant leakage, and serving to permit an electrical test of the bolt structure under all operating conditions.

2,107,605
METHOD OF PRODUCING COLORED PHOTOGRAPHIC MATERIALS
Béla Gáspár, Brussels, Belgium
No Drawing. Application August 9, 1934, Serial No. 739,136. In Germany August 10, 1933
6 Claims. (Cl. 95—7)

1. A method of uniformly coloring colloids used in the production of a photographic material including a light sensitive silver halide which comprises causing within the colloid a double decomposition by incorporating a lake forming dyestuff and a salt, which salt contains a lake forming cation and an anion of a colorless weak organic acid, indifferent to the light sensitive silver halide, a dyestuff lake being formed by the reaction and a salt of the weak organic acid resulting as a by-product.

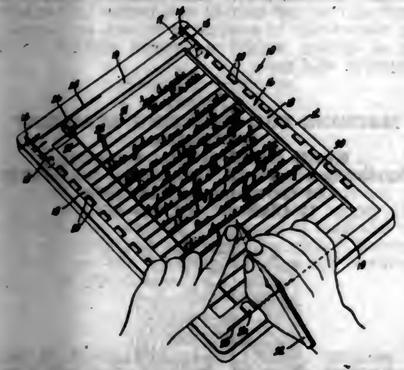
2,107,606
MOTOR VEHICLE CONSTRUCTION
George A. Gemmer, Richmond, Ind.
Application June 12, 1936, Serial No. 84,931
6 Claims. (Cl. 180—57)

1. In a motor vehicle provided with a body supporting frame, a readily detachable propelling assembly positioned adjacent the rear of said vehicle frame, said assembly comprising, driving wheels and axles therefor, a housing for said axles, a sub-frame and resilient supporting means arranged between said sub-frame and said housing, means for detachably securing said sub-frame to said vehicle frame, and a motor unit extending rearward of and rigidly connected to said housing for driving said vehicle, pivot means secured to said motor unit at a point intermediate the ends thereof, and resilient means secured at one end to said sub-frame and extending rearwardly to said pivot means for supporting as sprung weight a desired portion of the weight of said unit.



2,107,607
MACHINE FOR TREATING RESILIENT MATERIAL
Krafft Göbel, Guben, Germany
Application April 26, 1933, Serial No. 668,135
In Germany July 15, 1932
17 Claims. (Cl. 26—25)

1. In a machine for treating resilient material, movable bars arranged in pairs at opposite sides



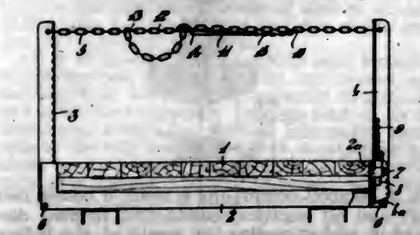
of the passage for the material to be treated and at an oblique angle to the direction in which the material moves through the passage, and means for moving the bars in each pair individually for deforming, and collectively for feeding the material.

2,107,608
CONTRACTIBLE TENT OR AWNING
William F. Hewlett, Upland, Calif.
Application August 3, 1937, Serial No. 157,128
4 Claims. (Cl. 135—1)

1. A contractible tent or awning comprising supporting means, a horizontal roller rotatably mounted on said supporting means, a flexible curtain means winding on said roller, screw threaded vertical rods rotatably mounted at the ends of the roller, slide members mounted to move vertically on said vertical rods and threadedly engaging the same to cause vertical movement of the slide members on rotation of the vertical rods, a cross bar attached to said flexible curtain means and provided with supporting arms pivotally connected to said slide members, and operating means connected to rotate the roller and the vertical rods simultaneously so as to raise the slide members and thereby extend the curtain means as the latter unwinds from the roller.

2,107,609
LINE GUIDE TO ENABLE THE BLIND TO WRITE SCRIPT
Harry G. Hill, Los Angeles, Calif.
Application March 21, 1936, Serial No. 70,696
5 Claims. (Cl. 35—38)

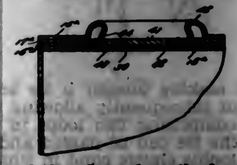
1. In a device for aiding in writing longhand, the combination of: a frame including two members adapted to extend along opposite edges of a piece of writing material; and a plurality of strands of a resilient nature connected at their opposite ends to said members at points disposed substantial distances outward from inner edges of said frame members and therefore substantially free to swing parallel with said writing material at said inner edges of said frame members, said strands lying sufficiently close to said writing material to flexibly guide a pencil in the hand of a person writing on said material.



2,107,610
BLEACHING ALKYD RESINS
Almon G. Hovey, Pleasant Ridge, Mich., assignor to Helmuth Reichhold, doing business as Reichhold Chemicals, Detroit, Mich.
No Drawing. Application June 14, 1937, Serial No. 148,264
4 Claims. (Cl. 8—2)

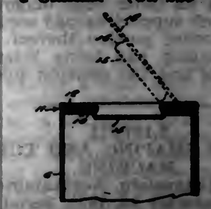
1. A process of bleaching alkyd resins which comprises incorporating in the resin during the course of manufacture 0.1–0.5% by weight, based on the total amount of resin ingredients, of an acid which is a member of a group consisting of citric, tartaric and oxalic, at a time long enough before the batch is thinned so that the products of reaction may escape and the bleaching effect take place, and at a temperature substantially above 200° C., the bleaching agent being added near the end of the cooking process.

2,107,611
CATALYSTS AND METHOD OF PREPARING THE SAME
Carl H. B. Jarl, Royal Oak, and Almon G. Hovey, Pleasant Ridge, Mich., assignors to Beck, Koller & Company, Inc., Detroit, Mich.
No Drawing. Application May 29, 1937, Serial No. 145,633
8 Claims. (Cl. 22—233)



1. In a process for the preparation of catalysts by coating a carrier with catalytically active material and a binder, and then volatilizing the binder; the improvement wherein the binder employed is selected from a group consisting of unmodified polyhydric alcohol-polybasic acid condensation products and resins formed by the polymerization of styrol.

2,107,612
STAKE OR STANCHION FOR VEHICLES
Alfred Leo Karige, Gotene, Sweden
Application March 8, 1937, Serial No. 129,731
In Sweden February 4, 1936
9 Claims. (Cl. 105—382)



1. In a transport vehicle, a stake having a slot adjacent to its lower end, the lower end of said stake being bevelled outwards and upwards, a stretchable load-holding chain secured to the upper end of said stake, the other end of said chain being secured to a part of said vehicle disposed an appreciable distance laterally of said stake, an offset carried by said vehicle to form a support for the bevelled lower end of said stake, and a projection on said vehicle above said offset entering said slot, when said stake is in its vertical position on said vehicle, the distance between the lower edge of said projection and the upper edge of said offset being substantially equal to the distance between the lower edge of said slot and a point on said bevelled end of said stake between the ends of the bevelled surface.

2,107,613
CARTON
Irwin Ketcher and Morris Ketcher, Brooklyn, N. Y.
Application December 9, 1936, Serial No. 115,015
1 Claim. (Cl. 229—17)

A carton of the class described constructed of a folded blank and having walls provided at their upper ends with flaps arranged in super-imposed relation and positively united together to provide a multi-ply top wall for the carton, all of said flaps being provided with apertures coinciding to define a single pouring opening for the carton, and the aperture in the lowermost one of said flaps being of a size slightly less than the apertures in the other of said super-imposed flaps, and the uppermost of said super-imposed flaps having at the edge thereof defining the aperture therein a raised flexible bead the inner side of which presents a spring lip adapted to spring into engagement with a closure disc seating on the innermost one of said flaps for releasably retaining the closure disc within the pouring opening.

2,107,614
CARTON
Irwin Ketcher and Morris Ketcher, Brooklyn, N. Y.
Application December 9, 1936, Serial No. 115,016
3 Claims. (Cl. 229—17)

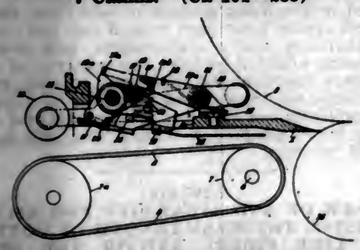
1. A carton of the class described constructed of a folded blank having walls provided at their upper ends with flaps adapted to be folded in super-imposed relation to provide a top wall for the carton, three of said flaps being provided with apertures coinciding to define a single pouring opening for the carton and a fourth one of said flaps being provided on its under side with a formation defining a plug adapted to seat within the pouring opening for closing the carton, said fourth flap inwardly from one edge thereof being foldable on an imaginary transverse fold line, and between said fold line and said one edge thereof being adhesively united to the uppermost one of said three flaps and functioning as a hinged mounting for said fourth flap.

2,107,615
DISPENSING DEVICE
George Mellen, Diamond Head, Honolulu, Territory of Hawaii, assignor to H. C. Hiltz, Honolulu, Territory of Hawaii
Application June 17, 1935, Serial No. 27,111
1 Claim. (Cl. 42—146)

A container comprising a flexible conical wall having a discharge opening at one end, a solid closure member of frusto-conical form fitting into the enlarged end of said conical wall, said closure member having a flange engaging the lower edge of said side wall and a flat transverse portion above the lower edge of said wall, a depression formed in said transverse portion extending substantially to the level of said lower edge and constituting a socket, a tube in alignment with the discharge opening of said container having its lower end fitting into said socket, and having apertures at intervals along its length; a cup formed in the lower portion of said tube, and a resilient spring positioned in said cup and socket and normally under compression, said flexible wall being adapted to force the contents of said container through the apertures in said tube, and thence out through the discharge opening on the application of pressure to the wall and said spring being adapted to return the wall to its normal position.

2,107,616
MANNER OF AND APPARATUS FOR ASCERTAINING THE MEAN LENGTH OF COTTON OR LIKE FIBERS AND/OR THE MEAN WEIGHT PER UNIT OF LENGTH OF SIMILAR FIBERS
Chandrashekariya Nanjundayya, Matunga, Bombay, British India, assignor to The Indian Central Cotton Committee, Bombay, British India, a corporation under the Indian Cotton Cess Act 1923
Application May 10, 1934, Serial No. 724,968
In British India May 12, 1933
7 Claims. (Cl. 73—51)

2. Apparatus for ascertaining the mean fiber length and/or the mean fiber weight per unit



of length of raw cotton or other textile fiber, comprising a slide bed, a tweezer, a carriage mounted on the slide bed and carrying the tweezer thereon, means for causing said tweezer to engage and securely to hold fibers, said carriage being slidable on said bed to draw out certain fibers from a sliver, and a comb at one end of the slide bed adapted to hold the sliver.

2,107,617
ADJUSTABLE ICE CREEPER
Alvin Oetterer, Hermann, Mo.
Application June 24, 1937, Serial No. 150,197
3 Claims. (Cl. 36—62)

1. A device of the class described comprising a pair of members telescopically arranged, a clamp on the outer end of each member, downwardly extending points on the outer ends of said members, transversely extending rods supported by the outer ends of said members and springs connecting the rods together.

2,107,618
MACHINE FOR POSTMARKING AND LIKE PURPOSES
Walter Ochsenbein, Bern, Switzerland, assignor to Hasler A.-G. Werke für Telephonie & Präzisionsmechanik, Bern, Switzerland
Application May 29, 1936, Serial No. 82,662
In Switzerland July 3, 1935
7 Claims. (Cl. 101—235)

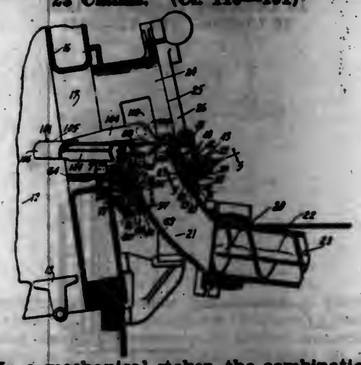
7. In a machine for postmarking or like purposes the combination of a rotatable marking cylinder, a belt conveyor actuated by rotation of said cylinder for feeding sheets to said cylinder, means whereby said cylinder is automatically locked on completion of each revolution, pressure means for pressing a sheet upon said conveyor so as to prevent relative movement between said sheet and said conveyor while said conveyor is working, a rotatable shaft, a finger rotatably mounted on said shaft and adapted to actuate said pressure means, a cam fixed to said shaft adapted to actuate said finger when said shaft is rotated in one direction, a spring loaded lever controlled by said cam, adapted to engage and lock said finger when said finger has actuated said pressure means, and adapted to be disengaged from said finger by rotation of said shaft in the opposite direction, and mechanism actuated by said shaft for unlocking said cylinder after actuation of said finger by said shaft.

2,107,619
DEVICE FOR MAKING ONESELF A TIE KNOT
Jules Ferdinand Ramas, Chaton, France
Application September 1, 1936, Serial No. 98,952
In France September 12, 1935
1 Claim. (Cl. 2—155)

Device for making oneself a tie knot outside the collar and subsequently allowing to place it in position, comprising two loops in which the two ends of the tie can be passed and caused to slide, and a double elastic bond in which the two loops are freely engaged.

2,107,620
COMBINED SOLE AND ARCH CONSTRUCTION FOR SHOES
Joseph Ruiz Rigandi, Westerleigh, N. Y.
Application June 10, 1936, Serial No. 84,393
3 Claims. (Cl. 36—71)

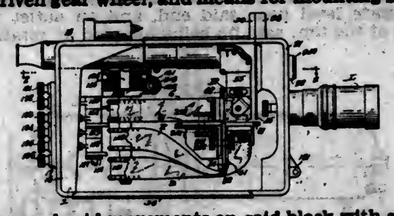
1. A combined sole and arch support construction comprising in combination, an insole having an arched portion intermediate of its ends, a relatively narrow skeleton sole member defining the edge of said insole member, said skeleton sole member having its inner edge undercut, and a compressible arch supporting pad secured to said insole at the arched portion thereof, said compressible supporting pad being interposed between the insole and the skeleton sole.



2,107,621
GARMENT SHAPING AND TURNING MACHINE
Morris J. Rubenstein, Northampton, Pa.
Application November 26, 1935, Serial No. 51,662
2 Claims. (Cl. 223—41)

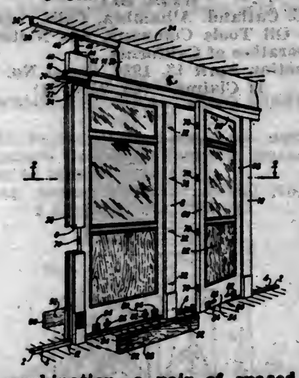
1. In a machine of the class described comprising a support, a die-carrying member connected with the support, a second die-carrying member hingedly connected at its lower end to the support and adapted to be moved toward the first die-carrying member, each die-carrying member comprising an upstanding member having a notch formed in its upper end and a plate secured to each side of the upstanding member, said plate extending across the entire width of the upstanding member and beyond the upper end thereof to form a socket, and a pair of dies, each die comprising a stem, a part integral with a portion of the upper end of said stem, and a second part resting on a portion of the upper end of the stem and adjustable relative to the first part, each die removably and securely fitting in the

socket of each upstanding member and adapted to be adjusted while in position on the die-carrying member.



2,107,622
FUEL DISTRIBUTING MECHANISM
Howard P. Andersen, Erie, Pa., assignor to The Standard Stoker Company, Inc., a corporation of Delaware
Application April 14, 1934, Serial No. 720,546
23 Claims. (Cl. 110—101)

1. In a mechanical stoker, the combination of a firebox having a wall with a firing opening therein, a conduit for delivering fuel to said firing opening, a pressure fluid distributor head movably mounted on the rear wall of said conduit opposite the lower portion of said firing opening and means for adjusting said distributor head to any one of a number of positions vertically and horizontally along said conduit rear wall, said distributor head being provided with jet openings directed toward said firing opening.

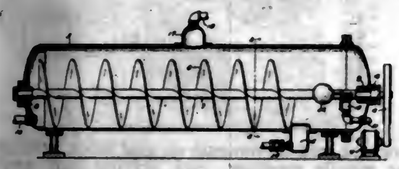


2,107,623
MOTION PICTURE CAMERA DRIVE
Joseph A. Ball, Los Angeles, Calif., assignor to Technicolor Motion Picture Corporation, Hollywood, Calif., a corporation of Maine
Original application August 20, 1931, Serial No. 558,198. Divided and application April 21, 1933, Serial No. 667,282. Divided and this application January 22, 1936, Serial No. 60,233
5 Claims. (Cl. 88—16.4)

1. A motion picture camera comprising a rigid supporting block, a driving gear wheel on said block, two film gates, two film movements for transporting film through said gates each having a driven gear wheel, and means for mounting said

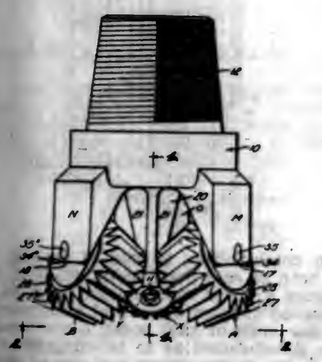
gates and said movements on said block with said gear wheels meshing, said driving and driven gear wheels being maintained in definite relative position by said block.

2,107,624
PARTITION SYSTEM
Mannie Berger, Plainfield, N. J.
Application September 15, 1936, Serial No. 100,826
6 Claims. (Cl. 20—4)



1. In combination, a pair of spaced vertical posts, both of said posts being grooved, but one post being grooved more deeply than the other, a channeled member above and positioned across the upper ends of said posts, a sectional panel unit so dimensioned as to be adapted to be inserted in the deeper channel of one of said posts, then moved to alignment with the shallower groove of the other post, then raised into the channeled cross-member and then adapted to be moved into the shallow channel of the other post; and means for removably maintaining said unit in a position so as to engage the lips of the channeled cross-member.

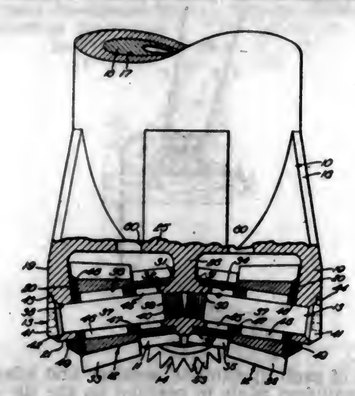
2,107,625
GAS SEPARATOR
William I. Bettis, Los Angeles, Calif., assignor to Estelle B. Kleaver, Burbank, Calif.
Application February 13, 1936, Serial No. 63,685
1 Claim. (Cl. 183—2.7)



A gas separator comprising; a closed horizontal cylindrical container of which the upper portion affords a unitary gas chamber; a rotatable shaft extending into the container parallel to, and directly below, the axis thereof; a continuous helical fin affixed to the shaft, within the container and extending nearly to the bottom thereof; means for passing gas-containing liquid into the container; and means for maintaining the liquid within the container at about the

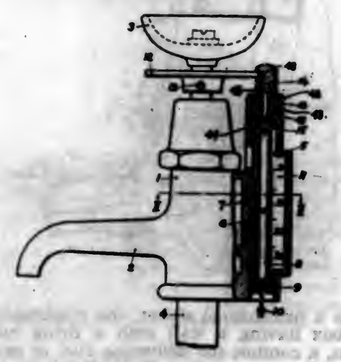
shaft level; said container having, a sump and outlet for heavy impurities at the bottom near one end, an outlet for purified liquid at an intermediate level near said end, and an outlet for gas at the top; said fin being adapted by rotation

to move settled impurities along the bottom of the container into said sump; and the rotatable parts within the container being adapted to pass through said liquid without substantial agitation thereof.



2,107,626
WELL BIT
Alfred C. Catland, Alhambra, Calif., assignor to Globe Oil Tools Company, Los Nietos, Calif., a corporation of California
Application April 13, 1936, Serial No. 74,164
11 Claims. (Cl. 255—71)

1. A well bit comprising, a shank, three circumferentially spaced outer roller cutters at the lower end of the shank, two of the outer cutters being of greater axial extent than the third outer cutter, separate means supporting said two outer cutters for rotation, an inner roller cutter, and a single removable member rotatably carrying said third outer cutter and the inner cutter.



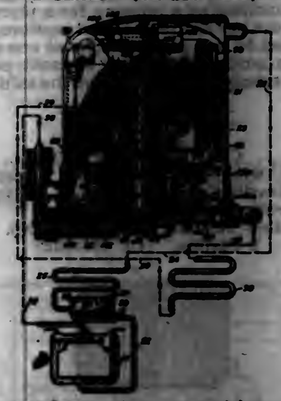
2,107,627
WELL BIT CONSTRUCTION
Alfred C. Catland, Alhambra, Calif.
Application October 13, 1936, Serial No. 105,371
6 Claims. (Cl. 255—71)

1. In a roller bit, a body, a wing depending from the body, a web depending from the center of the body, the wing and web being integral with the body, an integral bearing part on the web, the wing having an opening, the web having an opening concentric with the bearing part, a pin extending between the wing and web and having its end portions directly supported in said openings, a cutter rotatably supported on the outer portion of the pin, and a cutter whose inner portion rotatably bears on said bearing

part and whose outer portion is rotatably supported by the pin.

2,107,628
EVAPORATION METER
Odin Thorvald Clerius, Copenhagen, Denmark
Application September 25, 1936, Serial No. 102,618
In Denmark October 8, 1935
16 Claims. (Cl. 73—193)

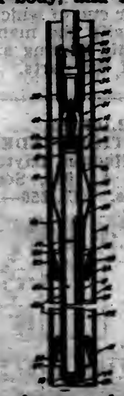
1. The combination with a main flow controlling valve, of an evaporation meter having a container for an evaporation liquid and valve means for opening and closing said container, and an operative connection between said main valve and the valve means of the meter for opening and closing the container as the main valve is opened and closed.



2,107,629
ADJUSTABLE CHAIR LEG EXTENSION
Constance Hopkins Dallas, Chestnut Hill, Pa.
Application January 12, 1937, Serial No. 120,904
7 Claims. (Cl. 155—93)

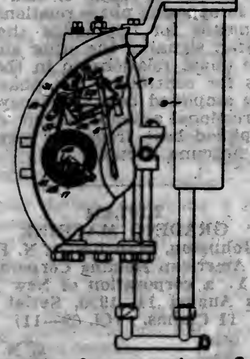
1. In combination with a leg for a chair or the like, an extension member having vertically spaced slots formed therein, and adapted to be selectively engaged, a holding element having a down-turned hook and attached to the leg end, said hook engaging said extension member

through one of said slots and holding it against said leg, and adjustable clamping means securing the upper portion of said extension member against said leg.



2,107,630
REFRIGERATING APPARATUS
Frederick R. Erbach, Beloit, Wis., assignor, by mesne assignments, to Nash-Kelvinator Corporation, Detroit, Mich., a corporation of Maryland
Application September 21, 1932, Serial No. 634,139
1 Claim. (Cl. 230—139)

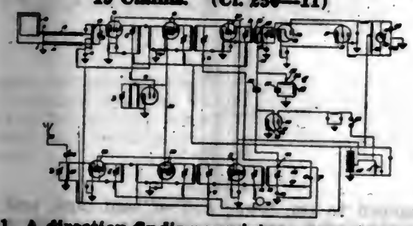
A compressing system comprising a base, a compressor, a motor mounted thereon, a casing enclosing said compressor and motor secured to said base, a body of lubricant disposed in said casing, and adapted to function as a lubricant sealing means and cooling agent, and means for pumping and conducting said lubricant outside of said casing for cooling said lubricant and then conducting said lubricant to the upper portion of the region in said casing where a portion of said cooled lubricant is directed over the motor windings and the remainder of said lubricant along the inside surface of said casing.



2,107,631
WELL CLEANING SYSTEM
Weldon C. Erwin, Huntington Park, Calif., assignor to John Grant, Los Angeles, Calif.
Application June 17, 1935, Serial No. 26,917
1 Claim. (Cl. 166—19)

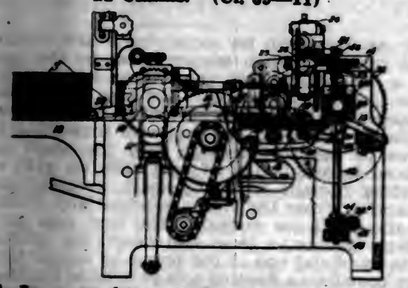
In a well cleaning device, the combination comprising, a body carried on the lower end of a pipe, said body and pipe being relatively movable and the lower portion of the pipe forming a low pressure chamber, and valve means operable by virtue of relative movement between said pipe and body to intermittently admit well liquid through the body into said chamber, said valve means comprising an upwardly projecting valve member carried by said body, and a tubular valve seat

attached to the lower end of said pipe, and a screwthreaded connection between said body and the tubular valve seat.



2,107,632
COMPENSATED MEASURING INSTRUMENT
Webster W. Frymeyer, Foxboro, Mass., assignor to The Foxboro Company, Foxboro, Mass., a corporation of Massachusetts
Application August 29, 1935, Serial No. 37,032
5 Claims. (Cl. 73—31)

2. An apparatus for measuring a first variable and correcting such measurement by the value of a second variable comprising a supporting base, a shaft supported in the base for rotation responsively to the first variable, a frame, means adjacent one end of the frame for supporting the same by bearings coaxial with the shaft and spaced longitudinally of said axis, an arm extending radially from the shaft, a second arm extending from the frame substantially parallel to the shaft for engaging the first arm to be driven thereby, a lever and means for pivoting it to the distal end of the frame by spaced bearings providing a floating axis parallel to the shaft, a link suitably connected to and moved by mechanism responsive to a second variable pivotally connected to the lever at a point adapted to pass through the shaft axis, a manifesting device mounted on the base and adapted to rotate about



an axis parallel to and remote from the shaft axis and a connecting rod, one end of which is pivotally connected to the lever between the ends thereof and the other end of which has a pivotal driving connection with the manifesting device adapted to overlie said floating axis in a predetermined position of the parts.

2,107,633
DIRECTION FINDER
Frederick J. Hooven, Dayton, Ohio
Application March 4, 1935, Serial No. 9,184
19 Claims. (Cl. 250—11)

1. A direction finding receiving apparatus comprising a receiving circuit connected to a directional antenna, a receiving circuit connected to a non-directional antenna, amplifier circuits for separately amplifying the signals in said receiving circuits, an oscillator coacting with each of said amplifier circuits for producing therein a beat frequency, a pair of rectifiers, an indicator for indicating the current differential in the output of said rectifiers, connections from the input sides of said rectifiers to one of said amplifier circuits, a phase determining network disposed in said connections to thereby impress the amplified beat frequency signal of said one amplifier circuit in opposing phase relationship on the rectifiers, means for impressing the amplified beat frequency signal of the other amplifier circuit in like phase relationship in the rectifiers, and means for controlling the phase relationship of the amplified beat frequency signals of the non-directional antenna circuit with respect to the amplified beat frequency signals of the directional antenna circuit.

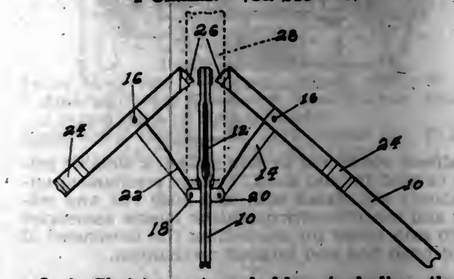
2,107,634
GRADING MACHINE
James W. Johnston, Manchester, N. H., assignor to North American Holding Corporation, Syracuse, N. Y., a corporation of New York
Application August 14, 1936, Serial No. 96,072
11 Claims. (Cl. 69—11)

1. In a machine of the character described, skiving mechanism including a skiving knife, a vertically movable gauge roller and an adjustable abutment to limit the extent of the movement of separation of the gauge roller from the skiving knife, and mechanism controlled by the blank during its passage through the machine to lift the gauge roller to the extent permitted by the abutment before the blank engages the gauge roller.

2,107,635
TUBE HOLDING DEVICE
Fred J. Junkermann, Philadelphia, Pa.
Application November 18, 1936, Serial No. 111,355
4 Claims. (Cl. 29—67)

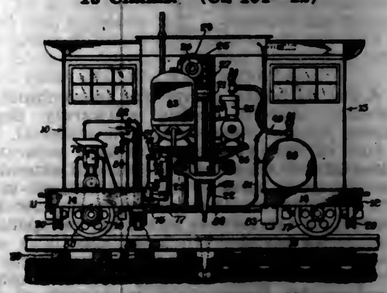
1. A tube holding device of the character described comprising a block formed with a plurality of differently sized grooves, a second block hinged to the first block and formed with a plurality of grooves complemental to the grooves in the first mentioned block, any two complemental grooves constituting a housing for a piece of tubing when the blocks are in closed position, a structure carried by one of the blocks at one end constituting a guide for a cutting element, said guide structure extending across all of the said grooves.

2,107,636
CLEANSER DEVICE
Russell B. Kingman, Orange, N. J., assignor to Metal Textile Corporation, West Orange, N. J., a corporation of Delaware
Application July 20, 1935, Serial No. 32,347
2 Claims. (Cl. 15—122)



1. A cleaner device comprising a resiliently compressible hollow body adapted to enclose expressible saponaceous material, portions of the body wall being made of sponge rubber through which saponaceous material may be expressed, and a metallic mesh secured to said body in externally overlying relation to the sponge rubber wall portions thereof.

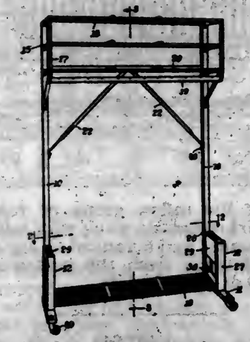
2,107,637
METHOD OF MAKING POROUS ARTICLES
Pierre Lefebvre-Carnot, Paris, and Leon Pierre Georges Vautier, St. Just des Marais, France, assignors to Soci6t6 Francaise de la Viscose S. A., a corporation of France
No Drawing. Application August 11, 1936, Serial No. 95,446. In Great Britain August 24, 1935
9 Claims. (Cl. 18—48)



1. In a method of preparing porous articles, such as artificial sponges or the like, the steps which comprise incrusting bodies which are substantially inert to and are not appreciably attacked by the reagents employed in the coagulation, fixing and other treatments the materials have to undergo during the process of producing the articles into the surfaces of a shaped mass formed of an intimate mixture of a cellulose derivative, fibers and pore-forming substance, coagulating and fixing the cellulose derivative, removing the pore-forming substance, and removing the incrusted bodies.

2,107,638
CHRISTMAS TREE HOLDER
James E. Lyons, Salem, Oreg.
Application August 17, 1936, Serial No. 96,455
4 Claims. (Cl. 248—48)

3. A Christmas tree holder, including three supporting legs, a central spider, and a link pivotally connecting each leg to the spider, each leg comprising two channel-shaped elements connected together back to back, and spaced apart to provide a link receiving slot adjacent the middle portions thereof.



2,107,639
RAILWAY BALLASTING MACHINE
Robert E. Madison, Harvey, Ill.
Application July 1, 1932, Serial No. 620,331
Renewed June 11, 1937
13 Claims. (Cl. 104—12)

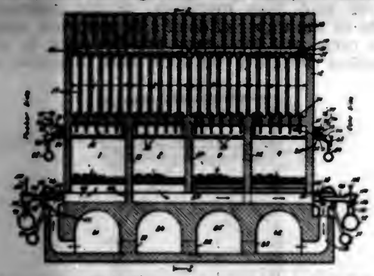
1. The method of ballasting adjacent pairs of railway ties which comprises agitating ballast from a point between the ties in a substantially horizontal plane lying below the plane of the bottoms of the ties by a member having a rotary motion about a vertical axis to effect lateral movement of the ballast from the point of agitation to positions underlying the ties, the displaced ballast being replaced as it is moved laterally by the ballast above that which was agitated.

2,107,640
WARDROBE RACK
Raymond A. Magnuson, Chicago, Ill., assignor to Vogel-Peterson Co. Inc., Chicago, Ill., a corporation of Illinois
Application January 16, 1935, Serial No. 1,969
9 Claims. (Cl. 211—1)

1. A wardrobe rack having in combination a plurality of laterally spaced vertical supports comprising horizontal base members, uprights secured to the rear ends of the base members, elongated top members extending forwardly from the uprights and rigidly secured in overhanging relation to said base members, article supporting means at the upper ends of said supports including a cross rail for heavy articles such as coats extending laterally between said uprights and

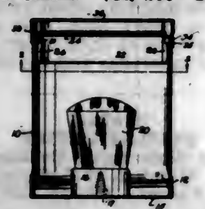
supported by said forwardly extending top members in forwardly spaced relation to said uprights, and hollow brace members secured in the angles formed by said base members and uprights so as to restrain forward tilting of the uprights upon their base members when said cross rail is subjected to a heavy load, said hollow brace members being open at their upper ends to form receptacles for umbrellas and the like.

2,107,641
DISPLAY DEVICE
Gilbert Cupps Malcomson, Collingswood, N. J.
Application March 2, 1935, Serial No. 8,974
7 Claims. (Cl. 40—130)



1. A display device comprising a plurality of boards disposed in spaced parallel planes and having openings therethrough, said boards carrying pictorial representations making up the display, said openings constituting a part of the pictorial representations, and illuminating means visible through said openings to impart reality to the pictorial representations, and also illuminating others of said boards.

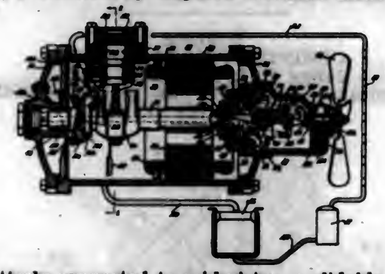
2,107,642
COKE OVEN BATTERY
Charles V. McIntire, Short Hills, N. J., assignor to Semet-Solvay Engineering Corporation, New York, N. Y., a corporation of New York
Application February 9, 1934, Serial No. 710,445
6 Claims. (Cl. 202—151)



1. In a regenerative coke oven battery comprising heating walls and coking chambers arranged side by side in alternate relation, each of said heating walls comprising combustion flues, crosswise extending regenerators disposed beneath the coking chambers communicating with the combustion flues and arranged in two groups, one group operating for inflow while the other group simultaneously operates for outflow, a chimney flue with which the outflow group of

regenerators communicates, an air main for containing air under pressure, passages connecting the inflow group of regenerators with said chimney flue, and an aspirator individual to each re-

generator of the inflow group of regenerators, said aspirators communicating with said air main and said passages and arranged to aspirate products of combustion from the passages into the inflow group of regenerators.

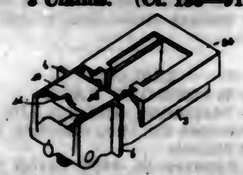


2,107,643
COMBINED RECEPTACLE AND BRUSH HOLDER
Alvin J. Milkavec, Cleveland, Ohio
Application October 24, 1935, Serial No. 46,556
1 Claim. (Cl. 206—1)

In combination with a cylindrical material container having an opening and being provided with a plurality of vertically extending ribs and an annular rib, each projecting from the outer periphery of said container, of a cylindrical supporting member having a threaded end with the extreme end being inturned to form a supporting means by cooperating with the annular rib of said container, the supporting member having cooperating portions with said vertical ribs for positioning the container and preventing inadvertent removal of the container from the support, and a cover having a threaded end engageable with the threaded end of the support for closing the opening of the container and placing the assembly in tight engagement.

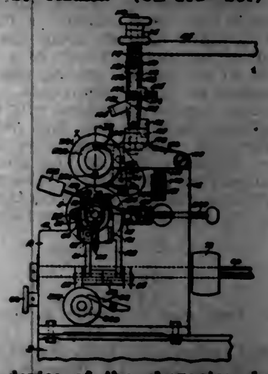
2,107,644
REFRIGERATING APPARATUS
Grayston Roy Ohmart, Detroit, Mich., assignor, by mesne assignments, to Nash-Kelvinator Corporation, Detroit, Mich., a corporation of Maryland
Original application October 7, 1932, Serial No. 636,631. Divided and this application December 12, 1935, Serial No. 54,631
1 Claim. (Cl. 230—29)

A refrigerant compressing unit comprising means providing a compression chamber having discharge and inlet ports and a vertically extending by-pass port parallel to said chamber, a push rod adapted to be reciprocated in said by-pass port, a valve carried by said rod with its head arranged to be acted upon by the pressure of the refrigerant in said compression chamber to tend to urge said valve toward its seat, a piston arranged for operation in said compression chamber, a horizontally disposed rotatable shaft op-



eratively connected to said piston, a slidable collar carried by said shaft, linkage mechanism operatively associated with said push rod and collar and centrifugally operating means associated with said collar for controlling the movement of said push rod and linkage mechanism.

2,107,645
DRY FLY HOLDER
Arthur C. Parkhurst, Denver, Colo.
Application March 19, 1937, Serial No. 131,816
4 Claims. (Cl. 43—1)

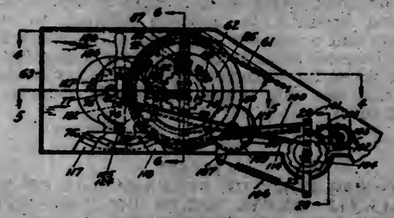


1. A dry fly holder comprising in combination a tweezer element having outwardly flexed clamping jaws of resilient flexible material, the free ends of the jaws being normally separated, an eye-piece attached to one jaw and extending across the space between the jaws, the eye-piece having an opening, there being a narrow slot through the material that surrounds the opening, a compressor element enclosing the jaws and movable therealong for effecting a movement of the free ends towards and away from each other, and means for limiting the movement of the compressor member in both directions.

2,107,646
BURNER
Thomas E. Potts, Los Angeles, Calif.
Application March 31, 1936, Serial No. 71,853
2 Claims. (Cl. 158—91)

1. In a burner, a main pan having connections for discharging liquid and gas fuels into the pan, an air control member shiftably mounted in the pan and embodying a top portion designed to close off the top of the front portion of the pan and a baffle portion extending downwardly between said connections and rearmost portion of the pan leaving a space above the bottom of the pan so that fuel and air can pass below the baffle into said rearmost portion, the pan having a bottom portion with rearwardly spreading shoulders so that various amounts of air can pass under the baffle when shifted towards the rearmost portion.

2,107,647
PRINTING PRESS
Leroy Q. Presby, Melrose, Mass., assignor to American Stay Company, East Boston, Mass., a corporation of Massachusetts
Application October 31, 1935, Serial No. 47,597
16 Claims. (Cl. 101—247)

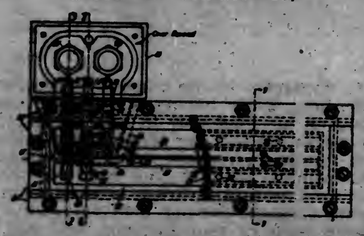


1. In a device of the character described, a print roll, a presser roll, a movable mounting for the latter for moving the presser roll into and out of cooperation with the print roll, and a work guide carried by said mounting.

2,107,648
AUTOMOBILE LAMP
Benjamin Futterman, Brooklyn, N. Y., assignor to Yankee Metal Products Corp., Norwalk, Conn., a corporation of New York
Application December 9, 1935, Serial No. 53,501
3 Claims. (Cl. 240—8.3)

1. A lamp, comprising in combination a casing; an inwardly projecting flange on said casing defining a light opening; a lens; a metal ring having a forwardly projecting channelled flange for holding said lens and having a rearwardly projecting thimble insertable in said light opening; and projections on said thimble spaced circumferentially thereof, cooperable directly with said casing flange to draw the channelled flange against the latter to thereby lock the casing flange between the channelled flange and the projections.

2,107,649
CHECKROW PLANTER
Lynn E. Rose, Aledo, Ill., assignor of two-fifths to Gladys Felton, one-fifth to Ralph Thede, and one-fifth to D. E. Farr, all of Aledo, Ill.
Application June 4, 1936, Serial No. 83,457
3 Claims. (Cl. 111—17)



6. In an automatic checkrow planter, seed-dropping mechanism, including, as an element thereof, a ratchet-operated shaft, ground-actuated means for actuating the shaft intermittently to cause dropping of the seeds, and timing mechanism for advancing or retarding the functioning of the seed-dropping mechanism, said timing mechanism being both gravity actuable and manually actuable to modify operation of the dropping mechanism, the manual actuation being utilized to vary the effect of the gravity actuation.

2,107,650
PREPARATION OF PENTACHLOROPHENOL
Frank B. Smith and John E. Livak, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Michigan
No Drawing. Application April 26, 1937, Serial No. 138,339
2 Claims. (Cl. 260—154)

1. In a method for the preparation of pentachlorophenol, the step which consists in heating 1 molecular proportion of hexachlorobenzene with from 2.25 to 2.75 molecular proportions of sodium hydroxide as a 5 to 15 per cent by weight solution in methyl alcohol at a temperature between 130° and 140° C. under the vapor pressure of the reaction mixture at the temperature employed.

2,107,651
ELECTRIC SWITCH
Sidney Reynell Smith, Liverpool, England, assignor, by mesne assignments, to Automatic Telephone & Electric Company Limited, London, England
Application January 25, 1935, Serial No. 2,271
In Great Britain February 15, 1934
2 Claims. (Cl. 200—86)

1. In a vehicle operated switch, the combination of a relatively long and narrow receptacle adapted to be imbedded substantially horizontally in the roadway for operation by vehicles

passing thereover, a stationary contact bar extending longitudinally in said receptacle, a resilient insulating cover mounted in said receptacle, said cover having projecting portions extending downward and longitudinally thereunder and formed with slotted recesses extending longitudinally and horizontally in said projecting portions with the open edges of said recesses spaced laterally in opposed relation to each other, and a contact strip slideably mounted in said recesses so as to be resiliently supported by said cover for engagement with said stationary contact bar only under pressure by vehicles on said cover.

2,107,652

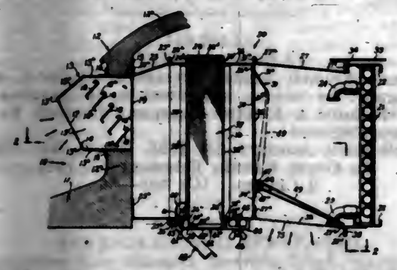
PROCESS FOR THE PREPARATION OF THE ALKALI METAL SALTS OF 2-BENZOYLBENZOIC ACID COMPOUNDS

Otto Stallmann, South Milwaukee, Wis., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application August 24, 1936, Serial No. 97,646

3 Claims. (Cl. 260—64)

1. In the process for preparing the dialkali metal salts of 2-benzoylbenzoic acids, which contain in the 4'-position a salt forming group of the class consisting of —SO_3H, —OH and —SH, by treatment of a 4'-halogen-2-benzoylbenzoic acid with an alkali metal compound of the class consisting of alkali metal sulfites, alkali metal hydroxides, and alkali metal sulfides, the step which comprises separating the resulting product by concentrating the reaction solution to a point where the major part of the inorganic salts of the alkali metals formed during the reaction are precipitated, and separating the inorganic salts from the solution of the dialkali metal salt of the 4'-substituted 2-benzoylbenzoic acid.



2,107,653

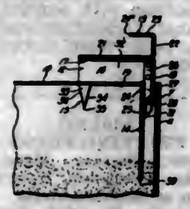
AIR FILTER FOR RAILROAD CARS

John D. Strobell, New Haven, Conn., assignor to The Safety Car Heating & Lighting Company, a corporation of New Jersey

Application September 12, 1935, Serial No. 40,217

10 Claims. (Cl. 183—41)

1. In apparatus of the character described, in combination, a car having a clerestory, means forming an air inlet port in said clerestory, an enclosure within said car opening into said port, means forming an outlet from said enclosure, means forming an inlet port from the interior of said car into said enclosure adjacent said outlet, and a single damper disposed within said enclosure adjacent said inlet port and said last-mentioned outlet and adapted to regulate the mixture of air which has entered from said port and said opening before it exits from said enclosure.



2,107,654

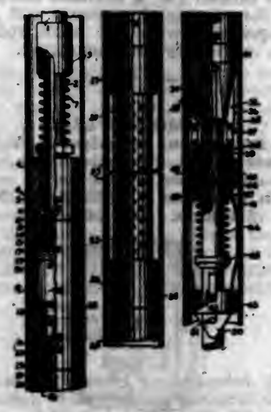
CONTAINER OPENING DEVICE AND POURING DEVICE

Edwin H. Vail, Los Angeles, Calif.

Application March 3, 1936, Serial No. 66,848

15 Claims. (Cl. 221—96)

4. A container opening device comprising, a body having a discharge channel, a cutter projecting substantially laterally from the body operable to cut an opening in a wall of a container, side flanges on the cutter, cutting edges on the flanges operable to make lateral cuts at the ends of said opening, means associated with the cutter operable to bend back the flap thus defined, and a part on the body extending between the flanges closing the adjacent end of the channel, the flanges and said part defining a passage for conducting a limited quantity of the container's contents from the interior of the container to the channel.



2,107,655

TESTER

Carl W. Vogt and Granville A. Humason, Houston, Tex.

Application February 17, 1936, Serial No. 64,196

7 Claims. (Cl. 166—1)

1. A well tester including a tubular stem, a chamber at the lower end thereof, means to seal the entrance of fluid to said chamber releasable on the relative downward movement of said stem to open said chamber, a tubular mandrel below said stem and connected therewith, a plurality of spaced packers on said mandrel, a perforated nipple between said packers, means adjustable to support said packers and nipple at any desired level, and means actuated by the downward pressure of said stem when said supporting means is operated to set said packers.

2,107,656

DYESTUFFS OF THE DIBENZANTHRONE SERIES

Alexander J. Wuerin, Carrollville, and Ralph N. Lulek, Waukesha, Wis., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application October 19, 1936, Serial No. 106,066

2 Claims. (Cl. 260—61)

2. In the process for preparing new gray to black vat dyestuffs of the dibenzanthrone series, the step which comprises heating a primary aminodibenzanthrone which contains no additional substituents with perchloromethylmercaptan in an inert organic solvent, at temperatures above about 120° C.

2,107,657

PROCESS FOR OBTAINING CREPE EFFECTS ON FABRICS

Hans Altwegg and Armin Eichler, Freiburg, Germany, assignors, by mesne assignments, to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application April 6, 1931, Serial No. 528,249. In Germany April 11, 1930

6 Claims. (Cl. 28—1)

1. A process for producing crepe effects on fabrics which comprises fabricating highly twisted cellulose acetate yarns containing a calcium salt which is very soluble in water into a fabric, and treating the fabric with an aqueous medium.

2,107,658

PYROPHORIC LIGHTING MECHANISM

Louis V. Arenson, Newark, N. J., assignor to Art Metal Works, Inc., a corporation of New Jersey

Application November 14, 1936, Serial No. 110,787

11 Claims. (Cl. 67—7.1)

9. In pyrophoric lighting means, a casing having an open bottom, a fuel chamber and an operating assembly disposed in said casing in side-by-side relation, said operating assembly comprising an actuating lever disposed along one vertical side of said casing, said chamber and said assembly being so shaped and of dimensions such as to jointly close said open bottom and such that they may be slidably withdrawn through said open bottom of said casing.

2,107,659

SOUNDBOARD FOR PIANOS

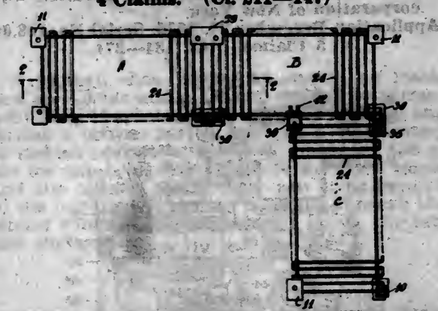
Paul H. Dillnber, Douglaston, N. Y., assignor to Steinway & Sons, New York, N. Y., a corporation of New York

Application November 24, 1936, Serial No. 112,558

6 Claims. (Cl. 84—193)

1. A soundboard for pianos, comprising a main soundboard having a curved end, said soundboard being supported upon the piano case and having its curved end free thereof, an augmenting soundboard having a curved end, said last-named soundboard supported upon the piano case and having its curved end free thereof, and a floating rim between the curved ends of said soundboards, the rim being in contact with both

soundboards, the two overhanging soundboards and floating rim therebetween, forming a freely suspended and vibrating member, the augmenting soundboard acting as a continuation of the main soundboard, said soundboards being of concave convexo shape with the edge portions tapering, and having said tapered edge portions in contact with the rim.



2,107,660

ADJUSTABLE SHELVING

Joseph Cichocki, Woodhaven, N. Y.

Application December 11, 1936, Serial No. 115,364

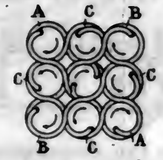
4 Claims. (Cl. 211—147)

1. An adjustable shelving for the support of trays comprising units adapted to be placed end to end, each unit composed of substantially L-shaped corner posts and intermediate posts, perforated end brackets having channels for the reception of the ends of one branch of the L-shaped posts, screws for securing said brackets to said posts, said end brackets adapted to be secured to the upper and lower walls of receptacles in which said shelving is placed by fastening means passed through the perforations in said end brackets, and intermediary brackets for said corner posts adjustably held to the same in any of their adjusted positions and locked to said posts, and adjustable brackets for said intermediate posts adapted to be adjustably secured thereto and locked in their adjusted position, said intermediate post brackets adapted to support the trays of two adjoining units of the shelving.

2,107,661

SOLID PLAITED MATERIAL

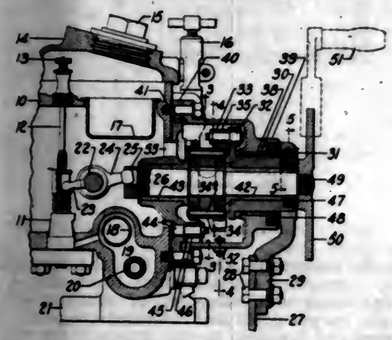
Arthur Cressley, Bolton, England



Application November 18, 1936, Serial No. 111,466

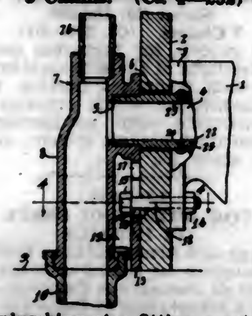
In Great Britain May 9, 1936

5 Claims. (Cl. 96—25)



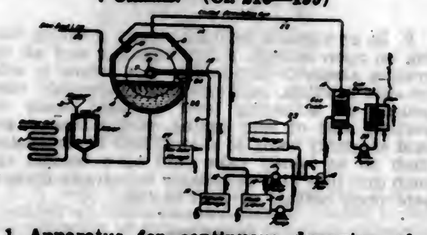
1. A solid plaited material comprising two independent tracks of bracing strands which run diagonally across the material from corner to corner and cross the path of each other at the

centre substantially at right angles to one another and at least one track of binding strands symmetrically arranged with respect to the bracing strands and appearing on the surface of the material at four points intermediate the corners, alternate points being situated at the opposite



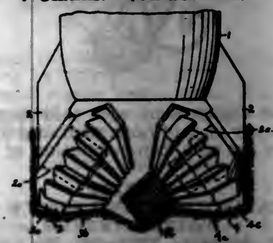
ends of a line passing through the centre of the material, each strand, after crossing another strand on the exterior surface, immediately returning to the interior of the material, and the bracing and binding strands being braided together interiorly of the material.

2,107,662
RATCHET MECHANISM
Bengt E. Folke, Mamaroneck, and Walter E. Wellheim, New York, N. Y., assignors to Nathan Manufacturing Company, New York, N. Y., a corporation of New York
Application December 29, 1936, Serial No. 118,063
5 Claims. (Cl. 184—27)



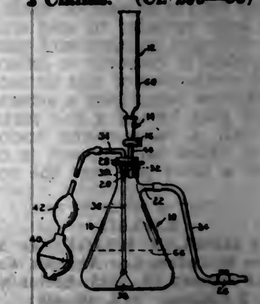
4. In combination with a force feed lubricator having a main oil reservoir, pumping units and a transverse shaft forming an actuating member therefor within the reservoir, the said shaft having a laterally sliding and vertically rocking motion, a ratchet mechanism comprising a cup-shaped housing, a shaft, driving pawls and a support therefor, counter-driving pawls and a support plate therefor, gears mounted around the shaft for engaging the said pawls and disposed between the said driving pawl support and counterpawl support plate, the said shaft being journalled in the said pawl support plate, the said plate having an aperture above the said shaft for admission of oil from the main reservoir of the lubricator to the said housing, means outside of the housing to operate the said shaft, and means within the lubricator and at the end of the said shaft to operate directly the actuating member of the said pumping units, the entire ratchet mechanism together with the said operating means outside of the housing and the said means within the lubricator to operate directly the actuating member being adapted to be withdrawn from one side of the lubricator as an assembled unit.

2,107,663
PIPE FITTING FOR WALL SUPPORTED WATER CLOSETS
Robert P. Franck, Huntington Park, Calif., assignor to Bennett Fittings, Vernon, Calif., a corporation of California
Application January 12, 1937, Serial No. 120,220
3 Claims. (Cl. 4—252)



1. In a plumbing pipe fitting construction, the combination of a supporting wall, a toilet bowl on one side of the wall, an elbow having a thimble extending through the wall to connect to the bowl outlet, said elbow having a down leg for connecting the thimble to a waste pipe, said elbow having a face plate integral with the said down leg, said face plate having substantially vertical slots including a lower slot opposite the down leg, bolts passing through the wall and said slots for securing the bowl to the elbow, the lower bolt that passes through the lower slot having an angular head between the plate and the said down leg, said down leg and said face plate having a pair of webs extending along each side of the lower slot integrally connecting the down leg and the said face plate, said webs lying adjacent the head of the lower bolt and locking the same against rotation on its axis.

2,107,664
SEPARATION OF WAX FROM MINERAL OIL BY FILTRATION
William Provine Gee, Plainfield, N. J., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
Original application March 31, 1934, Serial No. 718,347. Divided and this application February 12, 1935, Serial No. 6,151. Renewed July 16, 1937
7 Claims. (Cl. 210—199)



1. Apparatus for continuous dewaxing of a chilled wax-bearing mineral oil, comprising in combination, a continuous filter including a filter casing supporting a rotatable continuous filter element, a hood enclosing the filter casing, means for supplying a chilled gas to the interior of the filter casing to form a chilled gaseous atmosphere surrounding exposed portions of the filter element, means for continuously removing retained liquid from the wax cake on the filtering element by continuously passing a portion of the chilled gas through the cake and filtering element, means for separating gas from filtrate liquid, means for chilling separated gas, and means for returning the chilled gas to the supplying means for return to the filter casing.

2,107,665
DRILL BIT
George G. Harrington, Houston, Tex., assignor to Reed Roller Bit Company, Houston, Tex., a corporation of Texas
Application June 11, 1935, Serial No. 26,060
7 Claims. (Cl. 255—71)

1. A roller bit having a head and a pair of roller cutters mounted on said head, rotatable on axes inclined downwardly and inwardly toward the longitudinal axis of said head and arranged to traverse substantially the entire area of the bottom of the hole, each of said cutters extending beyond the periphery of the head; one of said cutters being substantially frusto-conical and having an inner and an outer portion, the teeth on the outer portion being at a lesser angle to the axis of rotation of said cutter than the teeth on the inner portion; and the other of said cutters having a point portion and a base, said base having inner and outer portions, said point portion being frustoconical and having cutting teeth extending upwardly and outwardly from a point substantially at the longitudinal axis of the head, the teeth of said inner base portion extending at a greater angle to the axis of rotation of said cutter than the teeth of said point portion, and the teeth of said outer base portion extending at a lesser angle to the axis of rotation of said cutter than the teeth of said inner base portion; those portions of said teeth which cut at the longitudinal axis of the head being substantially spaced from the axis of said other cutter.

2,107,666
FOAM APPARATUS
Helen Hechman, New York, N. Y.
Application August 23, 1935, Serial No. 37,592
2 Claims. (Cl. 299—93)

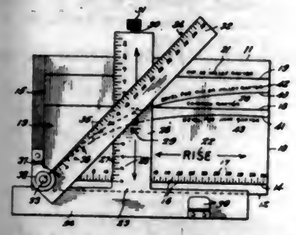
1. Apparatus of the class described comprising a flask having an opening at its top, a stopper having two bores therethrough inserted in said flask, a gas inlet tube extending into said flask through one of said bores to a point near the bottom of the flask, an outlet tube extending into said flask through the other bore in said stopper, a foam receiver connected to said last mentioned tube, said flask having an outlet opening below said stopper, and valve means to control the flow of foam alternatively through either said outlet tube or said opening below the stopper.

2,107,667
FOOTBALL SHOE
John H. Hermsen, Brooklyn, N. Y., assignor to A. G. Spalding & Bros., New York, N. Y., a corporation of New Jersey
Application June 29, 1937, Serial No. 150,948
1 Claim. (Cl. 36—2.5)

A football shoe having an upper, an insole and an outsole and a toe cap molded in permanent form of substantially inflexible material and having a bottom part or tab and a ball contact or kicking portion with lateral wings, the tab of the toe cap being introduced between the insole and the outsole, and the toe cap being secured to the body of the shoe by stitching through the lateral wings of the toe cap, the insole, the tab, and the outsole.

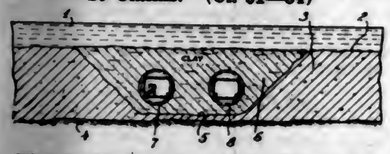
2,107,668
METHOD OF PRODUCING ARTIFICIAL SILK
William L. Hyden, Kenmore, and John S. Fonda, Buffalo, N. Y., assignors, by mesne assignments, to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 22, 1930, Serial No. 469,912
25 Claims. (Cl. 18—54)

1. A method of producing solid artificial thread having a luster equal to or lower than natural silk which comprises introducing a vaporizable high boiling hydrocarbon in a viscose solution, spinning said solution and finishing the thread in the usual manner whereby the hydrocarbon is substantially eliminated.



2,107,669
SHELF EDGING
Edward Karfiol, New York, N. Y.
Application March 17, 1936, Serial No. 69,294
6 Claims. (Cl. 41—10)

5. A shelf edging comprising a plurality of plies, one rear ply of which is folded over the upper edge of a forward ply and secured in abutting relation to the forward face of the latter



and one forward ply being folded over the lower edge of a rear ply and secured in abutting relation to the rear face of the latter, said forward ply being extended rearwardly of the rear ply to overlie the top and a shelf and form a shelf covering portion.

2,107,670
DEVICE FOR GAUGING THE CUTTING OF RAFTERS
Erik O. Karlson, Elmont, N. Y.
Application February 18, 1937, Serial No. 126,348
3 Claims. (Cl. 33—97)

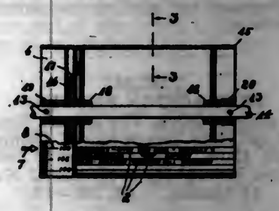
1. In a device for computing rafter cuts, a base having a plane upper surface, a slide member overlying and extending across the upper surface of the base, means mounting the slide member for guided sliding movement lengthwise of the base, an arm pivoted adjacent one corner of the base, means for locking the slide member and arm respectively in adjusted relation to each other, and curved lines on the surface of the base extending from the pivotal point of the arm for obtaining readings to determine the angle of the bevel cuts for the hip or valley and jack rafters.

2,107,671
METHOD OF CONSTRUCTING TUNNELS
Miles I. Killmer, New York, N. Y., assignor to Mason & Hanger Company, Inc., New York, N. Y., a corporation of West Virginia
Application July 31, 1937, Serial No. 156,648
10 Claims. (Cl. 61—84)

1. The method of tunneling through porous material beneath a body of water which comprises excavating a trench in the porous material, filling the trench with yielding and impermeable material, and advancing the tunnel through said yielding material.

2,107,672
MAGNETIC HOOKING GAME
Harold M. Lang, New York, N. Y.
Application June 13, 1936, Serial No. 85,004
2 Claims. (Cl. 272—140)

2. In a game of the character described, a body in the form of a figure; a bar magnet secured within said body; means for supporting said body mounted for universal rocking movement in stable equilibrium comprising a base detachable from said body; a loop attached to the end of said magnet and protruding from said body; and a magnetic hook having the curved end portion of the same polarity as the end of said magnet attached to said loop, manually controlled for engagement with said loop, whereby the proximity of said hook with said loop acts to unbalance the equilibrium position of said body.

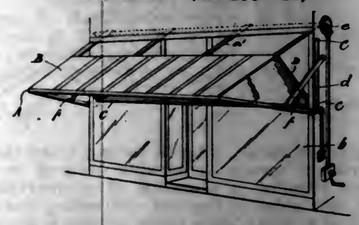


2,107,673
TEMPERATURE LIMITING DEVICE FOR HOT WATER SYSTEMS
Luther D. Lovekin, Villanova, Pa., assignor to Kitson Company, Philadelphia, Pa., a corporation of West Virginia
Application December 19, 1933, Serial No. 703,037
1 Claim. (Cl. 137—139)

In a self-resetting, temperature-limiting device for hot water systems, the combination of, a normally seated water relief valve, two straight temperature-responsive metal elements arranged one within the other and of which the inner one is tubular for the passage of water, a motion magnifying lever operated by said straight elements and arranged to open said valve and to permit it to close in response to differential expansion and contraction of said elements, a support for said lever comprising a generally cylindrical forked plug having a flat portion in its cylindrical wall, a valve casing enclosing said valve and to which said support is detachably secured, and a pivot pin near the root of the fork.

2,107,674
CHANGING DISPLAY WEIGHING MACHINE
George Marsden, Los Angeles, Calif.
Application February 12, 1937, Serial No. 125,387
2 Claims. (Cl. 40—28)

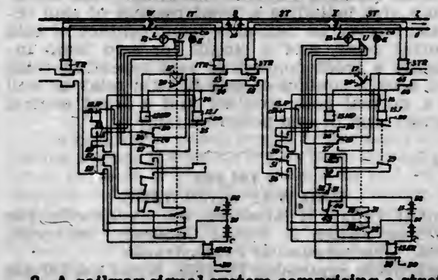
1. In a weighing machine having a drum dial with weight-indicating graduations, a display device of a drum form cooperatively disposed to and having its periphery aligning with the dial drum, display matter on the display drum arranged to appear as linear continuations of the dial graduations, and a slip contact means between the dial drum and the display drum for actuating the display drum by movements of the dial drum to bring different matter into aligned display position with respect to any of the weight-indicating figures of the dial-drum.



2,107,675
CHECKERWORK
Eugene A. McKelvy, Ardmore, Pa.
Application July 31, 1937, Serial No. 156,643
5 Claims. (Cl. 263—51)

1. A checkerwork brick structure for regenerative chambers comprising a plurality of refractory brick of the form of an oblong hexahedron having end surfaces of equal area inclined towards each other in one direction and having side faces of equal area inclined toward each other in the opposite direction and having the other two faces parallel and of unequal areas, said brick built up in bonded construction and providing in the structure vertical flues of progressively increasing and diminishing cross section.

2,107,676
AWNING
Friedrich Neumann, Berlin, Germany
Application August 24, 1935, Serial No. 37,631
In Germany August 31, 1934
4 Claims. (Cl. 156—44)

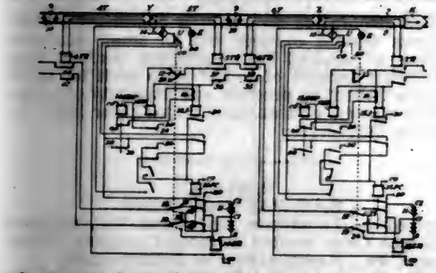


1. An awning, particularly for store windows, comprising a part pervious to light and two parts substantially impervious to light, said two impervious parts being arranged to form substantially a saddle roof, and the pervious part being attached to the impervious parts near their common top edge, and one of said impervious parts extending in a rearward and downward direction from said common edge.

2,107,677
FLEXIBLE DECORATIVE STRIP
John R. Sexton, Meriden, Conn.
Application May 5, 1937, Serial No. 140,965
5 Claims. (Cl. 41—10)

3. A decorative strip which comprises a continuous flexible metallic coil of small diameter having a polished light reflecting surface, said coil being formed of a flat strip with its turns angularly bent to produce a multiplicity of irregularly related substantially rectangular light reflecting surfaces.

2,107,678
RAILWAY SIGNALING
Howard A. Thompson, Edgewood, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application September 18, 1936, Serial No. 101,467
9 Claims. (Cl. 246—50)

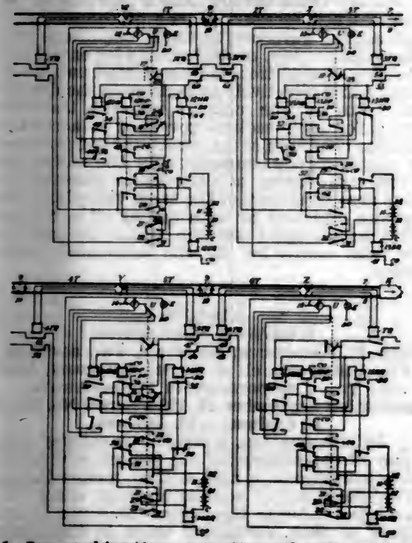


8. A railway signal system comprising a stretch of railway track divided into a plurality of successive track sections, a pair of conductors for each section governed by traffic conditions in the associated section, control means for each section receiving energy from the associated pair of conductors and selectively responsive to the direction and value of the current received therefrom, means for each section governed in accordance with the condition of the associated control means for supplying the conductors for the section next in rear with energy of a particular direction and value or with energy of the same value but in the opposite direction or with energy of a different value, and traffic governing means for each section also controlled by the associated control means.

2,107,679
RAILWAY SIGNALING
Ralph R. Kemmerer, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application September 18, 1936, Serial No. 101,468
16 Claims. (Cl. 246—50)

1. In combination, a section of railway track, a pair of conductors for the section governed by traffic conditions in said section, means for supplying said pair of conductors with energy of a particular value in the reverse direction or with energy of such particular value in the normal direction or with energy of a higher value in accordance with traffic conditions in advance of said section, a polarized relay responsive to energy of either value receiving current from said conductors, a neutral relay responsive only to energy of said higher value also receiving energy from said conductors, a repeating relay which

is energized or deenergized according as said polarized relay is energized or deenergized, a signal for said section comprising a first indication unit and a second indication unit, said first indication unit being a semaphore arm capable of assuming a stop and a caution as well as a proceed position and said second indication unit being a lamp, a caution circuit for said sema-



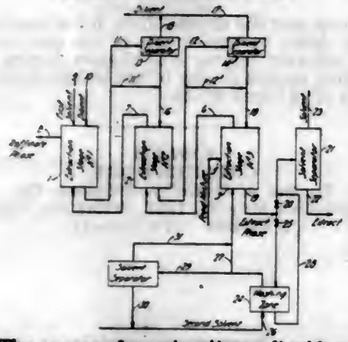
phore arm including a front contact of said repeating relay, a proceed circuit for said semaphore arm including a front contact of said repeating relay as well as a front contact of said neutral relay, and a circuit for said lamp including a front contact of said repeating relay and a back contact of said neutral relay as well as a normal polar contact and a front neutral contact unit of said polarized relay.

2,107,680

RAILWAY SIGNALING

Paul H. Crago, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania

Application September 18, 1936, Serial No. 101,469
12 Claims. (Cl. 246—46)



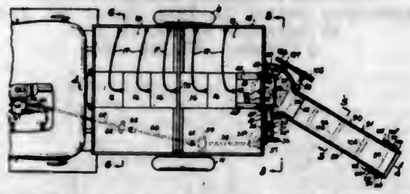
1. In combination, a section of railway track, a pair of conductors for said section, means for supplying said conductors with energy of a particular magnitude or with energy of a higher magnitude in one direction or with energy of said higher magnitude in the other direction in accordance with traffic conditions in advance of said section, a neutral relay responsive to energy of said particular magnitude receiving current from said conductors, a polarized relay responsive only to energy of said greater magnitude also receiving current from said conductors, and traffic governing means for said section controlled by said two relays.

2,107,681

EXTRACTION PROCESS

Willem J. D. van Dijck, The Hague, Netherlands, assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware

Application March 18, 1935, Serial No. 11,647
11 Claims. (Cl. 196—13)



1. The process for extracting a liquid mixture to remove a component therefrom, which comprises extracting said mixture in an extraction zone by flowing it countercurrently to and in contact with concurrent streams of a selective solvent and a diluent having a greater solvent power than and preferentially dissolved in the solvent under conditions producing raffinate and extract phases, and withdrawing diluent from the extraction mixture at at least one intermediate point of the extraction zone.

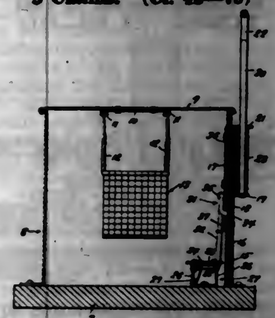
2,107,682

UNLOADING TRUCK

Reuben E. Wall, Winston-Salem, N. C.

Application July 21, 1937, Serial No. 154,840
2 Claims. (Cl. 214—83)

1. In combination, a truck having a bed thereon, partition means removably secured in the bed and forming a plurality of compartments therein, the sides of the bed converging towards each other at their lower edges, a trough disposed below said bed and extending the entire length of the bed, a plurality of removable bottom members disposed above said trough, an endless conveyor disposed in said trough, means extending from each of said bottom members to the upper part of the bed for removing the bottom members while material is resting thereon and so that the material may fall onto said conveyor, a second endless conveyor pivotally secured to the rear



end of the truck and below the delivery end of the first conveyor to receive the contents of the compartments discharged by the first conveyor, said second conveyor being mounted for lateral and vertical swinging movement to thereby deliver the material to the desired point relative to the rear end of the truck, and a driving connection between the motor of the truck and said conveyors.

2,107,683

ANIMAL TRAP

Wilbur Darrel Williams, Washington C. H., Ohio

Application June 19, 1935, Serial No. 27,444
Renewed July 12, 1937
5 Claims. (Cl. 43—78)

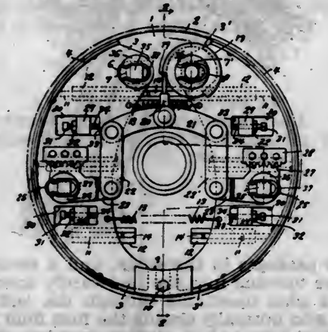
1. A rat trap of the class described comprising a casing provided on its interior with a bait holder, said casing having a doorway formed in at least one of its side walls to facilitate partial entry of the animal into the casing, a pair of vertical channeled guides on the exterior of said wall, a panel-like door slidable in said guides, a bracket attached to the outside of said door, a guide fixed to the outside of said wall, a rod slidable in said guide and attached at its lower end to said bracket, a coiled spring surrounding said rod between the bracket and guide, the upper end of said rod being provided with a finger ring, an animal actuated trip device on the interior of the casing adjacent said doorway, and an operating connection between said trip device and door, said operating connection comprising a substantially L-shaped pivotally mounted spring actuated latch having one end engageable with the trip means and the other end engageable with the door when the door is in elevated position.

2,107,684

MONOGRAM CONSTRUCTION

Ralph C. Bangs, Providence, R. I., assignor to Cohn & Rosenberger, Inc., New York, N. Y., a corporation of New York

Application August 12, 1936, Serial No. 95,595
12 Claims. (Cl. 40—140)



1. In combination, an ornament base having a panel, the ends of said panel being rearwardly inclined in front, and an ornament member having spring edges, said edges having depending rear portions which extend towards each other and are spaced from the body thereof and are spaced from each other a distance less than the width of the panel, said depending rear portions being snapped over the ends of the panel.

2,107,685

BRAKE

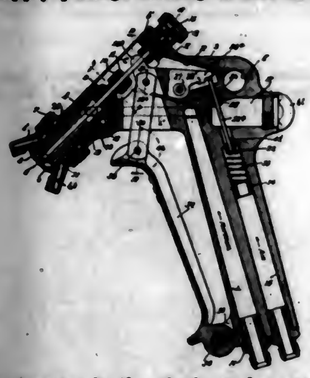
Arthur H. Bennett, Logansport, Ind.

Application October 29, 1936, Serial No. 108,295
2 Claims. (Cl. 188—78)

1. A brake shoe comprising a drum, brake shoes having facings riveted on the surfaces thereof and being movable to place the facings in and out of braking contact with the said drum, means for guiding and constraining the movement of the brake shoes along rectilinear lines, and adjustable means limiting the movement of the said brake shoes to prevent engagement of the brake shoes or the brake shoe facing rivets with the drum in the event the brake shoe facings have worn away, and means for moving said brake shoes including a cable drum mounted within the brake drum, an equalizing arm arranged within the brake drum, a cable fixed at one end to the cable drum and at the other end to the intermediate portion of said equalizing arm, motion transmitting means operatively connecting the equalizing arm with the brake shoes, means for turning said cable drum, and resilient means connecting the brake shoes.

2,107,686

SPRAY GUN FOR SPRAYING FABRICS



Svend Bramsen and Fritz Wahlin, Chicago, Ill., assignors to Binks Manufacturing Company, Chicago, Ill., a corporation of Delaware

Application September 27, 1935, Serial No. 42,412
17 Claims. (Cl. 299—88)

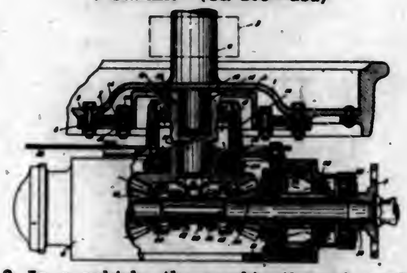
1. In a pneumatic spraying appliance having a slidable needle valve controlling the discharge of material from the appliance and a slidable air valve spaced rearwardly from the said needle valve and controlling the admission of air, and also having separate springs normally closing both of the said valves, valve opening means including a member extending between the two valves and disposed for opening both valves when the said member is moved in one direction, and digitally actuable means for moving the said member in the said direction; the digitally actuable means including two interpivoted links extending in toggle formation at an obtuse angle to each other and disposed so that the said angle increases during the actuation of the said digitally actuable means.

10. In a spray gun, a body comprising a stock and a handle depending from the rear end of the

stock; the stock having both a forwardly opening and a rearwardly opening recess and having two longitudinal fluid passages in the part of the stock below the forwardly opening recess, both of the said passages leading forwardly from the rearwardly opening recess; the handle having a first fluid supply passage leading to one of the fluid

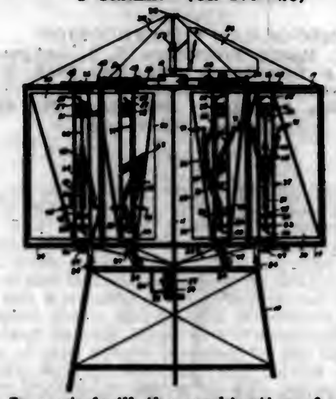
supply passages in the stock, and a second fluid passage opening into the rearwardly opening recess; a plug insertable through the last named recess and normally closing the first fluid passage in the stock; and a closure member normally closing the mouth of the said rearwardly open recess.

2,107,687
DOOR LATCH
William Edward Brown, Oakland, Calif.
Application May 4, 1937, Serial No. 140,763
2 Claims. (Cl. 292—78)



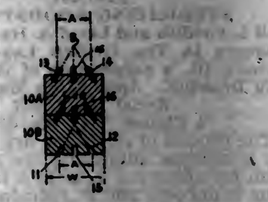
1. A latch for latching hinged closures, comprising a frame having an opening, a latch member pivotally mounted within the frame and extended through the opening, a substantially U-shaped link pivotally connected to the latch member near one end thereof and having right-angled ends fitted in openings formed in the side walls of the frame near the opposite end of the latch member, a spring member mounted within the frame and bearing against the latch member at a point between the pivot points of the link, whereby the latch member will move inwardly when the closure is moved to either its open or closed position.

2,107,688
TUNNEL MUCKING APPARATUS
Cecil M. Browner, Beaumont, Calif.
Application August 8, 1936, Serial No. 95,022
8 Claims. (Cl. 214—90)



1. Tunnel mucking apparatus comprising a chassis including framework, vertical pivot means on said framework, a boom support pivoted by said pivot means, a semi-circular track on the front of said chassis below said support, a forwardly extending foot on said support having rollers running on said track and supporting the front of said support, a main boom pivoted on said suupport, and a digging boom on said support.

2,107,689
POWER TRANSMITTING MECHANISM FOR VEHICLES AND ESPECIALLY RAILROAD VEHICLES
Ettore Bugatti, Molsheim, France
Application October 9, 1935, Serial No. 44,284
In France October 22, 1934
7 Claims. (Cl. 105—131)



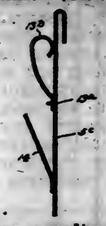
2. In a vehicle, the combination of a wheel axle; at least one bearing on said axle for transmitting thereto the load of the vehicle; a wheel on said axle, disposed outside said bearing with reference to the vehicle; a power transmitting device disposed outside said wheel with reference to the vehicle, having a power input member and a rotary power output member; elastic means for coupling said rotary power output member with said wheel in substantially coaxial relation therewith, said elastic means being secured positively and detachably both to the rotary power output member and to the wheel, and providing the sole direct connection between the wheel and the rotary power output member; and means for driving said power input member.

2,107,690
WINDMILL
Claude J. Clark, Young, Ariz.
Application January 7, 1937, Serial No. 119,490
4 Claims. (Cl. 170—25)

1. In a windmill, the combination of a tower, a vertical rotatable shaft extending through the tower and above the upper end of the tower, a revoluble structure supported by the tower and connected with said shaft to rotate with the shaft, a plurality of pairs of vanes mounted in the revoluble structure, each pair of vanes including a short shaft mounted in the top of the revoluble structure, a pair of side plates connected together at their upper and lower ends, a bearing between the connected upper ends of said side plates and through which said short shaft extends, the vanes of said pair being hinged at their inner edges to said side plates, clutch means associated with the short shaft and said side plates for placing said side plates in driven engagement with the short shaft for transmitting drive from said short shaft to said vanes, a wind vane mounted on said vertical shaft to rotate about the latter as an axis, driving mechanism connecting the wind vane with the short shafts of the aforementioned respective vane assemblies for driving the latter from the wind vane, and mechanism connected with said vertical shaft and the clutch mechanisms of the respective vane assemblies for engaging and releasing said clutches in response to the speed of rotation of said vertical shaft.

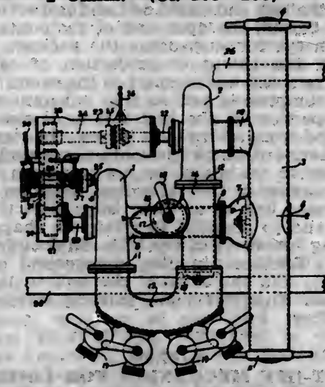
2,107,691
BLOCK KEYING SYSTEM
Lawrence E. Corser, Cortland, N. Y., assignor, by mesne assignments, to Cemalan, Incorporated Homer, N. Y., a corporation of New York
Application March 24, 1936, Serial No. 70,566
12 Claims. (Cl. 46—26)

1. A building block system comprising a plurality of similar separable units assembled in superimposed courses to build up an erected wall, certain adjoining blocks lying in different next adjacent courses having each of their respective parting faces provided with mated kerfs that lie within the adjacent width edges of such face and respectively include separate mouths laterally spaced apart to leave an interposed medial face region therebetween, said kerfs both being cross-sectionally inclined relative to one another with the corresponding kerf mouths of the respective faces extending lengthwise in superimposed alignment to complete two strip receiving grooves of which the respective component kerfs are cross-sectionally arranged in planiform registry, and a pair of identical flat sided keeper strips that are interchangeably insertable into either of said grooves to positively interlock the aforesaid parting surfaces against separation.



2,107,692
DEVICE FOR CLOSING A BAG
Martin de Betelhe, New York, N. Y.
Application August 5, 1937, Serial No. 157,485
4 Claims. (Cl. 150—3)

1. A bag provided with an opening and having a closing device which comprises a pair of cords, an end of one cord being connected to the bag near an extremity of the opening and an end of the other cord being connected to the bag near the opposite extremity of said opening, a ring



threaded on said cords, and means for retaining the ring in association with the bag.

2,107,693
ADVERTISING NOVELTY
Evans W. Finch, Riverside, Calif.
Application November 7, 1936, Serial No. 109,774
2 Claims. (Cl. 248—305)

2. An advertising novelty of the character described comprising a plate having one end provided with suspension means, a spring clip secured at one end to the plate at the front side thereof and adjacent the upper end portion, and a suspension prong secured at one end to the front side of the plate below said clip and extending upwardly and outwardly from said plate at an acute angle with respect to the plate.

2,107,694
PARALLEL SERIES CENTRIFUGAL PUMP
Charles H. Fox, Cincinnati, Ohio, assignor to The Ahrens-Fox Fire Engine Company, Cincinnati, Ohio, a corporation of Ohio
Application May 9, 1934, Serial No. 724,751
1 Claim. (Cl. 103—106)

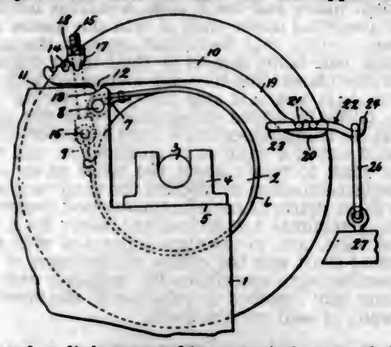
In combination in a pumping mechanism, an inlet header, a plurality of diverging outlets, a plurality of pumping mechanisms connected thereto and in parallelism with said header, valve means for selectively arranging said pump-

ing mechanisms in parallel or in series, a common outlet header attached to the outlets of said pumping mechanisms, and a common power means for selectively driving from a single source of power one or both of said pumping mechanisms, said valve means comprising a manually operated valve and automatically closing valves, one interposed between one pump and the inlet header and the other pump and the outlet header, said pumps being arranged in such relationship with respect to one another so that the pump shafts are out of axial alignment with one another.

2,107,695
BELT PACKAGE

Randolph E. S. Geare, Philadelphia, Pa., assignor to L. H. Gilmer Co., Philadelphia, Pa., a corporation of New Jersey

Application January 16, 1936, Serial No. 59,460
1 Claim. (Cl. 206—46)



In a belt package, the combination with a friction drive belt embodying an elongated endless loop of elastic material the sides of which when the belt is compressed to dispose said sides in parallel relation for compact packing of the belt are placed under tension tending to spread them apart, of an enclosing wrapper for the belt comprising a narrow elongated flat container of comparatively rigid material and of a depth and width approximately equal to the compressed belt and of a length approximating but slightly less than that of the belt, said container being closed at one end and open at its opposite end so as to snugly embrace the compressed belt except at one of the belt ends, said belt end projecting outwardly beyond the open end of the container to form an eye for suspending the package from a support, the extent of projection of said belt end being small with respect to the overall length of the compressed belt so that substantially the entire portion of the belt will be enclosed and protected from soiling and injury, the rigidity of the material of which the container is made being sufficient to maintain its normal form and of such relation to the spreading tendency of the compressed belt as to resist bulging of the container and to adapt it to retain its shape while opposing spreading of the belt and thereby instituting a frictional binding engagement between the same and the sides of the belt to hold the container and belt from shifting relatively to each other.

2,107,696
LET-OFF MECHANISM FOR LOOMS

Arthur Grenier, Lawrence, Mass.

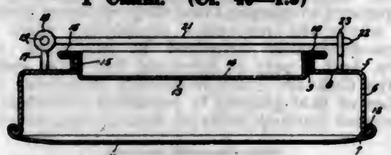
Application July 31, 1937, Serial No. 156,804
2 Claims. (Cl. 188—53)

1. The combination with a rotatable warp beam, of let-off mechanism for controlling rotation thereof comprising a brake band surrounding said beam for frictional engagement therewith and adapted for variable tensioning against said beam, and means for variably tensioning said band including a horizontally disposed fulcrumed lever having a free downwardly curved end provided with notches in the upper edge

thereof, a link removably mounted on said free end to form an extension thereof and provided with cross bars seating in said notches and a looped end straddling the free end of said lever and bearing against the under edge thereof, and a weight suspended from the other end of said link.

2,107,697
STERILIZING FOODSTUFFS

Carroll L. Griffith and Lloyd A. Hall, Chicago, Ill., assignors to The Griffith Laboratories, Inc., Chicago, Ill., a corporation of Illinois



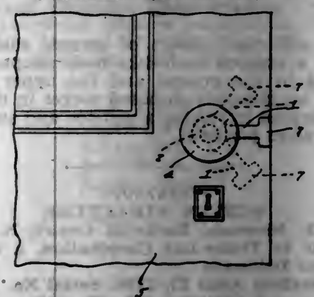
No Drawing. Application May 29, 1936, Serial No. 82,457
4 Claims. (Cl. 99—225)

3. The process of sterilizing dry food materials which comprises subjecting the material to a vacuum for about one hour at a non-destructive heat up to not over 240° F., reducing the temperature to about 150° F. and increasing the vacuum to a value near 28 inches, then admitting ethylene oxide into the evacuated space at least to a concentration of about 1 pound to 35 cubic feet of space, and exposing the material to the ethylene oxide for about 2½ hours.

2,107,698
BADGE

Sidney C. Greeschel and Aaron G. Dawson, Columbia, S. C.

Application October 23, 1935, Serial No. 46,376
1 Claim. (Cl. 40—1.5)

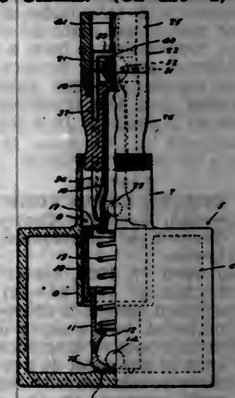


A badge of the character described, said badge comprising an annulus having on its rear edge a radially inwardly extending annular flange with its radially inward edge defining an access opening, a transparent disk, securing means fastening the peripheral edge of said disk to the front edge of said annulus, a circular pan-shaped closure for telescoping in said access opening, the rear edge of the annular wall of said closure having a laterally outwardly extending flange, a pin support extending axially from said annular flange at a point radially outwardly of said access opening, a fastening pin having one end pivoted to said support, and a pin detent extending axially from said annular flange at the opposite side of said access opening for detaining the free end of the pin in closed position, said pin being only sufficiently spaced from said laterally outwardly extending flange on said closure to accommodate the thickness of the cloth through which the pin is inserted in use and cause the cloth between the pin in closed position and last-mentioned flange to hold said closure in closed position.

2,107,699
DOOR BUMPER

Sidney C. Greeschel, Columbia, S. C., and Aaron G. Dawson, Otsen, N. C.

Application June 22, 1937, Serial No. 149,736
8 Claims. (Cl. 16—86)



1. In combination with a door in a door frame, said door having a rotatable handle and the frame having a jamb against which the free edge of the door is normally engageable in coming to a closed position, a bumper member mounted on the door handle and movable therewith and having a resilient part for fitting between the door jamb and a part of the door for cushioning the closing of the door.

2,107,700
COMBINATION INK BOTTLE AND COMPANION FOUNTAIN PEN

Henry G. Haas, West Orange, N. J.

Application February 6, 1937, Serial No. 124,509
6 Claims. (Cl. 120—4)

1. In a structure of the class described, in combination, an ink bottle having a neck, a valved pump unit in said bottle and neck including a ported discharge nozzle, and a fountain pen located removably in said neck and having a valved fitting provided with a socket for reception of said nozzle, in the manner and for the purposes described.

2,107,701
METHOD OF MANUFACTURING GRANULATED POTASSIUM FERTILIZERS FROM POTASSIUM SULPHATE OR FROM SULPHATE OF POTASSIUM AND MAGNESIUM

Karl Haase and Helmut Werth, Bleicherode, Germany, assignors to the firm Preussische Bergwerks- und Hütten-Aktiengesellschaft, Berlin, Germany

No Drawing. Application January 16, 1935, Serial No. 2,055. In Germany September 15, 1934
3 Claims. (Cl. 71—61)

1. The method of manufacturing a granulated fertilizer from technical potassium sulphate containing magnesium salts selected from the group consisting of technical potassium sulphate-magnesium sulphate combinations, comprising adding thereto an amount small in proportion to the amount of the potassium salt, of quick lime (CaO) and intimately mixing the aforesaid materials in the presence of a quantity of water amounting to from 15% to 20% of the moist mixture, and agitating the moist crumbly product in a heated rotary drum, drying the mixture in a manner to granulate same into hard dry granules.

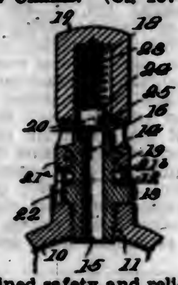
2,107,702
IMPROVED METHOD OF MANUFACTURING AN AGGLOMERATED POTASSIUM CHLORIDE FERTILIZER

Karl Haase, Helmut Werth, and Hermann Probst, Bleicherode, Germany, assignors to the firm Preussische Bergwerks- und Hütten-Aktiengesellschaft, Berlin, Germany

No Drawing. Application January 16, 1935, Serial No. 2,056. In Germany September 11, 1934
8 Claims. (Cl. 71—61)

1. In a method of manufacturing an agglomerated potassium chloride fertilizer from substances selected from the group consisting of technical potassium chloride, crude potash salt containing potassium chloride, and a mixture of these substances, intimately mixing with the respective substances amounts of calcium oxide (CaO) and of magnesium sulphate ($MgSO_4$) small in proportion to the amount of said potassium chloride containing substance, effecting interaction of the added calcium oxide and magnesium sulphate and the agglomeration of the thus obtained components in the presence of water, by agitation and causing the crumbly moist product containing from 15% to 20% of water to travel in a heated rotary drum, drying the mixture and transforming it into hard dry granules.

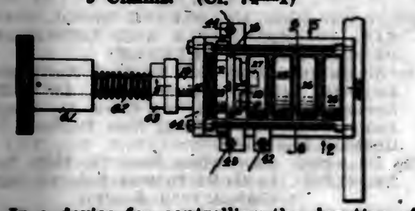
2,107,703
PROCESS FOR RENDERING WOOL MATERIAL UNSHRINKABLE AND NONFELTING PRODUCT MADE THEREBY



Archibald John Hall, New Basford, Nottingham, England, assignor of one-third to William Norton Hicking and one-third to Stephen James Pentecost, both of New Basford, Nottingham, England

No Drawing. Application June 27, 1936, Serial No. 87,805. In Great Britain July 17, 1935
5 Claims. (Cl. 8—20)

1. The process of rendering wool substantially non-felting, which consists in reacting all fibers

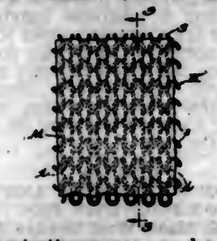


thereof with sulphuryl chloride, and withdrawing the same from such reaction while the epithelial scales are substantially undamaged and substantially uniform throughout the mass of fibres and the product uniformly has the nonfelting characteristics of air-dry wool which has been treated for a time of one hour with a two percent by volume solution of sulphuryl chloride in an inert organic solvent thereof initially at room temperature.

2,107,704
SAFETY AND RELIEF VALVE
Alfred L. Krenquest, Syracuse, N. Y., assignor to Continental Can Company, Inc., New York, N. Y., a corporation of New York
Application February 4, 1935, Serial No. 4,951
2 Claims. (Cl. 137—53)

1. A combined safety and relief valve comprising a coupling plug having a passage therethrough with a valve seat at the outer end thereof, a cap member threadedly engaging said coupling plug below said valve seat and having a recess in line with said passage and a plurality of lateral apertures therethrough, a spring-pressed ball valve disposed within said recess and adapted to engage said valve seat for closing said passage, said cap member having means disposed above said valve seat for positively raising said ball valve from said seat and for preventing removal of said ball valve, and stop means for limiting rotation of said cap member in either direction and including a depending skirt portion on said cap member extended partially around the same for providng stop shoulders and a stop pin carried by said coupling plug and cooperating with the shoulders on said skirt portion for limiting rotation of said cap member, said ball valve being movable independently of said cap member against the action of the spring when in engagement with said valve seat to permit relief of excess pressure.

2,107,705
REVERSING DEVICE
George H. Lang, Boston, Mass.
Application December 28, 1935, Serial No. 56,475
9 Claims. (Cl. 74—1)



1. In a device for controlling the duration of operation of a machine and reversing it, the combination of a series of rotatable wheels and carrying means for rotating one wheel one step when the next wheel has completed a revolution, the combination therewith of an axially movable shaft on which said wheels are rotatably mounted in one portion of the shaft, and a radially movable key carried by each wheel, said shaft having corresponding key-ways normally out of registration with the keys but so located as to be brought into registration with all of them when the shaft is moved in one direction from normal position, to key the wheels to the shaft.

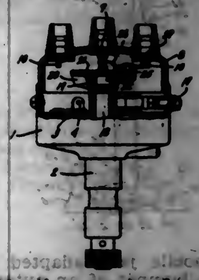
2,107,706
GOLF TEE
Maurice J. Morgan, West Englewood, N. J.
Application July 17, 1935, Serial No. 31,933
3 Claims. (Cl. 273—33)

1. A golf tee support of general disk shape having a tapered knife-like body adapted to be inserted in the ground and the upper portion having an obliquely-disposed socket in its upper part adapted to receive a golf tee and support it in operative position.

2,107,707
SCREEN STRUCTURE
David F. Newman, Rockville Centre, N. Y., assignor to Trans-Lux Corporation, a corporation of Delaware
Application April 17, 1936, Serial No. 74,913
2 Claims. (Cl. 88—24)

1. In a projection screen, a sheet-like body of translucent material, and a sheet of uniform knit fabric combined with said body of translucent material, said translucent material and said sheet of knit fabric cooperating to form a screen properly light-diffusive for rear projection practice, a substantial amount of light passing through said knit fabric and the translucent material when the screen is included in a rear projection system.

2,107,708
SCREEN STRUCTURE
David F. Newman, Rockville Centre, N. Y., assignor to Trans-Lux Corporation, a corporation of Delaware
Application April 17, 1936, Serial No. 74,914
2 Claims. (Cl. 88—24)

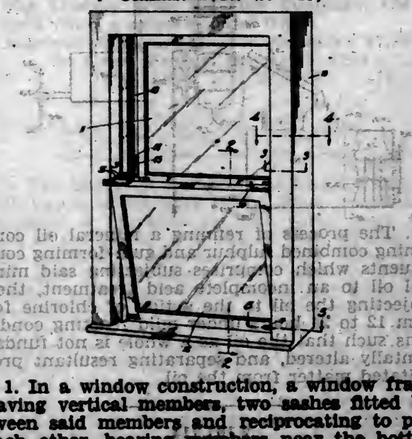


1. In a projection screen, a sheet-like body of translucent material, and a sheet of net fabric combined with said body of translucent material, the filler strands of the sheet of net fabric being disposed in crosswise relation with respect to each other and with respect to the longitudinal strands of said sheet of net fabric, said filler strands being intertwisted with or twisted around

the longitudinal strands, said translucent material and said sheet of net fabric cooperating to form a screen properly light-diffusive for rear

projection practice, a substantial amount of light passing through said net fabric and the translucent material when the screen is included in a rear projection system.

2,107,709
APPARATUS FOR REMOVING OXIDES AND PREVENTING PITTING OF ELECTRICAL CONTACTS
Luther E. Oberdick, Brooklyn, Ohio, assignor to Cleveland Tungsten Manufacturing Company, Inc., Cleveland, Ohio, a corporation of Ohio
Application August 27, 1936, Serial No. 98,193
3 Claims. (Cl. 200—19)



1. In combination, a pair of contacts containing tungsten which are adapted to be connected in an electrical circuit, means including an interrupter for intermittently opening and closing said contacts to make or break the electrical circuit, said contacts and interrupter being mounted in a closed casing, and blade means operable coincidently with said interrupter for moving sufficient air in said casing between said contacts while they are opening to remove volatile oxides formed by the arc created by back electromotive force when the circuit is being opened and to prevent localizing of the arc between the same spots on said contacts.

2,107,710
VAPOR PHASE HYDROLYSIS OF HALOGENATED HYDROCARBONS
Ralph P. Perkins and Andrew J. Dietzler, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Michigan
No Drawing. Application April 20, 1936, Serial No. 77,621
9 Claims. (Cl. 260—154)

2. A catalyst for the vapor phase hydrolysis of a chlorinated aromatic hydrocarbon consisting essentially of silica gel having adsorbed in its pores a basic compound of a metal belonging to one of the Groups II B, III B, IV A and B, and V B of the periodic system, and prepared by treating silica gel with an aqueous solution of a salt of such metal and thereafter washing the gel with water.

6. The method which comprises introducing vapors of a copper compound into a vapor mixture of chlorobenzene and water and passing the resultant vapor mixture over a porous catalyst at a temperature sufficient to cause reaction between the chlorobenzene and water, said catalyst consisting essentially of silica gel having adsorbed in its pores a basic compound of a metal belonging to one of the Groups II B, III B, IV A and B, and V B of the periodic system and being prepared by treating silica gel with an aqueous solution of a salt of said metal and thereafter washing the gel with water.

2,107,711
WINDOW
Spiro Prifti, Chicago, Ill.
Application May 2, 1935, Serial No. 19,436
7 Claims. (Cl. 20—43)

1. In a window construction, a window frame having vertical members, two sashes fitted between said members and reciprocating to pass each other, bearing members near the bottom of said window frame and secured thereto, and means including resilient sealing members for permitting tilting of said sashes upon reaching a predetermined position relative to said bearing members.

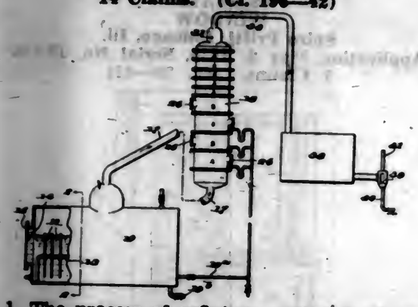
2,107,712
GUANIDINO AND BIGUANIDINO DERIVATIVES OF CYCLIC ETHER COMPOUNDS
Bruno Puetzer, Albany, N. Y., assignor to Winthrop Chemical Company, Inc., New York, N. Y., a corporation of New York
No Drawing. Application June 7, 1934, Serial No. 729,478. In Germany June 9, 1933
7 Claims. (Cl. 260—125)

1. The process which comprises reacting upon an amino-substituted ether in which a six-membered carbocyclic nucleus is linked to a second at most bicyclic ring system consisting of six-membered carbocyclic rings by means of an atom selected from the group consisting of oxygen and sulfur with an amide compound selected from the group consisting of cyanamide and dicyandiamide in the presence of an inert solvent.

3. The compounds of the formula:

$$R^1—X—R^2$$

wherein R^1 stands for a six-membered carbocyclic nucleus, R^2 stands for an at most bicyclic ring system consisting of six-membered carbocyclic rings, at least one of the said nuclei being substituted by a substituent selected from the group consisting of the guanidino, biguanidino and the corresponding N-alkylated groups, and wherein X stands for an atom selected from the group



consisting of oxygen and sulfur, which products are in the form of the free bases insoluble in water but soluble in organic solvents and are soluble in water in the form of their salts.

2,107,713

PROCESS FOR REFINING MINERAL OILS

Herbert R. Rowland and Eugene Jerome Smith, Kansas City, Mo., assignors to Corona Conversion Corporation, a corporation of Arizona

Application December 10, 1928, Serial No. 324,923
Renewed March 7, 1934
14 Claims. (Cl. 196—42)

1. The process of refining a mineral oil containing combined sulphur and gum-forming constituents which comprises subjecting said mineral oil to an incomplete acid treatment, then subjecting the oil to the action of chlorine for from 12 to 24 hours under mild reacting conditions such that the oil as a whole is not fundamentally altered, and separating resultant precipitated matter from the oil.

2,107,714

APPARATUS FOR REFINING MINERAL OILS

Herbert R. Rowland, deceased, late of Kansas City, Mo., by Mary U. Rowland, administratrix, Basking Ridge, N. J., and Eugene Jerome Smith, Ponca City, Okla.; said Herbert R. Rowland and Eugene Jerome Smith, assignors to Corona Conversion Corporation, Kansas City, Mo., a corporation of Arizona

Original application December 10, 1928, Serial No. 324,923. Divided and this application June 27, 1935, Serial No. 28,758
10 Claims. (Cl. 261—114)

1. In an apparatus of the character described, a shell, a partition dividing said shell into two compartments, a passage connecting said compartments, means in one compartment for supporting solid adsorptive material for free drainage, a vapor inlet for said last mentioned compartment, a fractionating column contained within said other compartment, and a vapor outlet from said last compartment.

2,107,715

JACK

William R. Runyan and Albert H. Langenheim, Dayton, Ohio, assignors to The Dayton Malleable Iron Company, Dayton, Ohio, a corporation of Ohio

Application April 4, 1935, Serial No. 14,645
4 Claims. (Cl. 254—103)

1. An automobile jack adapted for engagement with the bumper of an automobile, comprising an elongated screw, a ground engaging base at the lower end of said screw having a bearing portion rotatably supporting said screw, gear means in said base rotatable with said screw but capable of axial tilting movement with respect thereto, operating means engaging said gear means and supported by said base for rotational movements about an axis inclined angularly outwardly and upwardly, and a lifting nut threaded on said screw above the top of said base and having a projecting load supporting socket adapted for wedging engagement with the bumper.

2,107,716

WELL CASING SETTING AND BACKING-OFF COUPLING

John Christian Singleton, Vinton, La., assignor of one-fourth to Ivy Cunniff, Lake Charles, La.

Application April 16, 1937, Serial No. 137,366
7 Claims. (Cl. 255—58)

1. In a well casing setting, the combination with the top casing section of a combination-coupling secured thereto by a threaded connection of one direction, say right hand, said combination-coupling having a female casing thread of the same direction as that of the threaded connection, and having above the female casing thread an enlargement with a female thread of a direction opposite to that of the aforesaid threaded connection, a setting tool comprising an upper portion, an intermediate portion and a skirt constituting a lower portion, said upper portion having a female casing thread of the same direction as that of said threaded connection and said intermediate portion having a male thread

of a direction corresponding to that of the enlargement of said combination-coupling, said

skirt projecting into and protecting the female casing threads of said combination-coupling when said tool and coupling are assembled.

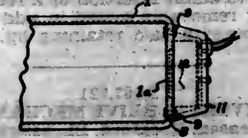
2,107,717

JACK

Charles J. Smith, Dayton, Ohio, assignor to The Dayton Malleable Iron Company, Dayton, Ohio, a corporation of Ohio

Application December 2, 1935, Serial No. 52,669
4 Claims. (Cl. 254—100)

2. In a jack, a vertically movable member, means for moving said member vertically, load supporting means movable on said member for engagement with an object to be lifted comprising a plurality of laterally staggered upstanding conical fingers adapted to simultaneously engage spaced points on opposite sides of the bottom edge of an object in wedging contact therewith.



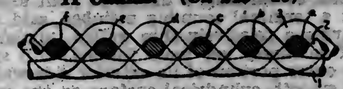
2,107,718

DEVICE FOR PROMOTING UNIFORM AND HOMOGENEOUS FREEZING

George Sparti, Covington, Ky.

Application April 5, 1934, Serial No. 719,170
Renewed July 7, 1937
4 Claims. (Cl. 249—72)

1. In combination with an ice tray, a bracket mounted upon said tray and an alternating current electro-magnet mounted upon said bracket, said tray being of magnetic material and said



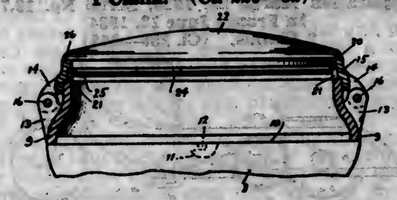
magnet being positioned to impart vibrations to a wall of said tray.

2,107,719

WOVEN WIRE FABRICS

Ferdinand Steinhart, Kearny, N. J., assignor to The Lindsay Wire Weaving Company, Cleveland, Ohio, a corporation of Ohio

Application August 22, 1936, Serial No. 97,353
In Great Britain August 28, 1935
11 Claims. (Cl. 245—10)



1. The improved method of uniting the ends of twill weave woven wire fabric which consists in removing a plurality of weft wires from the ends of the fabric to be joined, opening out the loose warp wire ends so that every third warp wire end is bent downwardly and every pair of intervening warp wire ends is bent upwardly, severing the warp wire ends shortly beyond where they cross the last remaining weft wire so as to leave downwardly sloping end portions on every third warp wire and upwardly sloping end portions on the intervening warp wires, abutting the ends of the fabric with the warp wires of one end of fabric in line with and abutting the warp wires of the other end of fabric, and finally uniting the abutting warp wire ends by welding, brazing or soldering.

2,107,720

DIAL COVER FOR WATER METERS

Louis A. Swander, Osborne, Kans.

Application May 8, 1936, Serial No. 78,730
1 Claim. (Cl. 220—82)

A dial cover for water meters comprising an annulus having its lower end portion constructed to embrace a complemental portion of an adapter and supporting collar, said annulus being formed at its upper end with an inturned ledge and retaining lip, a combined cover and magnifying lens of disk-like design, the diameter of said lens corresponding to the diameter of the adjacent end portion of said annulus, said lens being outwardly convexed in form and the marginal edge of the underside thereof resting removably on said ledge forming lip, the bottom of said lens being formed with a reduced circular neck depending below said lip and formed with an endless groove and the groove being located in the peripheral portion of said neck, disposed on the plane below

said lip, the surrounding wall of the annulus being spaced concentrically from said grooved neck a distance to admit insertion of a retaining ring, and a ring removably seated in said groove and engaging beneath said retaining lip.

2,107,721

UNIVERSAL DRIVE MECHANISM

Carl E. Swenson, Rockford, Ill., assignor to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois

Application April 9, 1936, Serial No. 73,444
2 Claims. (Cl. 64—23)

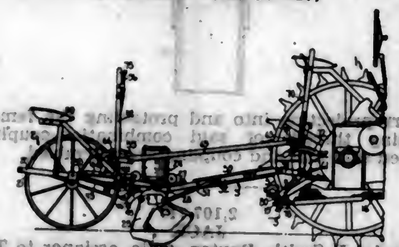
1. A universal drive mechanism, of the type described, comprising, a universal joint assembly having a terminal coupling member, said member having a relatively thin walled tubular portion of relatively low mass formed with splines on the outer portion of its exterior side wall and with a smooth cylindrical surface on the inward portion thereof, a sleeve telescopically disposed over said splined tubular portion of said terminal member and a portion of the said smooth outer surface thereof, said sleeve being relatively thin walled and formed on the outer portion of its inner side wall with splines engageable with said first named splines, said sleeve having a smooth outer wall of uniform diameter, a torque tube having one end fashioned with an interior wall conforming in contour and size to said smooth outer wall of said sleeve and telescopically disposed over said sleeve and providing a tight fit therewith throughout the entire length of said sleeve, means fixing the end of said torque tube to said sleeve, and a packing ring carried by the inner end of said sleeve and engaging the said smooth outer surface portion of the tubular portion of said terminal member.

2,107,722

MECHANICAL PROPULSION TOY-VEHICLE

Léon Vimeux, St.-Ouen, France

Application March 29, 1935, Serial No. 13,749
In France June 12, 1934
2 Claims. (Cl. 280—248)



1. A toy vehicle which comprises, in combination, a frame, an axle at the rear part of said frame, wheels mounted on said axle, at least one wheel mounted for supporting the front part of said frame, two levers pivoted to said frame about substantially vertical axes located close to the longitudinal plane of symmetry of the vehicle and on opposite sides of said plane, the upper ends of said levers being bent outwardly in substantially horizontal directions, a shaft journalled in said frame in parallel relation with said axle, the lower ends of said levers being bent in substantially horizontal directions, a crank at either end of said shaft rigid therewith, a connecting rod between the end of each of said cranks and the lower bent end of each of said levers, respectively, swivelled at both ends to said parts, respectively, and each being wholly on one side of said plane of symmetry, a sprocket wheel keyed on said shaft, a sprocket wheel keyed on said axle, and a chain passing about both of said sprocket wheels, at least one of the two first mentioned wheels, which are mounted on said axle, being keyed on said axle.

2,107,723

PLANTER

Charles H. White, Moline, Ill., assignor to Deere & Company, Moline, Ill., a corporation of Illinois

Application October 25, 1935, Serial No. 46,639
19 Claims. (Cl. 97—47)

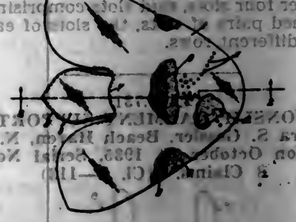
1. An agricultural machine comprising a source of draft, a draft lever pivotally connected at one end with said source of draft, an agricultural implement adapted to be propelled by the source of draft and including a ground engaging tool shiftable into and out of ground engaging position, draft transmitting means extending from said lever at a point spaced from its pivotal connection with the source of draft to said implement, and means operatively connected with said lever at a point spaced from said last mentioned means and also connected with said implement so as to change the position of said ground engaging tool means and simultaneously shift the implement fore and aft relative to said source of draft.

2,107,724

AUTOMATIC CLUTCH CONTROL DEVICE

Ralph S. Whittington, Oak Park, Ill., assignor to Bendix Products Corporation, South Bend, Ind., a corporation of Indiana

Application August 29, 1932, Serial No. 630,261
17 Claims. (Cl. 192—.01)



1. In an automatic control means for a motor vehicle, having a motor and an intake system, a clutch having means normally holding it in engaged position, a mechanism for controlling the acceleration of the motor, a pressure responsive means for releasing said clutch, means providing a passage between the intake system of the motor and said pressure responsive means, means operating when the motor is idling to open said passage whereby vacuum from said intake system actuates said pressure responsive means to release the clutch, means operating upon the actuation of said acceleration control mechanism to reduce the vacuum acting on said pressure responsive means whereby said clutch is moved toward engaged position, means responsive to pressure induced as the clutch is moved toward engagement, by the force of said means normally holding the clutch in engaged position to arrest the motion of said clutch toward engagement at a predetermined drop in said pressure incident to the initial engagement of said clutch, and means operative to further modify the pressure acting on said pressure responsive means whereby clutch engagement is completed.

2,107,725

BOOT OR SHOE AND METHOD OF MAKING THE SAME

Samuel Bourn, St. Louis County, Mo., assignor to International Shoe Company, St. Louis, Mo., a corporation of Delaware

Application November 11, 1933, Serial No. 697,573
8 Claims. (Cl. 36—3)

1. A vamp structure comprising inner and outer members having their rear portions adhesively attached and having registering perforations through said rear portions and the forepart of said outer member having perforations therethrough opposite an imperforate portion of said inner member, a box toe member interposed between the forepart of said inner and outer members and having an imperforate portion opposite said last named perforations that are through the forepart of said outer member and having perforations therethrough registering with certain of said first named perforations that are through said inner and outer members, and stitches passing through the rear portions of said inner and outer members and also extending forwardly and extending through the forepart of said inner and outer members and the rear portion of said interposed box toe member.

2,107,726

SPRAY GUN

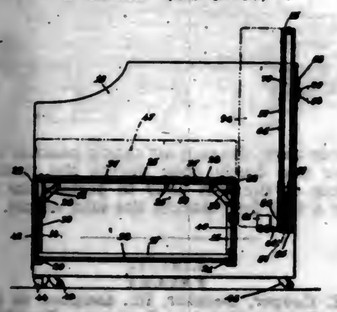
Svend Brambon and Felix Wahlin, Chicago, Ill., assignors to Binks Manufacturing Company, Chicago, Ill., a corporation of Delaware

Application October 2, 1935, Serial No. 43,244
15 Claims. (Cl. 299—140.1)

1. A body assembly for a spray gun, comprising: a main body part having an axially straight longitudinal air supply passage extending through it; a forward body part bearing flatwise against the forward end of the main body part and having a secondary air passage extending through it, the rearward portion of which secondary passage alines axially with the said air supply passage; and a nipple having its end portions threaded in relatively reverse directions into the rear end of the said secondary passage and into a forward portion of the said air supply passage to clamp the said head part against the said body part; the said air supply passage having its rear end freely open during the initial assembling of the gun body to permit the insertion of a tool for rotating the said nipple.

2,107,727

FAUCET

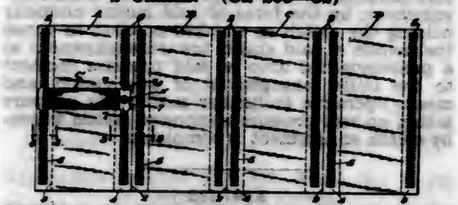


Earl E. Cooper, Decatur, Ill., assignor to Chambers, Bering, Quinlan Company, Decatur, Ill., a corporation

Application April 26, 1934, Serial No. 723,460
1 Claim. (Cl. 251—132)

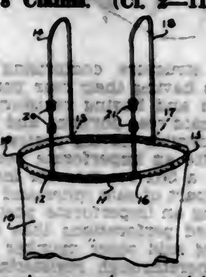
A faucet comprising a casing having means for attachment to a fluid container, and an intake opening, an outlet terminal at the lower extremity of the casing shaped at that point to define an annular valve seat from which to release fluids from the container through the faucet, a fluid release valve operatively mounted within said casing adapted to register with said valve seat, said casing having its receiving portion internally tubular and its discharge portion shaped to define a cylindrical chamber internally and disposed at an angle to said tubular intake portion; said valve having the head thereof shaped on the lower end to define a concave cup portion and having its outer peripheral facing shaped to fit said valve seat, a valve stem for the valve, a coil spring on the stem, a gasket seat in the wall of said discharge portion and a gasket adapted to seat therein, a cam plate seat above said gasket seat and of larger diameter and provided with peripheral notches therein, a cam plate slidably engaging said valve stem over said spring and gasket and provided with peripheral lugs for registry within said peripheral notches, ball bearings operatively seated on said cam plate, a threaded sleeve for engaging threads at the top of said discharge portion of the casing of the faucet, and a cap handle comprising in integral combination a cam face adapted to cooperate with said ball bearings, a hood for the casing, a perforated extension lug for receiving a detachable lock, a pair of downwardly extending integral flange stop members for limiting the oscillatable movement of the cap handle, a stop member lug extending from the side of the cap and an opening provided in the top of the cap for receiving a nut for engaging the upper end of the valve stem, and a threaded cap for covering said opening; said casing having an integral stop bracket for receiving said stop member lug to prevent unwarranted lifting of the valve, and an integral perforated extension lug on said casing cooperating with said perforated lug of the cap handle to provide means for holding the cap handle in locked position when the valve is closed.

2,107,728
CONVERTIBLE COUCH
Philip Cutler, New York, N. Y.
Application January 23, 1935, Serial No. 3,068
1 Claim. (Cl. 5—37)



In a convertible couch, a stationary frame having a bed spring surface, end pieces to support the said stationary frame, a second frame having another bed spring surface, foldable uprights connected to the said second frame and capable when extended of independently supporting the second frame horizontally at a height substantially the same as that of the first mentioned bed spring surface, pivotal securing means between the stationary and second frames comprising two elongated, vertically disposed channel members open at the top and closed on the bottom, each being oppositely affixed to the said end pieces rearwardly of and extending below the stationary frame, projections extending from the second frame and being mounted in the said channel members for rotation, removal and vertical displacement whereby the second frame when in upright position is spaced from the rear of the stationary frame and extends below the level of the stationary frame, supporting means projecting upwardly from the forward longitudinal edge of the second frame, duplicate loose mattresses supported on the said stationary and second frames, the said loose mattress against the second frame when the latter is in upright position being held in upright position by means of the above-mentioned supporting means and the rear longitudinal edge of the loose mattress for the stationary frame.

2,107,729
HORIZONTAL VIBRATING SCREEN
Robert Andrew Denevan, Asbestos, Quebec, Canada
Application July 15, 1936, Serial No. 90,629
6 Claims. (Cl. 209—314)

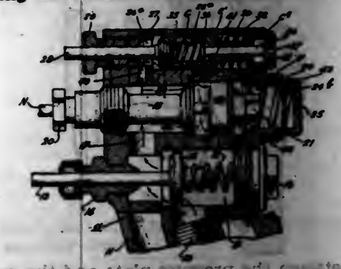


6. In a screening device, three screens mounted on a common base in substantially end to end relationship with adjacent ends overlapping, a connecting member constraining the two end screens to move as a unit, and actuating means for said screens constructed and arranged to reciprocate the middle screen and said end screens simultaneously in opposite directions.

2,107,730
SAMPLE CARD
Joseph Domber, Bronx, N. Y., assignor to Peerless Sample Card Co. Inc., New York, N. Y., a corporation of New York
Application March 2, 1935, Serial No. 8,984
2 Claims. (Cl. 206—82)

1. In combination, a sample card having longitudinal rows of aligned openings, the openings in the respective rows being laterally aligned and a sample card element, said sample card element comprising a strip of flexible material having substantially no inherent rigidity, said strip having mounts connected to the ends thereof, said mounts being spaced from each other, said mounts having tabs which are adapted to enter four slots, said slots comprising laterally aligned pairs of slots, the slots of each pair being in different rows.

2,107,731
NONSLIP GARMENT SUPPORT
Clara S. Gessler, Beach Haven, N. J.
Application October 29, 1935, Serial No. 47,269
8 Claims. (Cl. 2—113)



1. A garment support comprising a pair of endless shoulder straps, each of said straps passing over the top of one shoulder, across the front and back and around the opposite side of the garment, said straps being freely movable in said garment and independent of each other.

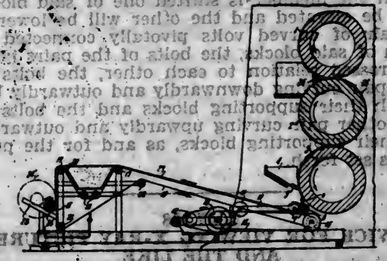
2,107,732
SPRAY GUN WITH PNEUMATIC MATERIAL CONTROL
Eric Gustafson and Fritz Wahlin, Chicago, Ill., assignors to Binks Manufacturing Company, Chicago, Ill., a corporation of Delaware
Application July 21, 1935, Serial No. 32,066
8 Claims. (Cl. 299—140.1)

1. A spray appliance comprising a body member having a material passage and an air passage presenting adjacent forwardly open outlets; a needle valve controlling the discharge of material from the material passage and movable rearwardly for permitting such discharge; the body member also having a piston chamber behind and in axial alinement with the needle valve, and having a branch air-passage leading from the air passageway to the forward portion of the piston

chamber; a piston slidable in the said chamber and fast on the needle valve; spring means resisting the rearward movement of the said piston; a control valve controlling the flow of air to the piston chamber through the said branch air-passage; a second spring means resisting the opening movement of the control valve; an air

valve controlling the admission of air to the said air passageway; a third spring means resisting an opening movement of the air valve; and a manually operable member pivoted on the said body member and disposed so that movement of the manually operable member in one direction will open both the air valve and the control valve.

2,107,733
GRID PASTING MACHINE
Harry H. Henry, Chicago, Ill., assignor, by mesne assignments, to U S L Battery Corporation, Niagara Falls, N. Y., a corporation of New York
Application July 7, 1932, Serial No. 621,265
9 Claims. (Cl. 226—39)



1. In a grid pasting machine, a frame, a hopper for paste mounted on said frame, belt means for advancing grids through the hopper, packing mechanism in said hopper, and a tilted adjustable platen supported below said belt and below said hopper.

2,107,734
SKYROCKET
Lester F. Holcomb, Freeport, N. Y., assignor to Paramount Fireworks Company, Inc., New York, N. Y., a corporation of New York
Application July 28, 1935, Serial No. 33,203
1 Claim. (Cl. 102—23)

A skyrocket comprising an open end pasteboard tubular casing, a choke element located in the lower portion of the casing, a plurality of slots in the casing in a position below the choke element, said slots extending through the thickness of the casing wall and being equidistantly spaced about its periphery, wings extending radially from the casing being formed by groups of two integrally joined sections, the joining portion of each of the groups of wings being arcuate in shape to conform to the interior surface of the rocket casing, and means for securing each of the wing sections in adjoining slots of the casing.

2,107,735
CRINKLED SHEET RUBBER AND PROCESS AND APPARATUS FOR MAKING THE SAME
Frank Henig, Pawtucket, R. I., assignor to United States Rubber Products, Inc., New York, N. Y., a corporation of Delaware
Application December 6, 1935, Serial No. 53,153
14 Claims. (Cl. 154—33)

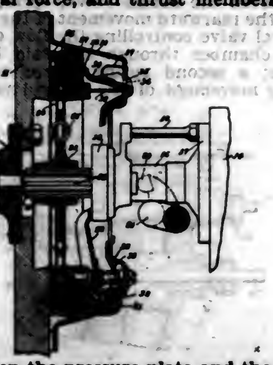
1. The method of making crinkled sheet rubber which comprises temporarily adhering a relatively thin and easily deformed sheet of plastic rubber to a support, forming crinkles in the sheet and adhering the adjacent walls of the crinkles together by progressively forcing portions of the sheet back upon itself and away from the support, the force being applied at an acute angle to the surface of the support while the sheet is progressively separated from the support.

2,107,736
BLADE HOLDER
Henry Huber, Pontiac, Mich.
Application March 26, 1936, Serial No. 70,913
1 Claim. (Cl. 30—162)

A device of the character described comprising a body having spaced apart side walls, a blade, means for guiding movement of said blade with respect to said body, and means for clamping said side walls against said blade to hold it in positions of adjustment, said guiding means comprising parallel slots in opposed side walls of said body and means carried by the blade and movable in said slots, said slots having portions disposed whereby they support the blade projecting endwise from said body, portions disposed whereby they support the blade entirely concealed within the body, and portions disposed whereby they support the blade with one side edge angularly exposed, the several portions of said slots being connected whereby the guiding means carried by the blade may be continuously moved from one position to another.

2,107,737
MULTIPLE LOCKING MEANS FOR AUTOMOBILE DOORS
Haskell Irwin, Oklahoma City, Okla.
Application May 19, 1936, Serial No. 80,623
1 Claim. (Cl. 70—264)

In a locking mechanism for automobiles of the type having a pair of meeting posts and pairs of doors which abut upon said posts at each side of the car body, a locking mechanism comprising a pair of vertically slidable blocks, one at each side of the car body and located in said posts, an endwise movable flexible member engaged with said blocks, key controlled means for shifting said member endwise in such manner that when the member is shifted one of said blocks will be elevated and the other will be lowered, a pair of curved volts pivotally connected to each of said blocks, the bolts of the pairs lying in crossed relation to each other, the bolts of one pair curving downwardly and outwardly beneath their supporting blocks and the bolts of the other pair curving upwardly and outwardly of their supporting blocks, as and for the purposes set forth.

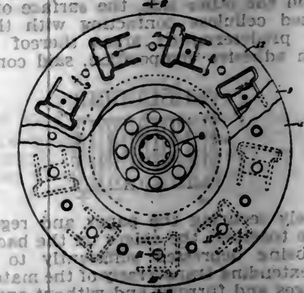


2,107,738
DEVICE FOR VIEWING X-RAY PICTURES AND THE LIKE
Sidney D. Klaus, Jamaica, N. Y.
Application October 17, 1936, Serial No. 106,078
4 Claims. (Cl. 40—158)

1. A device for viewing radiographs, comprising a first and transparent and flexible sheet, a second and translucent and flexible sheet having a single matte surface, rigid means applied only to parts of said sheets and holding said sheets in contacting relationship and with said matte surface of the second sheet in contact with the adjacent surface of the first sheet, clamping means connected to said rigid means adapted to hold a radiograph mount to the outer surface of one of said assembled sheets.

2,107,739
CLUTCH
Harold Nutt and Harold V. Reed, Chicago, Ill., assignors, by mesne assignments, to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application November 1, 1934, Serial No. 750,959
5 Claims. (Cl. 192—103)

1. In a centrifugally responsive clutch mechanism, a driving assembly including a housing having apertures arranged in annular array about the axis thereof and a pressure plate movable axially relative to the housing for engagement with a driven clutch disc, a plurality of weight members partially received within said apertures and adapted to fulcrum upon one edge of the apertures, said weight members being so arranged relative to the housing as to move upon their fulcrums points under the influence of centrifugal force when the driving assembly is rotated, relatively light springs associated with the housing and with the weight members urging said weight members in the direction assumed when said weight members are acting under the influence of centrifugal force, and thrust members interposed between the pressure plate and the weight members at one side of the fulcrums thereof.

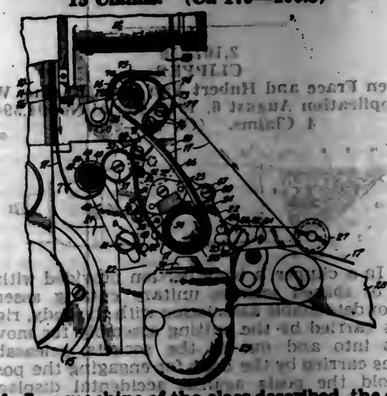


2,107,740
ELECTRIC DIRECT CURRENT TRANSFORMER
Joseph Maximus Pestarini, Grant City, Staten Island, N. Y.
Application February 21, 1935, Serial No. 7,595
In Italy February 28, 1934
7 Claims. (Cl. 171—123)

1. In an electrical machine of the metadyne type for transforming constant direct current supplied from a primary network, into substantially constant current of another value supplied to a secondary network, a rotor armature and a stator structure, said armature having commutating means including primary, secondary and tertiary sets of brushes, the primary set determining a commutating axis and connected to the constant current network, the secondary set determining a commutation axis nearly parallel to the primary commutating axis and connected to the secondary network, the tertiary set determining a commutation axis electrically substantially perpendicular to the primary and secondary commutation axis, a stator winding located in the axis of said tertiary brushes, a saturated dynamo driven by the rotor of the metadyne, supplying substantially constant voltage to the said stator winding, a stator winding of low resistance connected across the tertiary brushes and located in the commutating axis of the primary and secondary brushes, the stator also provided with a winding located in the axis of the tertiary brushes and connected in series with the primary brushes supplied with constant current.

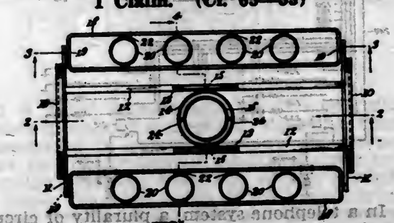
2,107,741
CLUTCH PLATE
Harold V. Reed, Chicago, Ill., assignor, by mesne assignments, to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application October 31, 1934, Serial No. 750,836
10 Claims. (Cl. 192—107)

1. A clutch plate comprising, a disc, an annulus having yieldable portions extending away from the body of said annulus in the direction of said disc, a pair of friction facings, common means securing one of said facings, the yieldable portions of said annulus and said disc together,



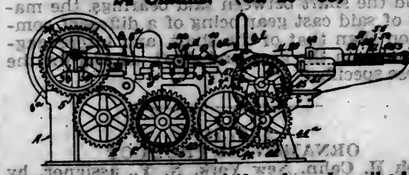
and means securing the other of said facings and said annulus together.

2,107,742
MERCURY CONTACT INTERRUPTER
Samuel Ruben, New Rochelle, N. Y.
Application January 25, 1935, Serial No. 2,372
14 Claims. (Cl. 200—82)



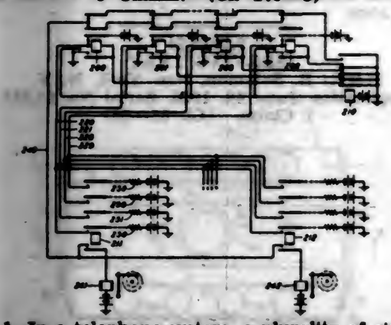
14. An electric current interrupter cell adapted to produce periodic interruptions in an electric current independent of any external periodic control and comprising an element having a contacting surface and a column of mercury in contact with and standing above said surface and having its entire contacting surface at substantially the same depth in said mercury column.

2,107,743
SOUND REPRODUCING AND RECORDING MECHANISM FOR THE FILMS OF MOTION PICTURE PROJECTORS
Allen A. Sheap, Chicago, Ill., assignor to Universal Stamping & Mfg. Co., Chicago, Ill., a corporation of Illinois
Application June 26, 1936, Serial No. 87,437
15 Claims. (Cl. 179—100.3)



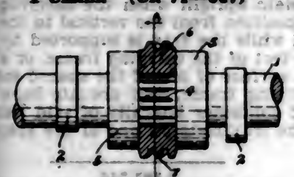
1. In a machine of the class described, the combination with a film, and reproducing means through which said film travels, of a film guide shoe mounted on the entrance side of said reproducing means over which the film travels, guides on the side edges of said shoe for engaging the edges of the film, and means independent of said shoe for maintaining sliding contact of the film on said shoe.

2,107,744
SERVING TRAY
Morris B. Solomon, New York, N. Y.
Application June 18, 1936, Serial No. 85,825
1 Claim. (Cl. 65—53)



A serving tray comprising a carrying frame including a pair of spaced members, each of which is provided with supporting feet, end rails supported by each of said members, a pair of bars connecting the two end rails, two freely revolving concentric rings, an upwardly extending arcuate bar carried by each of said pair of bars, the outer ring being pivotally connected with said arcuate bars and the inner ring being pivotally connected with the outer ring, said inner ring being adapted to hold a container, a holder frame pivotally connected with said end rails, and a plurality of receptacle holders pivotally connected with said holder frame, whereby a container placed within the inner concentric ring and receptacles placed within the receptacle holders in the holder frame will revolve freely and remain upright when the carrying frame is in any position from the vertical to the horizontal, and while the tray is supported by the supporting feet of the carrying frame, or rests upon the full surface of one of the spaced members of the carrying frame, said arcuate bars supporting said container laterally of said pair of bars when the tray rests on one of the spaced members.

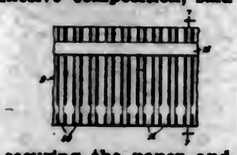
2,107,745
APPARATUS FOR MAKING WIRE PRODUCTS
Albert F. Bradley, Sterling, Ill., assignor to Northwestern Barb Wire Company, Sterling, Ill., a corporation of Illinois
Application July 19, 1934, Serial No. 735,927
24 Claims. (Cl. 29—33)



1. In an apparatus of the class described, wire drawing mechanism, means for performing a fabricating operation upon the drawn wire, means for feeding the drawn wire from said mechanism to the first means, said mechanism and feeding means being operative to afford an accumulation of wire therebetween, and means for maintaining the wire leaving said mechanism under tension.

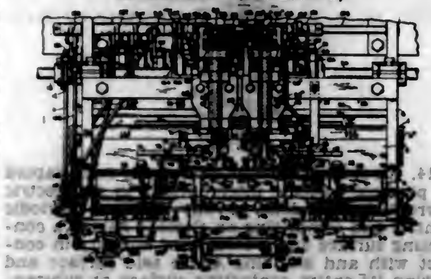
2,107,746
RELAY CIRCUIT
Aloysius J. Busch, Bellerose, N. Y., assignor to Bell Telephone Laboratories Incorporated, New York, N. Y., a corporation of New York
Application March 11, 1936, Serial No. 68,241
6 Claims. (Cl. 179—8)

1. In a telephone system, a plurality of circuit elements, means for marking these elements as busy or idle, a series of relays, means for connecting said relays to said elements each to each, and means for indicating the presence of an idle element comprising a chain circuit controlled by said relays and including the front contact of a single relay and a back contact of each of the remaining relays.



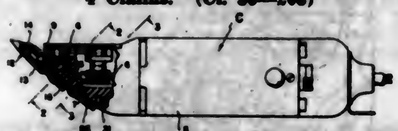
2,107,747
CAMSHAFT
Donald J. Campbell, Spring Lake Township, Ottawa County, Mich., assignor to Campbell, Wyant & Cannon Foundry Company, Muskegon Heights, Mich., a corporation of Michigan
Application October 28, 1935, Serial No. 46,933
1 Claim. (Cl. 74—567)

An elongated cast cam shaft or the like having spaced bearings of larger diameter than the shaft and cams integral with said shaft, two of said bearings on the shaft being spaced apart a short distance, a relatively thin cast gear located around the shaft between said bearings, the material of said cast gear being of a different composition than that of the shaft, and interengaging means on the gear and shaft, as and for the purpose specified.



2,107,748
ORNAMENTAL PRODUCT
Adolph H. Cohn, New York, N. Y., assignor, by mesne assignments, to Edward Karfiol, Great Neck, N. Y., and Louis A. Voitier, New York, N. Y.
Application July 15, 1937, Serial No. 153,700
12 Claims. (Cl. 41—10)

10. An ornamental edging for shelving comprising a pleated composite material formed of paper laminated to regenerated cellulose and having alternate ridges and furrows on both sides thereof, the ridges and furrows on one face being opposite the furrows and ridges respectively on the other side, the surface of the regenerated cellulose contacting with the paper having predetermined areas thereof provided with an adhesive composition, said composition

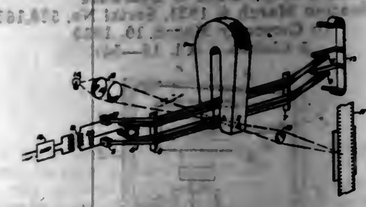


adhesively securing the paper and regenerated cellulose together, the ridges on the back of the paper being depressed sufficiently to form a groove extending transversely of the material and said ridges and furrows and without appreciably affecting the ridges on the front, and a strip in said groove adhesively secured to said paper.

2,107,749
APPARATUS FOR THE MANUFACTURE OF PRETZELS
Earl W. Curtis, Canton, Ohio
Application November 7, 1934, Serial No. 751,848
22 Claims. (Cl. 107—8)

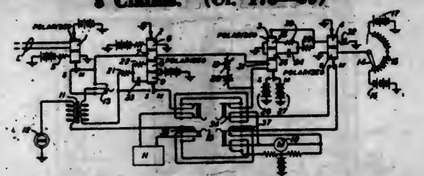
1. A pretzel forming machine comprising means for locating a straight dough stick, two grippers for the ends of the stick, means for actuating the grippers to seize the ends of the stick, means for moving the grippers into crossed relation, said means comprising means for moving one gripper over the center portion of the stick while the other is stationary, means for then moving the other gripper over the center portion of the stick, and stampers to attach the ends of the stick to the body thereof.

2,107,750
CLIPPER
Arleen Frace and Hubert Van Bree, Racine, Wis.
Application August 6, 1936, Serial No. 94,594
4 Claims. (Cl. 30—266)



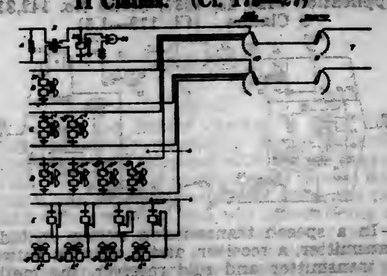
1. In a clipper, a body portion provided with a pair of spaced sockets, unitary cutting assembly for detachable association with the body, rigid posts carried by the cutting assembly for movement into and out of the sockets, releasable means carried by the body for engaging the posts to hold the posts against accidental displacement, and manually actuated means having a portion disposed between the body and the cutter assembly for forcibly moving the assembly and the posts away from the body upon actuation of said means.

2,107,751
TERMINAL STRIP
Harold W. Goff, Great Neck, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application October 30, 1935, Serial No. 47,389
4 Claims. (Cl. 173—324)



4. In a terminal strip unit, the combination with a metallic supporting bar having flanges secured on both ends thereof and plates of insulating material secured to said flanges in parallel spaced relation, and rows of terminals supported by the insulating plates, of a plurality of wire supports secured to the metallic support in transverse relation thereto, one of said supports for each of said rows, said wire supports having loop portions at their ends extending beyond the ends of the terminals in the strip for protection against the breakage of the terminals.

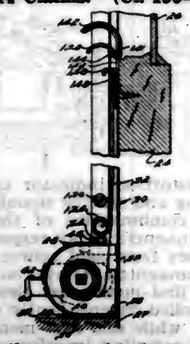
2,107,752
ELECTRICAL DEVICE
John B. Harley, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application October 30, 1936, Serial No. 749,156
5 Claims. (Cl. 88—61)



1. In a light valve, in combination a magnetic structure having aligned apertures, an electrical conductor arranged to form a light transmitting slit controlling the transmission of a beam of light passing through said apertures, a second electrical conductor arranged out of alignment with said apertures and ineffective to control the transmission of said light, means for supporting both said conductors in the magnetic field of said structure, means for tensioning both said conductors to have substantially the same frequency of mechanical resonance, and means for supplying signal currents to both said conductors in serial relationship to cause both said conductors to vibrate substantially in accordance with the signal currents whereby the effects of mechanical resonance on the control of said light beam are substantially reduced.

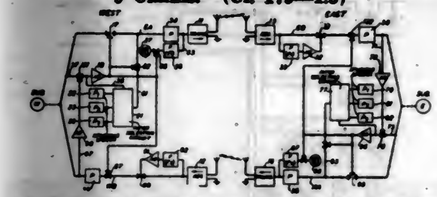
2,107,753
DISTORTION INDICATING AND MEASURING DEVICE FOR PRINTING TELEGRAPH SYSTEMS
Richard B. Hearn, Hollis, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application September 30, 1936, Serial No. 103,236
8 Claims. (Cl. 178—69)

2. A signal distortion indicator comprising a source of marking and spacing signaling impulses transmitted in combinations of the start-stop type, an electromagnetic relay responsive to the signaling impulses from said source, a plurality of other electromagnetic relays normally controlled by the first-mentioned electromagnetic relay and controlled independently of the first-mentioned relay while said first-mentioned relay responds to the selecting impulses of each signal combination, one of said plurality of relays being arranged to remain stationary and another of said plurality of relays being arranged to vibrate while the selecting impulses of each signal combination are being received by the first-mentioned relay, a second vibrating relay responsive to said other of said plurality of relays, an output circuit for said first-mentioned relay, an output circuit for said second vibrating relay arranged to intermittently close at predetermined uniform intervals, a transformer inductively connecting said output circuits whenever distortion is present in the signaling impulses received from said source, a gaseous discharge tube in said second-mentioned output circuit for indicating the presence of distortion in the signal impulses received from said source and switching means in both of said output circuits for determining whether the distortion is in the marking or spacing impulses.



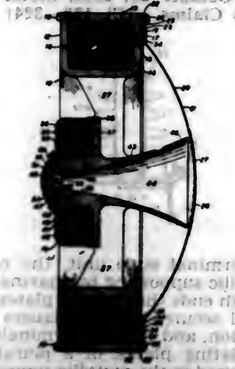
2,107,754
TELEPHONE SYSTEM
Donald F. Johnston, Pelham, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application June 16, 1926, Serial No. 116,452
11 Claims. (Cl. 179—27)

1. In a telephone system, a party line arranged for selective signaling, a central office, means including a trunk circuit for extending said party line to said central office, a single source of signaling current at said central office, and means at said central office for connecting said source



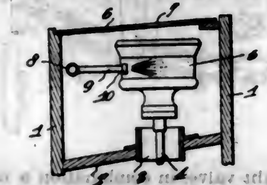
of current to said line in such a manner as to cause the alternate operation of the signaling devices located at the stations on said party line.

2,107,755
ROLL SCREEN STRUCTURE
William E. Kemp, Detroit, Mich.
Application June 22, 1934, Serial No. 731,808
14 Claims. (Cl. 156—39)



14. In a roll screen structure for windows including a window frame having a sill and a window sash vertically slidable in said frame, a roll screen, a housing of fixed dimensions therefor, the free edge of said screen being securable to the lower edge of said sash, and means for mounting said housing in operative position with respect to said sash and centrally of the window opening in said frame regardless of variations in the width of said window opening in excess of the length of said housing comprising a bracket for each end of said housing, each of said brackets being secured to said sill independently of the side members of said frame whereby to permit a choice of location thereof longitudinally of said sill to center said housing thereon, means releasably coacting between said brackets and housing for releasably securing said housing relative to said sill, and guide means for each edge of said screen, each of said guide means being secured to its corresponding frame side member independently of said sill.

2,107,756
PRIVACY SYSTEM
Burton W. Kendall, East Orange, and Doren Mitchell, Bound Brook, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application May 15, 1937, Serial No. 142,815
9 Claims. (Cl. 179—1.5)



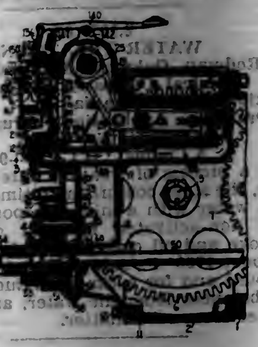
1. In a speech transmission system including a transmitter, a receiver, and a channel between said transmitter and said receiver, the method of maintaining secrecy during the transmission of speech from said transmitter to said receiver which comprises applying useful speech to said channel, selecting from a plurality of sources of spurious speech of different characteristic pitches that source most nearly approximating in characteristic pitch the useful speech and applying spurious speech from said selected source to said channel upon removal therefrom of said useful speech.

2,107,757
ACOUSTIC DEVICE
Thomas G. Kinsley, Bloomfield, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application February 29, 1936, Serial No. 66,400
11 Claims. (Cl. 179—115.5)

1. An acoustic device comprising a pair of diaphragms, means for vibrating said diaphragms, and a horn having its throat adjacent one diaphragm and its mouth adjacent the other diaphragm, said second diaphragm having openings through which pass sound waves from said first diaphragm and having its peripheral portion in a plane behind that of the horn mouth.

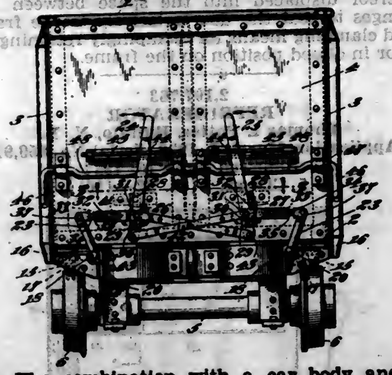
2,107,758
PROCESS FOR AVOIDING THE OVERCHARGING OF DRIVES FOR RAYON CENTRIFUGES
Erich Knechtel, Sydowsaue, near Stettin, Germany, assignor to North American Rayon Corporation, a corporation of Delaware
Application March 4, 1931, Serial No. 520,162
In Germany March 10, 1930
5 Claims. (Cl. 18—54)

1. In the method of collecting wet spun filaments in a driven spinning pot, the step of submitting the outer surface of the pot to a spray of liquid in a direction tangential to the said surface and in the direction of rotation thereof while the centrifuge is in operation.



2,107,759
ELECTROOPTICAL SCANNING APPARATUS
Charles F. Mattke, Jackson Heights, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application August 23, 1934, Serial No. 741,031
1 Claim. (Cl. 178—7.6)

Scanning apparatus comprising a rotating member having a plurality of lens equipped apertures, a stationary opaque screen having a plurality of small apertures therein, a stationary source of light of small cross-section, a stationary collimating lens located between said source and said screen with said source at the principal focus of said lens, a plurality of smaller lenses located side by side between said collimating lens and said screen with the principal focus of each small lens



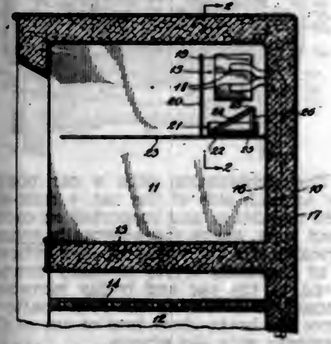
coincident with a respective aperture, and means to so position said rotating member with respect to said screen that each lens in succession forms an image of said screen on a scanning field, the apertures in said screen being offset in the direction of scanning so that one aperture only is imaged on said field at any one time and only slightly offset in a direction transverse to the direction of scanning.

2,107,760
HYDRAULIC MECHANISM
Elmer McCormick, Milford D. Stewart, and Wayne H. Werthington, Waterloo, Iowa, assignors to John Deere Tractor Company, Waterloo, Iowa, a corporation of Iowa
Application October 24, 1934, Serial No. 749,706
39 Claims. (Cl. 60—52)

1. In a hydraulic mechanism comprising a cylinder having a piston movable therein, a constantly driven hydraulic pump, a reservoir, a passage from said pump to said piston and a second passage from the pump to said reservoir, a first valve means biased for normally closing the passage from the pump to the cylinder, a second valve means in said second passage biased toward open position to permit said pump to discharge into said reservoir, means movable through successive positions for first opening the first valve means, to provide for the discharge of the fluid in the cylinder to the reservoir, and then closing the second valve means to build up pressure in said cylinder for moving said piston, means for holding said movable means in its various positions, and operating means momentarily movable from one position to another for shifting said movable means to its successive positions, said holding means serving to retain said movable means in the position to which it has been moved to provide for the return of said operating means to its first position.

2,107,761
CAR BRAKE
Louis G. Miller, Bethlehem, Pa., assignor to Bethlehem Steel Company, a corporation of Pennsylvania
Application December 31, 1935, Serial No. 56,920
32 Claims. (Cl. 188—107)

1. The combination with a car body and a wheel at each side of the car, a rock-shaft arranged parallel to and supported on each side of the car body, brake shoes pivotally connected to the rock-shafts for engaging each wheel, and a pair of operating levers pivotally connected to one end of the car and bodily movable simultaneously for actuating the rock-shafts adapted to force the brake-shoes into or out of frictional engagement with the wheels.



2,107,762
SEALING MEANS FOR HEATER DOORS
Ambrose D. Olds, Wichita, Kans., assignor to The Coleman Lamp and Stove Company, Wichita, Kans., a corporation of Kansas
Application August 21, 1935, Serial No. 37,127
1 Claim. (Cl. 110—173)

In a door for heater casings, a door frame having a laterally extending flange forming a door opening and provided with a door engaging seat surrounding said opening, said lateral flange having a continuous groove inset from the plane of said door engaging seat and surrounding said opening, a soft and resilient fibrous packing material inset within said groove, a door hinged to the frame and having a perimetric seating portion for engaging said seat on the frame, means hinging the door to the frame, a flange on the door and spaced from the lateral flange of the door frame to form an expansion space to accommodate any distortion that may occur in the door and frame incidental to heating, said door flange

having a depth relatively to said perimetric seating portion of the door to make contact with said fibrous material prior to engagement of said perimetric portion with the seat when the door is being moved to closed position whereby said material is compressed by said door flange against the sides and bottom of the groove and a portion thereof displaced into the space between said flanges to seal the door relatively to the frame, and clamping means for clampingly retaining the door in closed position on the frame.

2,107,763
REFRIGERATOR
Thomas I. Potter, Buffalo, N. Y.
Application March 7, 1933, Serial No. 659,917
Renewed June 16, 1937
5 Claims. (Cl. 62—116)

1. A refrigerator formed with a food chamber, a non-frosting coil therein, means for circulating a refrigerant through the coil, said coil serving to maintain the air in the chamber at a low but non-freezing temperature, a pan under the coil in position to catch any drip of moisture condensed from said air upon the coil, and a broad wick dipping into and extending outwardly from the pan to facilitate reabsorption of the moisture by the air.

2,107,764
FOLDING CHAIR
Alfred E. Puls, Cleveland, Ohio, assignor to Metropolis Bending Company, Metropolis, Ill., a corporation of Illinois
Application November 5, 1935, Serial No. 48,357
3 Claims. (Cl. 155—142)

1. A folding chair comprising side members, the lower portions of which constitute front legs, an upper back member connecting the upper ends of the side members and having an upwardly extending groove at its lower edge, an intermediate back member having its upper edge mounted within the said groove, one or more L-shaped metallic fastening devices secured to the upper end of the intermediate back member and each having an upper leg overhanging the upper edge of said intermediate member, fastening means extending through the upper back member and through the fastening device below and adjacent to the upper leg thereof, a lower transverse back member to which the intermediate back member is secured, rear legs pivotally connected to the side members above the lower back member, the rear legs being provided with longitudinal slots, the lower back member having projections entering said slots, a chair seat pivoted to the side members below the pivotal connection of the rear legs with said side members and a sliding connection between the rear portion of said chair seat and said rear legs.

2. In a folding chair, the combination of side members the lower portions of which constitute front legs, rear legs pivoted at their upper ends to the upper portions of said side members, a back interposed between the upper portions of said side members and having the opposite sides of its lower end slidably connected to the rear legs, a seat frame having front, side and rear members, means pivotally connecting the side members of said frame to the front legs, angle brackets secured to the lower surface of the rear member of said frame, one at each end thereof, each bracket having a vertical portion extending above the top of the rear member of the seat frame and being provided with openings next above said member, a rod extending through the said openings and lying adjacent to the upper surface of the rear member of the seat frame, and sliding connections between the opposite ends of the said rod and the rear legs.

2,107,765
WATER TREATMENT
Hugh Redman, Oakmont, Pa., assignor to Redman Chemical Company, Verona, Pa., a corporation of Pennsylvania
No Drawing. Application February 18, 1936, Serial No. 64,515
5 Claims. (Cl. 210—9)

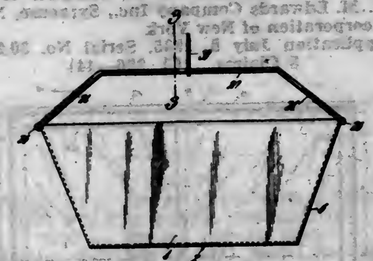
1. In a process of treating water to render it potable, the steps comprising intimately contacting the water with a minor proportion of finely divided non-activated material of the group pitch coke and oil coke previously heated to at least about 1700° F., said material being used in an amount and for a time to remove objectionable substances from the water, and separating the water from solid matter.

2,107,766
MONOCYCLE
Julius Rose, Brooklyn, N. Y.
Application April 6, 1937, Serial No. 135,269
4 Claims. (Cl. 180—10)

1. A device of the class described comprising an upright inner ring and an outer ring concentric

with and spaced apart therefrom, an internal gear rigid with said outer ring intermediate the width of the latter, a tire mounted on said outer ring, a gear housing mounted on said inner ring and having a gear in mesh with said internal gear, ballbearings mounted between said rings on each side of said internal gear, retainer rings rotatably supporting said ballbearings, means for rotating said second-named gear, and annular rims loosely locking said inner and outer rings together.

2,107,767
ELECTRIC SIGN
Max G. Rupp, Chicago, Ill.
Application April 10, 1936, Serial No. 73,612
3 Claims. (Cl. 40—130)



1. A sign comprising a glass plate in which the indicia of the sign are formed, a casing for supporting said plate, a stationary electric light bulb in said casing having end terminals, conducting trunnions for connecting said terminals in an electric circuit, a cylindrical color changing device rotatably mounted on said trunnions, said device comprising end members carried by said trunnions adjacent each end of said bulb and a plurality of differently colored transparent panels spanning said bulb lengthwise, electromagnetic means in said casing for rotating said device intermittently for interposing said panels in succession between said bulb and plate, circuit conductors for supplying current to said magnetic means and trunnions and a current interrupting member in said circuit for effecting the intermittent energization of said bulb and electro-magnetic means.

2,107,768
BRAKE SHOE KEY
Frederic Schaefer, Pittsburgh, Pa.
Application March 24, 1937, Serial No. 132,793
7 Claims. (Cl. 188—243)

1. A key for connecting a brake shoe to a brake head, comprising a pair of arms connected to each other, and a wedge mounted between said arms and slidable longitudinally thereof for spreading them apart, said wedge having an offset portion intermediate its end portions provided in its outer surface with a depression, and the adjoining arm being provided with a detent for registering with said depression when said wedge is moved to arms-spreading position, whereby withdrawal of the wedge is restrained.

2,107,769
PAINTER'S APPARATUS
Robert J. Simons, Springfield, Mass.
Application December 30, 1936, Serial No. 118,215
5 Claims. (Cl. 21—63)

4. Painters' apparatus of the class described comprising in combination, a rectangular receptacle having an open upper side, and a pair of separate unitary wire members bent intermediate their ends to have spaced horizontal parts extending over said open upper side of the receptacle in parallelism with the side walls thereof and end parts in parallelism with the end walls thereof and connections between the horizontal parts and the end parts, said end parts being secured to said end walls.

2,107,770
PROCESS FOR DEWAXING OIL
Maner L. Wade, Long Beach, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a corporation of California
No Drawing. Original application September 22, 1934, Serial No. 745,167. Divided and this application July 6, 1936, Serial No. 89,119
7 Claims. (Cl. 204—24)

1. A process for dewaxing oil comprising adding to the wax-bearing oil a compound having a benzene ring nucleus adapted to accelerate the rate of electrodeposition of wax, chilling the mixture to precipitate wax and removing the wax from the mixture by electrodeposition.

2,107,771
PROCESS FOR DEWAXING OIL
Maner L. Wade, Long Beach, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a corporation of California
No Drawing. Application April 17, 1937, Serial No. 137,533
4 Claims. (Cl. 204—24)

1. A process for dewaxing oil comprising adding to the wax-bearing oil an electrodeposition accelerator belonging to the group of fatty acids consisting of montanic, carnaubic, mellisic, cerotic and stearic acids, chilling the oil to precipitate wax and removing the wax from the mixture by electrodeposition.

2,107,772

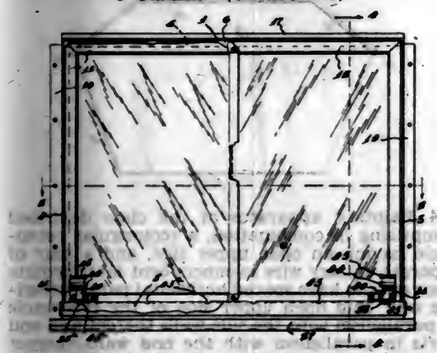
PROCESS FOR DEWAXING OIL

Manor L. Wade, Long Beach, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a corporation of California

No Drawing. Application September 22, 1934, Serial No. 745,167

8 Claims. (Cl. 204—1)

1. A process for dewaxing oil comprising adding an extraneous high molecular weight natural ester type wax to the wax-bearing oil, chilling the solution to precipitate wax, subjecting the mixture to an electric field and separating wax from the oil.



2,107,773

WINDOW FRAME AND SASH UNIT

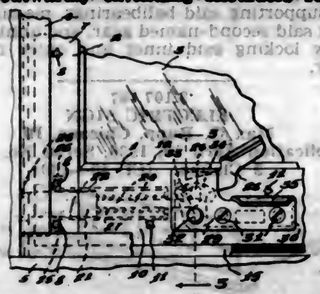
Roy T. Axe, Syracuse, N. Y., assignor to The O. M. Edwards Company Inc., Syracuse, N. Y., a corporation of New York

Application July 8, 1935, Serial No. 30,233

3 Claims. (Cl. 296—44)

1. In a unit window construction, a frame including top, bottom and side members, the bottom member comprising a sill portion having an inclined intermediate body and an upward flange at one edge of the body and a downward flange at the other end of the body, and a demountable guide strip mounted on the inclined body and having a horizontal top portion and a vertical outer edge portion, the horizontal top portion being formed with a pair of inner and outer parallel guide ribs and the top frame member being formed with a pair of guide ribs vertically alined with the former ribs, the side members of the frame being formed with a guide rib alined with one of the bottom and top members, the alined ribs forming two sets of sash guides, a pair of sash frames complemental to each other filling the opening of the window frame and arranged in lapping relation to each other, each sash frame being provided with a groove in its top and bottom rail and one stile for receiving one set of ribs of the window frame, thereby providing outer and inner sashes, each coacting with different guide ribs on the frames.

2,107,774



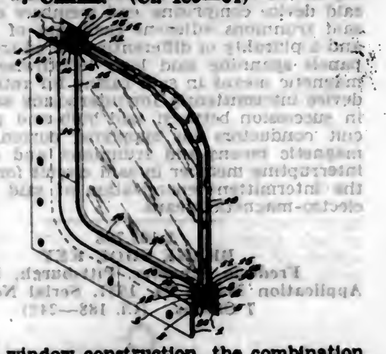
SASH HOLDER MECHANISM

Roy T. Axe, Syracuse, N. Y., assignor to The O. M. Edwards Company Inc., Syracuse, N. Y., a corporation of New York

Application June 4, 1936, Serial No. 83,533

1 Claim. (Cl. 292—337)

A sash holder for a sash having a hollow frame member including front and rear spaced walls with spacers between them, the sash holder comprising a holding member, a guide therefor mountable in the hollow frame member with the holding member movable beyond the edge of the frame, the guide and holding member being placeable as a unit in the frame by an endwise movement of the unit into the frame, the guide having means for coacting with the spacers of the window frame to limit and support it including outwardly extending shoulders for coacting with the spacers to limit the inward movement of the unit into the hollow frame member, and said unit including a spring acting in opposite directions on the holding member to move it into operative position and on the guide to thrust the guide inwardly and hold the same with said shoulders against the spacers.



2,107,775

WINDOW CONSTRUCTION

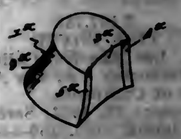
Roy T. Axe, Syracuse, N. Y., assignor to The O. M. Edwards Company Inc., Syracuse, N. Y., a corporation of New York

Application October 1, 1936, Serial No. 103,560

7 Claims. (Cl. 189—64)

4. In a window construction, the combination with a window frame formed with a channel, and a sash frame mounted in the channel and confining a second channel for receiving the margins of the window glass; of weather strip means between the sash frame and the walls of the channel of the window frame including resilient strips interposed between the sash frame and the side walls of the channel of the window frame and having beaded portions extending beyond the inner edges of the sash frame and pressing against the window glass.

2,107,776



SHOE HEEL AND METHOD OF MAKING SAME

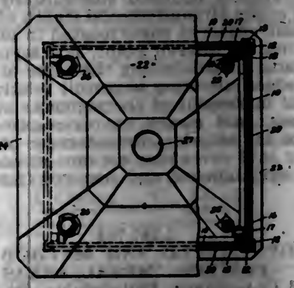
Albert F. Bancroft, West Newton, Mass., assignor to Bancroft-Walker Company, Waltham, Mass., a corporation of Massachusetts

Application March 27, 1937, Serial No. 133,337

6 Claims. (Cl. 12—147)

1. A heel core having a curved outer surface which extends forwardly to the front corners of the core, said core having in its breast surface two marginal channels each substantially wedge-shape in transverse cross section, the thin edge of each channel being substantially coincident

with the corresponding forward corner of the heel core, the thicker edge of each channel being substantially perpendicular to the main portion of the breast surface and of a depth substantially equaling the thickness of the material to be used in covering the outer surface of the heel.



2,107,777

SIGNAL CASING

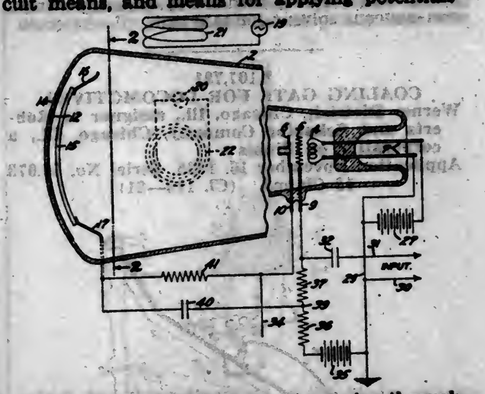
Carl H. Bissell, Syracuse, N. Y., assignor to Crouse-Hinds Company, Syracuse, N. Y., a corporation of New York

Application October 12, 1936, Serial No. 105,165

3 Claims. (Cl. 40—63)

3. A signal casing comprising a boxlike structure parallelogrammic in cross section, said structure consisting of separate side wall panels provided with coacting means along their vertical side edges to form an interlock between the panels, said panels being also formed with coacting abutments maintaining said panels in right angular relationship when secured together, means for detachably securing the panels together, top and bottom closures, and means for detachably securing said closures to said structure.

2,107,778



MEANS FOR GENERATING A PULSE IN A CATHODE RAY TUBE

Archibald H. Brolly, Palo Alto, Calif., assignor to Farnsworth Television Incorporated, a corporation of California

Application October 16, 1933, Serial No. 693,710

4 Claims. (Cl. 178—7.7)

1. In combination with a cathode ray tube having an envelope containing an energized anode and cathode cooperating to produce a beam of cathode rays and an area scanned by said beam, a grid positioned to control the energy in said beam, a collecting electrode positioned at the edge of said area and adapted to receive energy from said beam during scansion as a pulse, a condenser circuit, means for charging said condenser by anode potential, means connecting said condenser to said electrode to be discharged by energy received thereon, a resistor positioned in said circuit means, and means for applying potentials

developed by recharging currents passing through said resistor to said grid.

2,107,779

METHOD AND APPARATUS FOR PRODUCING FELTED FIBER INSULATION

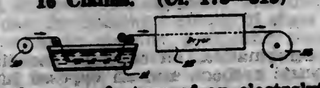
William Brown, Detroit, Mich.

Application February 19, 1934, Serial No. 711,868

Renewed April 5, 1937

23 Claims. (Cl. 92—58)

1. The method of molding insulation forms which comprises introducing into a foraminous mold a liquid pulpy mixture, agitating said mold, and spinning the mold about an upright axis to eject liquid content of the mixture from the mold and at the same time to produce a molded form.

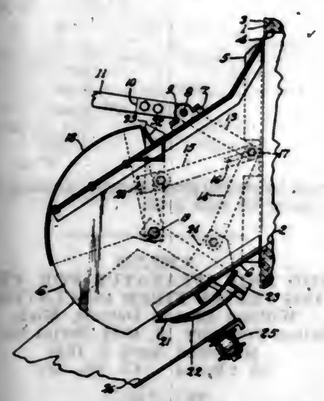


2,107,780

ELECTROLYTIC CONDENSER BODY AND METHOD OF MAKING THE SAME

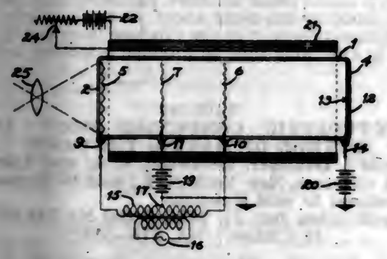
Harold I. Dansiger, Westwood, N. J., and Aniello Di Giacomo, New York, N. Y.; said Di Giacomo assignor to said Dansiger

Application July 11, 1934, Serial No. 734,628



16 Claims. (Cl. 175—315)

1. In the manufacture of an electrolytic condenser body comprising interwound filmable foil and fibrous spacing strips, the steps which consist in first incorporating a film-forming salt in dry form with the fibres of the spacing strips,

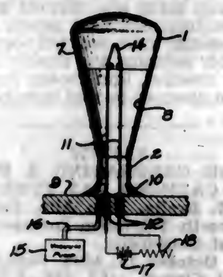


then forming the condenser body, and then impregnating the body with a medium comprising a non-aqueous solvent for said salt.

2,107,781
COALING GATE FOR LOCOMOTIVES
Werner Dietrich, Chicago, Ill., assignor to Roberts and Schaefer Company, Chicago, Ill., a corporation of Illinois
Application November 16, 1935, Serial No. 50,073
13 Claims. (Cl. 193—21)

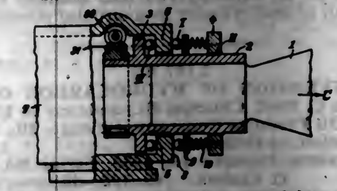
1. In combination, a fixed downwardly inclined chute, two gate members pivoted on a horizontal axis on the chute, adapted to move toward and from one another across the open end of the chute, the upper member having a cut off edge parallel with and the lower member having a cut off edge inclined to the axis of rotation.

2,107,782
RADIATION FREQUENCY CONVERTER
Philo T. Farnsworth, San Francisco, and Donald K. Lippincott, Larkspur, Calif., assignors to Farnsworth Television Incorporated, San Francisco, Calif., a corporation of California
Application February 24, 1936, Serial No. 65,464
4 Claims. (Cl. 250—1)



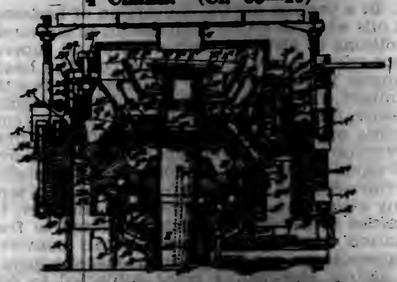
1. In combination, an envelope containing a photoelectric cathode and an opposed luminescent screen, an apertured cathode capable of emitting secondary electrons at a ratio greater than unity positioned between said first mentioned cathode and said screen, means for oscillating electrons between said photoelectric cathode and said apertured cathode to create electron multiplication in the space therebetween, and means for directing electrons passing through said apertured cathode against said screen.

2,107,783
TIRE COVER
Elmer E. Frey, Los Angeles, Calif., assignor to Kittie Manufacturing Co., Los Angeles, Calif., a corporation of California
Application January 27, 1931, Serial No. 511,531
7 Claims. (Cl. 150—54)



1. A tire cover having a plurality of relatively short segments disposed substantially throughout the entire circumferential length of the cover with their adjacent edges located in planes radiating from an interior point, said segments having means for connecting the same at their adjacent edges operating to permit relative circumferential movement of the segments at their inner edges, said means having a pivotal action adjacent the exterior circumference of the cover whereby said cover may assume an enlarged diameter when opened and removed from the tire.

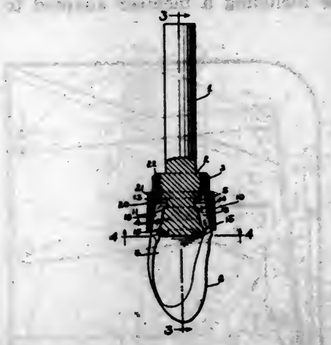
2,107,784
ENVELOPE SHIELD AND METHOD OF DEPOSITING METAL AREAS
Bernard C. Gardner, Philadelphia, Pa., assignor to Farnsworth Television Incorporated, San Francisco, Calif., a corporation of California
Application May 21, 1937, Serial No. 143,943
2 Claims. (Cl. 91—12.2)



2. The method of temporarily covering the inner wall of an envelope having a narrow opening with a resilient sheet during the evaporation of metal therein which comprises rolling said sheet upon itself until the roll is of small enough diameter to enter the opening, releasing the roll to expand said sheet to form a band covering an area of said wall, evaporating metal within said envelope, re-rolling said sheet and removing it while rolled through said opening.

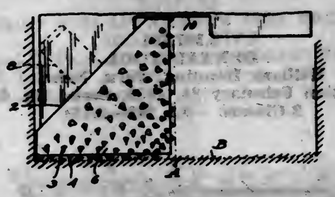
2,107,785
VARIABLE PITCH PROPELLER FOR AIRCRAFT
Manfred Grabarse and Ludwig Hoffmann, Berlin-Hermsdorf, Germany, assignors to Gustav Schwarz G. m. b. H., Berlin-Waldmannslust, Germany
Application August 19, 1935, Serial No. 36,768
In Germany August 23, 1934
12 Claims. (Cl. 170—162)

1. A propeller for aircraft, comprising a hub, a blade, a mounting in said hub for said blade permitting said blade to be turned about its axis and comprising bearing surfaces supporting said blade as against movement in opposite directions, and means to hold said bearing surfaces under initial pressure of such an amount that with any load to which the propeller is subjected in service the said bearing surfaces are in engagement with said blade for supporting the same as against movement transverse to the bearing surfaces.



2,107,786
CRUSHING MACHINE
Oscar C. Gruender, Milwaukee, Wis., assignor to Nordberg Manufacturing Co., Milwaukee, Wis., a corporation of Wisconsin
Application September 25, 1933, Serial No. 690,790
4 Claims. (Cl. 83—10)

2. In securing means for securing two members together, a lug on one of said members, the other member being apertured to permit the passage of the lug therethrough, a housing associated with the apertured member, said housing having an access opening, rotatable securing means for said lug, positioned within said housing and aligned with said opening, a cover member for said opening and means for securing it in place, and means cooperating with said cover member, when in place, to prevent rotation of said rotatable securing means.



2,107,787
CARVING MACHINE BIT
Earl W. Grumke, St. Paul, Minn.
Application May 19, 1936, Serial No. 80,257
2 Claims. (Cl. 144—219)

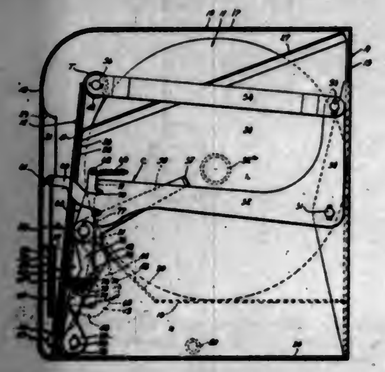
1. A cutting implement comprising, a stem having a frusto-conical head, a pair of cutting blades operably engaging the head, means by which the blades are releasably held to prevent motion axially of the head, said head having diametrically related outstanding stop lugs with

which the side edges only of the blades engage in a manner to fix the blades against rotation on the head.

2,107,788
DEBALLING DRILL BIT
Jesse E. Hall, Los Angeles, Calif.
Application January 9, 1937, Serial No. 119,814
9 Claims. (Cl. 255—71)

1. A self, de-balling, earth-formation, drill bit having a resilient, re-bounding means whereby to automatically dislodge accumulated mud or the like.

2,107,789
METHOD OF MAKING CHLORHYDRIN
Charles G. Harford, Wellesley, Mass., assignor to Arthur D. Little, Incorporated, Cambridge, Mass., a corporation of Massachusetts
No Drawing. Application February 13, 1931, Serial No. 515,640
42 Claims. (Cl. 260—157)



1. Method of making a chlorhydrin which comprises treating a non-benzenoid hydrocarbon containing the ethylene group —HC=CH— with a hypochlorite of a tertiary alcohol and with water.

2,107,790
TOWEL DISPENSING DEVICE
Leo M. Harvey, Los Angeles, Calif.
Application October 5, 1934, Serial No. 746,984
21 Claims. (Cl. 312—38)

3. A device of the character described including a case for housing a supply of sheet material and having an opening, a movable plate in the case facing the opening, means for guiding the material between the opening and the plate, the plate being movable by pressing against the material accessible through the opening, and means for controlling the withdrawal of the material from the case governed by movement of the plate.

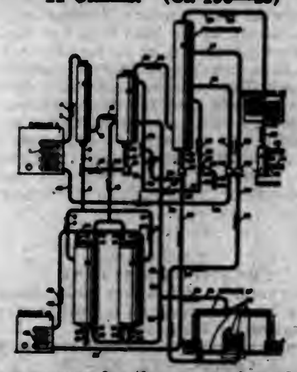
13. A towel cabinet including a case, a supply

of toweling material in the case having longitudinally spaced openings, and a control for governing the withdrawal of the material from the case including a member adapted to enter

the openings to limit the withdrawal of the material, and an element in the case operatively connected with the member and bodily manually movable through the medium of the material to retract the member.

2,107,791
DENTAL TOOL
William Henning, Peru, Nebr.
Application February 24, 1936, Serial No. 65,258
2 Claims. (Cl. 240—2.18)

1. A dental mirror, comprising a handle casing having a lamp in its outer end, a combined hood and mirror support having a conical inner end portion detachably engaging about the casing in the zone of the lamp and converging outwardly therefrom to provide a hood, one side of said conical portion extending therebeyond in offset relation to the axis of the lamp to provide a supporting arm, and a mirror mounted on the outer end of the supporting arm and extending therefrom diagonally across the axis of the lamp, said conical portion having a lateral opening in its reduced outer end at the side remote from said supporting arm, the converging walls of the conical portion adapted to converge and direct light rays from the said lamp through the said lateral opening and over the surface of the said mirror.



2,107,792
INTERNAL COMBUSTION MOTOR
Elmer E. Huseby, Los Angeles, Calif.
Application April 18, 1936, Serial No. 75,139
4 Claims. (Cl. 123—32)

1. In an internal combustion motor: a cylinder, a piston therein, a head on said cylinder having a chamber therein, said piston having portions reciprocable in said cylinder and in said chamber, and an eccentric arcuate passage affording communication between said chamber and peripheral points in said cylinder and formed so as to dis-

charge the air expelled from said chamber around the wall of said cylinder in a circular stream.

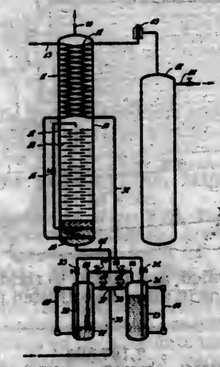
2,107,793
CONVERSION OF HYDROCARBON OILS
Lyman C. Huff, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application January 19, 1935, Serial No. 2,488
11 Claims. (Cl. 196—48)

1. In a process for the conversion of hydrocarbon oils wherein an oil is subjected to conversion conditions of elevated temperature and superatmospheric pressure in a heating coil, the heated products introduced into an enlarged reaction chamber, also maintained at superatmospheric pressure, wherein particularly their vaporous components are subjected to appreciable continued conversion and wherein separation of vaporous and liquid conversion products is accomplished, the vaporous and liquid conversion products separately withdrawn from the reaction chamber, the vaporous conversion products subjected to fractionation whereby their insufficiently converted components are condensed, fractionated vapors of the desired end-boiling point subjected to condensation and the resulting distillate collected, the improvement which comprises separating a relatively light reflux condensate and a relatively heavy reflux condensate from the vaporous products of the process undergoing said fractionation, returning the light reflux condensate to the heating coil for further conversion, subjecting the heavy reflux condensate to independently controlled conversion conditions of elevated temperature and superatmospheric pressure in a separate heating coil, introducing the heated products from said separate heating coil into a coking chamber, withdrawing liquid conversion products from the reaction chamber and introducing the same into said coking chamber, supplying vapors from the coking chamber to a separating chamber wherein undesirable high-boiling components, including any entrained high coke-forming liquids, are removed therefrom, returning the liquid products from said separating chamber to the coking chamber and subjecting vaporous products from the separating chamber to said fractionation.

2,107,794
MANUFACTURE OF ALCOHOLS
Vladimir Ipatieff and Vasili Komarewsky, Chicago, Ill., assignors to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
No Drawing. Application September 1, 1933, Serial No. 687,843
3 Claims. (Cl. 260—156)

2. In the production of alcohol from olefin hydrocarbons, the step which comprises treating the olefin with a phosphoric acid solution to which has been added from about 5% to 10% by weight of a metal oxide.

2,107,795
ENGINE PISTON
Everett P. Lamb, Vandalia, Ohio, assignor to The Master Electric Corporation, Dayton, Ohio, a corporation of Ohio
Application November 15, 1935, Serial No. 49,988
21 Claims. (Cl. 309—26)



1. A hollow piston head open at one end, the interior of the open end being tapered, an internal circumferential rabbet therein, an internal circumferential planar groove therein, spaced from the rabbet toward the open end of the piston head, and an internal helical groove leading from the internal tapered area to the internal circumferential planar groove.

2,107,796
DEODORIZING POLYMERIZED HALOPRENE
Alexander D. Macdonald, Malden, Mass., assignor to E. I. Chemical Co., a corporation of Massachusetts
No Drawing. Application December 3, 1934, Serial No. 755,959
7 Claims. (Cl. 260—2)

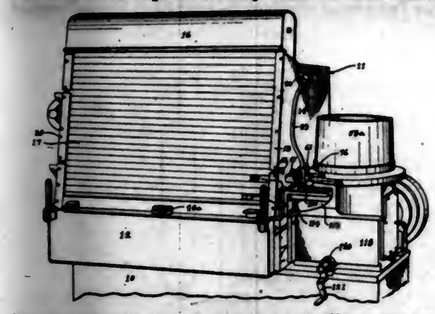
1. The method of deodorizing plastic polymerized chloroprene which comprises milling said polymerized chloroprene in the presence of an aliphatic monohydric alcohol for a time sufficient to remove the malodorant constituents of said polymerized chloroprene.

2,107,797
APPARATUS FOR PRODUCING AND STORING OXYGEN
Adolf Messer, Frankfort-on-the-Main, Germany
Application October 17, 1936, Serial No. 106,165
In Germany September 4, 1936
2 Claims. (Cl. 62—122)

1. An air separating apparatus including a rectification column, a heat interchanger, a liquid oxygen receiver connected to the liquid oxygen collecting portion of said column, a delivery pipe from said receiver to said heat interchanger,

and means for forcing air under pressure into said receiver to force the liquid oxygen therein through the heat interchanger.

2,107,798
METHOD AND APPARATUS FOR TREATING DRIED FRUITS
Clifford B. Pape and Elisha N. Thayer, San Jose, and Theodor A. Schwarz, Menlo Park, Calif.
Application January 2, 1937, Serial No. 118,744
13 Claims. (Cl. 99—104)



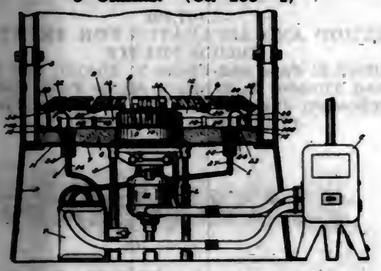
1. A method of treating dried fruits comprising the steps of separating a bulk of pieces of fruit into independent individual pieces, simultaneously subjecting a plurality of said individual pieces to transit through an extended path of travel, and subjecting said individual pieces to mechanical manipulative progressively increasing pressure independently of each other during the transit thereof through said extended path of travel for reducing the thickness of said individual pieces.

2,107,799
HIGH SPEED WIREDRAWING MACHINE
William D. Pierson and George W. Jackman, Waterbury, Conn., assignors to The Waterbury Farrel Foundry & Machine Company, Waterbury, Conn., a corporation of Connecticut
Original application February 3, 1934, Serial No. 709,646. Divided and this application February 19, 1935, Serial No. 7,264
31 Claims. (Cl. 205—16)

1. In a wiredrawing machine, a cabinet, wiredrawing mechanism located in said cabinet, a wire coiling mechanism located outside the wire exit end of said cabinet, means for rigidly holding a final drawing die intermediate said cabinet and said coiling mechanism, said holding means being

adjustable through angles around horizontal and vertical axes to produce any desired "cast" in the

wire being coiled, and means to rigidly secure said holding means in all of its adjusted positions.



2,107,800

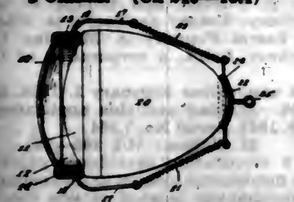
CARBURETING RING STRUCTURE FOR WALL FLAME BURNERS

Milton A. Powers, Detroit, Mich., assignor, by mesne assignments, to The Timken-Detroit Axle Company, a corporation of Ohio

Application October 6, 1934, Serial No. 747,220

9 Claims. (Cl. 158—4)

1. In a liquid fuel burning apparatus having a combustion chamber provided with a hearth and an upright wall, and means for projecting fuel toward said wall, an upright strip of refractory material disposed above the hearth to intersect the path of the projected fuel, and means for positioning said strip relative to the hearth, said means comprising a device secured to the hearth and having an upward extension providing a clip for reception of the upper edge of said strip.



2,107,801

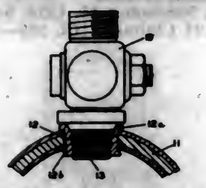
HEADLIGHT ATTACHMENT

Thurman Query, Columbus, Ind.

Application March 6, 1937, Serial No. 129,295

5 Claims. (Cl. 240—43.4)

2. An automobile headlight attachment, comprising an annular frame adapted to fit against the front of a headlight and encircle its light-emitting area, a filter glass in said frame, a member for engaging the rear end of the headlight, arms shaped to extend outwardly and rearwardly of said frame in position to avoid contact with the sides of the headlight, pivotal arm-mounting means on said frame including means to prevent inward movement of said arms from said outward and rearward positions, and tension devices extending between said member and the free ends of said arms.



2,107,802

MEANS FOR MAKING THREADED CONNECTIONS

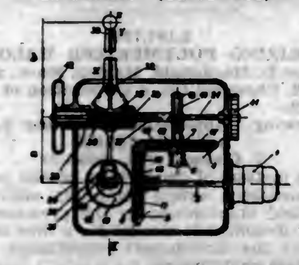
Nathan Roach, Cleveland, Ohio, assignor to The Cleveland Brass Manufacturing Company, Cleveland, Ohio, a corporation of Ohio

Application November 13, 1937, Serial No. 174,294

2 Claims. (Cl. 285—43)

1. In a connection between a hard metal threaded member and a hard metal wall having a threaded opening therein, said wall being subjected to fluid pressure, a bushing of a soft metal having a deformability similar to lead having threaded engagement between its outer face and said wall and having threaded engagement between its inner face and said member, and portions at each end of said bushing beyond its engagement with said wall extending radially outwardly beyond the diameter of said wall opening.

2,107,803



ADJUSTING MECHANISM FOR FIREARMS

Miroslav Rožík, Brunn-Husovice, Czechoslovakia, assignor to Československá Zbrojovka A. S. Brno, Brno, Czechoslovakia

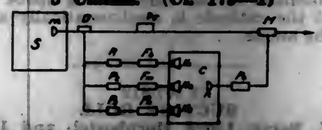
Application June 20, 1936, Serial No. 86,414

In Czechoslovakia June 24, 1935

11 Claims. (Cl. 74—195)

1. A mechanism for operating the means for vertically and horizontally adjusting fire arms comprising in combination a motor, two mechanisms operatively connected with said motor for driving the adjusting devices, means inserted between said motor and said mechanisms for continuously controlling the speeds in either direction of rotation and a device opdratively connected with both mechanisms for simultaneously and independently controlling the components of such motion.

2,107,804



METHOD OF MODIFYING THE ACOUSTICS OF A ROOM

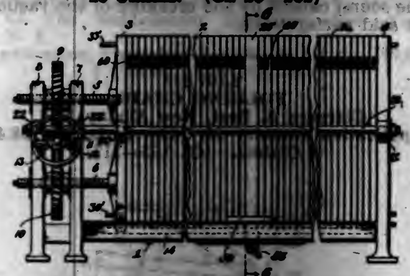
Bernard Roux, Robert Gaumont, and Mario Sellma, Paris, France

Application December 30, 1935, Serial No. 55,474

In France December 23, 1934

5 Claims. (Cl. 179—1)

1. In an electro-acoustical apparatus for transmitting sounds, a sound transmitter, an acoustical echo device for artificially lengthening the reverberation period of the transmitted sounds, means for conveying to the echo device a part of the energy coming from the transmitter, means for picking up the corresponding energy from the echo device and leading it to a receiver, one of the last named means being electrical, and electrical means combined with said electrical conveying means for affecting the intensities of the different musical frequencies conveyed, according to given coefficients of weakening regulatable at the will of the operator.



2,107,805

DIALYZERS

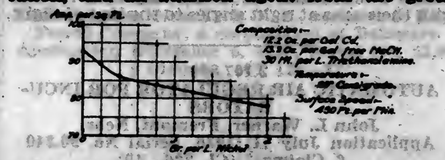
Arthur O. Russell, Port Chester, N. Y.

Application May 21, 1935, Serial No. 22,669

15 Claims. (Cl. 23—252)

6. A dialyzer comprising a press having front and rear end plates, a series of upright dialytic frames arranged in face-to-face relation between the end plates with permeable diaphragms disposed between the frames, means for moving one of the end plates into and out of clamping engagement with the frames, a distributor box segregating said series of frames into two adjacent groups of frames, ports formed in the frames of each group so constructed and arranged to form independent circulating systems for a carrier liquid and a wash liquid, passageways in the distributor box communicating with said systems, and means for moving the distributor box toward and from one group of frames.

2,107,806



DUCTILE CADMIUM COATING

Karl Gustaf Sederberg and Henry Brown, Detroit, Mich., assignors to Udylite Company, Detroit, Mich., a corporation of Indiana

Application June 2, 1934, Serial No. 728,247

21 Claims. (Cl. 204—1)

1. A cadmium plating bath for plating a ductile deposit of cadmium comprising a compound of cadmium, a cyanide compound in sufficient quantity to have free cyanide present in the solution, and an addition agent from the group

consisting of the hydroxyaliphatic amines and the ether derivatives of alkylene glycols.

2,107,807

PROCESS FOR SEPARATING MINERAL OIL PRODUCTS

Hermann Sulda and Hans Pöll, Vienna, and Alfred Nowak, Medling, Austria

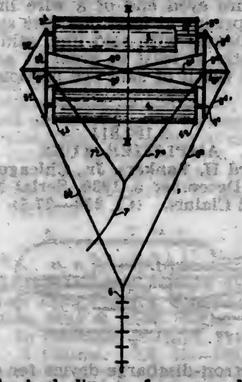
No Drawing. Application April 24, 1935, Serial No. 16,074. In Austria May 5, 1934

10 Claims. (Cl. 196—13)

1. In a process for separating and refining mineral oils containing paraffinic, naphthenic and aromatic portions by the alternate use of a selective solvent in anhydrous and water saturated stages; the improvement which comprises employing as the solvent a mixture consisting solely of crude cresol and a water repellent selective solvent which has a high dissolving power for naphthenic oils and is capable of lowering the viscosity of the solvent as a whole.

3. A process for separating mineral oil products into paraffinic, naphthenic and aromatic portions with simultaneous refining of the paraffinic and naphthenic portions, which comprises first extracting the oil products with a water saturated mixture consisting of crude cresol and a water repellent solvent, thus dissolving the main quantity of aromatic resinous and asphaltic compounds, thereafter extracting the undissolved portion of the oil with an anhydrous mixture of said solvents, separating the paraffinic portions in a pure state, saturating the extract with water, thereby separating the naphthenic substances in a pure state and finally joining the solution of aromatic, resinous and asphaltic compounds in the aqueous mixture of solvents with the aqueous extract first obtained.

2,107,808

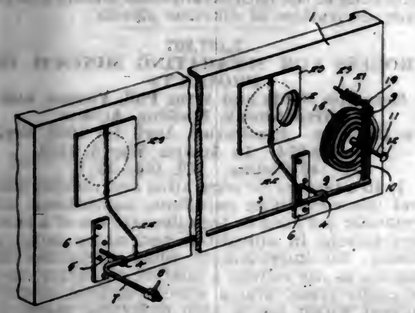


KITE

Willem H. A. G. van Ittersum, Biltheven, Netherlands

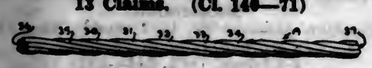
Application January 22, 1937, Serial No. 121,865

In France January 27, 1936



4 Claims. (Cl. 244—153)

1. A kite including a frame and a revolving



motor mounted in the frame and embodying hollow semi-cylindrical bodies displaced radially with their axes at right angles to the line of flight.

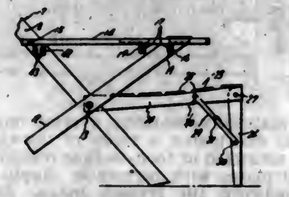
2,107,809
AUTOMATIC AIR REGULATOR FOR INCUBATORS
John L. Warner, Fremont, Nebr.
Application July 11, 1936, Serial No. 90,240
6 Claims. (Cl. 236—49)

1. In an incubator having a wall provided with air openings, a bar member disposed horizontally of the wall and supported for axial oscillation, arms carried by said bar, cover plates carried by said arms and each adapted to contact the adjacent wall and cover an opening, an upwardly directed arm carried by said bar and disposed in spaced relation with the incubator wall, resilient means coupling the arm with the wall and normally tending to oscillate the same in a direction to effect the engagement of said plates with the wall, and a thermostatic wafer interposed between said last arm and said wall and bearing at one side upon the wall and at its other side having connection with said arm.

2,107,810
WIRE LINE ENDS AND METHOD OF FORMING SAME
Earl E. Wherry, Oklahoma City, Okla.
Application November 29, 1935, Serial No. 52,251
13 Claims. (Cl. 140—71)

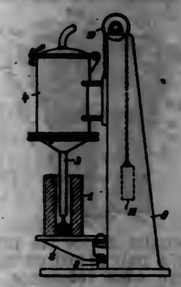
1. In a wire eyed end of a wire line, an eye portion comprising at least one wire strand, substantially integral with said line, said line having a diameter at least as great at all times as the greatest width of said eye portion.

2,107,811
AMPLIFIER TUBE
Edward H. Yonkers, Jr., Chicago, Ill.
Application December 5, 1930, Serial No. 500,217
2 Claims. (Cl. 250—27.5)



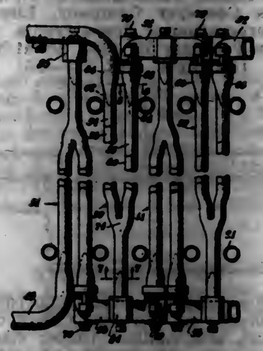
1. An electron-discharge device for amplifying pulsating currents comprising a helical electron-emitting cathode and a helical control element of the same pitch as the said cathode the convolutions whereof are interpositioned and a cylindrical anode of larger diameter than the said cathode, the axes of the three elements being substantially coincident, said control element being located between the cathode and the point of zero potential in the surrounding space charge so that the cathode is electrostatically shielded from the anode.

2,107,812
SUCTION ROLL
Earl E. Berry, Lloyd Hornbostel, and John E. Goodwillie, Beloit, Wis., assignors to Beloit Iron Works, Beloit, Wis., a corporation of Wisconsin
Application April 25, 1935, Serial No. 18,090½
15 Claims. (Cl. 92—53)



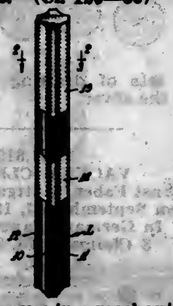
1. The combination in a suction roll of a perforate shell, a suction box, and a sound trap at the offgoing side of the suction box for reducing the sound caused by the breaking of the vacuum in said perforations.

2,107,813
FOLDING CHAIR
Clarence A. Best, New Albany, Ind.
Application January 10, 1936, Serial No. 58,445
2 Claims. (Cl. 155—117)



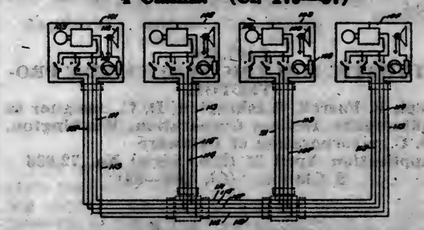
2. In a foldable seat combination including a back having a pair of forwardly extended legs at the sides thereof and a pair of rearwardly extended legs medially pivoted to the forwardly extended legs at the outer sides thereof, a seat pivotally connected at its rear portion to the inner sides of the forwardly extended legs, means to support the seat in horizontal position, the seat being foldable upwardly against the back, and side arms pivoted at their rear ends to the outer sides of the back and adjustably connected at their forward ends with the upper ends of the rearwardly extended legs, a writing leaf hinged to the inner edge of one of the arms and arranged for opening horizontally inward over the seat for use and for folding downwardly into the space formed between the adjacent outer side of the seat and the adjacent inner side of the rearwardly extended legs and thus out of the way to allow the seat to fold upwardly against the back, and means for holding the writing leaf in horizontal position.

2,107,814
MOLDING BY SAND-BLOWING
Carl Billand, Kaiserslautern/Rheinpfals, Germany
Application August 7, 1935, Serial No. 35,184
In Germany May 21, 1934
20 Claims. (Cl. 22—36)



20. In combination, a mold box, a sand blast nozzle associated in telescopic relation therewith, means for effecting recessional movement therebetween, and means for controlling said movement in accordance with the advance of the face of the sand deposit.

2,107,815
LOCOMOTIVE SUPERHEATER
Virginius Z. Caracristi, Bronxville, N. Y., assignor to The Superheater Company, New York, N. Y.
Application November 3, 1936, Serial No. 108,944
7 Claims. (Cl. 122—481)



1. In a superheater; inlet and outlet headers; a heat absorbing unit connected between said headers and divided into a plurality of sections each having a steam inlet branch and a steam outlet branch parallel thereto, each branch comprising a pair of parallel tubes connected at each end by a breeches piece to the inner ends of single tube lengths; coupling members receiving the outer ends of the single tube lengths at one end of each branch and connecting the section to the preceding and following sections of the unit for circulation of fluid in series therethrough; and breeches pieces joining the outer ends of the single tube lengths at the other end of both branches to another single tube length; and means closing the outer end of said mentioned single tube length.

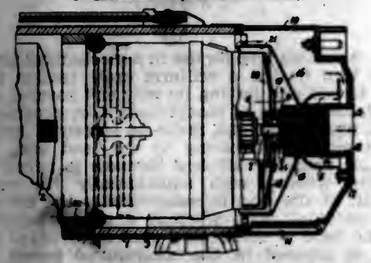
2,107,816
MECHANICAL PENCIL
Isidor Chesler, New York, N. Y., assignor to Eagle Pencil Company, a corporation of Delaware
Application December 5, 1935, Serial No. 52,969
3 Claims. (Cl. 120—83)

1. A writing lead for use in a mechanical pencil, said lead having a uniform cross section from end to end and having its rear end covered with a friable coating of conspicuous color contrasting with that of the lead, made up largely of minute solid particles adhering to the lead end, said coating being of sufficient thinness to permit effective writing with substantially the entire length of the lead in substantially the color of the uncoated lead, whereby a user is apprised of the need of recharging once said coated rear end is exposed in the mechanical pencil and may continue to write with said coated end until a new lead is available.

2,107,817
INTER-OFFICE COMMUNICATION SYSTEM
Jack I. Davis, Chicago, Ill., assignor to Sidney Ludwig, Chicago, Ill.
Application January 29, 1936, Serial No. 61,418
4 Claims. (Cl. 179—37)

1. An inter-office communication system of the character described, including: a plurality of units, each unit comprising a speaker, a microphone, tube means for amplifying the output of said microphone, and an indicator; a cable connecting said units, said cable having therein only one more wire than the number of units; a source of direct current associated with each of said units; and a relay breaking the circuit to said speaker when said indicator is being energized by direct current.

2,107,818
TEXTILE DRAFTING APPARATUS
Johann Elser, Mistek, Czechoslovakia
Application May 8, 1936, Serial No. 78,715
In Germany May 30, 1935
5 Claims. (Cl. 19—120)



1. In textile drafting apparatus the combination of a plurality of sets of drafting rolls through

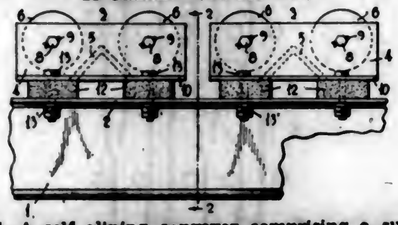
which the sliver to be drafted passes in succession, and a needle roll interposed between two

adjacent sets of drafting rolls and rotatably driven by the sliver.

2,107,819
VACUUM CLEANER
Ernst Faber, Stuttgart, Germany
Application September 17, 1935, Serial No. 40,905
In Germany January 4, 1935
8 Claims. (Cl. 230—232)

1. In a vacuum cleaner in combination, a shell formed with an air exhaust, a sleeve-shaped screen covering said exhaust, a cap embracing said screen and arranged to lead the air onto said screen in reversed direction, a casing open at both ends within said shell, a motor and fan unit accommodated in said casing, a shield embracing said casing and arranged to twice reverse the direction of the air, which leaves the casing, and elastic means supporting said casing and shield.

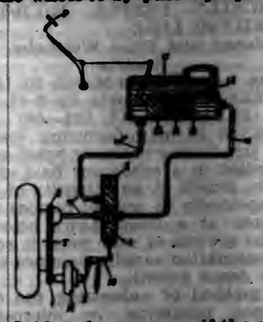
2,107,820
AUTOMATIC ELECTRIC SERVICE LINE PROTECTOR
Joseph E. Farrell, Washington, D. C., assignor to Automotive Devices Corporation, Washington, D. C., a corporation of Delaware
Application April 3, 1936, Serial No. 72,636
8 Claims. (Cl. 200—88)



1. An electric service line protector including in combination, an armature type latch normally spring biased to latching position, an electromagnet for actuating the latch, a pair of oppositely located spring terminals, a switch disk overlying the latch and having means for engaging therewith, said switch disk having opposite contacts connected by a fusible conductor adapted to carry an amperage substantially higher than the amperage for which the electro-magnet is set to function.

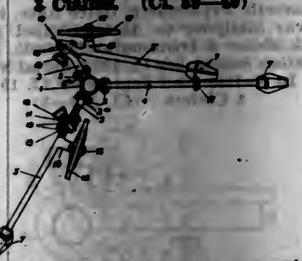
2,107,821
AUTOMATIC SWITCH FOR ELECTRIC SERVICE LINES
Joseph E. Farrell, Washington, D. C., assignor to Automotive Devices Corporation, Washington, D. C., a corporation of Delaware
Application October 18, 1934, Serial No. 748,959
11 Claims. (Cl. 200—89)

1. In an automatic device for protecting electric service lines, a pair of switch contacts, one of which is movable with reference to the other, normally interlocked manual and automatic insulation means for controlling the movable contact, restraining means for said manual means which in turn controls said automatic means while both are interlocked, an insulation barrier actuated by the automatic means to open and separate the contacts when the manual and automatic means are unlocked, and magnetic means for unlocking the manual and automatic means and rendering said manual means incapable of being reset by the restraining means while abnormal conditions exist in the line.



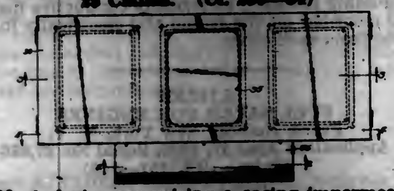
2,107,822
ROLLER CONVEYER
Arthur M. Hahn, Washington, D. C., assignor to Mathews Conveyer Company, Ellwood City, Pa., a corporation of Pennsylvania
Application February 16, 1937, Serial No. 125,976
15 Claims. (Cl. 193—35)

1. A self aligning conveyer comprising a support, a plurality of conveyer rollers carried by said support, and resilient rubber elements interposed between said support and said rollers.



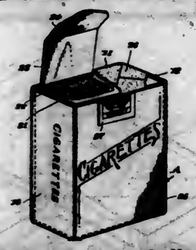
2,107,823
BRAKING SYSTEM
Paul Hallot, Paris, France
Application July 12, 1934, Serial No. 735,062
In France July 12, 1933
7 Claims. (Cl. 188—181)

7. A braking system for vehicle wheels, comprising an operating member, a piston moved by said member, hydraulic fluid for transmitting the movement of said piston to brake mechanism associated with a wheel to be braked, a compensating spring compressed by the movement of said piston, a second piston on which the spring bears, said second piston thereby being pressed on the hydraulic fluid, and a self-regulating device operated in accordance with the reduction of the speed of the wheel to by-pass a proportion of the



hydraulic fluid under pressure if the wheel is too highly braked.

2,107,824
GUN-CARRIAGE
František Helcl, Brunn-Julianov, Czechoslovakia, assignor to Ceskoslovenska Zbrojovka, a. s. Brno, Brunn, Czechoslovakia
Application September 29, 1936, Serial No. 103,139
In Czechoslovakia, October 4, 1935
2 Claims. (Cl. 89—40)



1. A wheel carriage for guns comprising in combination, a central gun support, a trail and two feet forming a tripod, each foot being subdivided into an inner and an outer section, the planes of subdivision extending at an acute angle to the feet axes and intersecting said trail, a wheel axle extending from each outer section near the inner end thereof and a wheel on said axle.

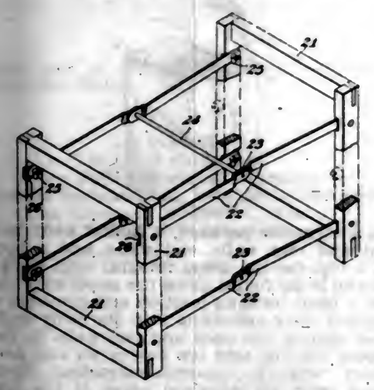
2,107,825
X-RAY APPARATUS
Edwin S. Humphreys, Aurora, Ill.
Application April 30, 1932, Serial No. 273,794
26 Claims. (Cl. 250—54)

20. A device comprising a casing impermeable to light rays, there being an exposure opening in said casing, a container removably associated with said casing, photographic plates arranged in stacked relation within said container, and mechanically operated means for successively shifting said plates in timed sequence to effect regular predetermined succession to said casing opening for timed exposure thereof.

2,107,826
CIGARETTE PACKAGE
Joseph Keller, Bronx, N. Y.
Application August 14, 1936, Serial No. 96,682
1 Claim. (Cl. 229—7)

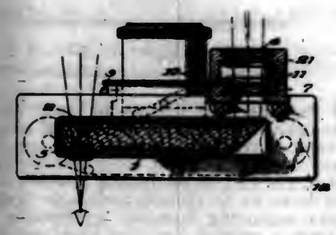
In a cigarette package, a hollow body having front and rear walls, end walls, and a bottom and a top, the top being integral with the front wall and being folded along the upper edge thereof to a head-forming position and provided with marginal flaps extending into the body and secured against the back and end walls to firmly support the top, said top having an end portion formed with a cigarette-extracting opening spaced from all marginal edges of the top to provide portions surrounding the opening and adapted to prevent accidental displacement of cigarettes and retain loose tobacco within the body, a closure flap for said opening carried by the rear wall and folded downwardly upon the top in covering relation to the opening and having its free front end portion folded downwardly against the outer face of the front wall and free from the same, and a wrapper enclosing the body and the flap.

2,107,827
DIVIDING AND REINFORCING MEANS FOR CONCRETE ROADWAYS
John Willard Kerr, Chicago, Ill., assignor to Ernest H. Geyer, Chicago, Ill.
Application July 17, 1934, Serial No. 735,671
3 Claims. (Cl. 94—17)



1. A dividing and reinforcing strip for concrete roadways comprising a flat metal strip having straight upper and lower edges and having between its edges a row of longitudinally extending apertures and an anchoring member of such zig-zag form as to present angularly projecting members extending laterally in opposite directions from a median line, the apertures in said metal strip being each of such length as to permit an angular projection of the anchoring member to be passed through it.

2,107,828
PORTABLE WARDROBE, CUPBOARD, OR THE LIKE
Morris Krantz, London, England
Application December 7, 1936, Serial No. 114,686
In Great Britain December 14, 1935
2 Claims. (Cl. 312—6)

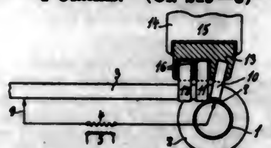


1. A collapsible portable wardrobe comprising, in combination, a box-like flexible bag having an access flap and an interior collapsible self-supporting frame fitted within said bag, said frame comprising opposite side sections including up-

right frame parts rigidly connected at the top and bottom by horizontal frame parts, bolts on the upright frame parts located inwardly of each horizontal frame part, and cross bars serving to hold the side sections in spaced relation, said bars

being each constructed to fold upon itself and pivotally attached to said bolts on the upright frame parts, the said upright frame parts being transversely grooved at the location of said bolts to receive the cross bars and lock the same in rectilineal condition.

2,107,829
PHOTOGRAPHIC CAMERA
Heinz Küppenbender, Dresden, Germany, assignor to Zeiss Ikon Aktiengesellschaft Dresden, Dresden, Germany
Application February 8, 1934, Serial No. 710,206
In Germany February 18, 1933
9 Claims. (Cl. 95—44)



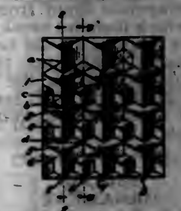
1. A camera provided with a focussing device in combination with a telemeter having the same view as said camera and adapted to bring into coincidence two images of said view projected along two spaced lines of vision, the said telemeter comprising optical means rotatable about an axis substantially coinciding with the axis of vision, for deflecting in a plane one of said images, mounted independently of the remaining elements of said telemeter in the path of one of said lines of vision and adapted to bring said image into coincidence with the other of said images, and means for coupling said optical means with said focussing device to be moved therewith and to bring said images into coincidence only when said camera is in focus.

2,107,830
METHOD OF INFLUENCING ENZYMES AND TECHNICALLY USEFUL MICRO-ORGANISMS AND THE LIKE
Paul Liebeny and Hugo Wertheim, Vienna, Austria
No Drawing. Application March 30, 1933, Serial No. 663,642. In Austria April 12, 1932
13 Claims. (Cl. 195—66)

1. A method of manufacturing yeast, which consists in irradiating ordinary yeast on a nutritive foundation in a condenser field of about 15 meters wave length at an intensity of 150 milliamperes repeatedly in several periods of twenty minutes each at a temperature below 30° C., whereby the growth of said yeast is so vigorous that said foundation rapidly becomes completely covered by dense growth.

12. The method of enhancing the efficacy of the enzymes occurring in micro-organisms which consists in isolating such enzymes and irradiating them in a condenser field ranging from 4 meters to 15 m. wave length the temperature being maintained not higher than that of the optimum activity of the enzyme.

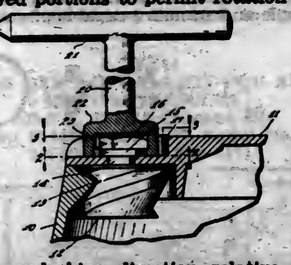
2,107,831
MACHINE FOR THE MANUFACTURE OF RIBBED PIPING
Leif Merseth, Frydenberg, Ostre Aker, near Oslo, Norway, assignor to Aktieselskapet Per Kure, Norsk Meter & Dynamofabrik, Oslo, Norway
Application September 15, 1936, Serial No. 100,949
In Switzerland September 17, 1935
4 Claims. (Cl. 219—3)



1. In a machine for the manufacture of ribbed piping and comprising a frame, means for feeding a pipe rotating about its axis in the axial direction and for feeding a metal ribbon, to be wound on to the pipe, to said pipe substantially normal to its axis, and electrical means for feeding an electric current through said ribbon from a point substantially adjacent to the point of contact between the ribbon and the pipe to a point on the ribbon remote from the pipe, guiding means adjacent to the said pipe on both sides of the current-carrying section of said ribbon to maintain the said ribbon in proper angular relation to the said pipe, said guiding means comprising a plurality of pairs of guiding blocks of electrically conductive material mounted on the frame and electrically insulated from each other.

2,107,832
FUEL SAVER FOR ENGINES
Frank Neilson, New York, N. Y.
Application June 17, 1935, Serial No. 27,086
1 Claim. (Cl. 251—145)

In a fuel saver, adapted to add a volume of gas to a charge pre-formed by a charge-forming device and adapted to be interposed between the outlet of said charge-forming device and the inlet of an intake manifold of an internal combustion engine, a gasket-like body portion having a centrally-disposed chamber therethrough, with openings at both ends thereof, one opening adapted for communication with said charge forming device and the other opening adapted for communication with said intake manifold, said body portion also having a substantially L-shaped gas intake passageway, wholly within said body portion, opening to the outer atmosphere directly at the exterior of said body portion and extending to said chamber, the longitudinal axis of that portion of said gas passageway nearest said chamber being radially disposed with reference to the axis of said chamber, a valve structure carried by said body portion, including a seat within said portion of said passageway, disposed at the juncture of the two portions of said L-shaped passageway and spaced from and facing said chamber, a valve normally on said seat and a valve stem secured to said valve, extending into said passageway and disposed with its axis substantially radial with reference to the axis of said chamber, and valve means urging seating of said valve, including a spring located wholly outside said gas intake passageway.



2,107,833
LIGHT DIFFUSING GLASS
Henri Paul, Montreal, Quebec, Canada
Application August 26, 1935, Serial No. 37,965
2 Claims. (Cl. 88—78)

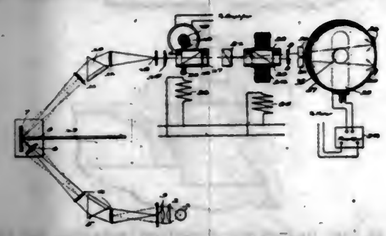
1. A light diffusing glass panel having one side flat and the other side shaped to form parallel contacting unbroken rows of interpenetrating right trihedral convex reflectors of similar dimensions, one edge of each reflector intersecting the center of one face of the adjacent reflector in the same row, all of such edges in each row lying in a plane perpendicular to said side, the intersecting surfaces between adjacent rows of convex reflectors forming a continuous unbroken row of concave right trihedral reflectors, and a row of smaller convex trihedral reflectors located in the angles formed by the intersecting faces of the said concave reflectors, one edge of each of the smaller trihedral reflectors being a continuation of the line of intersection between adjacent faces of said concave reflectors.

2,107,834
KEY
James A. Phillips, Hopkinsville, Ky., assignor to The Ford Meter Box Company, Wabash, Ind., a corporation of Indiana
Application December 19, 1935, Serial No. 55,186
9 Claims. (Cl. 70—409)

1. A combined key and handle for a meter-box lid having a rotatable locking member provided at its outer end with an outwardly extending flange of polygonal shape spaced from the adjacent portion of the lid, said key having a flange-receiving socket of size and shape corresponding to said flange, the inner walls of said socket inwardly from the open socket-end being provided with relieved portions to permit rotation of said

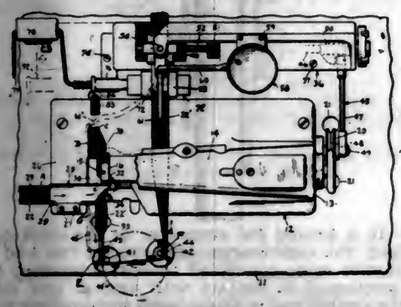
key in an unlocking direction relative to said locking member and to limit such key-rotation to a position in which the open end of the socket will be out of registry with said flange.

2,107,835
GROUND ROD CONNECTER
Milo Fred Pierce, Aurora, Ill., assignor to Western United Gas and Electric Company, Aurora, Ill., a corporation of Illinois
Application July 31, 1935, Serial No. 34,056
2 Claims. (Cl. 173—31)



1. In a ground rod connecter of the class described, the combination of a ground rod and a conductor to be connected therewith adapted to be positioned in contact with and at one side of the ground rod, a closed band surrounding the ground rod and conductor and having intersecting apertures therethrough for said ground rod and conductor, said apertures having knife-edged ribs instanding from their walls, said band having a recess forming a tapered seat at the side of the ground rod opposite said conductor, and a removable tapered wedge member seated in said tapered seat and adapted to be driven between said seat and said ground rod to force said ribs to pierce the metal of the ground rod and conductor and become embedded therein.

2,107,836
SPECTROPHOTOMETER
Orrin Weston Pineo, Milo, Maine, assignor to The Calco Chemical Company, Inc., Bridgewater Township, Somerset County, N. J., a corporation of Delaware
Application February 24, 1936, Serial No. 65,489
5 Claims. (Cl. 88—14)



1. A photometric apparatus comprising a photoelectric device arranged to receive integrated light from a sample and a standard, an optical system arranged to control the light received by said device comprising in series an angularly movable polarizing member, a second

member having the property of dividing a light beam into two beams which are polarized respectively in planes at right angles to each other and a third member between the second member and the sample and standard capable of causing each

beam to flicker from a minimum to a maximum, the flickering of the two beams in opposite phase, and means by which the first polarizing member may be angularly adjusted in accordance with the output of the photoelectric device.

2,107,837
APPARATUS FOR FORMING TUBULAR ARTICLES
Willis C. Robbins, Wakefield, Mass., assignor to Metropolitan Sewing Machine Corporation, Nyack, N. Y., a corporation of Delaware
Application June 13, 1934, Serial No. 730,378
6 Claims. (Cl. 112—63)

3. A tube sewing and turning apparatus comprising a sewing mechanism including a regular feeding means; an inlet channel member for directing a strip at an angle to the line of stitching; an outlet channel member for folding a strip, maintaining two edges of the folded strip in closely adjacent alignment and directing the two edges parallel with the line of stitching; a tube within said outlet channel member around which the strip is folded for stitching and through which the stitched tube is subsequently turned right side out; and a feed device associated with the sewing mechanism adapted to pull the stitched strip through the tube coordinately with the regular feed means of the sewing mechanism.

2,107,838
CONTINUOUS YARN
Maurice Albert Salombier, Jr., Pleasantville, N. Y.
Application May 1, 1935, Serial No. 19,143
12 Claims. (Cl. 117—52)

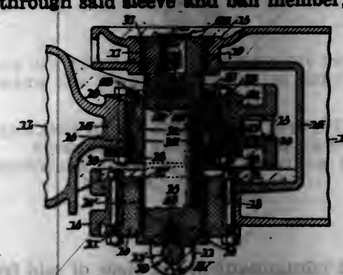
1. A continuous silk hosiery yarn for sheer leg portions of hosiery of the class described, said yarn being composed of a plurality of twisted natural silk strands of such length that during doubling and twisting breaks and run-outs in single strands will naturally occur, said strands

having individual knots at breaks or run-outs, said yarn having no knots common to all strands.

2,107,839
THERAPEUTIC DERIVATIVE OF THE GENUS LACTUCA AND PROCESS OF PREPARING SAME
Gerhard Schenck, Ludwigshafen-on-the-Rhine, Germany, assignor to E. Bilhuber, Inc., Jersey City, N. J., a corporation of New Jersey
No Drawing. Application August 5, 1937, Serial No. 157,323. In Germany June 22, 1936
9 Claims. (Cl. 87—28)

1. A process of the character described for producing a therapeutic agent from latex of the genus Lactuca which includes breaking the emulsion of the latex to form a solid component and a liquid component containing therapeutically active ingredients, separating the solid component from the liquid, and then removing water from the liquid component to concentrate said active ingredients.

2,107,840
ORNAMENT
Albert T. Sebek, Chicago, Ill.
Application April 2, 1937, Serial No. 134,836
5 Claims. (Cl. 41—10)



3. An ornamental device in the form of a handle member having a substantially bullet shaped extension and an ornament body having a socket formation conforming substantially to the outline of said extension and fitted over the same, together with pin means extended through said ornament and said handle member at a point adjacent the juncture of said handle and the edge or rim portions of said socket.

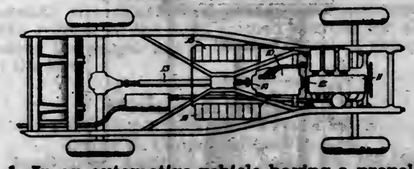
2,107,841
ARTICULATION JOINT FOR LOCOMOTIVES AND CARS
Leo J. Seider, Philadelphia, Pa., assignor to The Pennsylvania Railroad Company, Philadelphia, Pa., a corporation of Pennsylvania
Application June 1, 1937, Serial No. 145,692
2 Claims. (Cl. 105—175)

1. In articulation joints for locomotive and railroad car frame units including interregistra-

ble end projections, means for coupling said units together comprising an axially-orificed ball member and bearing case blocks removably supported by a peripherally-flanged split ring secured to the end projection of one frame unit, spaced circumferential grooves in the ball member with intervening arcual grooves for lubricant distribution, a sleeve sustained by the end projection of the other frame unit, a pivot pin passing through said sleeve and ball member, means

included in the sleeve structure directly supporting the pivot pin against axial displacement, and said sleeve being of an external diameter such that, when the pivot pin and the sleeve are withdrawn and the split ring removed, the ball member and bearing case blocks may be released and downwardly withdrawn, or replaced, through the aperture afforded by the removal of said sleeve and split ring without disturbing the locomotive or car superstructure.

2,107,842
SASH CONSTRUCTION
Christian M. Verhagen, Elkhart, Ind., assignor to The Adlake Company, Chicago, Ill., a corporation of Illinois
Application November 22, 1935, Serial No. 51,046
5 Claims. (Cl. 189—76)



1. In sash construction, side rails consisting of thin sheet aluminum members and a bottom rail consisting of an extruded aluminum member which contains a longitudinally extending cross web, said bottom rail member being cut vertically at its ends to the full width of the sash, and said side rail members being welded at their lower ends to the upper edges of the bottom rail member above the cut ends of the latter, leaving the cut ends open for the reception and support of a locking bolt on the cross web.

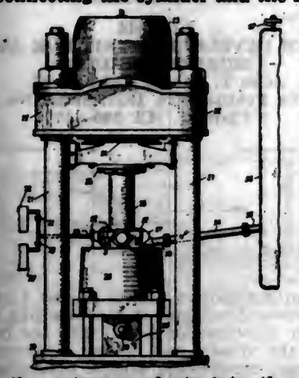
2,107,843
METHOD FOR TREATING TOBACCO
Harry P. Wurman, Brooklyn, N. Y., and Rush D. Touton, Philadelphia, Pa., assignors to Wurton Machine Company, Philadelphia, Pa., a corporation of Pennsylvania
No Drawing. Application November 6, 1934, Serial No. 751,746
2 Claims. (Cl. 131—6)

8. The method of treating tobacco in the curing thereof, which comprises adjusting the moisture content of tobacco, heating the tobacco in a loose state to a temperature above normal atmospheric temperature, packing the tobacco in a mass before any substantial fermentation has occurred and permitting the mass to ferment.

2,107,844
POWER DEVELOPING UNIT FOR AUTOMOTIVE VEHICLES
John T. Abbott, Chicago, Ill.
Application February 24, 1937, Serial No. 127,480
9 Claims. (Cl. 290—17)

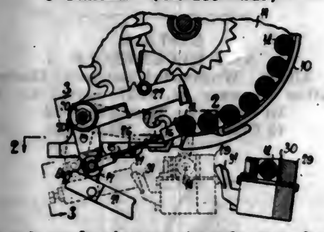
1. In an automotive vehicle having a propeller shaft, a power developing unit comprising a dynamoelectric machine connected with the propeller shaft of the vehicle and having a current feed, an internal combustion engine connected with the machine and having a fuel feed, batteries for supplying current to the machine, and a single acceleration correlating device connected with both the current feed to the machine and the fuel feed to the engine for accelerating and decelerating both the machine and the engine, said device being so constructed and arranged as to cause the machine to furnish at least the preponderance of the motive power used for starting the vehicle and the engine to furnish at least the preponderance of the motive power used for subsequent operation of the vehicle.

2,107,845
ASH RECEPTACLE
Carl Albert, Wuppertal-Barmen, Germany
Application January 12, 1937, Serial No. 120,274
In Germany March 7, 1935
11 Claims. (Cl. 206—19.5)



1. A withdrawable and insertable ash receiver, comprising an elongated hollow body with an opening near its top and being closed at its bottom, and having a longitudinal axis, said axis being curved in the shape of an arc of a circle, said receptacle embodying means to cause the same to move in an arcuate path during insertion and withdrawal.

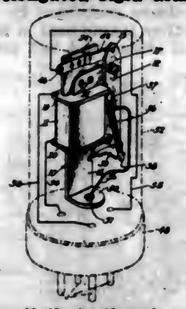
2,107,846
METAL EXTRUSION PRESS AND METHOD OF OPERATION
Ralph W. Atkinson, Perth Amboy, N. J., assignor to General Cable Corporation, New York, N. Y., a corporation of New Jersey
Application December 18, 1933, Serial No. 702,872
11 Claims. (Cl. 207—9)



1. In apparatus for extruding metal sheaths on electrical cables the combination of a cylinder, a

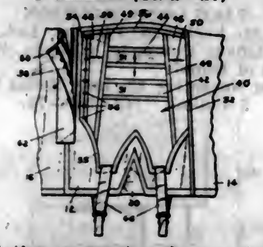
die block having an opening for the passage of a cable therethrough connected to one end of said cylinder, a ram extending into the other end of said cylinder, means for causing relative movement between the cylinder and the ram, sealing means connecting the cylinder and the ram pre-

venting the entrance of air into the cylinder around the ram while permitting relative movement therebetween, and means for removing substantially all air and other gases from the space between the cylinder and the ram under the said sealing means.



2,107,847
BOBBIN HOLDER
William H. Bahan, Greenville, S. C.
Application January 7, 1937, Serial No. 119,486
5 Claims. (Cl. 139—249)

1. In a loom having a rotary hopper for holding a plurality of filling carriers and having a lay for confining a shuttle and having a transfer mechanism including a transfer arm for transferring the lowermost filling carrier from the hopper to the shuttle upon exhaustion of the filling on the carrier in the shuttle, said transfer arm having a downwardly projecting arm integral therewith and being disposed at approximately right angles thereto, a member having one end pivotally connected to the lower end of said downwardly projecting member and having a member on the other end thereof for engaging the filling on the lowermost filling carrier and fixed means for slidingly supporting said latter member intermediate its ends.



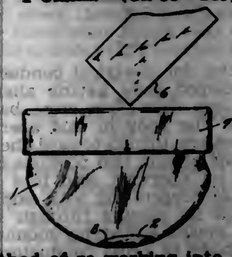
2,107,848
CIRCUIT CONTROLLING DEVICE
Edward L. Barrett, La Grange, Ill., assignor to Utah Radio Products Company, Chicago, Ill., a corporation of Illinois
Application November 14, 1936, Serial No. 110,875
12 Claims. (Cl. 200—87)

1. An electromagnetic relay comprising, in combination, a flat frame fashioned from a single piece of sheet metal and having a generally C-shaped portion including a central leg with laterally extending legs projecting from opposite ends thereof, an electromagnetic energizing winding disposed about said central leg, a pair of cooperating relatively movable contacts, means including an elongated rigid armature member

disposed substantially in the plane of said frame for effecting relative movement of said contacts in response to energization of said winding, and means for pivotally supporting one end of said armature on one of said laterally extending legs and with the other end thereof overlying the second laterally extending frame leg.

2,107,849
GIRDLE
Morris Biemenfeld, Brooklyn, N. Y.
Application July 3, 1937, Serial No. 151,786
1 Claim. (Cl. 2—27)

A foundation garment such as a girdle having a belt on the inside thereof in position to overlie the wearer's abdomen, said belt comprising a central portion which is elastic longitudinally and inelastic transversely, and side portions which are elastic transversely, one of said side portions being attached at its outer edge to the girdle, said side portions permitting the belt to be stretched and thereby tensioned when in position on the wearer, separable fasteners on said girdle and on the outer edge of said other side portion for releasably fastening the belt in said position, said girdle having separable portions adjacent said other side edge of the belt in the fastened position of the latter, and a slide operated fastener for releasably securing said separable portions together.



2,107,850
SERVICE APPARATUS
Clarence H. Beck, Detroit, Mich., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application December 17, 1934, Serial No. 757,930
17 Claims. (Cl. 73—51)

1. A service apparatus comprising a hydraulic lift, hydraulically actuated brake testing units

on the lift, and common fluid pressure means for actuating the lift and brake testing units.

2,107,851
COLORING OF BUTTER SUBSTITUTE
Frederick E. Beeham, Toledo, Ohio
Application June 29, 1936, Serial No. 87,964
1 Claim. (Cl. 99—148)

The method of re-working into a butter substitute homogeneous spreadable solid with air comprising introducing a pre-molded body of the solid with a color ingredient and air into a flexible walled container for reception of said body in the form as introduced thereinto with enveloping air thereabout; working the solid away from such form by pressing and rolling action on the container walls in a direction away from the container opening in re-forming and re-shaping the solid; with simultaneous expelling of excess air from the container and thereafter expelling the re-worked, re-formed solid in the re-formed, press-effected shape given to it in the container.

2,107,852
SIZING FABRIC
Elmer K. Belten, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application August 17, 1934, Serial No. 740,296
13 Claims. (Cl. 91—68)

1. Process of sizing fabrics with water insoluble methyl cellulose which is dissolved by aqueous caustic soda at low temperatures approximating the freezing point but not dissolved by the same at ordinary temperature, which comprises impregnating a cotton fabric with a solution containing approximately 2.5% of said methyl cellulose containing approximately ½ methyl group per glucose unit, said solution also containing approximately 5% caustic soda, removing excess solution from the fabric and coagulating the methyl cellulose on the fabric by treatment with 10% acetic acid, and thereafter drying.

2,107,853
FLOOR RACK
George E. Coffey, Chicago, Ill., assignor to Harold S. Bunnell, Chicago, Ill.
Application July 10, 1936, Serial No. 90,918
9 Claims. (Cl. 20—78)

1. A slatted floor for cars or the like, comprising integrally formed metallic panels, each panel

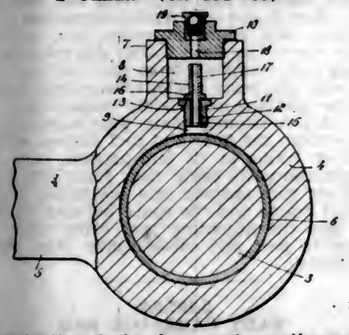
having formed therein a plurality of upstanding riblike members having flat top walls lying in a uniform horizontal plane and constituting slats with intervening valleys, and stringers located

beneath the panels and extending transversely with respect to the slats formed therein for elevating the panels above the floor level of the car or the like.

2,107,854
VEHICLE BODY CONSTRUCTION
Irving B. Cooper, Allendale, N. J.
Application April 21, 1937, Serial No. 138,100
5 Claims. (Cl. 296—22)

1. The hereindescribed elongated vehicle body frame structure including elongated roof and floor frames, means at one long side of the frame structure to support the roof frame on the floor frame, columns arranged at the ends of the other long side of said frame structure and supporting the roof frame on the floor frame, and two series of spaced posts arranged between the transverse vertical mid-plane of said structure and the respective columns and supporting the roof frame on the floor frame and rigidly connected to each of them, said frame structure also including, wholly above the floor frame, downwardly converging rails forming a truss with the floor frame and with the posts which respectively next adjoin the columns and rigidly connected to such posts in a horizontal plane approximately midway between the floor and roof frames and with the floor frame at its mid-portion, each space between the posts being clear from post to post and from substantially said horizontal plane to the roof frame and the space between each column and the adjoining post being clear from column to post and substantially from floor to roof frame.

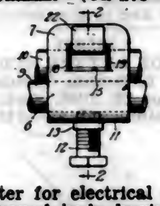
2,107,855
BABY CARRIAGE BED
Samuel Drexler, Brooklyn, N. Y., assignor to Meyer S. Harrison and Elias Specter, doing business under the firm name and style of Bilt-Rite Baby Carriage Co., Brooklyn, N. Y.
Application July 10, 1936, Serial No. 89,894
4 Claims. (Cl. 280—47)



1. In a baby carriage a body having a bottom frame and supporting springs mounted at their lower ends thereon, a bed frame flexibly mounted

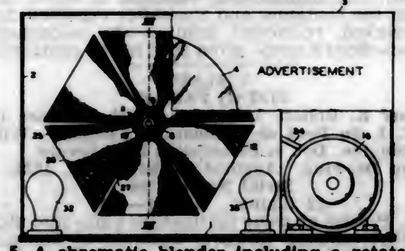
on the upper ends of said supporting springs and flexible means for guiding said bed frame permitting controlled side tilting and limited end tilting of said bed frame.

2,107,856
SALT OF ORTHO HYDROXY QUINOLINE
Joseph Ebert, Westmont, N. J., assignor to The Farastan Company, Philadelphia, Pa., a corporation of Pennsylvania
No Drawing. Application January 20, 1936, Serial No. 59,999
1 Claim. (Cl. 260—41)
Ortho hydroxy quinoline benzene sulfonate.



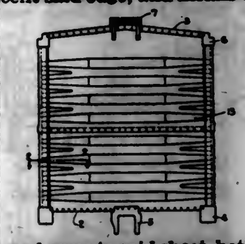
2,107,857
PROCESS FOR OXIDIZING PHOSPHORUS
Paul H. Emmett, Washington, D. C., assignor to Henry A. Wallace, Secretary of Agriculture of the United States of America
No Drawing. Application June 7, 1937, Serial No. 146,851
4 Claims. (Cl. 23—168)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)
2. The method of oxidizing the lower oxides of phosphorus, consisting of subjecting phosphate rock at a temperature of at least 900° C. to the action of a mixture of CO_2 and the oxides of phosphorus in which the concentration of CO_2 is greater than that stoichiometrically necessary for the oxidation of the lower oxides of phosphorus to pentavalent phosphorus.

2,107,858
LUBRICATING DEVICE
William H. Foster, Bayside, N. Y., assignor to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York
Application April 7, 1936, Serial No. 73,117
1 Claim. (Cl. 184—69)



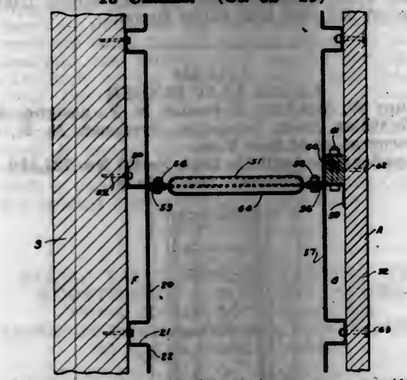
A lubricating device for a reciprocating engine part, comprising a capped lubricant cup and a passage leading to the point of lubricant application, in said passage a bushing having a cylindrical central passage and a horizontal valve seat surface upon its upper end, a valve pin extending within said bushing and having an upper and lower shank and a shoulder therebetween, the lower shank of the pin being cylindrical and fitting entirely within the central passage of the bushing closely enough to permit only substantially axial motion therein, the shoulder having a horizontal upper surface and a horizontal lower surface, said lower surface cooperating with the valve seat to form a closure, the upper shank extending vertically to a point adjacent the cup cap, a passage throughout the length of the valve pin, the vertical throw of said valve pin being limited by contact with said cup cap, the vertical throw of the pin, the external diameter of the shoulder and the annular lower-shank clearance being relatively proportioned to give a predetermined rate of lubricant discharge.

2,107,859
ELECTRICAL CONNECTER
William G. Fotsch, Chicago, Ill., assignor to Reliable Electric Co., Chicago, Ill., a corporation of Illinois
Application January 27, 1936, Serial No. 61,037
3 Claims. (Cl. 173—263)



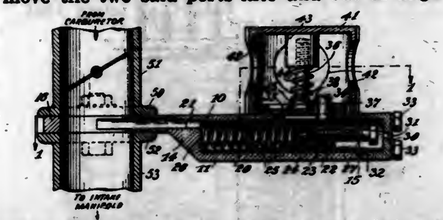
1. A connecter for electrical conductors comprising a U-shaped body having aligned apertures in the legs thereof, a cross bar slidable transversely of the body in said apertures and having end portions turned toward the free ends of said legs, one of said end portions being slidable through its aperture, and into the other aperture, means cooperating with said end portion to prevent its passing through said other aperture, and means adjustably mounted in the base of said body to press conductors between said legs against said cross bar, said cooperating means comprising projections at the opposite sides of said other aperture extending outwardly from the leg and toward each other.

2,107,860
CHROMATIC BLENDER
Reginald Gilbert, San Francisco, Calif.
Application February 8, 1937, Serial No. 124,717
5 Claims. (Cl. 40—130)



5. A chromatic blender including a rotatable wheel having studs projecting therefrom; conical members rotatable on said studs and having contrasting color bands on their curved surfaces; means for rotating said wheel at relatively high speed; and means for rotating said color members on said studs at relatively low speed.

2,107,861
CORRUGATED WALL FOR RAILWAY CARS
Garth G. Gilpin, Riverside, Ill., assignor, by mesne assignments, to Standard Railway Equipment Manufacturing Company, a corporation of Delaware
Application November 4, 1936, Serial No. 109,674
4 Claims. (Cl. 105—410)
1. In a railway car, the combination of a car side wall, a metallic sheet formed with a plurality of substantially parallel corrugations extending to one edge of the sheet, an outer corner post and an inner corner post, each comprising two angularly disposed arms, certain of said arms attached to said side wall and the other arms thereof overlapping the inside and outside respectively of said sheet adjacent said edge, and means to secure the

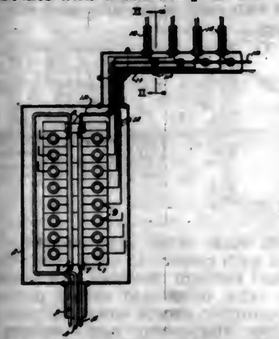


last mentioned arms to said sheet, both of said last mentioned arms conforming to the contour of the corrugated sheet, the arm which overlaps the inside of the sheet being longer than the arm which overlaps the outside of the sheet to form a backing for welding.

2,107,862
BUNKER FOR RAILWAY REFRIGERATOR CARS
Garth G. Gilpin, Riverside, Ill., assignor to Standard Railway Equipment Company, Chicago, Ill., a corporation of Delaware
Application February 5, 1934, Serial No. 709,778
Renewed August 3, 1937
13 Claims. (Cl. 62—19)

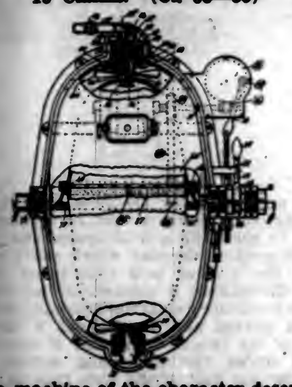
13. In a railway refrigerator car, a partition formed of a metallic plate extending normal to a wall of the car and secured to said car wall, a solid bulkhead secured to the outer margin of said partition, said bulkhead having openings therein adjacent the upper and lower portions thereof whereby air circulation may be established, an inner foraminous wall in spaced relation to said car wall and secured to the partition and an outer foraminous wall in spaced relation to said bulkhead and secured to the partition, said partition formed with integral corrugations to stiffen said portion between said foraminous walls.

2,107,863
GAS CONTROLLING DEVICE
Alphonse A. Heinzelmann, Rockville Centre, N. Y., assignor to Bludalk, Inc., New York, N. Y., a corporation of New York
Application February 15, 1937, Serial No. 125,789
9 Claims. (Cl. 137—152)
1. A gas controlling device comprising a casing; an air chamber within said casing opening outwardly therefrom; a vacuum chamber within said casing opening outwardly therefrom, said casing having a port opening outwardly from said air chamber; a revoluble valve abuttable upon said casing having a port therethrough and so positioned that the revolution of the valve will move the two said ports into and out of alignment with each other said elements being so positioned with respect to each other that a vacuum in said vacuum chamber will maintain said revoluble valve upon said casing during all periods of operation except when the said ports are in complete alignment; and vacuum movable means within the vacuum chamber, the movement of which will revolve said valve.



2,107,864
APPARATUS FOR TRAPPING DUST ARISING IN BORE HOLES
John Norman Hunter, Norbury, England, assignor to Pyrene Manufacturing Company, Newark, N. J., a corporation of Delaware
Application January 8, 1936, Serial No. 58,643
In Great Britain February 6, 1935
2 Claims. (Cl. 255—30)

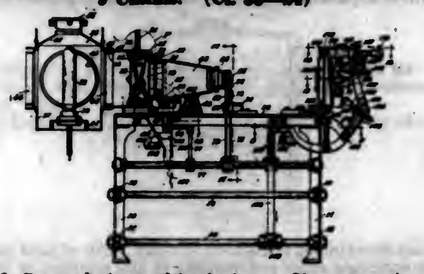
1. An apparatus for trapping dust arising in bore holes, comprising a tube of resilient metal adapted to surround a drill shank and provided with a connection through which suction may be induced, the wall of said tube being gradually tapered throughout a substantial portion of its length to facilitate its partial entrance into a bore hole and slotted also throughout a substantial portion of its length to render it readily contractible under the impinging action exerted thereon by the wall of the bore hole as it enters the same, the slotted area of said wall being sufficiently long to serve as a passage through which air is drawn into the tube from the vicinity of the outer end of the bore hole under the action of induced suction within the tube during such time as the tapered end of the tube is partially disposed within the bore hole.



2,107,865
ELECTRICAL DISTRIBUTION SYSTEM
John G. Jackson, Detroit, Mich., assignor to Square D Company, Detroit, Mich., a corporation of Michigan
Application January 25, 1935, Serial No. 3,447
6 Claims. (Cl. 247—3)
4. In an electrical distribution system having a three wire source leading to a distribution center

and a wiring duct leading from said center, a plurality of branch circuit conductors connected to each side of said source at said distribution center and carried within said duct, the neutral conductor being common to at least some of said branch circuits and extended past said distribu-

tion center and through said duct, at least some of said branch circuit conductors being the sole individual wires to their circuits within the duct, the other wires for said at least some of said branch circuits entering said duct and connecting to the neutral conductor adjacent to the load they supply.

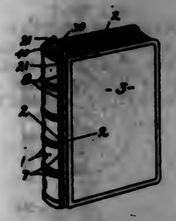


2,107,866
METHOD OF AND MEANS FOR CLEANING MATERIALS
Charles Calvert Lamb, Chicago, Ill.
Application September 6, 1932, Serial No. 631,869
15 Claims. (Cl. 68—38)

1. In a machine of the character described, an inner container, an outer casing surrounding said inner container, means for continuously oscillating said container and said casing in unison about a common axis, and means for rotating said container about an axis at right angles to said common axis.

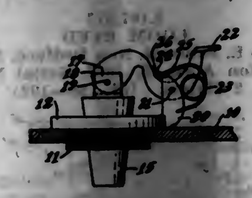
18. A method of cleaning materials, comprising the steps of introducing materials into a perforated container, sealing said container, introducing a volatile fluid into said container, maintaining said fluid in a non-gaseous state during the cleaning process by continuously co-mingling the fluid and evolved gases, subsequently opening said container, removing the fluid from the materials and the container under centrifugal force by rotating the container, and eliminating odor and traces of said fluid from the materials.

2,107,867
PRINTING ENLARGING MACHINE
Alvin L. Mayer, Cincinnati, Ohio
Application July 23, 1935, Serial No. 32,687
9 Claims. (Cl. 88—24)



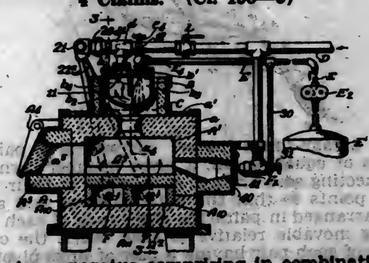
1. In a photographic device, a film support, a paper support, a projection lens associated with said film support to project the image from a film supported thereby onto a photographic paper supported by said paper support, a shutter for said lens, a projection screen normally disposed between said paper support and said lens, means for moving said screen from between said lens and paper support, means for moving paper supported by said paper support into the plane previously occupied by said screen and means interconnected with said screen and paper moving means for operating said shutter to expose said paper after the movement of said screen from between the lens and paper support.

2,107,868
LOOSE LEAF BINDER
Arthur W. McClure, Syracuse, N. Y., assignor to McMillan Book Company, Syracuse, N. Y., a corporation of New York
Application April 19, 1934, Serial No. 721,319
3 Claims. (Cl. 129—8)



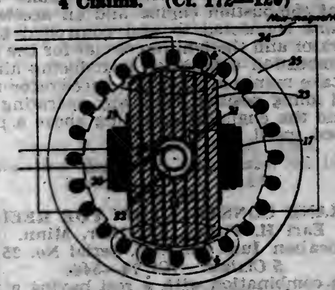
2. In a loose leaf binder, an extensible back member comprising a pair of superposed back sections mounted for movement relative to each other, coacting leaf-impaling elements associated with the back sections and adapted to secure leaves in the binder during the extension of said sections within certain limits, releasable cooperating means associated with the back sections adapted to limit the relative movement thereof, hinge means connecting the back sections and effective when said back sections are in fully extended position to permit said back sections and the elements connected therewith to swing into angular position, and one back section having slots therein adapted to cooperate with the other of said back sections for limiting the angular movement of the back sections relative to each other.

2,107,869
LOOSE LEAF BINDER
Arthur W. McClure, Syracuse, N. Y., assignor to McMillan Book Company, Syracuse, N. Y., a corporation of New York
Application April 19, 1934, Serial No. 721,320
2 Claims. (Cl. 129—24)



1. In a loose leaf binder, a binder covering comprising a back member and a pair of covers hinged with respect to the back member, a plurality of impaling posts for retaining a quantity of paper, said posts being connected at one end to the binder covering, means for releasably securing the other or free end of the posts to the binder covering including a housing secured to the binder covering having openings for receiving the free ends of the posts, a slide in the housing movable into and out of holding engagement with the posts, means secured to the back member and engageable with the rear and side edges of the sheets of paper as the back and corresponding cover are being moved toward a position to reassemble the binder, said means serving to straighten up the stack of paper and thereby bring the posts into approximate alinement, means secured to the binder covering for moving the posts into the openings in said housing as one cover is moved toward a closed position, and means automatically set into operation when the cover is closed for bringing the slide into operative holding engagement with the posts.

2,107,870
RELIEF VALVE FOR PREVENTING THE BURSTING OF LIQUID CONTAINERS
Vernon Merritt, Montgomery, Ala.
Application September 14, 1933, Serial No. 689,422
11 Claims. (Cl. 137—34.3)

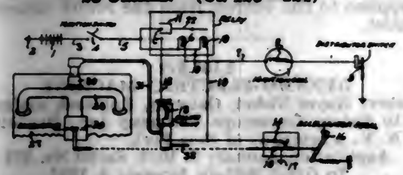


1. In combination, a liquid container, and a freeze plug mounted in the wall of said container and having a highly polished exterior surface of a material resistant to the establishment therewith of a frost bond, which surface is adapted to project into the liquid within the container beyond the zone of initial freezing thereof, and retaining means coacting with the container and plug to hold the latter seated against normal internal pressures and adapted to permit the expulsion of the plug from its seat to freely drain said container.

2,107,871
OIL BURNING FURNACE
John W. Nelsen, Chicago, Ill., assignor to Chicago Flexible Shaft Company, Chicago, Ill., a corporation of Illinois
Original application May 29, 1933, Serial No. 673,497. Divided and this application October 1, 1934, Serial No. 746,403
4 Claims. (Cl. 158—5)

1. An apparatus comprising in combination a heat-treatment chamber and a retort for developing gaseous fluid for heating the heat-treatment chamber, the retort consisting of a chamber having inlet and outlet connections respectively for passing into it liquid fuel and for delivering from it combustible gaseous fluid developed from the liquid fuel in its passage through the retort chamber, said chamber being otherwise sealed against entrance of the liquid fuel and discharge of the resulting gaseous fluid; a supply conduit leading from a source of liquid fuel to the retort chamber inlet; a discharge conduit connected to the retort chamber outlet; gas burner means positioned for heating the retort chamber and the heat-treatment chamber, the discharge conduit being connected to said gas burner means, and a conduit leading from a source of air under pressure connected with said discharge conduit for aerating the fluid supplied to the burner from the retort chamber outlet.

2,107,872
DYNAMO-ELECTRIC MACHINE
Robert Hayes Nisbet, Osterley, England, assignor to Sperry Gyroscope Company Inc., Brooklyn, N. Y., a company of New York
Application January 3, 1935, Serial No. 224
In Great Britain January 4, 1934
4 Claims. (Cl. 172—120)



1. A dynamo electric machine for self-synchronous electric transmitting and receiving systems, comprising a rotor member and a stator member, the former of said members having an exciting winding and having strips of aluminum therein, said strips being disposed for interrupting the closed lines of leakage flux between said rotor and stator members.

2,107,873
GARMENT HANGER
Edward Okun, New York, N. Y.
Application April 16, 1936, Serial No. 74,612
3 Claims. (Cl. 223—94)

1. A lazy-tongs hanger comprising a pair of arms of equal length, a pivot member turnably connecting said arms to each other at their central points so that the outer ends of said arms are arranged in pairs, the outer ends of each pair being movable relative to each other, the outer ends of each pair having a pair of links pivotally connected thereto, each pair of links comprising a short link and a long link, the length of the long link being substantially equal to the length of an arm, the short link being pivotally connected to the long link at the central point of the long link, the extensions of the long links beyond the short links constituting the end-portions of the hanger and a hook turnably connected to said pivot member and turnable in a direction perpendicular to the direction of turning movement of said arms.

2,107,874
VALVE CONTROL APPARATUS
Edward G. Parvin, Roselle, N. J., assignor to National Pneumatic Company, Rahway, N. J., a corporation of West Virginia
Application February 4, 1937, Serial No. 123,974
23 Claims. (Cl. 123—124)

1. The combination with the intake of an internal combustion engine and an accelerator, of means connected to and controlled by the accelerator and the ignition circuit for the internal combustion engine for introducing air into the intake manifold when the accelerator moves toward idling position from any operating position and the engine is operating above a predetermined speed.

2,107,875
CRANK CONSTRUCTION FOR REELS
Earl H. Pitney, Excelsior, Minn.
Application June 10, 1935, Serial No. 25,777
5 Claims. (Cl. 74—546)

1. In combination with a reel having a winding spool upon which a flexible element may be wound and having a winding shaft, crank construction comprising a head connected with the outer end of said winding shaft, a crank arm pivoted to said head on an axis eccentric to the axis of said shaft, a handle adjacent the free end of said crank arm, means for limiting the inward swinging movement of said crank arm relatively to said head and spring means for urging said crank arm toward its limit of inward swinging movement and for yieldably resisting outward movement of said crank arm when a strain or pull is imposed on said wound flexible

element, said last mentioned means normally holding said crank arm in its extreme inward position closely adjacent a straight line passing through said crank arm pivot and the axis of said shaft.

2,107,876
FOAM WIPER
Herman G. Richter and Herbert J. Richter, Sacramento, Calif.
Application August 2, 1937, Serial No. 156,978
11 Claims. (Cl. 225—8)

1. A foam wiper adapted for use with a drink dispensing faucet, said wiper comprising a support adapted to be mounted adjacent a faucet, a movable glass engaging element mounted in connection with the support, a foam wiping blade mounted on the support for movement across the top of the glass engaging the element, and means between the element and blade to so move the latter upon movement of said element.

2,107,877
LOOM REED
Hugo E. Schmidt, New Bedford, Mass.
Application April 28, 1937, Serial No. 139,396
2 Claims. (Cl. 139—192)

1. A loom reed comprising spaced end bars, a plurality of pairs of strips on the opposite faces of said end bars and fixedly positioned at the ends of said bars, a helical spring positioned around each pair of said strips, wire dents extended parallel to said end bars and having their ends engaging between the coils of said spring,

and binding material engaged on the outer spring and half of the next adjoining spring for forming a rigid unit of said loom reed, said inner springs being free from binding material, and half the width of said adjacent spring being free from said binding material.

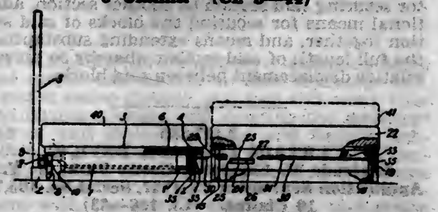
2,107,878
SAFETY BUCKLE
Siegmund Strauss, Vienna, Austria
Application March 17, 1937, Serial No. 131,278
In Austria April 6, 1935
7 Claims. (Cl. 24—178)

1. A buckle comprising a frame, a rest forming part of said frame, a tongue adapted to engage a strap and to bear upon said rest, said tongue forming part of a strip passing with clearance through a slot in a plate of said frame opposite to said rest, a retaining element on said tongue, resilient means arranged between said frame and said retaining element on said tongue and cam means rotatably attached to said strip outside of said frame and adapted to compress said resilient means.

2,107,879
PENCIL
Jack Tanis, New York, N. Y.
Application December 18, 1936, Serial No. 116,467
3 Claims. (Cl. 120—18)

1. A propelling pencil of the screw type comprising an outer casing consisting of a main body portion and a cap portion, a propelling mechanism within the main body portion, including a spirally slotted actuator, the propelling mechanism being fixedly held but the actuator capable of a rotary movement with relation thereto, a sliding non-rotary connection between the cap portion and the spirally slotted actuator, means to limit the sliding movement of the cap portion, and means to lock the cap and main body portion against relative turning movement when the cap portion is in its retracted position and in engagement with the upper end of the main body portion.

2,107,880
PORTABLE SEAT
Frank A. Wilsdorf, St. Louis, Mo., assignor to Nu-Line Manufacturing Company, Incorporated, St. Louis, Mo., a corporation of Missouri
Application June 21, 1934, Serial No. 731,721
2 Claims. (Cl. 155—133)



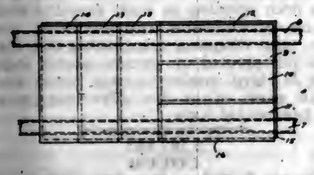
2. A folding seat as set forth, comprising a seat member constructed of stiff flexible material, a back member, said back member being constructed of flexible material sufficiently stiff to normally stand on one edge means for hingedly securing the members together and a flexible bracing means for holding the seat member and the back member in open position, said bracing means comprising a pair of flexible members disposed one on each side of the seat member and extending through the back member one adjacent each side and adjacent the upper end thereof, and a flexible connecting member connecting the upper ends of the flexible bracing members together and engaging against the rear side of the back member whereby to prevent undue bending of the back member.

2,107,881
COUPLING FOR COMBINED MOTOR CARS AND TRAILERS
Osmer Gray Beardsley, South Bend, Ind.
Application March 3, 1937, Serial No. 128,737
4 Claims. (Cl. 280—33)

1. In combination, a motor car and a trailer, having a door opening in their meeting ends, and a coupling surrounding and enclosing the door openings, said coupling comprising two members mounted for pivotal movement about independent axes at right angles to each other and connected to each other for swiveling movement about a horizontal axis.

2,107,882
COUCH
Percy P. Bebry, Brookline, Mass.
Application March 22, 1935, Serial No. 12,494
8 Claims. (Cl. 5—44)

1. A convertible couch comprising a stationary section and a movable section, a back rest pivot-



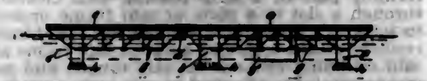
ally mounted on said stationary section and latching mechanism for latching the two sections to each other in telescopic relation, one component of said latching mechanism being mounted on the back rest and pivoted on the stationary section, the other component of the latching mechanism being mounted on the movable section.

2,107,883
HYDRAULIC WEIGHING SCALE
Elek K. Benedek, Bucyrus, Ohio
Application February 7, 1936, Serial No. 62,826
11 Claims. (Cl. 265—47)

1. The combination with a fluid pressure scale including a fluid cylinder having fluid therein, a load sustaining piston reciprocable therein and supported by the fluid, and a fluid pressure operated gauge operatively connected with the cylinder, of variable delivery rotary pump means and continuously driven during the weighing operation and operative to pump into the cylinder, continuously during the weighing operation, replacement fluid equal in volume to the slip fluid and at the fluid pressure in the cylinder under changing load conditions, and including means operated by the fluid pressure in the cylinder to adjust the stroke of the pump means.

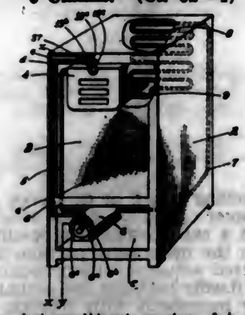
2,107,884
BLOCK FLOOR SECTION
Bailey Peyton Brien, Chattanooga, Tenn.
Application January 21, 1936, Serial No. 60,087
6 Claims. (Cl. 20—75)

1. A block floor including a section, said section comprising a plurality of alined blocks, means for securing said section to another section, additional means for securing the blocks of said section together, and means extending substantially the full length of said section whereby to prevent relative displacement between said blocks.



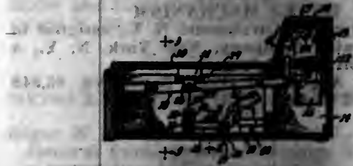
2,107,885
CURTAIN TIE-BACK DEVICE
Gertrude M. Caggiano, Ozone Park, N. Y.
Application September 25, 1937, Serial No. 165,725
10 Claims. (Cl. 156—33)

1. A curtain tie-back device comprising in combination, a supporting bracket, a pin member adapted to pierce the curtain to be tied back and releasable interengaging means on said



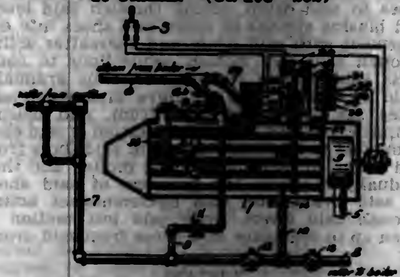
bracket and pin member for securing the same together.

2,107,886
FLOATING STATION
Frederick George Creed, Addiscombe, Croydon, England
Application March 14, 1935, Serial No. 10,980
In Great Britain March 15, 1934
3 Claims. (Cl. 114—42.5)



1. A floating structure for landing airplanes at sea comprising three cylindrical floats triangularly disposed and a substantially rigid platform carried by said floats, each of said floats being disposed with its axis substantially vertical and extending from a point above the water to such depth that its bottom surface lies at such a depth as to be in substantially placid deep water in all conditions of the sea, each of said floats being of uniform cross section over its entire immersed depth and said three floats constituting the variable buoyancy support of said platform.

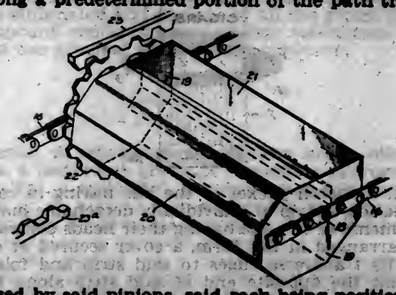
2,107,887
REFRIGERATING SYSTEM
Ransom W. Davenport, Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a corporation of New Jersey
Application December 30, 1936, Serial No. 505,483
6 Claims. (Cl. 62—4)



1. In an intermittent motor-driven compression refrigerating system utilizing a refrigerant and a lubricant mutually soluble in all proportions and having a body of said lubricant in a sump in said compressor for lubricating the latter, heating means for said body of lubricant, and means for alternately operating said heating means and the motor.

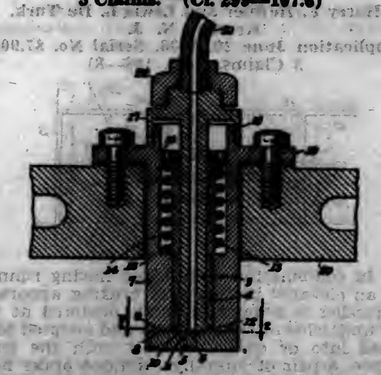
2,107,888
ILLUMINATING DEVICE FOR BATHROOM SCALES
Irving Dean, Rockaway Beach, N. Y.
Application January 8, 1937, Serial No. 119,597
1 Claim. (Cl. 240—2.11)

In a device of the class described having a beam adapted to swing downward and a dial adapted to be rotated proportionately to the amount of downward swing of said beam, an electric lamp mounted adjacent said dial, a source of electric supply, a switch connected in series with said lamp and said source, said switch comprising a pair of contact fingers, a pin on said beam having a cord secured at one end thereto, a vertical tube mounted beneath said cord and having a horizontal opening therein, said fingers projecting into said tube through said opening, a weighted ball suspended on the lower end of said cord, said cord being taut when the beam is in its extreme elevated position, descent of said beam through a relatively short distance causing the weight of said ball to force said fingers together to close said switch, continued descent of said beam causing slackening of said cord to maintain closure of said switch.



2,107,889
VACUUM PUMP
John M. Dougherty, St. Louis, Mo.
Application June 26, 1935, Serial No. 28,465
10 Claims. (Cl. 103—262)

1. In a structure of the class described, a condensing tank, means for admitting water to said tank and for discharging water therefrom, a valve for admitting steam to said tank, a thermostat constructed and arranged for contact by the air, steam, and water in said tank, and an electromagnet and spring mechanism controlled by said thermostat to open said valve when said thermostat is cooled and to close said valve when said thermostat is heated, a float, operable by the water in said tank, and means actuated by said float when the water in said tank reaches an abnormally high level, to admit steam to said tank independently of said thermostat.



2,107,890
CONVEYER AND ROTARY DRUM THEREFOR
William A. Frank, Jersey City, N. J.
Application September 30, 1936, Serial No. 103,238
7 Claims. (Cl. 214—17)

1. A conveyer arrangement comprising endless parallel chains, a plurality of drums rotatably mounted between and carried at spaced intervals by said chains each drum comprising head plates and side plates arranged at angles to each other to form a spiral in transverse section, the ends of the sides overlapping to form a longitudinal opening so as to permit the contents to remain within the drum when the latter is rotated in one direction and to cause the contents to be discharged through the opening when the drum is rotated in a reverse direction, a pinion attached to each drum, a stationary rack arranged along a predetermined portion of the path trav-

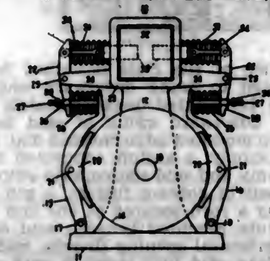
ersed by said pinions, said rack being positioned on one side of said path to be engaged by said pinions, when they pass said portion of the path, thereby rotating the pinions and drums in said first mentioned direction without discharge of the contents, and a second stationary rack arranged along a subsequent portion of the path of the pinions and being positioned on the opposite side of said path to be engaged by said pinions as they reach such subsequent portion of the path, whereupon the rotation of the drums is reversed for the discharge of the contents.

2,107,891
FUEL INJECTOR
George A. Gillen, New York, N. Y.
Application October 7, 1936, Serial No. 104,417
5 Claims. (Cl. 299—107.6)

1. A fuel injector comprising a stationary liquid fuel supply tube having an open discharge end, a piston sleeve slidable over said stationary tube and having a closed end covering the discharge end of said stationary tube and thereby subjected to pressure of liquid in said tube, a stationary casing about said piston sleeve, a flange at the closed end of said piston sleeve for abutment with the end of said casing, said piston sleeve having a port or ports back of said flange and closed at opposite ends by said supply tube

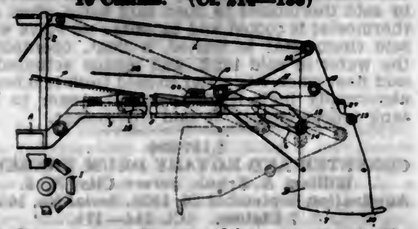
and surrounding casing when said piston sleeve is retracted against the end of the casing and means for holding said piston sleeve retracted against pressure of liquid in said supply tube.

2,107,292
ADVERTISING NOVELTY
Meyer Gold, Minneapolis, Minn.
Application May 29, 1937, Serial No. 145,537
2 Claims. (Cl. 206—29)



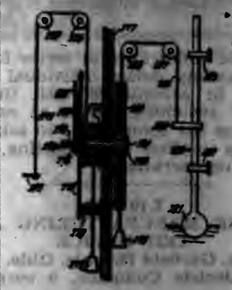
1. A match packet or the like having in combination a strip of individually detachable match elements or the like having their heads compactly arranged in flat form, a cover secured at one of its transverse edges to said strip and folded about the opposite end of said strip along two parallel transverse lines, said cover having its other transverse edge free for detachable connection with a portion of said packet adjacent the base of said strip to close the packet, said cover having wing portions disposed adjacent said transverse folding lines and extensible from the longitudinal edges of said cover, said wing portions each being folded inwardly along outwardly diverging lines extending respectively from said transverse folding lines to one of the longitudinal edges of said cover, whereby when said cover is opened, said wing portions will be swung outwardly and when said cover is closed, said wing portions will be swung inwardly beneath said cover and disposed at the side edges of said strip.

2,107,293
SLED BRAKE
Harry F. Heffner and Lewis L. De Turk, Kearny, N. J.
Application June 29, 1936, Serial No. 87,900
3 Claims. (Cl. 188—8)



1. In combination with a sled having runners and an elevated platform, of braking apparatus comprising a gripper movably mounted at the rear underside of the platform and adapted to be moved into or out of contact with the track surface, a pair of laterally extended brake handles, said handles being crossed at a common pivot connection whereby they are operatively attached to the platform to form operating levers, a U-shaped rod pivotally associated with the gripper, the legs of said U-shaped rod extending forward for connection to the operating levers so that movement of the handles in a rearward direction exerts a forward pull on the U-shaped rod to move the gripper into engagement with the track surface, and coil springs connected between the inner ends of the operating levers and the platform for normally urging the connecting rod to a brake release rearward position whereby the gripper is moved out of contact with the track surface.

2,107,294
BRAKE MECHANISM
Frederick Hymans, Larchmont, N. Y., assignor to Otis Elevator Company, New York, N. Y., a corporation of New Jersey
Application August 14, 1936, Serial No. 95,949
2 Claims. (Cl. 188—171)



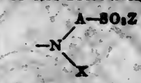
1. In combination; a brake drum; a pair of oppositely disposed brake shoes for engaging said drum; an operating lever for each shoe; a compression spring for each lever for operating such lever to apply the shoe for which the lever is provided to said drum; a lost motion connection between each lever and said operating spring for that lever; an additional compression spring for each lever for biasing said lever in a direction to take up said lost motion; an electromagnet; and means operable by said electromagnet for operating said levers against the force of said operating springs to release said shoes from said drum, said operating springs, in applying said shoes to said drum, acting through said levers and biasing springs to move said shoes into engagement with said drum and thereafter acting through said lost motion connections to compress said biasing springs and thus gradually build up to full value the force with which said shoes are applied to said drum, said biasing springs expanding, upon energization of said electromagnet to effect the release of said shoes from said drum, to take up said lost motion and thus gradually decrease the pressure of said shoes on said drum, and said electromagnet acting through said levers when said lost motion is taken up to disengage said shoes from said drum.

2,107,295
EXCAVATOR
Hans Lundstrom, St. Louis, Mo., assignor of two-thirds to Ida Lundstrom, and one-third to Joseph Magidson and Phelix B. Magidson, all of St. Louis, Mo.
Application June 15, 1936, Serial No. 85,284
10 Claims. (Cl. 214—138)

1. In an excavating machine, a pair of relatively movable boom members, a reversible dipper, a link having one end pivoted to the end of one of said boom members and the other end pivoted detachably to said dipper, and means for pivotally connecting the adjacent end of the other boom member selectively to said dipper at a pair of spaced points beneath the pivoting point of the dipper and link, whereby said dipper may be reversed to dig either forwardly or backwardly.

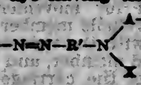
2,107,296
METAL EXTRUSION PRESS AND METHOD OF OPERATION
Edgar W. MacKnight, Bayonne, N. J., assignor to General Cable Corporation, New York, N. Y., a corporation of New Jersey
Application December 19, 1933, Serial No. 703,057
23 Claims. (Cl. 207—2)

1. In apparatus for extruding solidified metal the combination of a cylinder, a die block connected to one end of said cylinder, said die block having a transverse die opening therein, a ram having an opening extending longitudinally therethrough, said ram extending into the other end of said cylinder, sealing means between the cylinder and the ram preventing the entrance of air into the cylinder around the ram while permitting relative movement therebetween, means for charging the cylinder with molten metal through the longitudinal opening in the ram, and means for causing relative movement between the cylinder and the ram to extrude the metal from the cylinder after it has solidified.



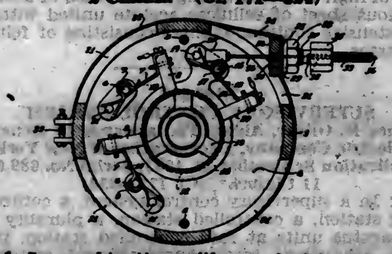
2,107,297
FAN
Kenton D. McMahan, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application July 24, 1935, Serial No. 32,850
7 Claims. (Cl. 230—127)

1. A centrifugal fan comprising a plurality of fan blades mounted in parallel relation about a common axis, means to drive said fan blades, and a scroll having an inlet opening and an outlet opening, the width of said scroll being approximately equal to 1.6 times the effective length of said fan blades.



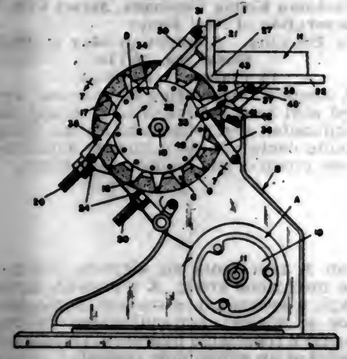
2,107,298
AZO COMPOUNDS AND PROCESS FOR DYEING THEREWITH
James G. McNally and Joseph B. Dickey, Rochester, N. Y., assignors, by mesne assignments, to Eastman Kodak Company, Jersey City, N. J., a corporation of New Jersey
No Drawing. Application May 6, 1936, Serial No. 78,170
14 Claims. (Cl. 8—5)

1. A compound consisting of a nuclear non-sulfonated aryl nucleus linked to a second nuclear non-sulfonated aryl nucleus by an azo group, the compound containing as a nuclear substituent at least one group of the following structure:



wherein A represents an alkylene group other than a methylene group, X represents hydrogen, an alkyl, a cycloalkyl, a nuclear non-sulfonated aryl or a nuclear non-sulfonated heterocyclic group and Z represents hydrogen, an alkali-forming metal or an ammonium radical.

4. The process of coloring cellulose acetate which comprises effecting coloration by applying thereto an azo dye having the general formula:

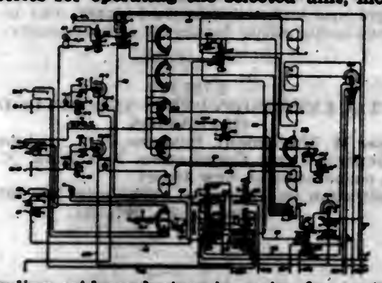


wherein R and R' represent nuclear non-sulfonated aryl nuclei, A represents an alkylene group other than methylene, X represents hydrogen, an alkyl group, a cycloalkyl group, a nuclear non-sulfonated heterocyclic group or a nuclear non-sulfonated aryl group and Z represents hydrogen, an alkali-forming metal or an ammonium radical.

2,107,299
MANUAL CONTROL FOR AUTOMOBILE GENERATORS
Otto Mueller, Dearborn, Mich.
Application June 6, 1935, Serial No. 25,278
2 Claims. (Cl. 171—324)

1. In combination with an electric generator comprising a housing having an opening and a brush support swingable about an axis, means for imparting swinging movement to said brush support, said means comprising a member having means for clamping the same on said housing, a Bowden wire comprised of a flexible sheath and a flexible element slidable therein, means on said member permanently securing the end of the sheath thereto with the flexible element projecting through the opening in said housing tangent to the arc of swinging movement of said brush support, and means on the end of said flexible element connecting the same to said brush support.

2,107,900
TAPE APPLYING DEVICE
Charles S. Munro, Detroit, Mich.
Application September 23, 1936, Serial No. 102,059
13 Claims. (Cl. 216—33)



1. In apparatus for securing separable parts together, a revoluble member carrying a length of tape, a carriage for the parts to be secured together mounted for movement toward and away from the revoluble member to respectively engage the parts with the tape and to withdraw the same from said member, and means effective upon movement of the carriage in a direction away from the revoluble member to advance the latter.

2,107,901
ELECTRICAL INSULATION MATERIAL
Carl F. Obermaier, York, Pa., assignor to General Electric Company, a corporation of New York
Original application November 20, 1931, Serial No. 576,422. Divided and this application February 20, 1936, Serial No. 64,856
3 Claims. (Cl. 154—2.6)

1. A unitary flexible electrical insulation material of high dielectric strength composed of a continuous sheet of cellulose acetate united with a coextensive continuous sheet consisting of felted asbestos.

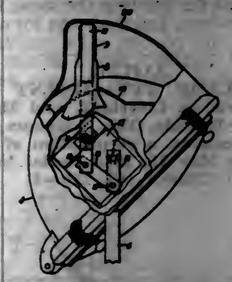
2,107,902
SUPERVISORY CONTROL SYSTEM
James H. Oliver, Aldan, Pa., assignor to General Electric Company, a corporation of New York
Application September 12, 1933, Serial No. 689,087
11 Claims. (Cl. 177—353)

4. In a supervisory control system, a controlling station, a controlled station, a plurality of apparatus units at said controlled station, two line conductors interconnecting said stations, control devices at said controlling station individual to said units, signalling devices at said controlling station individual to said units, means responsive to a predetermined operation of any of said control devices for effecting the transmission through said conductors in series of a predetermined number of impulses of different character permutated individual to the operated control device, selective means at said controlled station responsive to said impulses for selecting one of said units, means responsive to the selection of a unit for effecting the transmission through said conductors in series of a predetermined number of impulses of different character permutated individual to the selected unit, selective means at said controlling station responsive to said last mentioned impulses for selecting the signalling devices individual to the selected unit, means including said conductors in series for operating the selected unit, means

including said conductors in series for controlling the signalling device individual to the selected unit in accordance with the position thereof, and switching means at each station for controlling the connections to said line conductors so as to effect said selecting, operating, and controlling operations.

2,107,903
METHOD OF MANUFACTURING AN ELECTRIC DEVICE
Lee R. Peters, Garfield Heights, Ohio, assignor to General Electric Company, a corporation of New York
Application January 3, 1934, Serial No. 705,067
2 Claims. (Cl. 29—155.5)

1. The method of mounting an electric energy translation element on a pair of leading-in wires which consists in clamping a portion of the translation element between a pair of jaws with the ends thereof extending from opposite sides of one of said jaws and then pressing and molding a portion of a leading-in wire against each side of said jaw and around the translation element end extending therefrom to embed said ends of the translation element in the leading-in wires.



2,107,904
PROCESS OF SEPARATING NITRILE-HYDROCARBON MIXTURES
William O. Peel, Chicago, Ill., assignor to Armour and Company, Chicago, Ill., a corporation of Illinois
No Drawing. Application September 14, 1936, Serial No. 100,763
15 Claims. (Cl. 260—99.20)

1. The process of separating liquid mixtures composed of aliphatic nitriles and liquid aliphatic hydrocarbons which comprises subjecting said liquid mixture to the action of a solid adsorbent having the property of preferentially adsorbing the nitriles from the liquid mixture, and then recovering the adsorbed nitriles from said adsorbent.

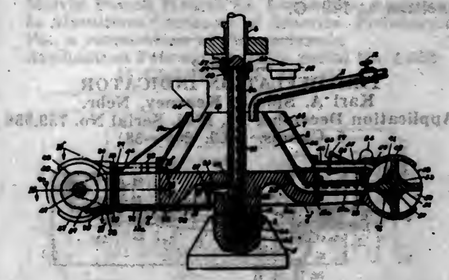
2,107,905
CHLORINATED ARALKYL KETONES
Anderson W. Ralston and Carl W. Christensen, Chicago, Ill., assignors to Armour and Company, Chicago, Ill., a corporation of Illinois
No Drawing. Application March 9, 1937, Serial No. 129,944
7 Claims. (Cl. 260—131)

1. Chlorinated ketones of the general structure R—CO—R' wherein R is an aryl radical chosen from the group consisting of phenyl, tolyl and xylyl, and R' a heptadecyl radical containing a chlorine substituent.

2,107,906
LAMP SUPPORT FOR PROJECTORS
Stephen C. Rogers, Lynn, Mass., assignor to General Electric Company, a corporation of New York
Application March 25, 1936, Serial No. 70,768
4 Claims. (Cl. 240—41)

1. In a light projector, the combination of a housing, a yoke support for said housing provided with pivot pins about which said housing is arranged to move, a reflector in said housing, a lamp, a support for said lamp arranged between said reflector and housing and pivoted upon the wall of said housing, a connection between said lamp support and said pivot pins comprising an arm rigidly attached to one of said pivot pins, a connecting link pivotally connected to said bracket and said lamp support, the distance between the connecting link pivots being equal to the distance between the yoke pivot and the lamp support pivot and the connecting link being parallel to a line drawn between the housing pivot and the lamp support pivot whereby the lamp support is maintained in a predetermined position relatively to said yoke irrespective of the movement of said housing about its pivots.

2,107,907
RECOVERY AND CONVERSION OF THE SULPHUR CONTENT OF INDUSTRIAL GASES
Ludwig Rosenstein, San Francisco, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application July 21, 1934, Serial No. 736,271
8 Claims. (Cl. 23—225)



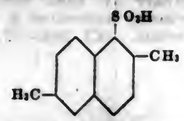
1. A process of utilising the hydrogen sulphide in gases which comprises contacting said gases containing hydrogen sulphide with an aqueous solution containing K_3PO_4, evolving substantially all of the hydrogen sulphide from said solution in a substantially pure state, burning the separated hydrogen sulphide with a limited amount of air to form molten sulphur, separating the molten sulphur from water formed in the reaction and residual gases, separating the sulphur compounds in the residual gases by passing the same through an aqueous solution containing K_3PO_4, and withdrawing the remaining gases composed largely of nitrogen.

2,107,908
IMMERSION STARTER FOR POOL-TYPE DISCHARGE DEVICES
Emil Rupp, Berlin-Frohnau, Germany, assignor to General Electric Company, a corporation of New York
Application October 31, 1935, Serial No. 47,694
In Germany November 8, 1934
2 Claims. (Cl. 250—27.5)

1. In an electric discharge device, an anode, a mercury pool cathode and a starting electrode supported in cooperative relation with said cathode, said electrode comprising an exposed conductive portion above said mercury pool and a depending portion projecting below the surface of the pool during the normal operation of the device, said last-named portion consisting of an insulating sheath and a core of a semi-conducting material having a specific resistivity between about 100 and 100,000 times that of mercury, the core being substantially enclosed by the sheath and being exposed to the mercury only below the surface thereof.

2,107,909
CENTRIFUGE
John Schaaf, Buffalo, N. Y.
Application January 30, 1935, Serial No. 4,107
11 Claims. (Cl. 210—73)

8. A centrifuge including a body, a liquid mixture chamber on said body, a housing mounted adjacent said body, a bucket rotatably mounted in said housing, means to form multiple chambers in said bucket, a screen in each of said bucket chambers, passage means connecting said body chamber and said bucket, means to form a discharge opening in said housing opposite said passage means, means to rotate said body, means to rotate said bucket from the rotation of said body and bring each of its chambers in succession first into communication with said body chamber to receive mixture from said mixture chamber and then into communication with said housing discharge opening to discharge the solids from said mixture.



2,107,910

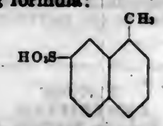
2,6-DIMETHYLNAPHTHALENE-1-SULPHONIC ACID AND A PROCESS OF PREPARING IT

Willy Schumacher, Frankfort-on-the-Main, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware

No Drawing. Application July 6, 1936, Serial No. 89,249. In Germany July 4, 1935
2 Claims. (Cl. 260—159)

2. The 2,6-dimethylnaphthalene-1-sulphonic acid of the following formula:

forming a sulphochloride which melts at 116° C. to 117° C., and a sulphamide which melts at 124° C. to 125° C.



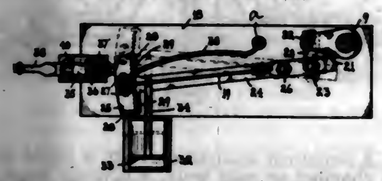
2,107,911

PROCESS OF PREPARING 1-METHYL NAPHTHALENE-7-SULPHONIC ACID AND 1-METHYL-7-HYDROXYNAHPTHALENE

Adolf Sieglitz, Frankfort-on-the-Main, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware

No Drawing. Application July 6, 1936, Serial No. 89,251. In Germany July 6, 1935
3 Claims. (Cl. 260—154)

3. The 1-methylnaphthalene-7-sulphonic acid of the following formula:



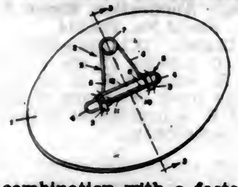
being a colorless crystalline compound which yields a sulphochloride melting at 107° C., a sulphamide melting at 131° C. and a sulphanilide melting at 149° C.

2,107,912

TIRE DEFLATION INDICATOR

Karl A. Spieth, Kearney, Nebr.

Application December 31, 1934, Serial No. 759,956
5 Claims. (Cl. 200—58)



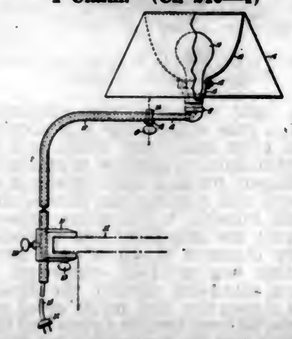
1. In a tire deflation indicator, the combination with the front and rear axles of a vehicle, a housing, an arm swingably mounted on the housing and provided with a head-piece, a spring controlled plunger-clamp normally engaging said head-piece and under control for disengagement therefrom, an electrically energized contact-piece on said head-piece, a rock-arm secured to the housing and movable with one axle, a second rock-arm pivotally mounted on the housing and movable with the other axle, and an electrically energized contact-finger movable with the second rock-arm adapted to engage said electrical contact-piece.

2,107,913

FASTENING DEVICE

Florence M. Stader, Plymouth, Mich.

Application April 6, 1936, Serial No. 72,996
10 Claims. (Cl. 24—103)



1. The combination with a fastening element having spaced attachment members at one side thereof, of a fastener formed of a continuous length of wire having U-shaped portions insertable into and extending within said attachment members and an intermediate resilient portion for urging said U-shaped portions away from each other and for holding the same in said attachment members, and a portion for attachment to an article.

2,107,914

ELECTRIC LAMP ATTACHMENT FIXTURE

Albert H. Stricker, Cleveland, and Marshall W. Ulf, Shaker Heights, Ohio, assignors to General Electric Company, a corporation of New York

Application May 29, 1935, Serial No. 24,034
1 Claim. (Cl. 240—4)

A lighting fixture for attachment to tables and like devices comprising a clamp adapted to engage the edge of the top of said table or other device, a hollow bent tube supported in said clamp and comprising a vertically extending portion and a horizontally extending portion, said tube being mounted in said clamp so as to allow rotation of said tube and movement of said horizontal portion in a horizontal plane, a rigid tubular extension adjustably carried by said horizontal portion, an illumination device comprising a socket rigidly secured to the end of said extension and adapted to hold an incandescent lamp vertically with the base downward, a diffusing shade surrounding said lamp and a reflector surrounding said shade and adapted to direct the light downwardly, said shade and reflector being located above said extension, and electric conductors extending through said tube and extension to said socket.

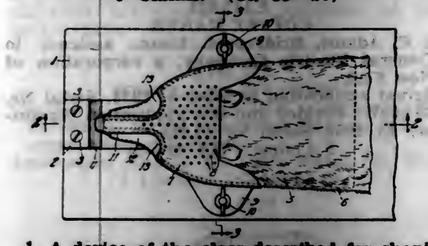
2,107,915

CONDUIT MOLDING

Armen H. Tashjian, Cleveland Heights, Ohio

Application March 20, 1935, Serial No. 12,034
11 Claims. (Cl. 247—3)

1. A molding comprising a body portion, the terminal edges of which form a continuous longitudinal opening, said opening being of a width less than the width of an outlet receptacle or the like to be inserted therein in an amount equal to the height of a relatively thin flange on one of said terminal edges, said thin flange being



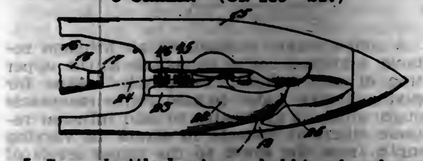
adapted to be removed by cutting or filing for a distance equal to the length of said receptacle whereby the resultant spaced ends of said flange retain said receptacle in longitudinal location with respect to said body portion when the former is inserted in said opening.

2,107,916

SHAPING FUR HEADS OF PELTS

Martin Tanzs, Chicago, Ill.

Application January 24, 1936, Serial No. 60,745
9 Claims. (Cl. 35—20)



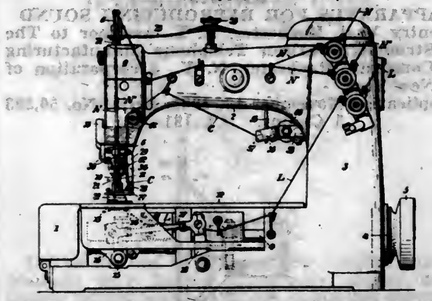
1. A device of the class described for shaping a fur head of a circumferentially integral fur pelt, comprising a plate adapted to be removably inserted within the fur head of said pelt, said plate being of a shape to simulate the contour of the head of the animal represented by the pelt, a second plate complementary in contour to said first plate, a base for holding said members, and means for clamping said members securely to said base.

2,107,917

SHUTTLE TENSION

William A. Tebo, Anthony, R. I.

Application March 2, 1936, Serial No. 66,839
5 Claims. (Cl. 139—217)



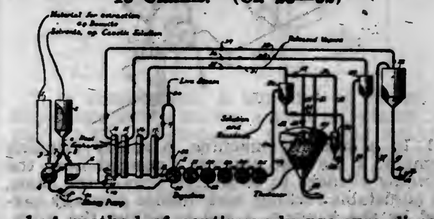
5. In a shuttle having a bobbin chamber and a thread eye, a plurality of pairs of spaced tension plates for engaging the yarn in working position, the plates of each pair being constructed and arranged to engage the opposite sides of one section of the yarn, and yieldable means for urging one of the plates of each pair toward the opposite plate, said means and the plates being arranged so that the plates impose different and progressively increasing tension on the yarn passing between the plates of successive pairs on its way from the bobbin chamber to the eye.

2,107,918

SEWING MACHINE

Charles S. Thompson, Elmhurst, and Frank A. Kucera, Chicago, Ill., assignors to Union Special Machine Company, Chicago, Ill., a corporation of Illinois

Application February 6, 1936, Serial No. 62,570
9 Claims. (Cl. 112—100)



1. In a sewing machine, a work support with an overhanging arm; a vertical needle bar; a vertical presser bar rearward of the needle bar in the line of feeding, both the needle bar and the presser bar being confined to axial movement in a head at the end of the overhanging arm; a guide bushing for the presser bar journaled for oscillation in said head; a looper below the work support adapted to cooperate with a plurality of needles on the needle bar; a cover thread manipulating element operating in front of the needle bar and adapted to cooperate with the needles above the work support, said element being carried by the bushing aforesaid; and means for oscillating the bushing to effect actuation of the cover thread manipulating element.

2,107,919

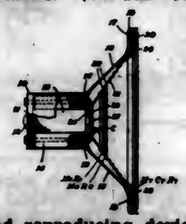
CONTINUOUS DIGESTION PROCESS

Carrell Orison Turner, East St. Louis, Ill., and Melvin Powell Weigel, St. Louis, Mo., assignors to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania

Application February 1, 1935, Serial No. 4,552
15 Claims. (Cl. 23—52)

1. A method of continuously pressure digesting solids with a solvent, comprising forming a slurry of the solids with some of the solvent, and indirectly heating another portion of the solvent in a plurality of successive stages of increasing temperature to a predetermined superheat with respect to the slurry, combining the slurry and the solvent under pressure to obtain a predetermined digestion temperature, digesting the mixture in a plurality of stages, then cooling the mixture in a plurality of separate stages of decreasing temperature and pressure, controlling the decrease in pressure between successive cooling stages so as to release vapor from the solvent in such quantity that it is adapted to supply heat to several of the solvent-heating stages,

the heating of the solvent in several such stages being accomplished by passing said released vapor into heat exchangers which prevent contact between said vapor and said solvent, and maintaining a flow of materials throughout all the steps of the process.



2,107,920

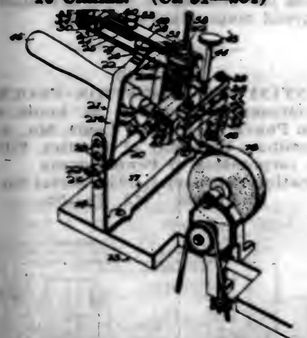
APPARATUS FOR REPRODUCING SOUND

Gentry Veal, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a corporation of New York

Application November 16, 1935, Serial No. 50,203

5 Claims. (Cl. 181—31)

1. In a sound reproducing device, a support, a cone-shaped diaphragm having a free edge, and a surrounding suspension joining the free edge of said diaphragm to said support, said suspension having the softness and pliability of carpincho leather with its grain surface removed.



2,107,921

GRINDING DEVICE

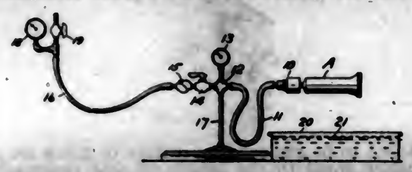
Walter A. Weed, Lakeland, Fla.

Application November 11, 1936, Serial No. 110,395

10 Claims. (Cl. 51—234)

1. In a grinding machine, a rotary grinding element, a movable support arranged near the grinding element to be shifted toward the same, an adjustable rocking work-holder pivotally carried by the support, a rod to adjust the work-holder to cause the same to clamp the work, and an adjustable latch carried by the support to hold and release the rod, said rocking work-holder being incapable of rocking movement when the rod is held by the latch.

2,107,922



COLLAPSIBLE TUBE TESTING APPARATUS

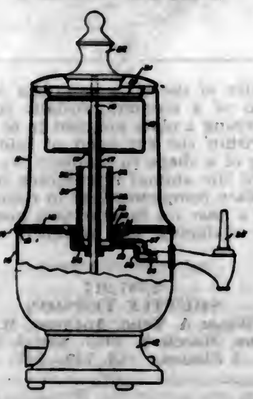
Charles J. Westin, Philadelphia, Pa., assignor to F. J. Stokes Machine Company, Philadelphia, Pa., a corporation of Pennsylvania

Application January 19, 1934, Serial No. 707,255

1 Claim. (Cl. 73—51)

Means for testing collapsible tubes, comprising in combination, a source of pulsating compressed air, a flexible tube leading to said source, an adapter having a passage therethrough for connecting a collapsible tube to be tested to said flexible tube, said adapter having a portion forming a cross-section of said passage of relatively small area compared to the area of the cross-section of said passage and of the inlet to said collapsible tube, a valve controlling the flow of

air from said source through said flexible tube, a gauge connected to said source on the inlet side of said valve to indicate the pressure in said source, a second gauge connected to said flexible tube adjacent said adapter to indicate the pressure of air therein, and a check valve connected between said source and said valve so as to prevent the return of air from said flexible tube to said source.



2,107,923

COFFEE MAKER

Joy C. Adams, Bridgeport, Conn., assignor to General Electric Company, a corporation of New York

Original application October 4, 1933, Serial No. 692,097. Divided and this application November 15, 1935, Serial No. 49,896

5 Claims. (Cl. 53—3)

1. A coffee maker comprising an infusion receptacle, a ground coffee receptacle in the upper portion of said infusion receptacle, means for supplying heated water to said coffee receptacle through which it gravitates to said infusion receptacle where it collects in strata of varying strength from the lower to the upper levels of the collected infusion, a discharge conduit, a faucet controlling said discharge conduit, a vertical conduit within said receptacle connected at its lower end to said discharge conduit and having a plurality of apertures arranged at spaced intervals from said lower to said upper levels so that infusion of varying strength at the different levels of the collected infusion can flow simultaneously into said vertical conduit, when the faucet is opened so that the infusion from the different levels is mixed in the conduit and discharged from the faucet.

2,107,924

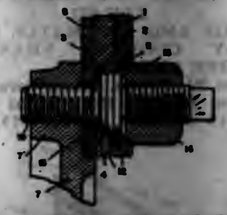
COFFEE MAKER

Joy C. Adams, Bridgeport, Conn., assignor to General Electric Company, a corporation of New York

Application October 4, 1933, Serial No. 692,097

14 Claims. (Cl. 53—3)

1. A coffee maker comprising a liquid container, a heating chamber, a fountain tube in liquid communication with said heating chamber, a passageway for delivering fluid from said liquid container to said heating chamber where it is heated and delivered by steam pressure to said fountain tube and thermostatically operated means providing communication between said heating chamber and said liquid container so as to relieve steam pressure in said heating chamber to prevent the building up of a steam pressure sufficient to deliver a material quantity of liquid to said fountain tube until said liquid in said container has attained a predetermined high temperature.



2,107,925

WHEEL CONSTRUCTION

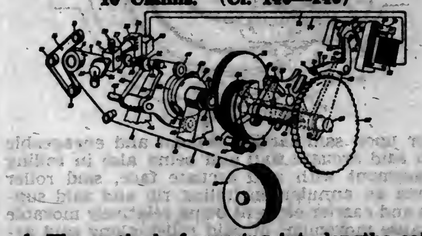
Charles S. Ash, Milford, Mich., assignor to Kelsey-Hayes Wheel Company, Detroit, Mich., a corporation of Delaware

Application August 12, 1935, Serial No. 35,860

4 Claims. (Cl. 301—36)

4. A vehicle wheel comprising a hub member, a radially extending element on said hub member, an inner wheel body member having an annular series of holes therethrough, each of said holes having a flared outer end and having an intermediate portion extending axially of the hub, an annular series of studs detachably threadedly engaging the radially extending element, each stud having an enlargement intermediate its ends provided with oppositely flared portions and with a cylindrical portion extending inwardly from the flared portion at the inner side of the enlargement for engagement with the annular intermediate portions of the holes in the inner wheel body member to position the latter relative to the hub, one of the flared portions on the enlargement being engageable with the outer flared end of the associated hole of said inner wheel body member, an outer wheel body member provided with an annular series of holes therethrough having inner flared ends, a series of nuts threadedly engaging said studs and having portions co-acting with and adapted to force said outer wheel body member toward said inner wheel body member and to engage the inner flared ends of said last named holes against the outer flared faces of said enlargements.

2,107,926



METHOD OF AND APPARATUS FOR SEVERING INTO LENGTHS COILED FILAMENT WIRE

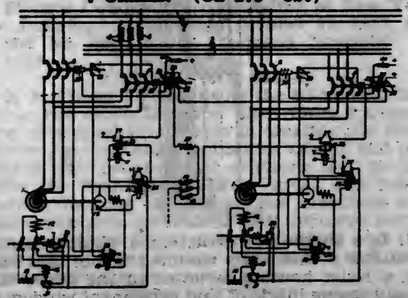
Heinrich Asmussen, Berlin-Steglitz, and Joseph Riess, Berlin, Germany, assignors to General Electric Company, a corporation of New York

Application October 16, 1936, Serial No. 106,044

In Germany November 8, 1935

10 Claims. (Cl. 140—140)

1. The method of severing into lengths coiled filament wire having alternately closely and loosely wound sections which comprises moving the filament wire longitudinally through a beam of light and causing the variation in the amount of light projected beyond said closely and loosely wound sections of filament wire to intermittently operate a cutting tool to sever said wire at intervals.



2,107,927

CONTROL SYSTEM

Herman Bany, Lansdowne, Pa., assignor to General Electric Company, a corporation of New York

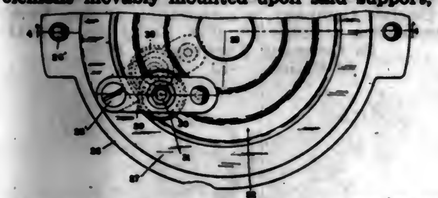
Application August 6, 1936, Serial No. 94,628

7 Claims. (Cl. 175—320)

1. In combination, a plurality of relays, an impedance device having a high impedance relative to the impedance of one of said relays, a source of current, and switching means individual to each relay for connecting the associated relay and said common impedance in series across said source, the relative impedances of said impedance device and said relays being such that when a predetermined plurality of said relays are simultaneously connected in series with said impedance device the voltage impressed on said connected relays is below the pick-up value thereof.

2,107,928

APPARATUS FOR FORMING MOLDS



Joseph E. Batio, Detroit, Mich., assignor to Kelsey-Hayes Wheel Company, Detroit, Mich., a corporation of Delaware

Application November 22, 1935, Serial No. 51,168

5 Claims. (Cl. 22—22)

1. An apparatus for forming a mold, compris-

ing a flask containing a mold body of molding material and having an arcuate wall, a support positioned by said flask in predetermined axial relation to said mold body and having an arcuate face concentric with said arcuate wall, a carrier element movably mounted upon said support, a

roller upon said carrier element and engageable with said arcuate wall and being also in rolling engagement with said arcuate face, said roller having an annular encircling rib and said support and carrier element being relatively movable to cause movement of said roller along said arcuate wall.

2,107,929

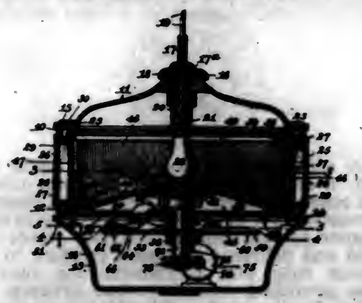
STORM WINDOW

Edward E. Benson, Providence, R. I., assignor of one-half to Emerson P. Smith, Providence, R. I.

Application June 7, 1934, Serial No. 729,395

2 Claims. (Cl. 20—40)

1. In a building construction, a window casing, a window permanently mounted within said casing, a roller housing mounted in the upper end of said casing inside of said permanent window to form an air seal for the upper end of said casing, aligned air sealing guideway means mounted on each side wall of said casing below said housing spaced from said permanent window, rollers mounted in said housing, a flexible window screen member mounted on one of said rollers, a flexible transparent storm window member mounted on the other roller, bar means mounted on the lower ends of said flexible members, air seal means projecting downwardly from said flexible window member bar means, air seal means abutting each side of said flexible storm window within said housing, and means to secure each of said bar means to the lower end of said casing, said rollers being so spaced within said housing that said flexible members may be selectively lowered from said housing and the bar means thereof secured to the lower end of said casing, with said flexible storm window member being air sealed within said casing at a spaced distance from said permanent window to form an insulating air space therebetween.



2,107,930

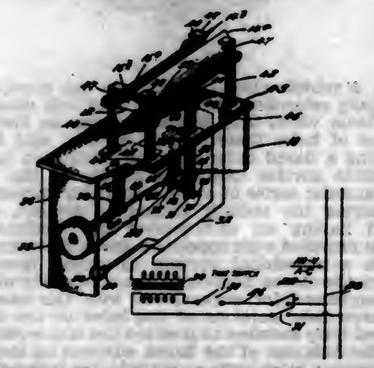
TRAFFIC SIGNAL

John L. Braun, Tonawanda, and Kitt S. Shicktanz, Buffalo, N. Y., assignors of one-third to Frank C. Conti, Buffalo, N. Y.

Application August 6, 1935, Serial No. 34,904

12 Claims. (Cl. 116—63)

1. A traffic signal, comprising a casing having sight openings therein, a signaling member rotatably mounted within said casing having different signaling elements, a timing element under constant rotation and having its axis co-incident with the axis of said signaling member, friction means between said timing element and said signaling member to cause the latter to move with said timing element, and means interposed between said timing element and signaling member to cause slippage of said friction means so as to allow independent rotative movement of said timing element.



2,107,931

METHOD OF AND APPARATUS FOR ELECTRICALLY COOKING FRANKFURTERS AND OTHER ARTICLES

Charles W. Brown, Middlebero, Mass.

Application July 20, 1936, Serial No. 91,494

19 Claims. (Cl. 219—19)

19. In an electric cooker for articles including the types likely to expand on the cooking thereof, comprising, in combination, two thin substantially rigid electrically conductive heating plates capable of being heated to cooking temperature by passage of electric current therethrough and functioning as the sole heating elements, arranged with the surfaces thereof opposed to embrace the article between them and an electric circuit connected to said plates to pass current therethrough.

2,107,932

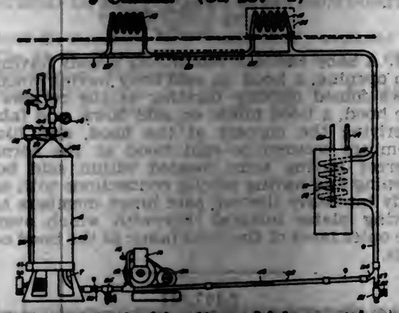
CAR LOADING DEVICE

Samuel D. Butterworth and Sulo Michael Nampa, Detroit, Mich., assignors of ninety-nine percent to The Werth Company, a corporation of Michigan; and one percent to said Samuel D. Butterworth

Application September 19, 1934, Serial No. 743,372

4 Claims. (Cl. 105—368)

1. An article of manufacture designed to be used in a freight car floor for anchoring objects, comprising a metal pocket having a base and a side wall around the base, and an attachment member pivoted within the pocket for pivotal movement into and out of the pocket, said member substantially corresponding in shape to the exposed opening in the pocket so as to substantially close said opening when pivotally moved into the pocket.



2,107,933

HEATING SYSTEM AND METHOD

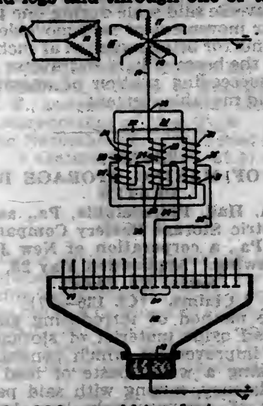
Robert Arthur Crockett and Robert Henry Crockett, Cincinnati, Ohio

Application April 29, 1935, Serial No. 18,830

9 Claims. (Cl. 237—1)

1. The method of heating which comprises effecting unidirectional forced circulation of a gas through a continuous circuit of piping while the gas in all parts of the circuit is maintained under high pressure, and generating heat at desired locations by introducing the flow of gas into areas of increased resistance to the flow thereof.

2,107,934



PARALLEL MULTIANODE TRANSFORMER CONNECTION

Earl V. De Bleux, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York

Application May 21, 1936, Serial No. 81,061

4 Claims. (Cl. 175—363)

1. In a system for transferring power between an alternating current circuit and a direct current circuit, a vapor electric apparatus including a cathode and a plurality of anodes, polyphase windings associated with said alternating current circuit, and means to connect a given single one of the phases of said windings to a group of said anodes in parallel, said means comprising a core having a plurality of legs, and a plurality of pairs of coils, each anode of said group being connected to said phase through one of the coils on one of said legs and through one of the coils on

another of said legs, said two last-named coils being in series, the two coils on any given one of said legs being arranged in opposing relation, whereby parallel operation of said group is forced upon failure of one of the anodes of said group to start conducting current.

2,107,935

ULTRAVIOLET TRANSMITTING GLASSES

Johann Enez and Magdalene Hünigar, Berlin-Charlottenburg, Germany, assignors to General Electric Company, a corporation of New York

No Drawing. Application October 31, 1933, Serial No. 696,112. In Germany November 11, 1932

2 Claims. (Cl. 252—8)

2. A process for producing the silicic acid useful in the manufacture of ultra-violet transmitting glasses which consists in treating the finely divided raw materials containing titanic and iron oxides with concentrated sulphuric acid to dissolve the titanium and iron oxides and subsequently washing the treated raw materials with dilute sulphuric acid mixed with hydrogen peroxide to prevent the dissolved titanium and iron compounds from precipitating again and from mixing with the raw materials.

2,107,936

LIGHT BEAM INSTRUMENT

George F. Gardiner, Scotia, N. Y., assignor to General Electric Company, a corporation of New York

Application July 24, 1936, Serial No. 92,423

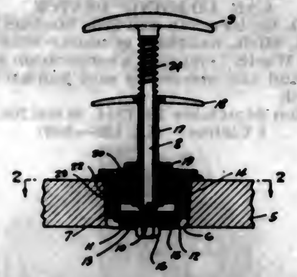
2 Claims. (Cl. 116—114)

2. An indicating instrument of the light-beam type comprising in combination, a source of light, a movable element carrying a pair of mirrors cooperating with said light source to cause beams of light to be deflected in response to deflection of the movable element, a scale cooperating with said light source and said mirrors so as to be

traversed by said beams of light, said movable element being adapted to deflect through an angle substantially greater than that required to advance one of the light beams the length of the said scale and one of said mirrors being mounted at such an angle as to cause the light beam to traverse said scale during one portion of the angular movement of said movable element, the second mirror being mounted at such an angle as to cause the beam of light to traverse said scale during a succeeding portion of angular movement of said movable element.

2,107,937
METHOD OF MAKING STORAGE BATTERY PLATES
Clarence A. Hall, Philadelphia, Pa., assignor to The Electric Storage Battery Company, Philadelphia, Pa., a corporation of New Jersey
No Drawing. Application May 29, 1935, Serial No. 24,662
2 Claims. (Cl. 136—27)

2. In the method of introducing glass fibers into the lead oxide material of storage battery plates the improvement which consists in primarily making a water paste of lead oxide of soupy consistency, mixing with said paste glass wool fibers of comparatively long lengths by stirring and while the fibers are water wet and while the paste is being stirred adding gradually to the paste a solution of sulphuric acid and water which stiffens the paste, and continuing the stirring for a sufficient time to break up the long fibers to any shorter lengths that may be desired.



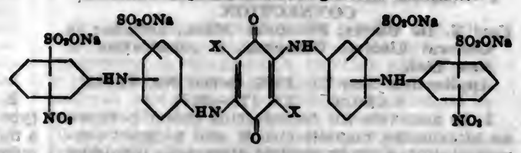
2,107,938
EAR ORNAMENT
Constance Harris, Providence, R. I.
Application April 24, 1937, Serial No. 138,772
6 Claims. (Cl. 63—14)

1. An ear ornament comprising a U-shaped clamp to engage the lobe of the ear, an ornament rigidly supported by said clamp with its inner surface in adjacency to the plane of the U-shaped clamp, and with a recess registering with the opening between the arms of the U of the clamp to receive the lobe of the ear therein.

2,107,939
PLUG
John C. Hartnack, Los Angeles, Calif., assignor to Rubbercraft Corporation of California, Ltd., Los Angeles, Calif., a corporation of California
Application August 24, 1935, Serial No. 37,665
6 Claims. (Cl. 217—109)

said rod against said gasket, and means to move

said expanding element against said gasket to expand the same.



2,107,940
BABY CARRIAGE AND HOOD THEREFOR
Carl Hedstrom, Jr., Gardner, Mass., assignor to Hedstrom-Union Company, Gardner, Mass., a corporation of Massachusetts
Application June 20, 1936, Serial No. 86,300
5 Claims. (Cl. 296—116)

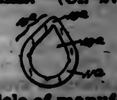
1. A baby carriage comprising a body having a top opening, a hood on said body having wooden bows joined directly together at the corners of the hood, a hood fabric on said bows, said fabric overlying the corners of the hood, and hinge members secured to said hood at the corners thereof having arms located within said body opening and having pivotal connections with said body interiorly thereof, said hinge members also having plates integral therewith which overlie the outer faces of the hood fabric at the hood corners.

2,107,941
FAST BROWN LEATHER DYESTUFFS AND A PROCESS OF PREPARING THEM
Fritz Hess, Karl Hager, and Walter Fenne, Frankfort-on-the-Main-Hoechst, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application November 26, 1935, Serial No. 51,680. In Germany November 30, 1934
4 Claims. (Cl. 260—56)

1. The compounds of the general formula:

wherein X means a member of the group consisting of hydrogen, methyl and chlorine, dyeing leather brown tints of good fastness properties.

2,107,942
CUTTER CHAIN
Morris P. Holmes, Claremont, N. H., assignor to Sullivan Machinery Company, a corporation of Massachusetts
Application July 30, 1934, Serial No. 737,495
11 Claims. (Cl. 262—33)



1. A double-ended, reversible cutter bit having a narrow elongated body terminating in cutting portions at its opposite ends and provided, in side elevation, with end and side surfaces lying in the sides of a parallelogram, and rectangular in cross section, the cutting portions at the opposite ends of the bit body providing cutting points at the opposite sides of the bit, and means formed on the opposite sides of the bit body viewed in side elevation, providing abutments respectively engageable with an outer surface of a bit block for limiting inward movement of the bit within a bit block socket and with means for holding the bit within a bit block socket.

2,107,943
METHOD OF MANUFACTURING COMPOSITE SEAMLESS TUBES
Robert K. Hopkins, New York, N. Y., assignor to The M. W. Kellogg Co., New York, N. Y., a corporation of Delaware
Application June 5, 1936, Serial No. 83,664
9 Claims. (Cl. 29—188)

1. A method of manufacturing composite metal articles comprising the steps of forming a hollow mold that includes as a part thereof metal of one composition and depositing in said mold under the influence of a flux blanketed electric energy discharge, metal of a different composition in an amount sufficient to substantially fill said mold thereby uniting said metal of different composition into an integral structure.

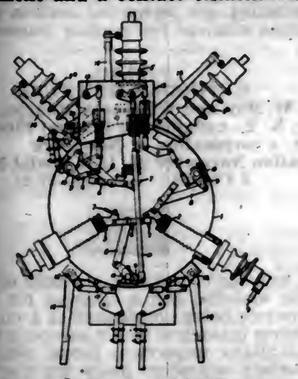
2,107,944
GOLF BALL POSITION MARKER
Willard Howard, Newton, Mass.
Application May 5, 1937, Serial No. 140,950
7 Claims. (Cl. 273—32)

1. As a new article of manufacture, a device for marking the position of a golf ball on a putting surface, said device comprising a thin flat body of general annular form, down-turned positioning elements at the under face of said body constructed and arranged for holding engagement with the putting surface, and means on said body distinguishing one peripheral portion thereof as a pointing element for ranging purposes.

2,107,945
CATHODE STRUCTURE
Albert W. Hull and William A. Ruggles, Schenectady, N. Y., assignors to General Electric Company, a corporation of New York
Application November 20, 1934, Serial No. 753,875
6 Claims. (Cl. 250—27.5)

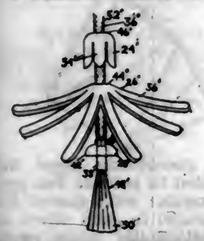
1. A cathode comprising a supply of electron-emitting material and a covering for the same, said covering being constituted of a mesh of fine metal wires braided or woven so closely as to form a substantially impervious fabric which affords only surface migration paths for the restricted passage of emitting material through the covering.

2,107,946
CARTON CONSTRUCTION
William H. Inman, Newark, N. Y., assignor to Bloomer Bros. Company, Newark, N. Y., a corporation of New York
Application September 15, 1936, Serial No. 100,907
6 Claims. (Cl. 229—22)



1. A carton comprising sheet material cut, scored, and folded to provide two approximately equilateral triangular walls spaced from and approximately parallel to each other, and two approximately rectangular walls each extending from one edge of one triangular wall to the corresponding edge of the other triangular wall, one of the triangular walls being integrally hinged along one of its edges to one edge of one of the rectangular walls and the other of said triangular walls being integrally hinged along its corresponding edge to the opposite edge of the same one of said rectangular walls, each of the triangular walls having along another edge an integrally hinged flap overlapped with and adhesively secured to the other of said rectangular walls on the outer surface thereof, and each of said triangular and rectangular walls having along one edge a flap adapted to cooperate with flaps on other walls to form a closure for the third side of the triangular body.

2,107,947
ELECTRIC SWITCH GEAR
William Victor Jeffs, Eastcote, England, assignor to General Electric Company, a corporation of New York
Application January 18, 1937, Serial No. 121,194
In Great Britain January 31, 1936
5 Claims. (Cl. 200—5)

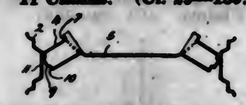


1. Electric switchgear for isolating and controlling connections between a plurality of circuits comprising a casing, an insulating lead-in

conductor bushing for each of said circuits extending within said casing so as to converge towards the center of said casing, and a movable switch element and a contact element mounted

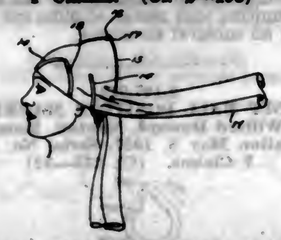
at the end of certain of said bushings arranged so that the switch element of one conductor is adapted selectively to engage the contact element of an adjacent conductor.

2,107,948
TASSEL
Clifford G. King, Barrington, R. I.
Application April 11, 1934, Serial No. 720,123
7 Claims. (Cl. 2—278)



1. In a tassel for use with shoe laces and like cord articles having a free end, a tuft member constructed of flexible material having a center portion having a hole therein for stringing on said cord article and integral spaced tuft forming strand portions projecting radially outwardly from said center portion, lower clamping means adapted to abut the lower surface of said tuft member and the upper surface of a cord article portion spaced from the end of said cord article for preventing downward movement of said tuft member on said cord article, said lower clamping means comprising a tubular portion adapted to surround said cord article and means projecting outwardly therefrom adapted to abut the lower surface of the center portion of said tuft member and upper clamping means for securing said tuft member against upward movement on said cord article comprising a rigid member constructed of rigid bendable flat material having a base center portion having a hole therein for stringing on said cord article above said tuft member adapted to clamp said center portion of said tuft member against said lower clamping means for preventing downward movement of said tuft member on said cord article, and spaced portions projecting radially outwardly from said center portion of less length than said radial tuft forming strand portions bendable downwardly to bend said radial tuft member strand portions downwardly to form a tuft with said strand portions laterally adjacent to each other and substantially normal to the center portion of said rigid member.

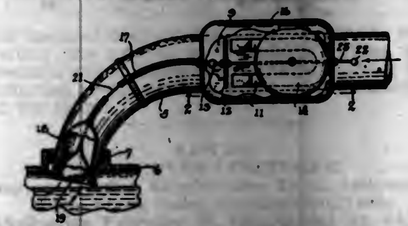
2,107,949
DOOR CLOSURE
Charles E. Klecan, Chicago, Ill., assignor to Philip R. Oftedal, Chicago, Ill., doing business under the style and firm name of Protex Weather-Strip Mfg. Co.
Application December 17, 1934, Serial No. 757,799
6 Claims. (Cl. 20—68)



1. A door closure comprising a casing, a felt retaining member within said casing and adapted to engage a felt or other elastic substance, a rod extending within the said retaining member, one end of said rod extending exteriorly of said member and adapted to coact with a door jamb, the other end of said rod pivotally mounted on a lever, said lever being adapted to press against the said retaining member, a spring connected with a second lever having slidable engagement with said retaining member and adapted to return said retaining member in raised position when the contact of said first lever with said door jamb is broken.

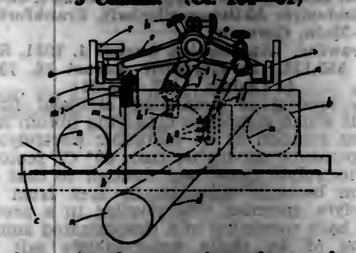
2,107,950
METHOD OF FORMING A WHEEL
Frank H. Le Jeune, Detroit, Mich., assignor, by mesne assignments, to The Kelsey-Hayes Wheel Company, Detroit, Mich., a corporation of Delaware
Application April 11, 1932, Serial No. 604,551
11 Claims. (Cl. 29—159.03)

5. The method of forming a one-piece sheet metal artillery wheel part which comprises striking the spoke portions from a blank sheet to substantially parallel axial relation with corresponding ends remaining integrally connected to the sheet and bending the sheet to place the spokes in operative radial relation.



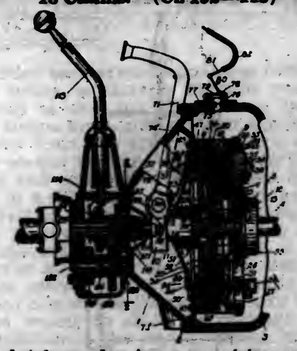
2,107,951
HEAD COVERING
Ruby Lipton, New York, N. Y.
Application May 17, 1937, Serial No. 143,059
4 Claims. (Cl. 2—196)

2. A turban comprising a wide band of material having a length several times its width, the band having an intermediate head receiving zone and ends adapted to be wrapped about the head and



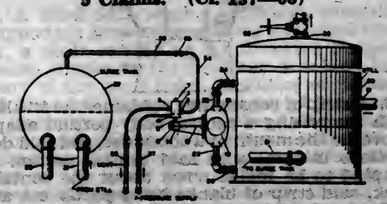
tied, one longitudinal edge of said band constituting the front of the turban and the other longitudinal edge of the band constituting the back of the turban, a pair of strips carrying hookless slide fastener elements mounted in the head receiving zone adjacent the back and extending in opposite directions, and a slidable element engaging said hookless fastener elements and, when so engaging, to cause the material to be folded and to be partially doubled to form a head receiving recess, said recess being adapted to enclose the head.

2,107,952
SIGNALING DEVICE
Joseph Roy McGee, Los Angeles, Calif.
Application November 5, 1936, Serial No. 109,369
2 Claims. (Cl. 236—96)



2. In a signaling device for use with a hose, a casing adapted to be attached to the hose at a point remote from the end thereof, of a float positioning housing secured to the outer surface of said hose and adjacent the end thereof, a float mounted in said housing, an audible signal positioned in said first-mentioned casing, a flexible connection extending from said float to said audible signal and positioned at the outer surface of said hose, the ends of said housing and casing being open and in the same plane as the ends of the hose, whereby when fluid rises in said housing said float will actuate said audible signal.

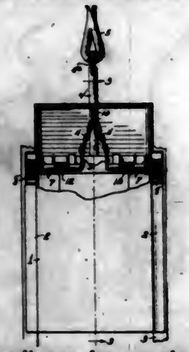
2,107,953
APPARATUS FOR REMOVING SELVAGE EDGES FROM TEXTILE FABRICS IN THE PIECE
Wilfrid Thomas Basil Morley, Worsley, and Francis Edwin Morley, Sale, England
Application October 1, 1936, Serial No. 103,622
In Great Britain May 20, 1936
5 Claims. (Cl. 164—61)



1. Apparatus for removing selvage edges from textile fabrics in the piece comprising two carriages adapted to be movably mounted on runways mounted transversely of a machine provided with feed and batch up rolls through which the fabric is traversed, flexible cables and weights coupled to said carriages and normally tending to draw the same towards each other transversely of the path of traverse of the fabric, each carriage being provided with vertical antifriction rollers adapted to run on horizontal components of the runways and horizontally disposed antifriction rollers adapted to bear against vertical components of the runways, and each carriage having a slitting knife mounted thereon in spaced relationship to an abutment, together with an abutment adapted to bear against the edge of the fabric.

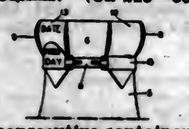
2,107,954
CLUTCH AND TRANSMISSION MECHANISM
Wade D. Morton, Gloucester City, and William E. Haupt, Westville, N. J., assignors to Automatic Drive & Transmission Company, Gloucester City, N. J., a corporation of New Jersey
Application April 19, 1933, Serial No. 666,238
18 Claims. (Cl. 192—113)

1. A clutch mechanism comprising a rotatable supporting structure; driving and driven clutch plates carried and housed by said structure; clutch facings including a large percentage of solid lubricant on at least one of said plates; centrifugally operated mechanism to force said plates together when said supporting structure attains a predetermined speed; at least one ventilating opening in the periphery of said structure adjacent the peripheries of said plates; and means, providing a plurality of fan blades disposed in said supporting structure for forcing a current of ventilating and cooling air outward between and around said plates and out through said ventilating opening to remove any solid lubricant from the mechanism which may be freed from said facings and to cool the mechanism in operation.



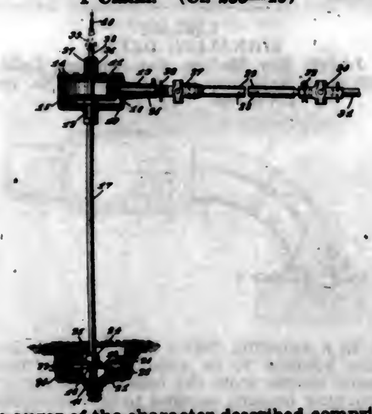
2,107,955
APPARATUS FOR LIQUID LEVEL AND PRESSURE CONTROL
Irvin Earl Nutter and Fletcher Edward Martin, Whittenburg, Tex., and Gerald W. McCullough, Bartlesville, Okla., assignors to Phillips Petroleum Company, Bartlesville, Okla., a corporation of Delaware
Application January 29, 1934, Serial No. 708,895
5 Claims. (Cl. 137—68)

1. An apparatus of the character described, comprising a tank, a second tank in communication therewith to receive liquid therefrom, a



source of fluid pressure in direct communication with said second tank and valve means operable in direct proportion to variations in liquid level in said first tank for controlling the fluid pressure in said second tank to change the rate of flow from said first tank to said second tank, whereby the liquid level in said first tank is maintained substantially constant.

2,107,956
SAFETY DEVICE FOR ELEVATORS
Louis Olevary, Spartanburg, Pa., assignor of one-half to William C. Michael, Connellsville, Pa.
Application November 6, 1935, Serial No. 48,567
1 Claim. (Cl. 187—87)

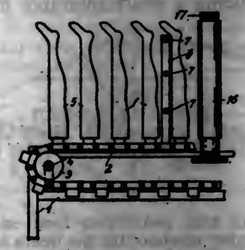


A safety appliance for an elevator that has rails movable through tracks, which includes a member mounted for slidable movement through pre-determined limits through the top of the elevator and to which the operating cable is attached, a laterally extending pin on said member flexible elements secured to the ends of the pin, spaced pairs of parallel oppositely extending shafts journaled on the elevator and having their confronting ends each formed with angle arms to which the respective flexible elements are individually secured, coiled springs having one end fixed on the respective shafts and their second end fixed to the elevator for separately turning the shafts in one direction and peripherally serrated wheels eccentrically fixed on the outer ends of the shafts and engageable with the track for the elevator.

2,107,957
CONTAINER COVER
Frank O'Neill, Jr., New York, N. Y., assignor to Tamper-Proof Seal Corporation, New York, N. Y., a corporation of Maryland
Application April 4, 1935, Serial No. 14,692
10 Claims. (Cl. 215—38)

5. A strip of consecutive container cover blanks each comprising a central body portion adapted to overlie the mouth of a container, and fold down portions integral with said central portion and adapted to be folded down about the container neck, said strip of blanks being partly cut away on each side of the longitudinal centerline thereof between adjacent blanks leaving therebetween projecting ends of longitudinal fold down portions, and a pair of metal clips located on the longitudinal centerline of said blank and respectively secured to said projecting longitudinal ends and extending transversely thereof with the ends of said metal clips projecting partly over said cut away parts.

2,107,958
AUGER
Elmer L. Pribyl, Wymore, Nebr.
Application March 22, 1937, Serial No. 132,416
1 Claim. (Cl. 255—19)



An auger of the character described comprising a gear housing forming a head having a removable top cover, gear and pinion within the housing and meshing with each other, an auger shaft journaled in the housing and fixed to said gear, an auger cutter carried by said shaft, slip and universal joint connections with the pinion and adapted for driving connection with a source of power, a center lug rising from the said cover, a handle bar engaged in the lug, and a hoist bail straddling the lug and pivoted to the handle bar.

2,107,959
MANUFACTURE OF ARTIFICIAL ARTICLES FROM FIBROIN SOLUTIONS
Ernst Ressner and Karl Börner, Premnitz/Westhavelland, and Herbert Mahn and Wilhelm Irion, Dessau, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany
No Drawing. Application August 4, 1931, Serial No. 555,133. In Germany August 18, 1930
14 Claims. (Cl. 18—54)

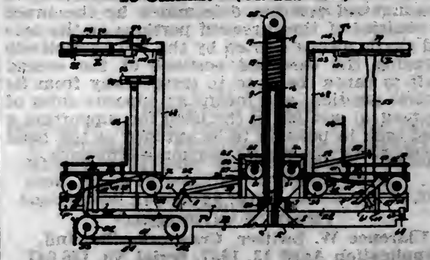
7. A process of producing artificial fibroin threads which comprises dissolving fibroin in an aqueous solution of an inorganic electrolyte at a temperature not higher than 80° C., removing said electrolyte from said solution so that said solution becomes substantially free from said electrolyte, spinning said solution in a precipitating bath consisting of a concentrated aqueous solution of an easily water-soluble salt and stretching the freshly coagulated product.

2,107,960
MATTING PROCESS
Fritz Schuster, Chemnitz, Germany
Application April 4, 1935, Serial No. 14,692
In Germany April 17, 1934
1 Claim. (Cl. 28—1)

The method which consists in mounting silk or artificial silk articles on forms, applying a preliminary moistening treatment to the articles for the purpose of loosening the fibers of the fabric, spraying a matting liquid onto the said pretreated articles during the shaping operation on the said forms so as to forcibly impregnate

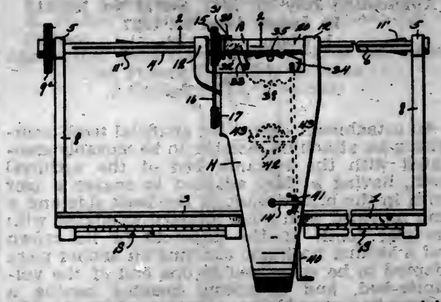
the loosened fibers of the fabric, and finally subjecting the articles to a uniform rolling and pressing action, whereby to ensure a uniform distribution of the matting liquid over the surface of the fabric.

2,107,961
CAP COVER STRETCHER
Dayton A. Seller, Elizabethton, Tenn., assignor to Justin Frank Seller, Elizabethton, Tenn.
Application February 18, 1936, Serial No. 64,594
2 Claims. (Cl. 223—25)



1. A form for shaping cap covers comprising a pair of segmental members, a link member pivotally connected with one of said segmental members and being apertured at a plurality of positions along the length thereof, a second link member pivotally connected with the other of said segmental members and having a pin mounted thereon, said link members being normally disengaged and said pin being engageable at a selected position with the apertured link member for determining the spacing of said segmental members, and means for holding said link members in substantial alignment with said segmental members in effective spaced relation within a cap cover.

2,107,962
PILLOW
Hugh Cecil Sheasby, Kimberley, South Africa
Application March 4, 1936, Serial No. 67,116
4 Claims. (Cl. 5—71)



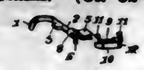
1. A pillow comprising a supporting frame, a second frame adjustably connected to the first frame, a plurality of radially arranged resilient elements connected to the second frame, a ring-like member supported by the resilient elements, a pillow having a nose and mouth opening supported by the resilient elements with the opening aligning with the ring-like member, and means for securing the pillow to the ring-like member.

2,107,963
SACK SEWING APPARATUS
Vereau L. Statham, Riverdale, Calif.
Application May 9, 1936, Serial No. 78,950
18 Claims. (Cl. 112—11)

1. A filled sack sewing apparatus comprising a sewing means, a carriage movable rectilinearly in a path at one end adjacent to the sewing means, means for urging the carriage in a direction away from the sewing means, a sack supporting means mounted upon the carriage constructed and arranged to hold closed the mouth portion of a filled sack, said carriage as it moves in a direction toward the sewing means carrying the filled sack beyond the sewing means to permit stitching of the closed mouth of the sack, and power means for moving the carriage toward the sewing means and manually operable means for connecting the carriage with the power operated means to shift the carriage into coactive relation to the sewing means, and means acting automatically to release the connection between the power operated means and the carriage upon the completion of the sewing operation to thereby permit the return of the carriage under the action of the urging means.

2,107,964
FILLED SACK SEWING APPARATUS
Vereau L. Statham, Riverdale, Calif.
Application May 9, 1936, Serial No. 78,951
3 Claims. (Cl. 112—11)

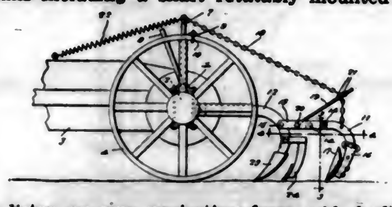
1. A filled sack sewing apparatus comprising a supporting structure including a straight trackway, a shaft carried by the structure in spaced parallel relation to the trackway, a sewing head, a part of the head being in sliding engagement with the shaft, and a second part travelling on the trackway, a driving member freely mounted on the shaft and operatively connected with the mechanism of the sewing head, a clutch member keyed to the shaft for rotation therewith but having sliding movement lengthwise thereof, said driving member and clutching member travelling with the head, a second shaft carried by the supporting structure, the two shafts being in driven



connection, said second shaft having threaded portions, the thread of one portion being reversely disposed with respect to the thread of the second portion, one of the shafts constituting a drive shaft, means for normally maintaining the head at a neutral position determined by the inner extremities of the threaded portions of the second shaft, means carried by the head selectively engaging the threaded portions of the second shaft to cause the head to travel away from its neutral position, and means at opposite sides of the neutral position of the head for supporting a filled sack in position to be stitched as the head travels along the mouth portion of the sack.

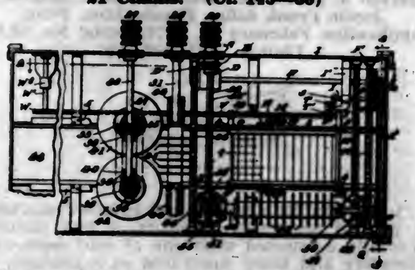
2,107,965
TRAILER COUPLING
Clarence W. Switzer, Crawfordsville, Ind.
Application April 13, 1937, Serial No. 136,647
2 Claims. (Cl. 188—142)

1. In a trailer including a tongue, brakes and a mechanism for actuating said brakes, a coupling including a substantially U-shaped housing, the bight portion of said housing having circumferential slots therein, a clevis for connecting the housing to a towing vehicle, the end portions of said clevis projecting into said housing through the slots, a pin mounted in said end portions of the clevis for anchoring said clevis in the housing, a lever pivotally secured, at one end, in the housing, the tongue being pivotally connected to said lever at an intermediate point, and a flexible member operatively connecting the lever to the brake operating mechanism of the trailer for actuating said brake operating mechanism when said lever is moved under the influence of the trailer tongue.



2,107,966
ATTACHMENT FOR ARTIFICIAL TEETH
Junso Taguchi, Tokye-shi, Japan
Application July 28, 1937, Serial No. 156,213
In Japan June 22, 1937
1 Claim. (Cl. 32—5)

An attachment device for artificial teeth comprising an attaching member to be movably associated with the vulcanite-bed of the artificial teeth, having a clasp adapted to engage a pier tooth in the bridge work at the back side and a limb provided with a lug adapted to engage with the pier tooth at the undercut of its crown and a locking hook and carrying an anchor piece adapted to be embedded in one end of the vulcanite-bed, and a locking member having a locking bar movable on a holder adapted to be secured to the vulcanite-bed in such a position as to permit the locking bar to co-act with the hook to lock the clasp and hence the artificial teeth in position.

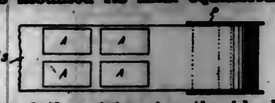


2,107,967
DAM FORMING ATTACHMENT
Leonard Taylor, Pert, Okla.
Application February 19, 1937, Serial No. 126,673
3 Claims. (Cl. 97—55)

1. A dam forming attachment for wheeled listers comprising a beam pivotally connected to the lister for swinging movement in a vertical plane, a scraping element mounted on said beam and adapted to travel in the ditch made by the lister plow, and means operatively connecting the beam to one of the wheels of the lister for periodically lifting said element out of the ditch, said means including a shaft rotatably mounted on

the lister, an arm projecting from said shaft, a flexible member connecting the beam to said arm, a lever projecting from the shaft, and a trip on said one wheel engageable with the lever for actuating the shaft and the arm in a direction to lift the beam.

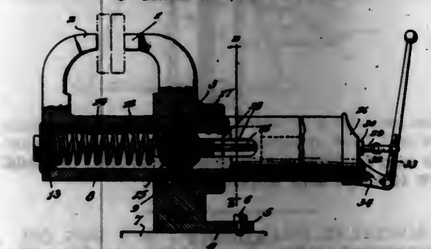
2,107,968
MACHINE FOR CUTTING ICE
Migiel J. Uline, Washington, D. C.
Application January 30, 1935, Serial No. 4,152
21 Claims. (Cl. 143—38)



8. A machine for cutting cakes of ice into small blocks or cubes, means for forming kerfs at right angles to one another in the end of said cake of ice, and a series of independently adjustably superposed cut off saws arranged in the path of travel of said ice for severing the cubes or blocks formed by the kerfs.

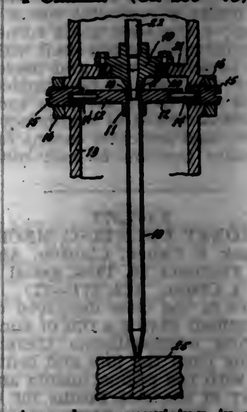
10. A machine for cutting cakes of ice into small cubes or blocks comprising means for intermittently reciprocating a block of ice on end, means operated by the reciprocation of said block for intermittently elevating said block, a reciprocating saw carriage adapted to move over said block to form parallel kerfs therein, a stationary saw carriage having a plurality of saws for cutting parallel kerfs at right angles to the previously cut kerfs when said cake of ice is moved into contact therewith and a horizontally disposed stationary saw arranged in the path of travel of said cake of ice for severing the previously formed cubes of ice from the block.

2,107,969
METHOD OF MAKING RECORD CARDS FOR STATISTICAL MACHINES
Raymond Louis André Valtat, St. Mande, France
Application March 26, 1937, Serial No. 133,288
In France April 7, 1936
2 Claims. (Cl. 164—17)



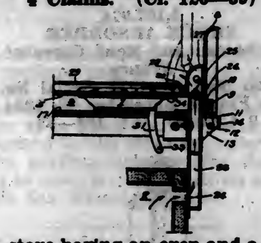
1. A method of making record cards for statistical machines comprising in combination, cutting out of a reel of paper, cardboard or like material, blanks having a dimension slightly greater than the exact dimensions required for the finished cards or slips; storing said blanks

for a period of time until the material of the blanks has assumed its final equilibrium of di-



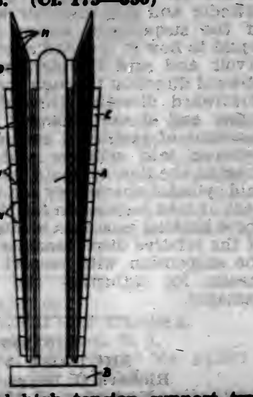
mensions and then trimming the blanks to the exact dimension required.

2,107,970
HYDRAULIC VISE
Emil C. Wells, Kanseenga Lake, N. Y.
Application December 31, 1935, Serial No. 55,621
5 Claims. (Cl. 60—52)



1. In a device of the character described, a stationary support, a movable member having a portion slidable through the support and formed with a longitudinally extending bore and having longitudinally extending slots opening through opposite sides of the bore, a piston in the bore, an anchoring member for said piston extending transversely through the bore with portions extending outwardly through the side slots and connected with the stationary support, resilient means yieldably resisting movement of the movable member in one direction, and means for forcing fluid under pressure into the bore of the movable member to act against the piston and move the movable member in the said direction.

2,107,971
JET PIPE RELAY
Guido Wunsch and Walter Hartung, Berlin-Steglitz, Germany, assignors to Askania-Werke A. G. vormals Central Werkstatt Dessau und Carl Bamberg-Friedenau, a company of Germany
Application July 29, 1936, Serial No. 93,306
In Germany November 30, 1935
4 Claims. (Cl. 299—73)



1. A jet pipe relay comprising, in combination, a jet pipe pivotally mounted on a horizontal axis and having an open inlet end the axis of which is substantially in line with the longitudinal axis of the jet pipe; and a fixed fluid supplying nozzle projecting slightly into and loosely fitted within the open end of the jet pipe providing sufficient clearance to permit free pivotal movement of the jet pipe.

2,107,972
COOKING STOVE
William D. Antrim, Gloucester, N. J., and Alfred W. Schlemmer, Philadelphia, Pa., assignors to Roberts & Mander Stove Company, Philadelphia, Pa., a corporation of Pennsylvania
Application August 29, 1936, Serial No. 98,580
4 Claims. (Cl. 126—39)

1. In a stove having an oven and a cooking top burner chamber, a hinged cooking top plate having an opening suitably located therein, said cooking top plate normally overlying and enclosing the burner chamber and adjustable to an elevated position for access to said burner chamber and a flue communicating with the oven and extending to the under side of the cooking top plate when in said normal position with the outlet opening of said flue registering with the opening in said cooking top plate.

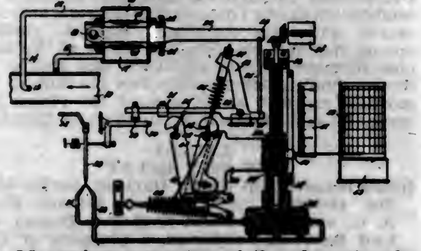
2,107,973
ELECTRIC TRANSFORMER FOR HIGH TENSION
Adolphe Bajon, Gentilly, France, assignor to Societe Anonyme "Transformateurs de Mesure E. Walter", Gentilly, France, a corporation of France
Application September 2, 1935, Serial No. 39,942
In France December 29, 1934
2 Claims. (Cl. 175—356)

1. In an electrical high tension support type transformer, an open magnetic circuit iron core having a bar-like vertical portion and a supporting base portion adapted to be grounded, a low

voltage winding arranged along the bar-like portion of the core, a high voltage winding having a generally conically shaped interior surface arranged over the low voltage winding, a plurality of insulated metal cylinders in stepped coaxial arrangement between the high and low voltage windings to provide capacity elements of a condenser, the inner cylinders being of greater length than the outer cylinders to substantially fill the space between the two windings, the area of the outermost cylinder equalling at least one-half of the area of the innermost cylinder, and all of said cylinders extending beyond the two windings at the upper end thereof and the outer cylinders projecting beyond the upper end of said core.

2,107,974
SHOCK ABSORBER
Louis Bécherean and René Carroueé, Paris, France
Application May 10, 1935, Serial No. 20,857
In France November 29, 1934
9 Claims. (Cl. 188—88)

1. A shock absorber for use in connection with a suspension including two parts movable with respect to each other, which comprises, in combination, a cylinder filled with liquid, a reservoir containing liquid, rigid with said cylinder, means for mechanically connecting both said cylinder and said reservoir with one of the parts of the suspension, means for permitting said liquid to flow in a closed circuit through said reservoir and said cylinder, in series, only in the upward direction through the cylinder and in the downward direction through the reservoir, the upper end of said cylinder being provided with passages of restricted section of flow extending between said cylinder and said reservoir, for braking the flow of liquid therethrough, means in said cylinder operatively connected with the other part of said suspension for forcing liquid through these braking passages whatever be the direction of the relative displacements of said two parts of the suspension with respect to each other, and means for adjusting the flow through said passages.

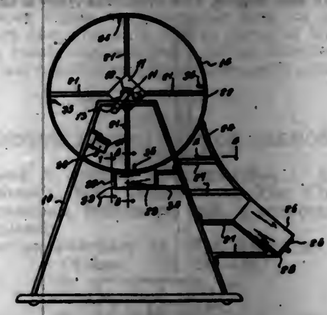


2,107,975
SHUT-OFF VALVE
Richard O. Beggs, Arp, Tex.
Application November 17, 1936, Serial No. 111,315
3 Claims. (Cl. 103—202)

1. The combination with an oil well apparatus including a working barrel, and a foot valve, of a shut-off valve at the bottom of said working barrel and interposed between the latter and

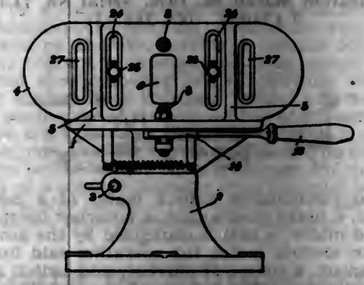
the said foot valve and operable to shut off fluid flow through said working barrel.

2,107,976
MEASURING AND INDICATING APPARATUS
Kurt Biasig, Berlin-Steglitz, Germany, assignor to Askania-Werke A. G. vormals Centralwerkstatt-Dessau und Carl Bamberg-Friedenau, a corporation of Germany
Application September 24, 1936, Serial No. 102,426
In Germany September 25, 1935
7 Claims. (Cl. 73—295)



1. Measuring apparatus of the character described comprising, in combination, a differential pressure responsive device creating a controlling force; a relay connected to be operated by said controlling force; a reversible motor controlled by said relay; a threaded shaft turned by said motor; a nut movable on said shaft without turning; a cam associated with and moved by said nut; a lever arranged to be displaced by the movement of said cam; a spring connected to said lever and arranged to counteract said controlling force; and indicator means for indicating the relative position of said nut and said spindle.

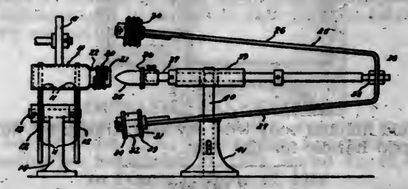
2,107,977
PAPER MONEY COUNTING MECHANISM
Frank J. Callen, Clanton, Ala.
Application February 20, 1936, Serial No. 64,975
1 Claim. (Cl. 271—27)



A structure of the class described comprising a rotating element having a rim of annular form, a hub having compartments therein, hollow spokes leading from the hub and being in communication with the compartments and open at the periphery of the rim, means for creating a suction within the compartments and through

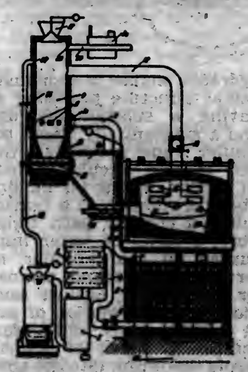
the spokes serving to cause articles to adhere to the periphery of the rim, a shaft for said hub, and a plate closing one side of the hub and

mounting said means for creating a suction, said chambers being in communication with the atmosphere through said hub and plate.



2,107,978
JIG FOR USE IN METALING BEARINGS
Harry James Salusbury Croucher, Farnham, England
Application July 27, 1936, Serial No. 92,921
In Great Britain August 2, 1935
3 Claims. (Cl. 33—123)

1. A jig for use in metaling bearings comprising a flat apertured metal face-plate, a hollow partly cylindrical mandrel adapted to be secured to said face-plate with the longitudinal edges of the mandrel in engagement with the flat surface of the face-plate on each side of the aperture therein so that a defined passage is left between the interior surface of the mandrel and the face-plate to which heat may be applied by means of a flame through the aperture in the face-plate, and means for fixing the bearing shell to be metaled in desired relationship with said mandrel and face-plate.

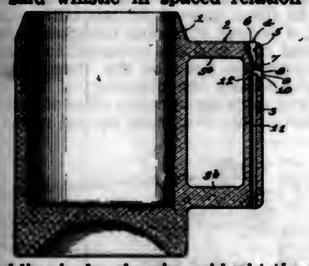


2,107,979
APPARATUS FOR FORMING SCREW-THREADED NECKS
Jakob Dichter, Berlin-Schoneberg, Germany
Application April 22, 1935, Serial No. 17,612
In Germany April 23, 1934
1 Claim. (Cl. 49—23)

In an apparatus of the class described, means for rotatably supporting a vial, means for rotating the vial, means for heating the outside of the vial adjacent the mouth end thereof, a rotatably mounted threaded roller adapted to engage the outside of the heated vial adjacent the mouth end thereof to form threads on the outer surface of the vial, a second rotatably mounted roller having spaced rim portions adapted to engage the vial on opposite sides of the threaded portion thereof to reduce the diameter of the vial and smooth the same on opposite sides of the threaded portion of the vial, said second roller having

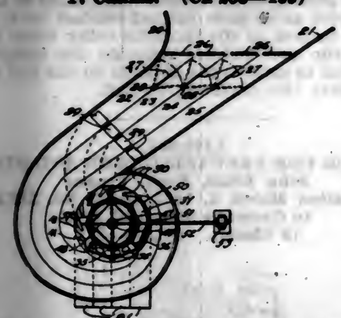
a portion of reduced diameter disposed between said rim portions and of a length substantially equal to the length of the threaded roller, the reduced portion of the second roller being of such a diameter as to have limited contact with the threads formed by the threaded roller while said spaced rim portions are reducing the diameter of the vial to smooth the threads on the vial and to regulate the diameter thereof.

2,107,980
METHOD FOR PREPARING IRON AND STEEL
John Elian, Paris, France
Application March 1, 1937, Serial No. 128,542
In Germany March 16, 1936
10 Claims. (Cl. 75—38)



1. A method for preparing iron and steel wherein the ore is treated in a chamber with a reducing gas and then smelted in a furnace of the Siemens-Martin type, comprising pre-heating the reducing gas in the recuperation chambers of the Siemens-Martin furnace and utilising the gases issuing from the reducing chamber as fuel for heating said furnace.

2,107,981
AUDIBLE SIGNALING HANDLE
Joseph Ford, Trenton, N. J.
Application August 3, 1936, Serial No. 94,697
2 Claims. (Cl. 46—175)



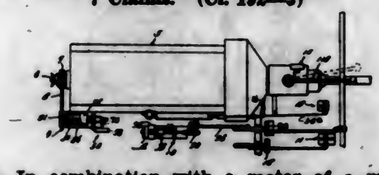
1. A whistle drinking mug comprising a liquid holding body, a hollow tubular whistle adapted to make an audible signal upon the introduction of a blast of air into the hollow tube, and means

holding said whistle in spaced relation to said

liquid holding body whereby said whistle provides a grip handle for the mug.

2,107,962
HYDRAULIC ENGINE
George Paul Geissler, Washington, D. C.
Application September 25, 1935, Serial No. 42,092
17 Claims. (Cl. 253—159)

1. In a hydraulic engine, in combination, a stationary circular structure providing an annular channel having a substantially unobstructed open top and a substantially closed bottom portion, an annular frame providing a rotary member mounted in said circular structure above said bottom portion, means for guiding said annular member for rotation in a horizontal plane on and around a circular path formed by the said structure, a series of water impinged elements mounted on said annular member at spaced intervals there-around, means for delivering water successively against said elements in a direction to cause rotation of said annular frame, said annular frame and water impinged elements thereon arranged for discharge of water downwardly therefrom into the annular channel provided by the bottom portion of said stationary structure, and said water impinged elements including means carried thereby and depending therefrom into the flow of water around said channel whereby such flowing water imparts additional rotating force to said rotary annular frame.

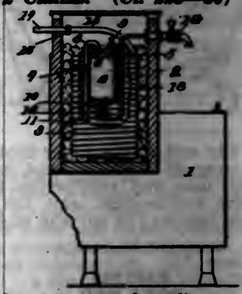


2,107,963
GOLF PUTTER
Thomas Albert Hamilton, Hale, England
Application December 31, 1936, Serial No. 116,642
In Great Britain January 21, 1936
2 Claims. (Cl. 273—80)

1. A golf ball putter which can be adjusted during the course of play to the effective length desired without altering the position of the hands of the user on the handle, comprising a head, a tubular shaft with a cylindrical portion, attached to said head, a tubular handle slidably mounted on the cylindrical portion of the shaft, a non-circular bar rigidly attached to said handle and provided with transverse notches, a guide at the top of the shaft having a through

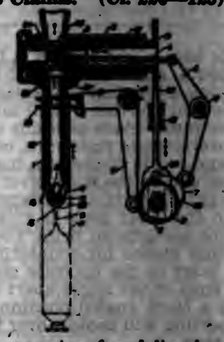
bore of a shape corresponding to the cross sectional shape of the bar and spring fingers secured to the shaft adapted to engage said notches to lock the bar in the adjusted position.

2,107,964
AUTOMATIC BRAKE OPERATOR
Walter Dixon Harper, Florence, S. C.
Application March 28, 1936, Serial No. 71,480
7 Claims. (Cl. 192—3)



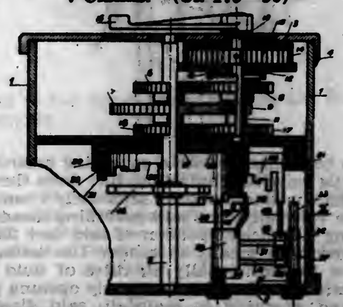
1. In combination with a motor of a motor vehicle, a brake mechanism, a governor operated by said motor, a switch controlled by the governor, an electric motor for operating said brake mechanism, a source of current, said switch and electric motor being connected electrically with said source of current, and an accelerator operated switch between said source of current and the electric motor adapted to be closed when the accelerator is in inoperative position.

2,107,965
STRAIGHT KNITTING MACHINE
Waldemar Heinitz, Chemnitz, Germany, assignor to Schubert & Salzer Maschinenfabrik Aktiengesellschaft, Chemnitz, Germany
Application June 3, 1936, Serial No. 83,262
In Germany July 10, 1935
4 Claims. (Cl. 66—89)



1. A straight knitting machine having a Jacquard petinet attachment, comprising a three-part narrowing comb extending all over the width of the fabric to be knitted on the machine, a rotatably and shiftably arranged bar, a middle part of said narrowing comb carried by said bar, a spring drawing said bar against a fixed stop, two other bars, one for each lateral part of said narrowing comb, an adjustable stop for each of the bars carrying said lateral parts of the narrowing comb, and a tension spring between each of the last mentioned bars and the said adjustable stops.

2,107,966
DISPENSING APPARATUS FOR CARBONATED BEVERAGES
Raymond J. Jenkins and Christian J. Addicks, Baltimore, Md., assignors to The Chandlee Corporation, Baltimore, Md., a corporation of Maryland
Application February 12, 1936, Serial No. 63,624
2 Claims. (Cl. 225—39)



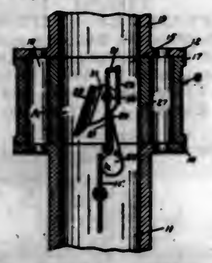
1. In a dispensing and cooling apparatus for carbonated beverages, the combination with a refrigerating chamber having a cooling coil disposed therein, of a source of liquid supply connected to said cooling coil, a removable storage and control tank disposed within said cooling coil adapted to be maintained full of the beverage to be dispensed and having a connection at its upper end with the outlet of said cooling coil, an outlet at the bottom of said storage and control tank of a smaller diameter than the inlet to said tank, a pipe having a coil connected to said outlet and a faucet connected to said pipe.

2,107,967
APPARATUS FOR DELIVERING PORTIONS OF RELATIVELY MOBILE MATERIAL
Bror Emil Johnson, Alsten, Sweden, assignor to Aktiebolaget Gerh. Archus Mekaniska Verkstad, Stockholm, Sweden, a Swedish joint-stock company
Application December 4, 1936, Serial No. 114,256
In Sweden December 9, 1935
5 Claims. (Cl. 226—125)

1. In an apparatus for delivering portions of relatively mobile material, a delivery spout having an end forming a valve seat and having lateral discharge openings, a valve sleeve enclosing said spout and having a central narrowed discharge opening, a pump for periodically supplying material to said spout, and a mechanism operatively connecting said pump with said sleeve to shut the lateral discharge openings of said spout by means of said sleeve and substantially simultaneously to impart to said pump a retractive suction movement.

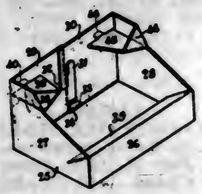
2,107,968
IMPULSE TRANSMITTER
Léon Kardorff, Brussels, Belgium, assignor to Inventor Trust S. A., Luxemburg, Luxemburg
Application September 27, 1935, Serial No. 42,406
In France October 12, 1934
7 Claims. (Cl. 179—90)

7. An impulse transmitter comprising in combination a rotating cylinder with a name index marked on its outer surface and containing a cam-like member of invariable profile moving continuously and in such a manner that its position is analogous for the same digit of each group of impulses, means coacting with the cam-like member for producing impulses, code-members driven by the said rotating cylinder and corresponding to a given number of groups of impulses, and a feeler moving with an alternating motion imparted by the cam-like member and having a stroke which is limited by the code-member so as to vary the number of impulses of each group, as set forth.



2,107,969
GARDEN LINE STAKE
Henry G. M. Kuhn, Spencertown, N. Y.
Application July 21, 1936, Serial No. 91,793
3 Claims. (Cl. 33—86)

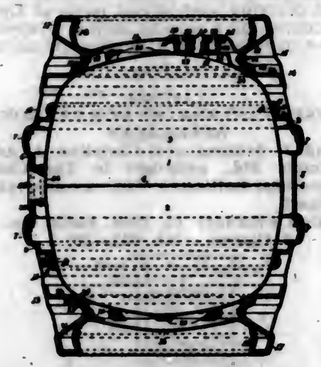
1. A garden stake comprising a flat elongated body portion having one end thereof formed with a vertical kerf adapted to receive and clamp a flexible straight edge, there being spaced transverse kerfs formed in one longitudinal edge of



the body portion in spaced relation to the vertical kerf and adapted to receive a portion of said straight edge.

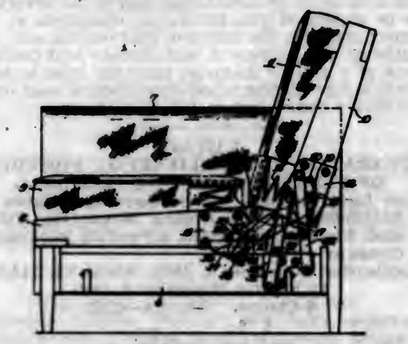
2,107,990
METHOD AND APPARATUS FOR GOVERNING FLUID FLOW
William E. Leibing, San Francisco, Calif., assignor to Leibing Automotive Devices, Incorporated, San Francisco, Calif., a corporation of Nevada
Application January 30, 1935, Serial No. 4,154
13 Claims. (Cl. 137—152)

1. In combination with a governing means and a throttle valve for controlling fuel flows through a conduit, means mounted separately from said throttle valve adjacent said governing means for directing a sufficient portion of said fuel flow to said governing means to render the latter responsive to substantially all rates of fluid flow when said throttle valve is in early opening position, and a spring to maintain said directing means in such directing position independent of changes in pressure of said fluid except when said throttle valve goes to substantially fully open position.



2,107,991
DISPLAY BOX STAND
William E. Thomas, Charlotte, N. C.
Application November 25, 1935, Serial No. 51,567
1 Claim. (Cl. 248—196)

A stand for supporting opened boxes at an inclined angle and comprising a front wall, a back wall and a pair of spaced sidewalls, means projecting inwardly from an intermediate portion of each sidewall for engaging an intermediate portion of the box, and the upper edge of the front wall being adapted to receive the lower end of a box.



2,107,992
METAL BARREL
Walter F. Schulz, Youngstown, Ohio, assignor to Truscon Steel Company, Youngstown, Ohio, a corporation of Michigan
Application June 8, 1934, Serial No. 729,665
12 Claims. (Cl. 220—16)

1. In a double walled barrel having an inner container, an outer casing surrounding and spaced from the inner container and including a pot-shaped end section having a side wall, a head portion, and an outwardly extending chime portion, a substantially U-shaped reinforcing ring

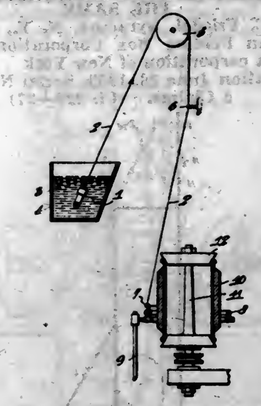
surrounding the end of the inner container and providing a support therefor, and having one leg extending into and reinforcing the chime portion of the end section, and the other leg secured to the side wall of the end section.

2,107,993
SOFA BED
Martin Fox, Chicago, Ill., assignor to The Seng Company, Chicago, Ill., a corporation of Illinois
Application January 13, 1936, Serial No. 58,860
9 Claims. (Cl. 5—47)

1. In a sofa bed, a seat section, a back section, plates attached to adjacent edges of the sections, one plate having a pivoting projection toward the other and the other having a pivot inset from the edge, a pair of hinge levers pivotally connected to each other intermediate their ends, one lever pivoted at one end to the projection, the other lever pivoted at one end to the inset pivot, the projection and the pivot it carries overlapping the section to which the other plate is attached in one position of the sections to bring them close together, and link means for connecting the other end of each lever to the opposite plate to swing the opposite ends of the levers apart and to offset the plates in a right angled position so that the edge of one section will project over the adjacent edge of the other.

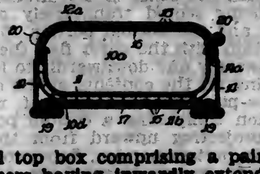
2,107,994
HOLLOW GLASS BUILDING BLOCK
Benjamin F. Hamilton, Jr., Toledo, Ohio, assignor to Owens-Illinois Glass Company, a corporation of Ohio
Application October 11, 1935, Serial No. 44,511
Renewed July 16, 1937
7 Claims. (Cl. 72—41)

1. A hollow building block including a pair of opposed glass walls and a colored translucent sheet interposed between and disposed in substantial parallelism with at least one of said walls.



2,107,995
DUSTLESS BAG DISCHARGE HOPPER
Neel Statham, Irvington-on-Hudson, N. Y., and Horace Richards, Lake, Md., assignors to West Virginia Pulp and Paper Company, New York, N. Y., a corporation of Delaware
Application February 19, 1937, Serial No. 126,576
4 Claims. (Cl. 221—23)

1. In a device of the character described, a hopper, a cover in which said hopper is contained, said cover being adapted to close a bin or container, said hopper having flared sides adapted to receive and hold a bag containing finely divided material and with which said bag makes a substantially tight fit, a cutting or slitting device disposed across the opening of said hopper adjacent the bottom thereof, means for holding said device, permitting same to be drawn across the surface of the bag in said hopper thereby slitting the bag, whereby the contents thereof are discharged into said bin or container while the bag acts as a seal to prevent escape of material into the atmosphere surrounding the hopper.

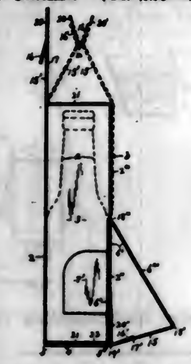


2,107,996
WINDING PROCESS FOR FILAMENTS OF ARTIFICIAL ORIGIN
Kurt Schmidt, Wuppertal-Elberfeld-Gronau, Germany, assignor to North American Rayon Corporation, a corporation of Delaware
Application December 8, 1932, Serial No. 701,433
In Germany December 9, 1932
3 Claims. (Cl. 19—54)

1. In a process for the winding on spools artificial filaments freshly extruded by the wet spinning process, the steps of guiding the filaments by a driven drawing roller to a twisting spindle and imparting a twist to the filaments of less than 20

turns to the meter and collecting the so twisted filaments.

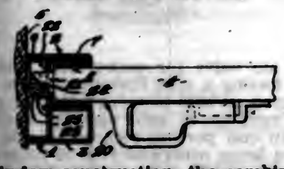
2,107,997
ROLL TOP BOX
James H. Horsley, Chicago, Ill., assignor to Shanklin Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application December 19, 1934, Serial No. 758,207
17 Claims. (Cl. 220—41)



1. A roll top box comprising a pair of inner side members having inwardly extending guide portions, a hollow body member connecting and spacing said inner side members in parallel relationship, a flexible closure arranged to slide on said guide portions, and a sheathing portion encasing said body and inner side members and comprising outer side members cooperating with said guide portions to form a runway for opposite margins of said closure.

2,107,998
VALVE FOR CARBURETORS
Earl A. Rullison, Toledo, Ohio, assignor to The Tillotson Manufacturing Company, Toledo, Ohio, a corporation of Ohio
Application October 7, 1935, Serial No. 43,831
2 Claims. (Cl. 251—119)

1. An air valve for carburetors including an element having a port therein; a valve seat surface formed on said element adjacent said port; a valve member of split annular configuration having an end portion secured to said seat element and being otherwise free to form a flexible valve portion; said valve seat surface being helically arranged whereby said portion of said valve member may be flexed from the element for the passage of air through said port.

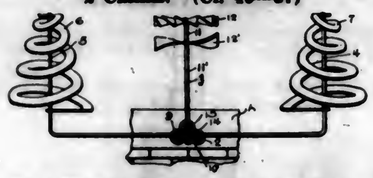


2,107,999
PAPER CARTON AND METHOD OF MAKING THE SAME
Arthur C. Friedel, Syracuse, N. Y., assignor to Lowman Folding Box Corporation, Syracuse, N. Y., a corporation of New York
Application June 28, 1933, Serial No. 678,007
5 Claims. (Cl. 229—27)

2. A one-piece paper carton of rectangular cross-section comprising a bottom portion, side portions projecting upwardly from opposite edges of the bottom portion, cover flaps extending from the upper edges of the side portions, and additional side portions projecting laterally from opposite upright edges of one of the first-named side portions, the other of the first-named side portions being scored transversely between its cover flap and the bottom portion to enable its upper portion with the cover flap thereon to be folded outwardly and downwardly to form a display opening for the contents of the carton.

3. A one-piece paper carton of rectangular cross-section comprising a bottom portion, side portions projecting upward from the opposite edges of the bottom portion, flaps projecting upward from the upper edges of the side portions and provided with hand holes in opposed relation, handle flaps secured to the upper margins of said hand holes, one of said handle flaps being folded upward and lying between said first-mentioned flaps and the other of said handle flaps being folded upward and extending through the opposite hand hole.

2,108,000
WINDOW CONSTRUCTION
Thomas W. Holt and John F. Levan, Elkhart, Ind., assignors, by mesne assignments, to The Syracuse Trust Company, a corporation of New York, Trustee
Original application January 9, 1931, Serial No. 507,670. Divided and this application July 24, 1935, Serial No. 32,918
1 Claim. (Cl. 189—72)

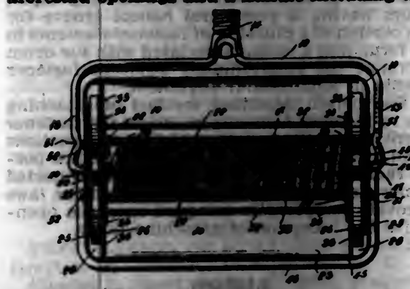


In a window construction, the combination of a window frame comprising a post structure and inner and outer stops forming a sash guide and a sash in the guide, the post structure being formed hollow and mountable in the window opening, and being formed with passages in its inner faces toward the edges of the sash, sash holder means carried by the sash and each including a bolt extending through the edge of the sash and through one of said passages, and means in the hollow post structure in line with said passages and on the opposite side of the contiguous portion of the post structure to that on which the sash is located, said means coacting with the bolt for thrusting the sash against the outer stop when the bolt projects through one of said passages, whereby the bolt and the means within the hollow post structure with which it coacts are located within the front to rear thickness of the sash.

2,108,001
STABLE FILM-FORMING MATERIAL AND METHOD OF MAKING SAME
Walter Durgin Bowlby, Meriden, N. H.
No Drawing. Application June 29, 1935, Serial No. 29,176
8 Claims. (Cl. 106—37)

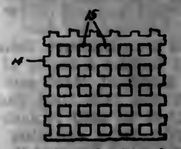
1. Nitrocellulose impregnated under pressure with an alkali-metal soap.

2,108,002
DISPLAY DEVICE
Charles H. Smith and James E. Conner, Casper, Wyo.; said Conner assignor to said Smith
Application March 10, 1937, Serial No. 130,173
2 Claims. (Cl. 40—37)



1. In a display device, a supporting arm provided at one extremity with means for securing same to a support and at the other extremity with a vertical pin, said supporting arm having a flattened intermediate portion formed with an opening, a transverse bar formed with a flattened intermediate portion having an opening registering with the opening formed in the flattened portion of the supporting arm, fastening means extending through the openings and securing the arm and the transverse bar together and vertical pins carried by said bar and said transverse arm for supporting a plurality of rotatable elements.

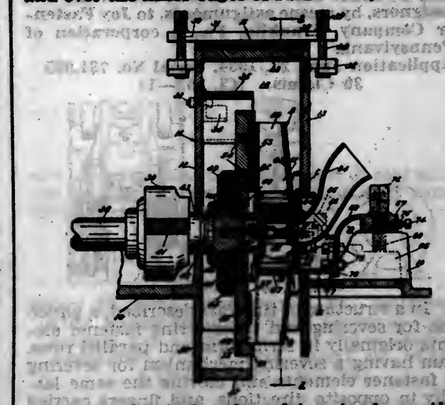
2,108,003
CARPET SWEEPER
Turney H. Stough, Jeannette, Pa., assignor to The Jeannette Steel Corporation, Jeannette, Pa.
Application October 29, 1936, Serial No. 108,284
3 Claims. (Cl. 15—41)



1. In a carpet sweeper of the character described, an elongated casing having top and bottom sections, an inverted U-shaped frame having spaced side walls rigidly mounted parallel to each other in each end of the bottom section, floor wheels and a brush journalled in the frames and projecting downwardly through openings provided in the bottom section, the top section inclosing the frames and having abutting marginal edge contact with the bottom section, the outer wall of each inverted U-shaped frame having an opening therein and the end walls of the top

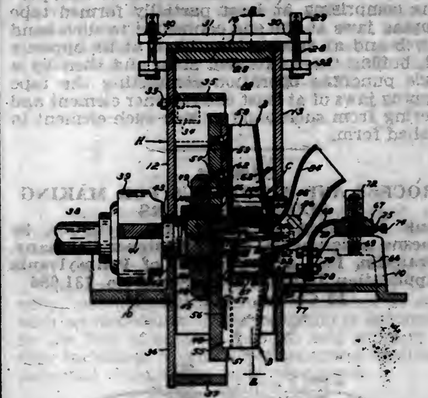
section having openings registering with the aforesaid openings and a handle including a bail

with inwardly directed angle ends received in said registering openings for holding the top and bottom sections in assembled relation.



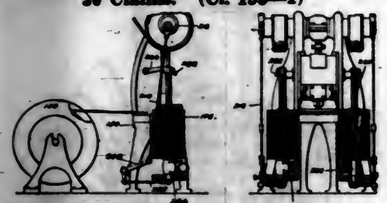
2,108,004
ELECTRODE MATERIAL AND METHOD OF MAKING THE SAME
Owen A. Rogers, Newark, N. J., assignor to Driver-Harris Company, Harrison, N. J., a corporation of New Jersey
Application March 29, 1935, Serial No. 13,653
6 Claims. (Cl. 29—155.5)

1. An electrode for electronic tubes formed of thin sheet metal having substantially rectangular perforations of a number of the order of several hundred perforations to the square inch with the material at the edges of the perforations bent back and flattened against a side of the strip.



2,108,005
ABRADING APPARATUS
Walter L. Keefer, Hagerstown, Md., assignor to Pangborn Corporation, Hagerstown, Md., a corporation of Maryland
Application July 25, 1935, Serial No. 33,185
6 Claims. (Cl. 51—9)

1. In an abrading machine, a rotor having a plurality of blades terminating short of the axis of said rotor to define an abrasive admitting space, an abrasive feeding device of an external diameter less than the radius of the rotor extending into said space and having a discharge opening therein disposed to one side of the axis of said rotor and located between the planes of rotation defined by the sides of said blades for delivering abrasive to the inner ends of said blades, said blades terminating sufficiently close to said feeding device to pick up the abrasive with a minimum impact and said blades having substantially smooth and uninterrupted abrasive-propelling surfaces of sufficient length to accelerate the abrasive smoothly and continuously and without abrupt changes in a substantially radial direction and discharge it from the outer ends of said blades at an abrading velocity when said rotor is rotated, a rotatable impeller mounted for synchronous rotation with said rotor and comprising a plurality of impeller vanes disposed within said feeding device, said vanes being equal in number to said blades and extending to a region closely adjacent the axis to define a comparatively small axially extending passage, and means for introducing abrasive into said passage and over the inner edges of said vanes, said vanes

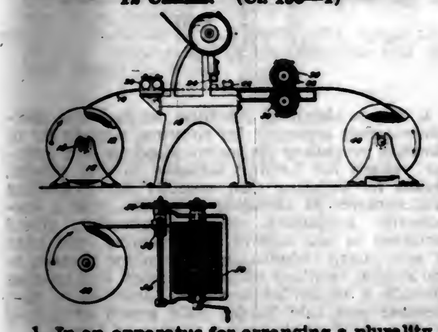


being operable to impel predetermined quantities of abrasive through said discharge opening and into the path of the inner ends of said blades in timed relationship thereto.

2,108,006
ABRADING APPARATUS
Walter L. Keefer, Hagerstown, Md., assignor to Pangborn Corporation, Hagerstown, Md., a corporation of Maryland
Original application July 25, 1935, Serial No. 33,185. Divided and this application June 26, 1937, Serial No. 150,648. Renewed November 9, 1937
15 Claims. (Cl. 51—9)

1. In an abrading machine, at last one disc-like member mounted for rotation, a plurality of abrasive propelling blades mounted on said member, means for feeding abrasive to said blades, means for rotating said member for propelling said abrasive at abrading velocities, and a stationarily supported rebound abrasive guard mounted to one side of said member, one edge of said guard terminating in a plane normal to the axis of rotation of said member and passing through a region adjacent the junction of said member and said blades, said guard extending in an axial direction away from said blades.

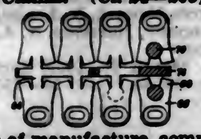
2,106,997
METHOD AND APPARATUS FOR MAKING SLIDE FASTENERS
Frank P. Miller and Lewis Skeel, Meadville, Pa., assignors, by mesne assignments, to Joy Fastener Company, Franklin, Pa., a corporation of Pennsylvania
Application June 22, 1934, Serial No. 731,995
30 Claims. (Cl. 153—1)



1. In a structure of the class described, a punch press for severing and transferring fastener elements originally in strip form and parallel rows, a ram having a severing mechanism for severing the fastener elements and moving the same laterally in opposite directions, and fingers carried by the ram for engaging and advancing the previously severed fastener elements.

6. In a structure of the class described, a drum having a series of circumferentially spaced, helically arranged cells for the reception of fastener elements, said cells also being arranged in longitudinal alignment, means to intermittently turn the drum and advance the same axially, and a feeding mechanism for successively presenting fastener elements to the cells of the drum.

18. A method of making slide fastener elements, which comprises subjecting a metal strip to successive punching operations to produce a continuous web or band having spaced apart portions connected thereto and projecting laterally from at least one edge thereof; each of said portions comprising at least partially formed tape gripping jaws at the end connected to such band or web and an interlocking head at its opposite end, buffing the so formed strip and then by a single punching operation completing the tape gripping jaws of at least one fastener element and severing from such band or web such element in finished form.



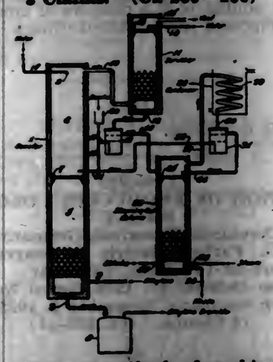
2,106,998
PROCESS AND APPARATUS FOR MAKING SLIDE FASTENERS
Frank P. Miller, Meadville, Pa., assignor, by mesne assignments, to Joy Fastener Company, Franklin, Pa., a corporation of Pennsylvania
Application June 22, 1934, Serial No. 731,996
12 Claims. (Cl. 153—1)

1. In an apparatus for arranging a plurality of connected fastener elements in longitudinal alignment for connection with attaching tapes, a drum having a peripheral helical groove for the reception of a plurality of fastener elements in strip form, and a means associated with the drum to arrange the longitudinally adjacent fastener elements in longitudinal alignment.

6. The herein described method of attaching tapes to fastener elements in which the fastener elements are initially joined at the jaw portions thereof, which consists in arranging the jaw portions radially outward and bowing the connected fastener elements to temporarily spread the jaws to provide temporarily enlarged entrance openings for the reception of attaching tapes.

2,106,999
SLIDE FASTENER
Frank P. Miller and Lewis Skeel, Meadville, Pa., assignors, by mesne assignments, to Joy Fastener Company, a corporation of Pennsylvania
Original application June 22, 1934, Serial No. 731,995. Divided and this application June 2, 1937, Serial No. 145,987
21 Claims. (Cl. 24—205)

1. An article of manufacture, comprising a ribbon-like member having a series of fastener elements disposed along at least one side thereof, characterized by the fact that each element is unitarily connected to said ribbon-like member and provided with tape gripping jaws at one end and an interlocking head at its other end.



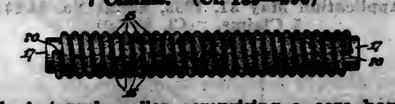
2,107,010
CLOCKWORK SYSTEM
Jean Delvinciotti, Paris, France
Application August 17, 1934, Serial No. 740,291
Renewed July 22, 1937. In France September 5, 1933
13 Claims. (Cl. 58—28)

1. In a clockwork system including an electric circuit, a device for controlling said circuit which comprises, in combination, an elastically mounted contact in said circuit, another elastically mounted contact in said circuit adapted to cooperate with said first mentioned contact for closing said circuit, an oscillating spindle actuated by said clockwork system, and two inclined pallets rigid with said spindle and adapted to actuate said second mentioned contact and close the circuit for each oscillation of said spindle, the inclined pallets being diasymmetrically positioned with respect to said second mentioned contact when the spindle is in its mid-position of oscillation.

8. In a clockwork system including an electric circuit, a device for controlling said circuit which comprises, in combination, an oscillating spindle actuated by the clockwork, two inclined pallets rigid with said spindle to oscillate therewith, a member projecting into the path of the pallets and movably mounted to be shifted in a direction substantially longitudinally of the spindle through engagement and disengagement with the pallets, a relatively stationary contact included in the circuit and spaced longitudinally of the spindle from said member, and another electrical contact interposed between the first mentioned contact and said member and normally free from engagement with the former and in the path of movement of the latter to be shifted by the latter into engagement with the first mentioned contact.

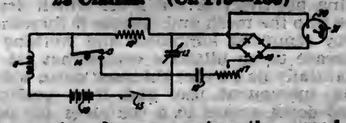
2,106,011
PREPARATION OF ETHYLENE BROMIDE
Grayton F. Dressel, Wilmington, N. C., and Charles E. Short, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Michigan
Application December 30, 1935, Serial No. 56,660
3 Claims. (Cl. 260—166)

1. A continuous method of making ethylene bromide which comprises introducing liquid bromine into a reactor wherein it is intimately contacted with a stream of ethylene-containing gas free from other reactive components, such bromine being slightly in excess of the stoichiometrical proportion to the ethylene in the gas, whereby reaction occurs with evolution of heat, regulating the rate of introduction of bromine and ethylene so as to maintain the temperature in the reaction zone above the boiling point of bromine but below the boiling point of ethylene bromide, whereby the reaction proceeds substantially in vapor phase while the ethylene bromide formed flows as liquid from the reaction zone, and passing such outflowing ethylene bromide in counter-current to the incoming stream of ethylene-containing gas to convert any residual free bromine dissolved in such liquid to ethylene bromide by reaction with such ethylene.



2,106,012
OSCILLOGRAPH APPARATUS
Joseph Daniel Eisler, Los Angeles, Calif., assignor to Western Geophysical Company, Los Angeles, Calif., a corporation of Delaware
Application June 16, 1937, Serial No. 148,618
3 Claims. (Cl. 171—95)

1. Oscillograph apparatus comprising a plurality of oscillograph strings closely spaced and parallel to each other, said strings lying substantially in a given plane, and a magnet having pole faces on opposite sides of said strings, said pole faces being at an angle of from about 5° to about 45° to said plane, said magnet being provided with a small hole passing therethrough in a direction substantially perpendicular to said plane



and so located that the movements of said strings can be photographed by means of light passing through said hole.

2,106,013
TEMPLE ROLLER
Harry W. Fehr, Whitemarsh, Pa., assignor to Steel Heddle Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania
Application July 8, 1936, Serial No. 89,532
7 Claims. (Cl. 139—296)

1. A temple roller comprising a core having wound thereon a surface layer composed of a plurality of strands of different diameters, a strand of larger diameter providing gripping helices, and a spacing strand of smaller diameter serving to increase the pitch and the amount of separation of the gripping portions of successive coils of the larger strand.

2,106,014
TACHOMETER
Harrison A. L. Jones, Oakland, Calif., assignor of one-fifth to Arthur M. Girard and one-fifth to Adelaide B. Girard, both of Oakland, Calif.
Application January 15, 1937, Serial No. 120,738
23 Claims. (Cl. 175—183)

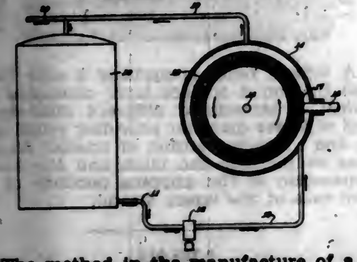
1. Apparatus for measuring the speed of a body, comprising a primary electrical circuit including a reactance, means controlled by the body for periodically charging said reactance at a frequency which varies with the speed of the body, and a metering circuit connected in shunt with an impedance whose potential is determined by the flow of current through said primary circuit including means for measuring oscillating potential drop across said impedance.

2,106,015
NOTEBOOK PAD
Harry L. Kalish, New York, N. Y.
Application December 30, 1935, Serial No. 56,692
5 Claims. (Cl. 281—29)

1. A note book pad, comprising a plurality of sheets having lines of perforations near the top dividing off support areas, and a cover for the pad having a top portion secured upon the front side of said support area, and continuing across the top of the pad down the back of the pad across the bottom of the pad and up the front of the pad

terminating in an edge adapted to engage beneath the edge of the top portion for holding the cover in the closed position, and a spacer strip

attached upon the front of the support area for the purpose of holding the front portion of the cover slightly spaced so that the edge of the bottom portion may be engaged therebeneath.



2,106,016

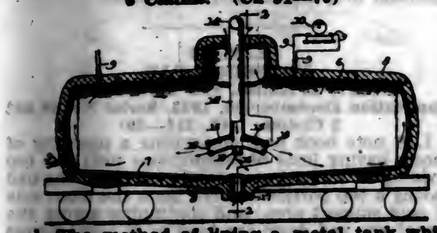
GREASE MANUFACTURE

Gus Kaufman, Beacon, N. Y., assignor to The Texas Company, New York, N. Y., a corporation of Delaware

Application May 31, 1935, Serial No. 24,241

5 Claims. (Cl. 87—9)

1. The method in the manufacture of a soda base grease, which comprises after saponifying the fatty material and mixing with mineral oil, passing the mixed and saponified grease from a container to a working-down zone and subjecting the grease in said zone to the action of intermeshing positively driven gears which draw the grease into the mesh and squeeze it therethrough, thereby removing lumpiness and working down the grease to an ultimate consistency, at which substantially no further thinning down will occur during subsequent use, and then passing the worked-down grease to a container for packaging without further treatment for use.



2,106,017

METHOD OF COATING CONTAINERS

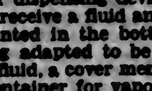
James Lithgow, Chicago, Ill., assignor to Lithgow Corporation, Chicago, Ill., a corporation of Delaware

Application February 27, 1936, Serial No. 65,978

6 Claims. (Cl. 91—70)

1. The method of lining a metal tank which comprises first covering the tank with a covering of heat insulating material, then coating the inner surface of the tank with a suitable coating material which is adapted to be baked on, permitting said coating material to air dry, then introducing a conduit into the tank and forcing gases heated to the necessary temperature for baking the coating material, after it has become dry, through the conduit into the tank for a sufficient length of time to bake the coating to a uniform hardness, said gases being permitted to escape from the tank as the baking progresses.

2,106,018



VULCANIZATION OF RUBBER

Thomas C. Morris, Akron, Ohio, assignor to Wingfoot Corporation, Wilmington, Del., a corporation of Delaware

No Drawing. Application October 31, 1935, Serial No. 47,629

17 Claims. (Cl. 18—53)

1. The method of compounding rubber which comprises adding to it a mixture of zinc stearate and a compound having the formula

in which R is arylene.

2,106,019

METHOD OF PRODUCING COLORED SMOKE

Eberhard Neukirch, Bitterfeld, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany

Application October 17, 1936, Serial No. 106,261

In Germany November 6, 1935

10 Claims. (Cl. 102—1)

1. A method of producing colored smoke which comprises causing a chromate compound to react with chlorosulphonic acid.

2,106,020

DISPENSER

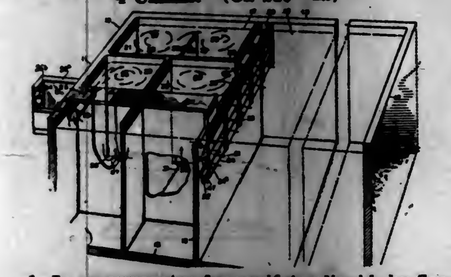
Harry R. Noll, Philadelphia, Pa., assignor of one-half to John W. Coyle, Philadelphia, Pa.

Application March 16, 1936, Serial No. 69,169

5 Claims. (Cl. 219—40)

2. In a vapor dispensing device, a hollow casing adapted to receive a fluid and having heating electrodes mounted in the bottom thereof, said electrodes being adapted to be electrically connected by said fluid, a cover member for said casing, a liquid container for vaporizable liquid detachably secured to said cover member within said casing, a nozzle mounted on said cover member, and structure providing in said cover member a passageway between the interior of the

casing and the interior of the liquid container and another passageway between the interior of the liquid container and the nozzle.



2,106,021

WATER TREATMENT

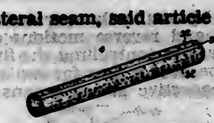
William S. Russell, Salem, Va., assignor to The Dorr Company, Inc., New York, N. Y., a corporation of Delaware

Application March 29, 1934, Serial No. 717,968

4 Claims. (Cl. 210—12)

1. In an apparatus for purifying liquids by flocculation of the impurities and subsequent floc sedimentation, a tank, a battery of floc treatment cells associated therewith, interconnected in a continuously progressing manner to provide for the uni-flow passage therethrough of a stream of the floc laden liquid in alternate up and down direction for stepwise floc treatment, said battery comprising an interconnected system of upstanding partition walls within said tank arranged to divide off a desired number of floc treatment cells and also arranged to provide passages at the top or bottom portion respectively of said cells, and agitating means effective to secure coagmenting floc movement in and through said cells.

2,106,022



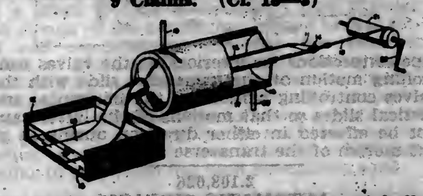
TUBE OF THERMOPLASTIC DERIVATIVES OF CELLULOSE

William Salemme, West Orange, N. J., assignor to Celluloid Corporation, a corporation of New Jersey

Original application May 24, 1934, Serial No. 727,210. Divided and this application July 8, 1936, Serial No. 89,549

9 Claims. (Cl. 138—42)

1. A hollow article of thermoplastic material having abutting edges joined in a permanent straight lateral seam, said article being substantially free of residual stresses tending to cause undesirable distortion and collapsing.



2,106,023

METHOD AND APPARATUS FOR MAKING TUBES OF THERMOPLASTIC DERIVATIVES

William Salemme, West Orange, N. J., assignor to Celluloid Corporation, a corporation of New Jersey

Application May 24, 1934, Serial No. 727,210

9 Claims. (Cl. 18—3)

1. In a process for the production of hollow articles, the step which comprises drawing under longitudinal tension a heat softened strip of thermoplastic derivative of cellulose material through a cooled forming device adapted to cause the strip to be folded into the form of a hollow cylinder.

2,106,024

MEANS FOR CLOSING SEALING RINGS

Edgar E. Shanor, Sharon, Pa., assignor to The Petroleum Iron Works Company of Ohio, Sharon, Pa., a corporation of Ohio

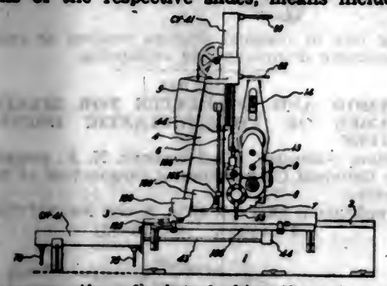
Application May 6, 1937, Serial No. 141,150

5 Claims. (Cl. 220—46)

1. The combination of a container having an opening whose defining wall is formed with a gasket seat, a gasket, a cover having a flange which bears upon the gasket, and means for sealing and securing the parts in the relation stated, said means comprising a horizontal U-chime having spaced apart ends with strap extensions whereof each carries a mate of a mated interlock for securing the chime in the contracted state, a slack take up member mounted for angular movement with relation to the straps to contract the chime and to put the mated locking provisions in interengaging relation, said mated locking provisions comprising male and female members, and a separable member for securing them in locking position.

2,106,025

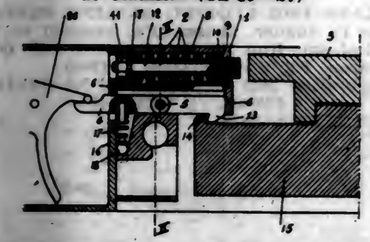
HYDRAULIC OPERATION AND CONTROL OF MACHINE TOOLS



Robert D. Shaw, Brooklyn, N. Y., assignor to Niles-Bement-Pond Company, Hartford, Conn., a corporation of New Jersey

Application May 22, 1930, Serial No. 454,646

29 Claims. (Cl. 90—13.5)



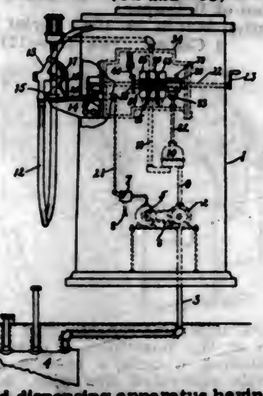
1. The hydraulic operation and control of machine tools, comprising horizontal, vertical and transverse slides, means for supplying fluid un-

der pressure to hydraulically operated means for effecting direct and reverse motions of the respective slides, valves controlling the fluid to said hydraulically operated means for controlling motions of the respective slides, means including

pipe connections for interlocking the valves controlling motion of the transverse slide with the valves controlling motions of the horizontal and vertical slides so that motions of the latter cannot be effected in either direction during in or out motion of the transverse slide.

2,106,626
AUTOMATIC FIREARM
Charles Sutter, Suresnes, and André Bousel, Courbevoie, France, assignors to Société Anonyme Anciens Etablissements Hotchkiss & Cie., Levallois-Perret, France, a joint-stock company of France
Application August 12, 1936, Serial No. 95,880
In Germany January 25, 1936
10 Claims. (Cl. 89—27)

1. Automatic firearm comprising a mechanism having a reciprocating movement, a longitudinally sliding member, a sear for stopping the firing pivotally mounted on said member, a heel carried by said member and against which the breech mechanism abuts at the end of its recoil stroke, housings provided in said member and, in each of said housings, resilient means interposed between an accelerator member mounted at one end of said housing and adapted to be carried rearwardly by said sliding member to compress the resilient means at the end of the stroke of the recoil mechanism of the firearm and a movable heel mounted at the other end of said housing and adapted to be carried forwards by said sliding member when the firing is stopped, a fixed abutment being provided against which said movable heel abuts when the accelerator compresses said resilient means.



2,106,627
RING TRAVELER
Sam Tour, New York, N. Y., assignor to U. S. Ring Traveler Company, Providence, R. I., a corporation of Rhode Island
Application October 4, 1937, Serial No. 167,294
5 Claims. (Cl. 118—61)

1. A ring traveler for vertical twister rings, formed with a foot, a shank extending upwardly therefrom and merging into a head or horn portion, the head or horn portion extending outwardly and upwardly from the shank at its lead-

ing edge and substantially horizontally at its trailing edge, thereby forming a pocket whereby the air in the operation of the traveler contacts with the under surface of said horn portion.

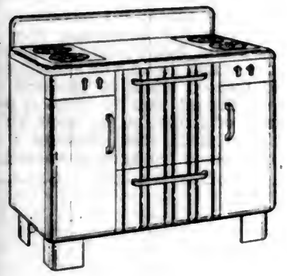
2,106,628
INTERLOCKING MECHANISM FOR GASOLINE DISPENSERS
Reuben E. Bechtold, Fort Wayne, Ind., assignor to Tokheim Oil Tank and Pump Company, Fort Wayne, Ind., a corporation of Indiana
Application July 13, 1936, Serial No. 90,373
6 Claims. (Cl. 221—95)

1. In liquid dispensing apparatus having a motor-driven pump connected with a source of liquid supply and provided with a dispensing line connected with the outlet of said pump and terminating with a manually-operated valve-controlled nozzle, a switch controlling the pump motor, a meter connected in said dispensing line, a register operatively connected with said meter provided with a manually-operated actuating shaft associated with mechanism for resetting the integrating wheels of said register, a stationary bracket for the support of said nozzle, a rock-shaft having operative connection with said switch provided with a lever for manually actuating said rock-shaft disposed to be locked in inoperative position by the said nozzle while said nozzle is supported on said bracket, mechanism associated with said actuating shaft and rock-shaft adapted to prevent concurrent operation of said shafts, a trip-wheel secured on said actuating shaft provided with a recess and a notch, a spring-actuated pawl engageable in said notch to limit backturning movement of said trip-wheel, and a spring actuated bell-crank associated with a stop to limit movement thereof in one

direction and provided with a stud engageable in said recess to cause limited backturning movement of said actuating shaft to its zero position.

2,106,629
METHOD OF HONING
Kirke W. Conner, Detroit, Mich., assignor to Micrematic Hone Corporation, a corporation of Michigan
Application April 27, 1936, Serial No. 76,519
7 Claims. (Cl. 51—278)

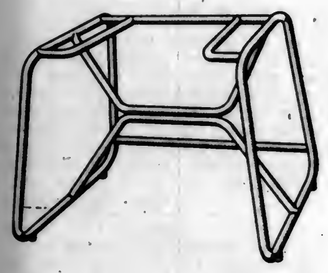
1. The method of honing a work piece which includes the steps of, advancing a honing tool and work piece relative to each other, moving a honing element of said tool into engagement with the surface work piece to be abraided, rapidly reciprocating the honing element during the time it is rotated, and relatively advancing the honing tool and the work piece relative to each other along the tool axis during said rotation and reciprocation.



2,106,630
PROCESS OF OXIDATION
William A. Darrah, Chicago, Ill.
No Drawing. Application April 30, 1934, Serial No. 723,172
7 Claims. (Cl. 204—26)

1. The process of oxidizing beverages containing alcohol which consists in passing a stream of the liquid beverage to be oxidized in contact with a moving stream of gas containing oxygen, causing a silent electric discharge to pass through said stream of gas containing oxygen to said liquid and continuously removing the entering stream of gas and liquid and introducing fresh quantities of gas and liquid, and subsequently subjecting said treated liquid to elevated temperatures for a sufficient time to cause a portion of said products of oxidation to react on another portion of the liquid, thus creating a beverage similar to one which has been extensively aged.

DESIGNS



FEBRUARY 8, 1938

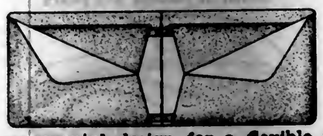
108,312
DESIGN FOR A COOKING STOVE
Wilbur Henry Adams, Cleveland, Ohio, assignor to Kalamazoo Stove Company, Kalamazoo, Mich., a corporation of Michigan
Application December 6, 1937, Serial No. 73,389
Term of patent 3½ years

The ornamental design for a cooking stove, as shown and described.

108,313
DESIGN FOR A STAND FOR BUSINESS MACHINES
Walter A. Anderson, Bridgeport, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y., a corporation of Delaware
Application December 31, 1937, Serial No. 74,030
Term of patent 14 years

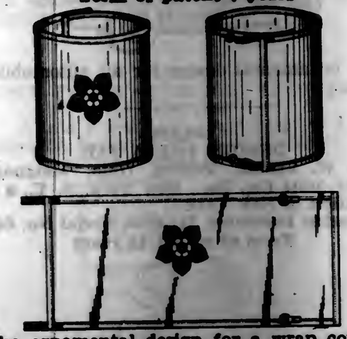
The ornamental design for a stand for business machines, as shown.

108,314
DESIGN FOR AN ADVERTISING TOWER
Walter G. Baryl, Evanston, Ill., assignor to Loop Auto Parks, Chicago, Ill., a corporation of Illinois
Application March 1, 1937, Serial No. 67,932
Term of patent 3½ years



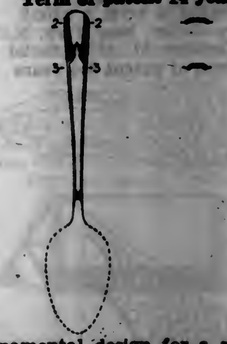
The ornamental design for an advertising tower, as shown and described.

108,315
DESIGN FOR A SHOE
Benjamin Benjamin, Freeport, N. Y.
Application January 4, 1938, Serial No. 74,073
Term of patent 3½ years



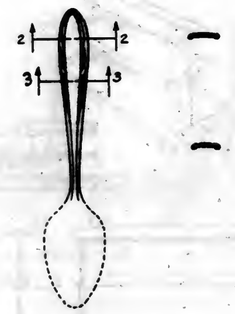
The ornamental design for a shoe substantially as shown.

108,316
DESIGN FOR A FLEXIBLE POCKET RECEPTACLE
Warner R. Buxton, Longmeadow, Mass.
Application December 21, 1937, Serial No. 73,777
Term of patent 14 years



The ornamental design for a flexible pocket receptacle substantially as shown and described.

108,317
DESIGN FOR A WRAP COVER FOR CANNED PRODUCTS
Moses Buchalter, New York, N. Y.
Application November 27, 1937, Serial No. 73,231
Term of patent 7 years

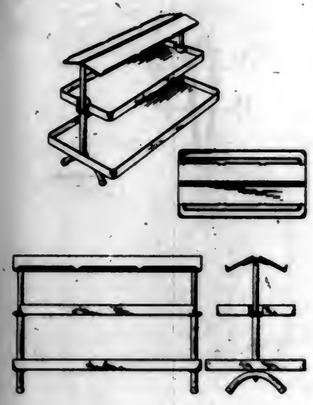


The ornamental design for a wrap cover for canned products, as shown.

108,318
DESIGN FOR A SPOON OR OTHER ARTICLE OF FLATWARE
Edward J. Conroy, New Haven, Conn., assignor to International Silver Company, Meriden, Conn., a corporation of New Jersey
Application January 8, 1938, Serial No. 74,159
Term of patent 14 years

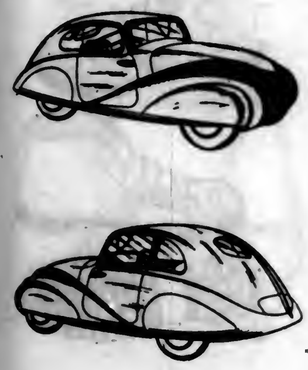
The ornamental design for a spoon or other article of flatware, substantially as shown and described.

108,319
DESIGN FOR A SPOON OR OTHER ARTICLE OF FLATWARE
Marwood A. Downs, Muncie, Ind., assignor to Ontario Manufacturing Company, Muncie, Ind., a corporation
Application December 30, 1937, Serial No. 73,987
Term of patent 14 years



The ornamental design for a spoon or other article of flatware, substantially as shown.

108,320
DESIGN FOR A TENNIS SHOE
James F. Eldon, Binghamton, N. Y., assignor to Endicott Johnson Corporation, Endicott, N. Y., a corporation of New York
Application December 6, 1937, Serial No. 73,406
Term of patent 14 years



The ornamental design for a tennis shoe as shown.

106,221
DESIGN FOR A RACK FOR BREAD OR SIMILAR ARTICLES
Ernest R. Erickson, Des Moines, Iowa, assignor to C. R. Erickson Company, Incorporated, Des Moines, Iowa, a corporation of Iowa
Application June 7, 1937, Serial No. 69,711
Term of patent 7 years

The ornamental design for a rack for bread or similar articles substantially as shown.

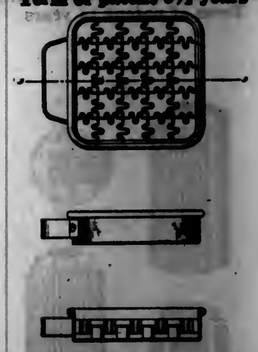
106,222
DESIGN FOR AN AUTOMOBILE
Douglas Frederick Harold Fitzmaurice, London, England; Dorothy Jeannette Fitzmaurice administratrix of said Douglas F. H. Fitzmaurice, deceased
Application December 16, 1936, Serial No. 66,553
In Great Britain August 14, 1936
Term of patent 3½ years

The ornamental design for an automobile as shown.

106,223
DESIGN FOR AN AUTOMOBILE
Douglas Frederick Harold Fitzmaurice, London, England; Dorothy Jeannette Fitzmaurice administratrix of said Douglas F. H. Fitzmaurice, deceased
Application December 16, 1936, Serial No. 66,554
In Great Britain August 22, 1936
Term of patent 3½ years

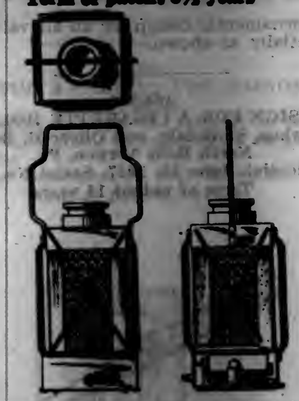
The ornamental design for an automobile as shown.

106,224
DESIGN FOR A JAR
Edwin W. Fuerst, Toledo, Ohio, assignor to Duffy-Mott Co., Inc., New York, N. Y., a corporation of New York
Application December 24, 1936, Serial No. 66,728
Term of patent 14 years



The ornamental design for a jar substantially as shown and described.

106,225
DESIGN FOR A SHOE
Harry Geller, New York, N. Y.
Application October 27, 1937, Serial No. 72,438
Term of patent 3½ years

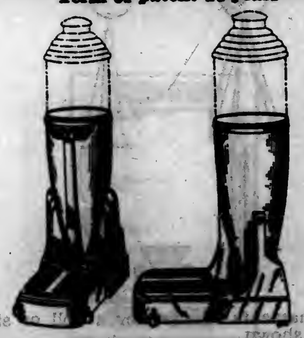


The ornamental design for a shoe as shown.

106,226
DESIGN FOR A CUTTER ELEMENT FOR FOOD CHOPPERS
Emery Earl Grow, Jacksonville, Fla.
Application October 25, 1937, Serial No. 72,422
Term of patent 3½ years

The ornamental design for a cutter element for food choppers, as shown.

106,227
DESIGN FOR A COMBINED LANTERN AND BOTTLE
Alfred J. Hertenau, New York, N. Y.
Application December 11, 1937, Serial No. 73,529
Term of patent 3½ years

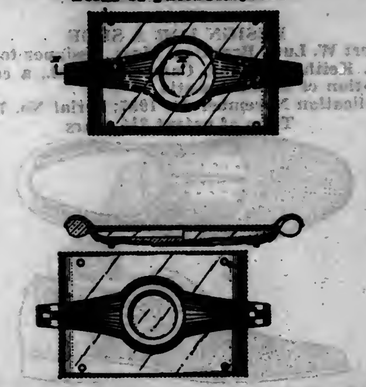


The ornamental design for a combined lantern and bottle as shown and described.

106,228
DESIGN FOR A TOY SIGN
Charles W. Jackson, Rocky River, Ohio
Application October 13, 1937, Serial No. 72,141
Term of patent 7 years

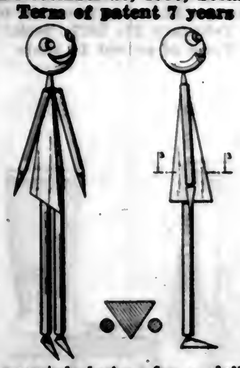
The ornamental design for a toy sign as shown.

106,229
DESIGN FOR A SCALE
Ode D. Jennings, Schaumburg Township, Cook County, Ill., assignor to O. D. Jennings & Company, Chicago, Ill., a corporation of Illinois
Application February 27, 1937, Serial No. 67,968
Term of patent 14 years



The ornamental design for a scale, as shown and described.

106,230
DESIGN FOR A LIPSTICK HOLDER
Martine Kane, New York, N. Y., assignor to Helena Rubinstein, Inc., a corporation of New York
Application June 18, 1937, Serial No. 69,899
Term of patent 7 years



The ornamental design for a lipstick holder, as shown.

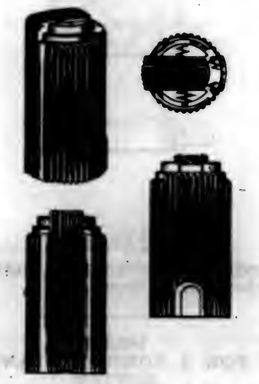
106,231
DESIGN FOR A TRAY OR SIMILAR ARTICLE
Robert A. Kelly, East Pittsburgh, Pa., assignor to United States Glass Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application November 11, 1937, Serial No. 72,776
Term of patent 7 years

The ornamental design for a tray or similar article, substantially as shown.

108,332
DESIGN FOR A DOLL OR SIMILAR ARTICLE
Celeste K. Kempner, New York, N. Y.
Application December 20, 1937, Serial No. 73,737
Term of patent 7 years

The ornamental design for a doll or similar article, as shown.

108,333
DESIGN FOR A SHOE
Alfred D. Levine, Newton, Mass.
Application December 22, 1937, Serial No. 73,799
Term of patent 3½ years

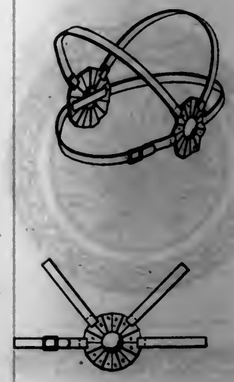


The ornamental design for a shoe, as shown and described.

108,334
DESIGN FOR A SHOE
Albert W. Lutz, Brockton, Mass., assignor to Geo. E. Keith Company, Campello, Mass., a corporation of Massachusetts
Application November 24, 1937, Serial No. 73,162
Term of patent 3½ years

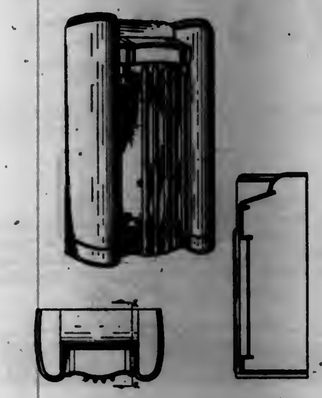
The ornamental design for a shoe, as shown and described.

108,335
DESIGN FOR AN AIR VALVE CASING
Eugene J. Lux, New York, N. Y., assignor to Detroit Lubricator Company, Detroit, Mich., a corporation of Michigan
Application December 20, 1937, Serial No. 73,772
Term of patent 14 years



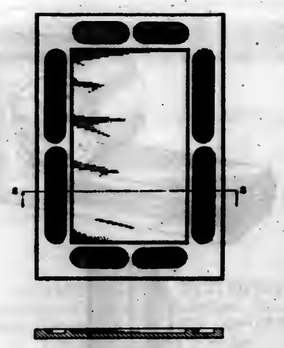
The ornamental design for an air valve casing substantially as shown.

108,336
DESIGN FOR A CIGARETTE HOLDER
John Lykos, Stockdale, and Oliver H. Beaumont, North Belle Vernon, Pa.
Application June 19, 1937, Serial No. 69,934
Term of patent 14 years



The ornamental design for a cigarette holder substantially as shown.

108,337
DESIGN FOR A SAFETY BELT FOR PEDESTRIANS
Thomas Earle Miller, Nashville, Tenn.
Application March 15, 1937, Serial No. 68,164
Term of patent 7 years

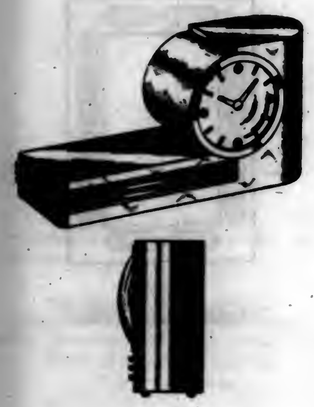


The ornamental design for a safety belt for pedestrians, as shown.

108,338
DESIGN FOR A CABINET FOR RADIOS AND THE LIKE
Nels A. Miller, Chicago, Ill., assignor to Seeburg Radio Corporation, Chicago, Ill., a corporation of Illinois
Application September 23, 1937, Serial No. 71,760
Term of patent 7 years

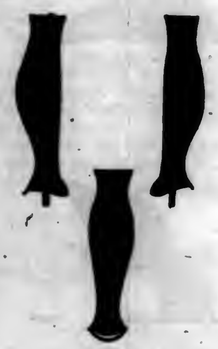
The ornamental design for a cabinet for radios and the like, substantially as shown.

108,339
DESIGN FOR A PICTURE FRAME
Murray Mitchell, New York, N. Y.
Application October 16, 1937, Serial No. 72,232
Term of patent 7 years



The ornamental design for a picture frame, as shown and described.

108,340
DESIGN FOR A SHOE
Frank Molea, New York, N. Y.
Application October 11, 1937, Serial No. 72,115
Term of patent 3½ years

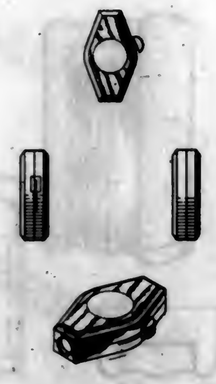


The ornamental design for a shoe, as shown and described.

106,241
DESIGN FOR A CLOCK
John R. Morgan, Oak Park, Ill., assignor to Sears, Roebuck and Co., Chicago, Ill., a corporation of New York
Application December 15, 1937, Serial No. 73,630
Term of patent 7 years

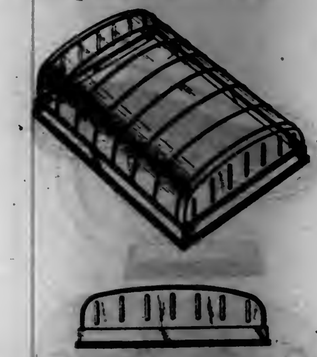
The ornamental design for a clock, as shown.

106,242
DESIGN FOR A TOP SOCK OR SIMILAR ARTICLE
Ann Morrison, New York, N. Y.
Application December 31, 1937, Serial No. 74,008
Term of patent 3½ years



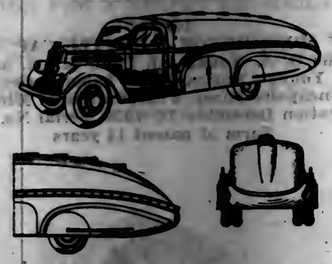
The ornamental design for a top sock or similar article, substantially as shown.

106,243
DESIGN FOR A MEDALLION OR THE LIKE
Irma Neu, New York, N. Y.
Application December 9, 1937, Serial No. 73,501
Term of patent 3½ years



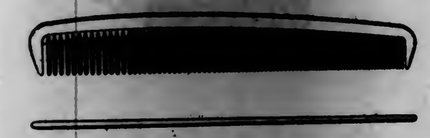
The ornamental design for a medallion or the like, substantially as shown and described.

106,244
DESIGN FOR AN ELECTRIC SWITCH
Johann G. Petersen, West Hartford, Conn.
Application October 21, 1937, Serial No. 72,354
Term of patent 14 years



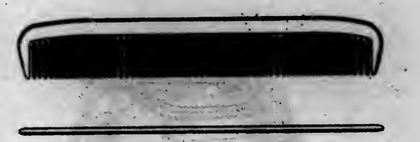
The ornamental design for an electric switch, substantially as shown.

106,245
DESIGN FOR A COMBINED ARTICLE CONTAINER AND DISPLAY CABINET
Thomas J. Pillied, Swanton, Ohio, assignor to The Pillied Cabinet Company, Swanton, Ohio, a corporation of Ohio
Application September 20, 1937, Serial No. 71,695
Term of patent 7 years



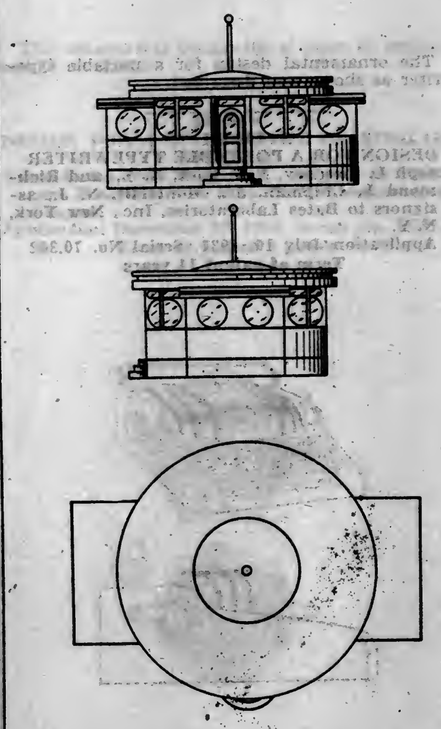
The ornamental design for a combined article container and display cabinet, substantially as shown.

106,246
DESIGN FOR A FUEL TANK TRUCK
Alexis de Sakhnoffsky, Philadelphia, Pa., assignor to The White Motor Company, Cleveland, Ohio
Application January 21, 1937, Serial No. 67,192
Term of patent 7 years



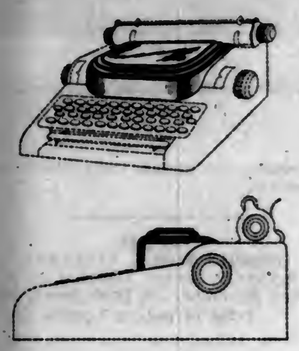
The ornamental design for a fuel tank truck as shown and described.

106,247
DESIGN FOR A COMB
Herman J. Scheihammer, Whitestone, N. Y., assignor to American Hard Rubber Company, New York, N. Y., a corporation of New York
Application November 16, 1937, Serial No. 72,926
Term of patent 14 years



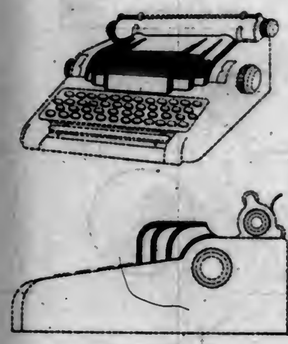
The ornamental design for a comb as shown and described.

106,248
DESIGN FOR A COMB
Herman J. Scheihammer, Whitestone, N. Y., assignor to American Hard Rubber Company, New York, N. Y., a corporation of New York
Application November 16, 1937, Serial No. 72,991
Term of patent 14 years



The ornamental design for a comb as shown and described.

106,249
DESIGN FOR A BUILDING
Arthur E. Sieber, Haledon, N. J.
Application November 22, 1937, Serial No. 73,099
Term of patent 7 years



The ornamental design for a building substantially as shown.

168,350
DESIGN FOR A PORTABLE TYPEWRITER
Joseph L. Sweeney, New York, N. Y., and Richmond L. Chipman, Jr., Montclair, N. J., assignors to Bates Laboratories, Inc., New York, N. Y.
Application July 10, 1937, Serial No. 70,361
Term of patent 14 years

The ornamental design for a portable typewriter as shown and described.

168,351
DESIGN FOR A PORTABLE TYPEWRITER
Joseph L. Sweeney, New York, N. Y., and Richmond L. Chipman, Jr., Montclair, N. J., assignors to Bates Laboratories, Inc., New York, N. Y.
Application July 10, 1937, Serial No. 70,362
Term of patent 14 years

The ornamental design for a portable typewriter as shown and described.

168,352
DESIGN FOR A FOOT BATH TRAY
Clarence L. Weirich, Westport, Conn., assignor to The C. B. Dolge Company, Westport, Conn., a corporation of Connecticut
Application December 15, 1937, Serial No. 73,643
Term of patent 14 years

The ornamental design for a foot bath tray as shown.

168,353
DESIGN FOR A BOTTLE CAP
Serenus H. A. Young, St. Paul, Minn., assignor to Young Engineering Laboratories, Inc., Minneapolis, Minn., a corporation of Minnesota
Application December 16, 1936, Serial No. 66,576
Term of patent 14 years

The ornamental design for a bottle cap, as shown and described.

168,354
DESIGN FOR A TEACUP OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application December 29, 1937, Serial No. 73,928
Term of patent 7 years

The ornamental design for a teacup or similar article, as shown.

168,355
DESIGN FOR A TEAPOT OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application December 29, 1937, Serial No. 73,929
Term of patent 7 years

The ornamental design for a teapot or similar article, as shown.

168,356
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application December 29, 1937, Serial No. 73,930
Term of patent 7 years

The ornamental design for a plate or similar article, as shown.

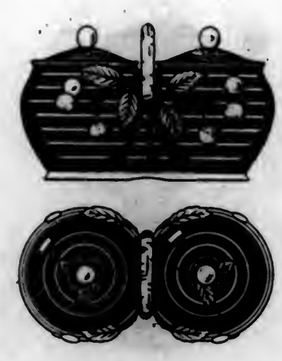
168,357
DESIGN FOR A SUGAR BOWL OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application December 29, 1937, Serial No. 73,931
Term of patent 7 years

The ornamental design for a sugar bowl or similar article, as shown.

108,358
DESIGN FOR A CREAMER OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application December 29, 1937, Serial No. 73,932
Term of patent 7 years

The ornamental design for a creamer or similar article, as shown.

108,359
DESIGN FOR A JUG OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application December 29, 1937, Serial No. 73,933
Term of patent 7 years

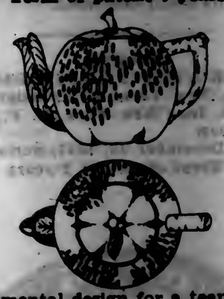


The ornamental design for a jug or similar article, as shown.

108,360
DESIGN FOR A BOWL OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application December 29, 1937, Serial No. 73,936
Term of patent 7 years

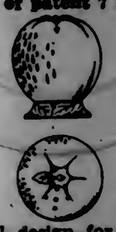
The ornamental design for a bowl or similar article, as shown.

108,361
DESIGN FOR A JAR OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application December 29, 1937, Serial No. 73,937
Term of patent 7 years



The ornamental design for a jar or similar article, as shown.

108,362
DESIGN FOR A TEAPOT OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application December 29, 1937, Serial No. 73,938
Term of patent 7 years

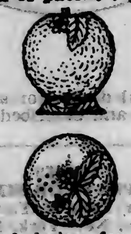


The ornamental design for a teapot or similar article, as shown.

108,363
DESIGN FOR A TEAPOT OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application December 29, 1937, Serial No. 73,939
Term of patent 7 years

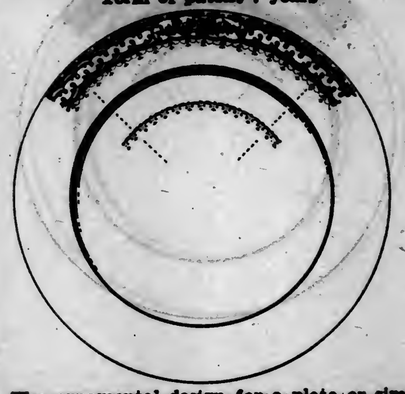
The ornamental design for a teapot or similar article, as shown.

108,364
DESIGN FOR A SALT OR PEPPER SHAKER
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application December 29, 1937, Serial No. 73,940
Term of patent 7 years



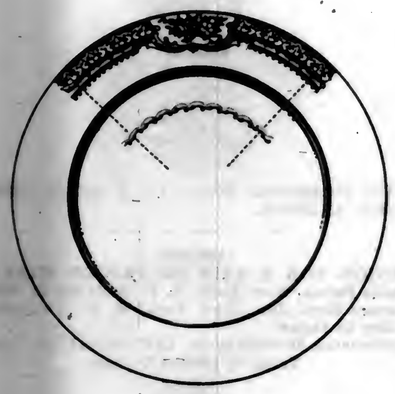
The ornamental design for a salt or pepper shaker, as shown.

108,365
DESIGN FOR A SALT OR PEPPER SHAKER
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application December 29, 1937, Serial No. 73,941
Term of patent 7 years



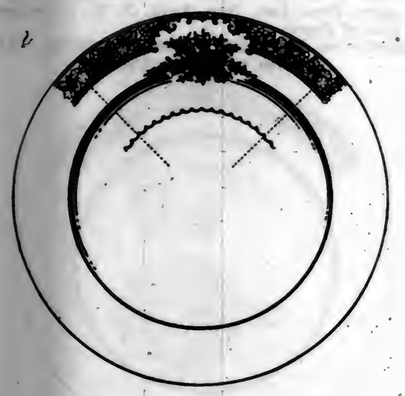
The ornamental design for a salt or pepper shaker, as shown.

108,366
DESIGN FOR A SALT OR PEPPER SHAKER
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application December 29, 1937, Serial No. 73,942
Term of patent 7 years



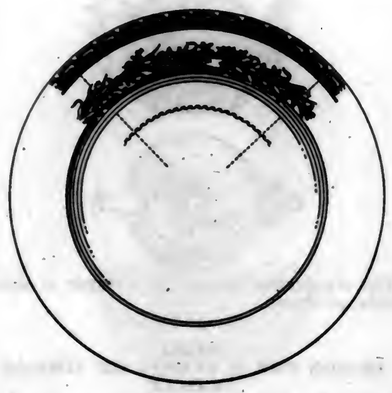
The ornamental design for a salt or pepper shaker, as shown.

108,367
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application December 29, 1937, Serial No. 73,944
Term of patent 7 years



The ornamental design for a plate or similar article, as shown and described.

168,368
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application December 29, 1937, Serial No. 73,945
Term of patent 7 years

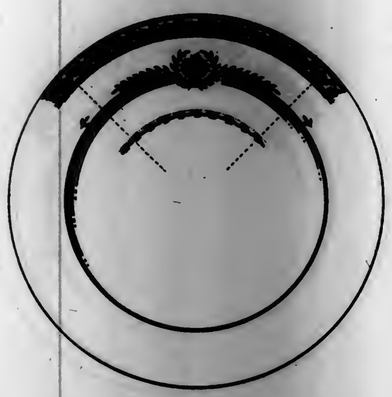


The ornamental design for a plate or similar article, as shown and described.

168,369
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application December 29, 1937, Serial No. 73,946
Term of patent 7 years

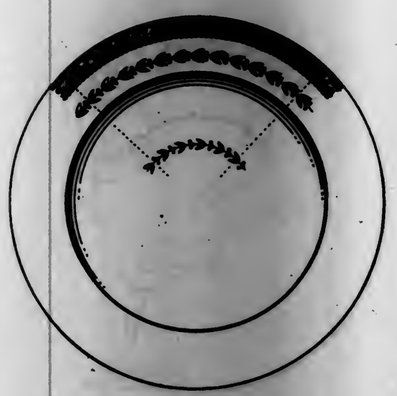
The ornamental design for a plate or similar article, as shown and described.

168,370
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application December 29, 1937, Serial No. 73,947
Term of patent 7 years



The ornamental design for a plate or similar article, as shown and described.

168,371
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application December 29, 1937, Serial No. 73,948
Term of patent 7 years

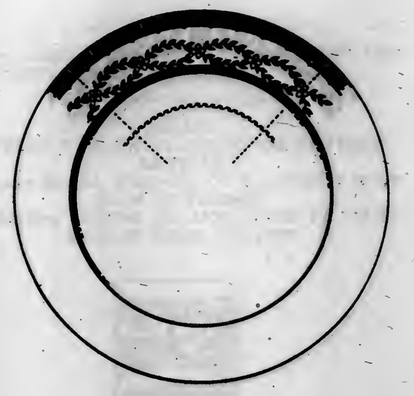


The ornamental design for a plate or similar article, as shown and described.

168,372
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application December 29, 1937, Serial No. 73,949
Term of patent 7 years

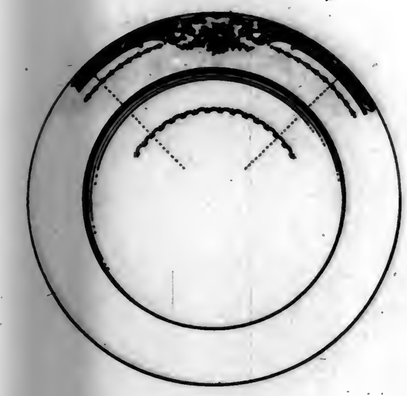
The ornamental design for a plate or similar article, as shown and described.

168,373
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application December 29, 1937, Serial No. 73,950
Term of patent 7 years



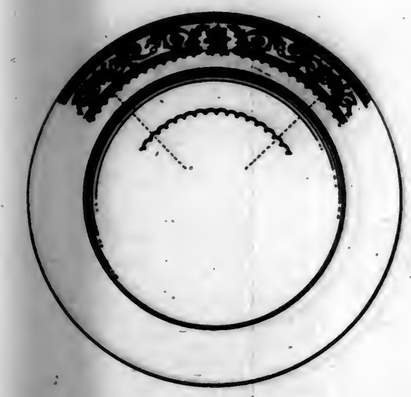
The ornamental design for a plate or similar article, as shown and described.

168,374
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application December 29, 1937, Serial No. 73,951
Term of patent 7 years



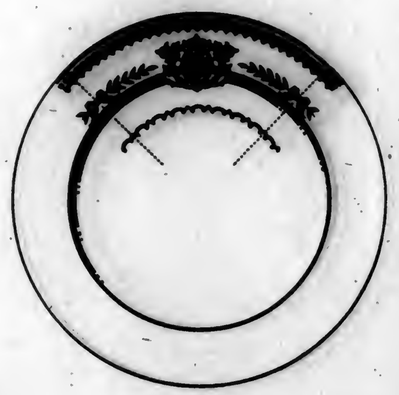
The ornamental design for a plate or similar article, as shown and described.

168,375
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application December 29, 1937, Serial No. 73,952
Term of patent 7 years



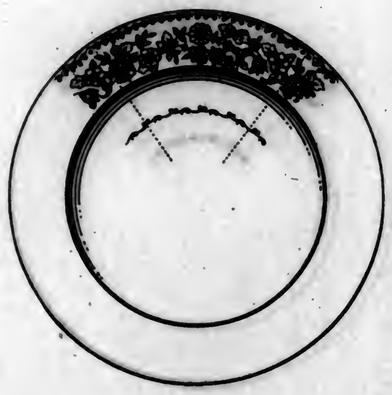
The ornamental design for a plate or similar article, as shown and described.

108,276
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application December 29, 1937, Serial No. 73,953
Term of patent 7 years



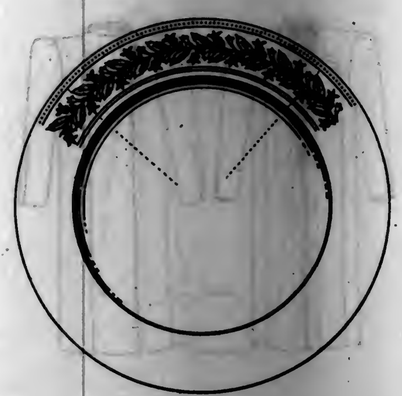
The ornamental design for a plate or similar article, as shown and described.

108,277
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application December 29, 1937, Serial No. 73,954
Term of patent 7 years



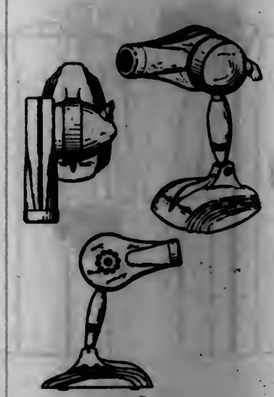
The ornamental design for a plate or similar article, as shown and described.

108,278
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application December 29, 1937, Serial No. 73,955
Term of patent 7 years



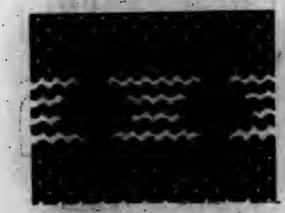
The ornamental design for a plate or similar article, as shown and described.

108,279
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application December 29, 1937, Serial No. 73,956
Term of patent 7 years



The ornamental design for a plate or similar article, as shown and described.

108,280
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application December 29, 1937, Serial No. 73,957
Term of patent 7 years



The ornamental design for a plate or similar article, as shown and described.

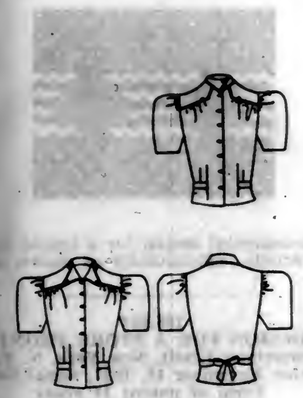
108,281
DESIGN FOR A HAIR DRIER OR THE LIKE
David Chapman, Chicago, Ill., assignor to Knapp-Monarch Company, St. Louis, Mo., a corporation of Missouri
Application December 14, 1937, Serial No. 73,592
Term of patent 7 years

The ornamental design for a hair drier or the like, substantially as shown.

108,282
DESIGN FOR A TEXTILE FABRIC OR SIMILAR ARTICLE
Louis N. Gross, Cleveland, Ohio
Application October 18, 1937, Serial No. 72,146
Term of patent 3½ years

The ornamental design for a textile fabric or similar article, substantially as shown and described.

108,283
DESIGN FOR A STORE FRONT
Mortimer Levitt, New York, N. Y.
Application November 18, 1937, Serial No. 72,982
Term of patent 14 years

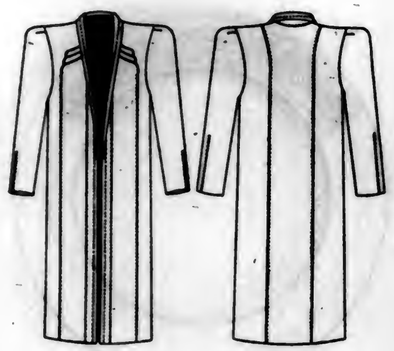


The ornamental design for a store front substantially as shown and described.

108,284
DESIGN FOR A TAX STAMP OR SIMILAR ARTICLE
Anthony Rabito, Elmhurst, N. Y., assignor to the State of Vermont
Application October 16, 1937, Serial No. 72,221
Term of patent 3½ years

The ornamental design for a tax stamp or similar article, substantially as shown and described.

108,285
DESIGN FOR A BLOUSE
Israel Abzug, New York, N. Y.
Application January 4, 1938, Serial No. 74,070
Term of patent 3½ years

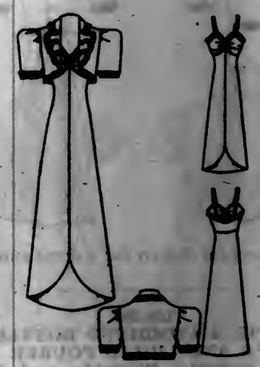


The ornamental design for a blouse substantially as shown.

108,286
DESIGN FOR A COAT
Max Bagodonow, New York, N. Y.
Application December 28, 1937, Serial No. 73,968
Term of patent 3½ years

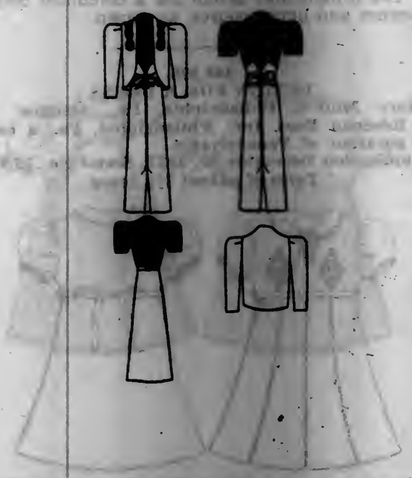
The ornamental design for a coat substantially as shown.

108,287
DESIGN FOR A COAT
Max Bagodonow, New York, N. Y.
Application December 28, 1937, Serial No. 73,969
Term of patent 3½ years



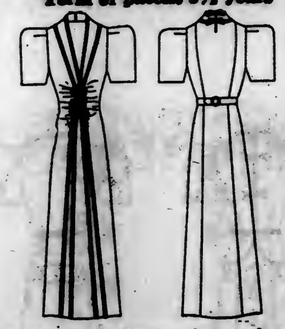
The ornamental design for a coat substantially as shown and described.

108,288
DESIGN FOR A COAT
Max Bagodonow, New York, N. Y.
Application December 28, 1937, Serial No. 73,910
Term of patent 3½ years



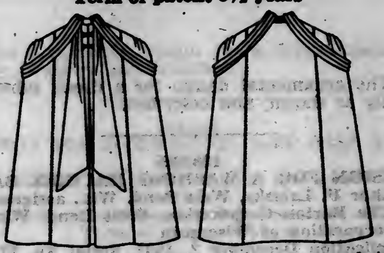
The ornamental design for a coat substantially as shown.

108,289
DESIGN FOR A DRESS ENSEMBLE
Carl H. Colcord, New York, N. Y.
Application December 11, 1937, Serial No. 73,524
Term of patent 3½ years



The ornamental design for a dress ensemble substantially as shown.

108,290
DESIGN FOR A DRESS ENSEMBLE
Tera Coleman, New York, N. Y.
Application January 12, 1938, Serial No. 74,213
Term of patent 3½ years

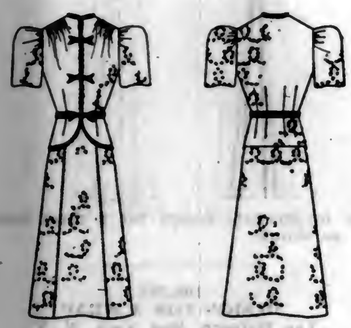


The ornamental design for a dress ensemble substantially as shown.

108,291
DESIGN FOR A DRESS
Tera Coleman, New York, N. Y.
Application January 12, 1938, Serial No. 74,214
Term of patent 3½ years

The ornamental design for a dress substantially as shown.

108,292
DESIGN FOR A WRAP
Leo Halpern, New York, N. Y.
Application January 12, 1938, Serial No. 74,249
Term of patent 3½ years

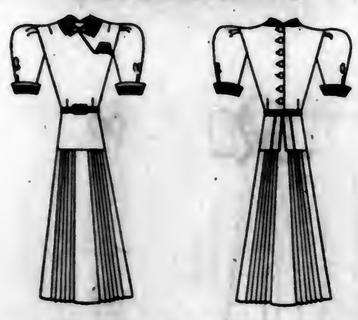


The ornamental design for a wrap, substantially as shown.

108,293
DESIGN FOR A TEXTILE FABRIC
Allen S. Hatcher, Mount Holly, N. J.
Application January 12, 1938, Serial No. 74,229
Term of patent 3½ years

The ornamental design for a textile fabric substantially as shown.

168,394
DESIGN FOR A DRESS
Rose Hochberg, New York, N. Y.
Application December 17, 1937, Serial No. 73,672
Term of patent 3½ years

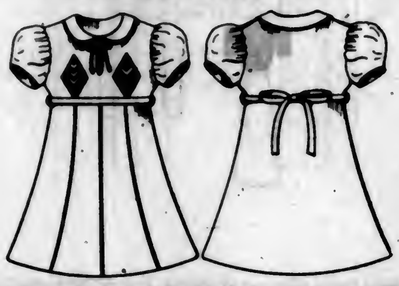


The ornamental design for a dress, substantially as shown, and described.

168,395
DESIGN FOR A WASHING MACHINE BASE
Arthur H. Labisky, West Bend, Wis., assignor to The Barton Corporation, West Bend, Wis., a corporation of Wisconsin
Application December 2, 1937, Serial No. 73,312
Term of patent 14 years

The ornamental design for a washing machine base as shown and described.

168,396
DESIGN FOR A DRESS
Harry Lowenbraun, Brooklyn, N. Y.
Application January 11, 1938, Serial No. 74,196
Term of patent 3½ years

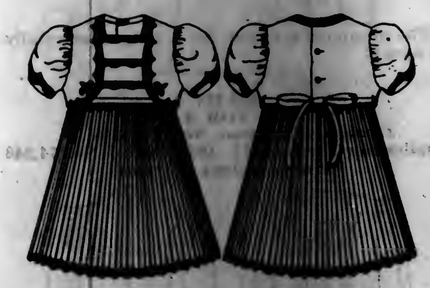


The ornamental design for a dress substantially as shown.

168,397
DESIGN FOR A COMBINED BOTTLE STOPPER AND LIQUID POURER
Clifford A. McBride, Riverside, and Percy J. Callowhill, Edgewood, R. I.; said Callowhill assignor to said McBride
Application August 21, 1937, Serial No. 71,224
Term of patent 14 years

The ornamental design for a combined bottle stopper and liquid pourer, as shown.

168,398
DESIGN FOR A DRESS
Mary Mullen, Philadelphia, Pa., assignor to Rosenau Bros. Inc., Philadelphia, Pa., a corporation of Pennsylvania
Application December 29, 1937, Serial No. 73,920
Term of patent 3½ years

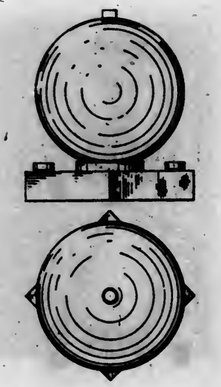


The ornamental design for a dress as shown.

168,399
DESIGN FOR A DRESS
Mary Mullen, Philadelphia, Pa., assignor to Rosenau Bros. Inc., Philadelphia, Pa., a corporation of Pennsylvania
Application December 29, 1937, Serial No. 73,921
Term of patent 3½ years

The ornamental design for a dress as shown.

168,400
DESIGN FOR A DRESS
Mary Mullen, Philadelphia, Pa., assignor to Rosenau Bros. Inc., Philadelphia, Pa., a corporation of Pennsylvania
Application December 29, 1937, Serial No. 73,922
Term of patent 3½ years



The ornamental design for a dress as shown.

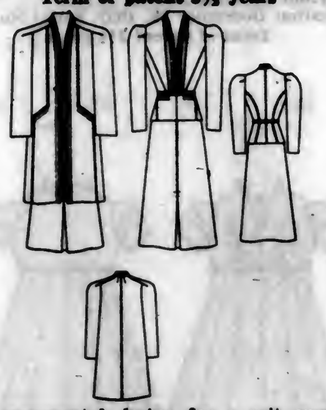
168,401
DESIGN FOR A DRESS
Marie Pene, New York, N. Y.
Application December 4, 1937, Serial No. 73,368
Term of patent 3½ years

The ornamental design for a dress substantially as shown and described.

168,402
DESIGN FOR A COMBINED LAMP BASE AND RADIO
Noel E. Pool and Fred N. Curby, Salt Lake City, Utah
Application December 28, 1937, Serial No. 66,782
Term of patent 7 years

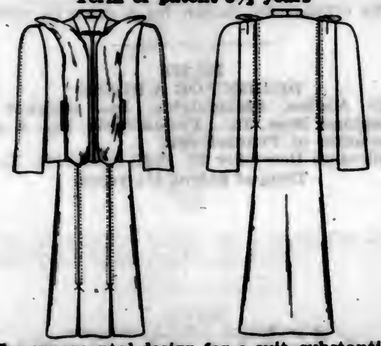
The ornamental design for a combined lamp base and radio, as shown.

108,403
DESIGN FOR A BEDSPREAD
Gerhardt H. Rauschenberg, Dalton, Ga.
Application January 12, 1938, Serial No. 74,227
Term of patent 3½ years



The ornamental design for a bedspread, substantially as shown.

108,404
DESIGN FOR A SWEATER
Martin H. Scheinwald, New York, N. Y.
Application January 14, 1938, Serial No. 74,277
Term of patent 3½ years



The ornamental design for a sweater, substantially as shown.

108,405
DESIGN FOR A SUIT ENSEMBLE
Jacob A. Silverman, New York, N. Y.
Application January 8, 1938, Serial No. 74,148
Term of patent 3½ years

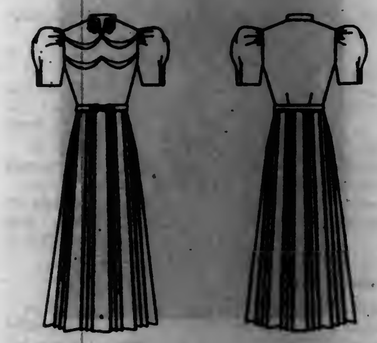
The ornamental design for a suit ensemble, substantially as shown.

108,406
DESIGN FOR A SUIT
Jacob A. Silverman, New York, N. Y.
Application January 8, 1938, Serial No. 74,152
Term of patent 3½ years

The ornamental design for a suit, substantially as shown.

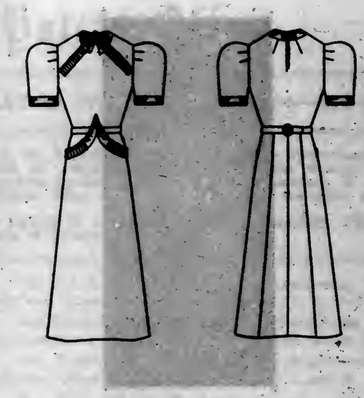
108,407
DESIGN FOR A COAT
Jacob A. Silverman, New York, N. Y.
Application January 12, 1938, Serial No. 74,240
Term of patent 3½ years

The ornamental design for a coat, substantially as shown.



108,408
DESIGN FOR A TEXTILE FABRIC
Florence B. Sterman, New York, N. Y.
Application December 27, 1937, Serial No. 73,869
Term of patent 7 years

The ornamental design for a textile fabric, substantially as shown.



108,409
WITHDRAWN

108,410
DESIGN FOR A DRESS
Samuel Zahn, New York, N. Y.
Application January 6, 1938, Serial No. 74,122
Term of patent 3½ years

The ornamental design for a dress, substantially as shown and described.

108,411
DESIGN FOR A DRESS
Samuel Zahn, New York, N. Y.
Application January 8, 1938, Serial No. 74,146
Term of patent 3½ years

The ornamental design for a dress, substantially as shown and described.

108,412
DESIGN FOR A WOVEN TEXTILE FABRIC
Joseph George Levy, New York, N. Y., assignor to Louis Newman, New York, N. Y.
Application December 23, 1937, Serial No. 73,814
Term of patent 3½ years

The ornamental design for a woven textile fabric substantially as shown.

108,413
DESIGN FOR AN EMBROIDERED FABRIC
Albert Ruchman, New York, N. Y.
Application January 17, 1938, Serial No. 74,364
Term of patent 3½ years

The ornamental design for an embroidered fabric, substantially as shown, and described.

108,414
DESIGN FOR A TEXTILE FABRIC
Mark Turpan, West New York, N. J.
Application January 12, 1938, Serial No. 74,233
Term of patent 7 years

The ornamental design for a textile fabric substantially as shown.

108,415
DESIGN FOR A TEXTILE FABRIC
Mark Turpan, West New York, N. J.
Application January 12, 1938, Serial No. 74,234
Term of patent 7 years

The ornamental design for a textile fabric substantially as shown.

108,416
DESIGN FOR A TEXTILE FABRIC
Mark Turpan, West New York, N. J.
Application January 12, 1938, Serial No. 74,235
Term of patent 7 years

The ornamental design for a textile fabric, substantially as shown.

Patents Nos. 2,108,031 to 2,108,784

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 487—No. 3 TUESDAY, FEBRUARY 15, 1938 Price—$16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum; including annual index, $18.75; single numbers, 35 cents each.
PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter address the Commissioner of Patents, Washington, D. C.
CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Adjudicated Patents

(D. C. Del.) Johnston patent, No. 1,388,434, for method and apparatus for butt-welding thin-gage tubing, claims 1 and 2 *Held* valid and infringed. *Steel & Tubes* v. *Clayton Mark & Co.*, 21 F. Supp. 326.

(D. C. Del.) Belmont patent, No. 1,611,875, for welding apparatus, claims 1 and 2 *Held* valid and infringed. *Id.*

(C. C. A. Ill.) Nordendale patent, No. 1,718,176, for die-punching method, *Held* invalid. *Thorderson Electric Mfg. Co.* v. *General Transformer Corporation*, 93 F.(2d) 36.

Adverse Decisions in Interference

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 2,030,676, L. W. Atchison, Refrigerating system, decided January 25, 1938, claim 1.

Pat. 2,040,443, H. G. Pashoian, Paper clip, decided January 26, 1938, claims 1, 2, and 4.

Pat. 2,044,268, H. E. Williams, Amusement apparatus, decided January 26, 1938, claims 1, 2, 3, and 4.

Pat. 2,049,545, R. F. Ostrander, Ventilating heater for automobiles, decided January 26, 1938, claim 2.

Pat. 2,059,394, A. F. Randolph, Plastic composition, decided January 25, 1938, claims 1, 2, and 5.

Pat. 2,067,797, R. W. Smith, Circuit breaker, decided January 22, 1938, claims 1, 2, 3, and 4.

Disclaimers

2,026,959.—*Eric H. Bradley*, Cincinnati, Ohio. LIQUID DISPENSING APPARATUS. Patent dated January 7, 1936. Disclaimer filed January 26, 1938, by the assignee, *National Pumps Corporation*.

Hereby enters this disclaimer to claims 9 and 10 of said patent.

2,056,896.—*James K. Douglas*, Milwaukee, Wis. HYDRAULIC TRANSMISSION. Patent dated October 6, 1936. Disclaimer filed January 22, 1938, by the assignee, *The Oilgear Company*.

Hereby enters this disclaimer to claims 5 and 6, except when the displacement varying means specified in said claims is operated by power supplied from a source other than said pump.

Notice—Attorney's Address

Many letters are being returned to this Office for lack of street address. The attorney's full post-office address should be given in every power of attorney. The prompt delivery of communications will thereby be facilitated.

Amendments to Amendments

RULE 74. When an amendatory clause is amended, it must be wholly rewritten, so that no interlineation or erasure shall appear in the clause, as finally amended, when the application is passed to issue. If the number or nature of the amendments shall render it otherwise difficult to consider the case or to arrange the papers for printing or copying, the Examiner or Commissioner may require the entire specification to be rewritten.

Examiner's Letters and Amendments

Examiners are directed to recite in each letter in an application the date of the action by the applicant to which it is a reply, and applicants are requested to indicate in their actions on an application the date of the last Office letter.

Condition of Applications Under Examination at Close of Business January 29, 1938

(Total number of applications awaiting action, excluding Trade-Mark Division, 43,274; Trade-Mark Division, 1,748. Oldest new case, July 24, 1937; oldest amended, July 6, 1937.)

(The dates given are 1937 except where † indicates 1938)

DECISIONS IN PATENT AND TRADE-MARK CASES

Supreme Court of the United States

TEXTILE MACHINE WORKS
v.
LOUIS HIRSCH TEXTILE MACHINES, INC.
No. 62. Decided January 3, 1938
[302 U. S. —]

1. PATENTABILITY—ATTACHMENT FOR KNITTING MACHINES.

Claims for an attachment for "flat" knitting machines *Held* invalid for lack of invention over the prior art.

2. SAME—ADDITION OF ELEMENT TO OLD COMBINATION.

"The addition of a new and useful element to an old combination may be patentable; but the addition must be the result of invention rather than the mere exercise of the skill of the calling, and not one plainly indicated by the prior art."

3. SAME—COMMERCIAL SUCCESS.

"Commercial success may be decisive where invention is in doubt, but an insuperable obstacle to the invocation of that doctrine here is our inability, like that of the court below, to say "that an art which knew how to reinforce 'full-fashioned' webs without re-entrant angles, and straight edged webs with such angles, required some uncommon talent merely to conceive of combining the two . . ."

ON WRIT of certiorari to the United States Circuit Court of Appeals for the Second Circuit.

Affirmed.

Mr. Charles H. Howson (*Mr. Hubert Howson*, *Mr. Dexter N. Shaw*, and *Mr. William A. Smith, Jr.*, with him on the brief) for petitioner.

Mr. Samuel E. Darby, Jr. (*Mr. Walter A. Darby* with him on the brief) for respondent.

Mr. Justice STONE delivered the opinion of the Court.

This case comes here on certiorari, 301 U. S. 680, to review a decree, in a patent infringement suit, of the Court of Appeals for the Second Circuit, which reversed the district court and held invalid claims 1, 3, 14, and 15 of the Schletter Patent No. 1,713,628 of 1929, for an attachment for flat knitting machines. 87 F.(2d) 702. The Court of Appeals for the Third Circuit had previously held these claims valid and infringed in *Alfred Hofmann, Inc., v. Textile Machine Works*, 71 F.(2d) 973. The patent is for an attachment for "flat" or "straight" knitting machines including machines of the "full-fashioned" type. By use of the attachment, as the specifications state,

"yarn-guides can be accurately controlled to lay a yarn over a distance less than the full length of a course being knitted, as for reinforcing or for so-called split-seam work wherein sections of fabric are connected by suture seams."

The attachment, it is stated, may be used for "fashioning designs, as clocks, upon hosiery."

Flat knitting machines are adaptable to use in the manufacture of full-fashioned garments such as stockings, underwear, or sweaters. A characteristic feature of the manufacture is that the garment, or a portion of it, is knitted in a flat web which, in the course of knitting, is shaped by variation of its width, in such a way that it conforms to the contour of the body to be fitted, when its shaped edges are united in a seam. The desired variations in width are secured through control of the traverse or "throw" of the yarn guide which brings the yarn to the needles of the machine as they knit the web. They may be and usually are set up as multiple units in a single machine capable of knitting simultaneously a number of garments of the same type.

The object of the patented attachment in providing accurate controls for yarn guides laying a yarn over a distance less than the full width of a fabric being knitted, is either to knit an additional yarn over a particular area of the main body of the fabric so as to strengthen it or form upon it an ornamental design, or to insert in it "split-seam work", which is a portion of the main fabric knitted with a separate yarn and forming a distinctive design. The attachment makes it possible to lengthen and shorten the throw of the yarn guide, and thus to form designs with reentrant angles in both reinforcement and split-seam work.

The patented device embraces a rotatable spindle having threads cut upon it, in reverse, on opposite sides of its central portion, with a nut mounted upon each of its two threaded parts and moved by its revolutions so that when the spindle is turned in the one direction or the other the nuts are moved by the reversely threaded screws toward or away from each other. Carried on the nuts so as to move with them are yarn carrier stops which are so adapted and located as to serve as controls to limit the travel of carrier rods which have mounted on them the yarn guides. The function of the mechanism is to control the movement of the stops which in turn control the distance of travel of the yarn guides. This is accomplished by the movement of the stop nuts toward or away from each other by the rotation of the threaded spindle in the appropriate direction.

Movement in conformity to a desired pattern is effected by the transmission of power from the main cam shaft of the knitting machine to two ratchet wheels mounted on the end of the threaded spindle, each with an actuating pawl. The two pawls are in such relationship that when one operates its complementary ratchet wheel the spindle will rotate in one direction, and when the other operates its complementary ratchet wheel the spindle will turn in the opposite direction. The operation of the ratchet wheels is controlled by means of buttons, arranged on two endless belts propelled by the main cam shaft. The buttons attached to one of the belts serve to actuate a mechanism which pushes both pawls. The buttons affixed to the other belt govern a mechanism that selectively engages one or the other of the two pawls, and thus determines the direction in which the spindle and

hence the stops are to move. By suitable spacing of the buttons on the belts, the motion, which is to be imparted to the stops through the intermediate apparatus, is controlled in such fashion as to fix in advance the length of throw and hence the outline of the design which is to be incorporated in the main fabric by reinforcement or split-seam work.

Claim 14, which may be taken as typical, defines the invention as the combination

"In a straight knitting machine [*a*] a set of yarn guide carrier bars for operating yarn guides traveling less than the full width of the fabric being knitted, [*b*] a spindle having reversed screw threads, [*c*] stops operated by said spindle, [*d*] means for turning the spindle in either direction, [*e*] pattern-controlled means for determining the time of operation of the spindle, and [*f*] pattern-controlled means for determining the direction of rotation of the spindle."

As early as 1912, 10 years before Schletter's original application of June, 1922, from which his patent dates, the art had devised an attachment for full-fashioned knitting machines, commercially used for reinforcing the heel portion of the stocking. One form, known as the Gotham, comprised a reversely threaded spindle, on the threads of which were mounted stops moving toward each other when the spindle rotated in one direction, and away from each other when the spindle turned in the opposite direction. The traveling stops controlled the throw of carrier bars with yarn guides which lay a reinforcing yarn at the heel of the stocking. As the reinforcement was triangular with the point above the heel gradually widening below without reentrant angles, it was needful to rotate the spindle automatically in but one direction in order to complete the pattern. When the reinforcement had been knitted the spindle was rotated by hand in the reverse direction, or "racked out", until the stops were restored to their initial position, ready to knit the next stocking. A means for automatically rotating the spindle in the desired single direction was provided by a ratchet wheel mounted on the spindle, which was worked by a pawl pushed by a cam on the main shaft; the operation of the pawl was controlled by a mechanism actuated by a "button" type of pattern belt or chain. The reinforcement could not be knitted from a single yarn carrier operating over a single area of the fabric, because the reinforced area was divided, in the completed stocking, by the seam which united the selvages of the stocking web. It was thus necessary to knit the reinforcement in two areas, using two yarn carriers, each with a throw of the desired variation in length, reaching from the selvage on either side of the stocking web inward upon the main fabric. For this purpose the lugs on the carrier rods which, in cooperation with the stops, controlled the throw, was located between the end stops of the full-fashioned machine and the stops moved by the threaded nuts on the attachment.

It will be observed that this device, while not completely anticipating that of the patent, nevertheless exhibited every element of the claim except the "pattern-controlled means for determining direction of rotation of the spindle." This lack was supplied by Nusbaum, whose machine was in common use as early as 1917. As already indicated, the use of such a device in full-fashioned knitting machines to secure selvage variations was known long before the Schletter application. In order to effect this type of fashioning, the yarn carrier stops were moved and their movements controlled by stop nuts mounted on spindles with threads in reverse located at either end of the knitting machine. Two-way movement of the nuts was effected by mechanisms, under pattern-belt control, suitable to rotate the spindle in either direction.

The Nusbaum machine was a modification of the existing flat-knitting machine and was designed for knitting reinforcements of variable width on sweaters which were themselves not full fashioned, that is, not narrowed in the knitting. The modification was devised for varying the throw of a secondary yarn carrier supplying yarn to needles knitting upon the main fabric a reinforcement or plaiting. To accomplish this, Nusbaum rebuilt an old full-fashioned machine by using the existing end nuts as a means of controlling the movements of the stops which determine the length of throw of a secondary yarn carrier, and supplying a new carrier bar for the primary yarn. Since the garment was not full-fashioned he placed fixed stops at the ends of the machine so that the throw of the primary thread carrier was constant. He used the old automatically reversible spindle of the full-fashioned machine as a means, wanting in the Gotham mechanism, for increasing or diminishing at will the throw of the secondary yarn carrier. Instead of the single reversibly threaded spindle of the Gotham machine, Nusbaum retained the two threaded shafts located at the ends of the principal machine, each bearing twin ratchet wheels, each of which was operated by a pawl controlled through an intermediate apparatus by buttons appropriately spaced on a pattern belt. Only a single belt was used bearing four rows of buttons, which by reversing the motion of the spindle as desired operated to vary the throw of the yarn carrier in conformity to the desired pattern.

It is true, as petitioner urges, that the threaded spindles were located at the ends of the Nusbaum machine, and that they were separate shafts although capable of being operated in unison as if united in a single spindle such as that shown by the Gotham attachment. Even with the double spindle synchronously operated instead of the single spindle of the Gotham it was substantially the device claimed by Schletter. In converting a full-fashioned knitting machine into a different type of straight-knitting machine which did not fashion the main fabric, Nusbaum embodied in it a device for accurately controlling yarn guides for laying a secondary yarn less than the length of the course being knitted, which was capable of producing designs having reentrant angles. This, according to the specifications, is one of the objects to be achieved by the patented device. The other is the making of multiple designs and split-seam work.

As the pattern of the reinforcement or plait was to be wholly within a single area on the main fabric and did not extend to the selvage, Nusbaum used a single yarn guide instead of the two which were required in the Gotham attachment because the reinforcements were upon detached areas of the fabric. Hence his machine as set up could not do split-seam work or make double designs, which could only be knitted by employing a plurality of yarn guides with corresponding controls. But the use of the device for these different methods of knitting the secondary yarn involves but an obvious adaptation of the claimed combination to the particular work to be done. That may be accomplished by using the device exhibited by Nusbaum as well as that claimed by the patent, with the requisite number of controlled yarn guides in the case of multiple designs and with stops, both sides of which are used as carrier rod controls in the case of split-seam work. This addition of yarn guides and the varied use of the stops, even if invention, are not embraced in the claims before us.

[1] [2] The addition of the reversing mechanism, used by Nusbaum and previously used in the full-fashioned machine, to the elements exhibited by the Gotham, for the purpose of effecting variations in the throw of the secondary yarn carrier in precisely the manner in which the throw of the primary yarn carrier had been controlled in full-fashioned machines, was plainly not invention. The addition of a new and useful element to an old combination may be patentable; but the addition must be the result of invention rather than the mere exercise of the skill of the calling, and not one plainly indicated by the prior art. *Electric Cable Joint Co.* v. *Brooklyn Edison Co.*, 292 U. S. 69, 79, 80; *Altoona Publix Theatres, Inc.*, v. *American Tri-Ergon Corporation*, 294 U. S. 477, 486. The art of machine design in the knitting machine field is a highly developed one. The addition to the combination of the Gotham attachment of a means for automatically reversing the rotary threaded spindle to perform the very function it had performed in the full-fashioned knitting machine was not beyond the skill of the art and was plainly foreshadowed, if not completely anticipated, by Nusbaum.

The claims in suit do not embrace a train of mechanism of any particular type for the transmission of control from the power shaft to the pawls and so cannot rest on any differences between the train employed by Schletter and that of earlier devices. As the court below pointed out, if the patent is valid it is either because of the novelty of the conception of employing the Nusbaum device in an attachment for a full-fashioned machine, which Nusbaum had not done, or because of technical difficulties in executing that conception. If there were such difficulties, which could be overcome only by invention, Schletter did not show what they were or define such an invention by the claims before us. He did show in his specifications how to provide, by familiar mechanical means, for one necessary relationship of the attachment to the principal machine—the necessity that the threaded spindle remain stationary while the fashioning stops are moving. For this no invention is claimed, nor well could be in view of the state of the art.

[3] Petitioner relies on the novelty of conception reinforced by an alleged commercial success. Commercial success may be decisive where invention is in doubt, but an insuperable obstacle to the invocation of that doctrine here is our inability, like that of the court below, to say

"that an art which knew how to reinforce 'full-fashioned' webs without re-entrant angles, and straight edged webs with such angles, required some uncommon talent merely to conceive of combining the two, for, as we have said, the patent can only stand on the bare conception."

It is significant that the courts which, in *Textile Machine Works* v. *Alfred Hofmann, Inc.*, supra, found invention, supported by commercial success, pointed to the novelty not of this conception but of adding to the elements of the Gotham machine the automatic pattern controlled means for reversing the screw spindle. But neither court made mention of the Nusbaum machine which supplied that element. Upon the record before us we cannot say that the commercial success is attributable to novelty of the bare conception of the use of the attachment with full-fashioned knitting machines rather than to the skill with which the patentee devised mechanisms for making the attachment effective, but for which he made no claim, or to the strength of the hands into which the patent came. Compare *Paramount Publix Corporation* v. *American Tri-Ergon Corporation*, 192 U. S. 464, 474, with *Altoona Publix Theatres, Inc.*, v. *American Tri-Ergon Corporation*, supra, 487.

hence the stops are to move. By suitable spacing of the buttons on the belts, the motion, which is to be imparted to the stops through the intermediate apparatus, is controlled in such fashion as to fix in advance the length of throw and hence the outline of the design which is to be incorporated in the main fabric by reinforcement or split-seam work.

Claim 14, which may be taken as typical, defines the invention as the combination

"In a straight knitting machine [*a*] a set of yarn guide carrier bars for operating yarn guides traveling less than the full width of the fabric being knitted, [*b*] a spindle having reversed screw threads, [*c*] stops operated by said spindle, [*d*] means for turning the spindle in either direction, [*e*] pattern-controlled means for determining the time of operation of the spindle, and [*f*] pattern-controlled means for determining the direction of rotation of the spindle."

As early as 1912, 10 years before Schletter's original application of June, 1922, from which his patent dates, the art had devised an attachment for full-fashioned knitting machines, commercially used for reinforcing the heel portion of the stocking. One form, known as the Gotham, comprised a reversely threaded spindle, on the threads of which were mounted stops moving toward each other when the spindle rotated in one direction, and away from each other when the spindle turned in the opposite direction. The traveling stops controlled the throw of carrier bars with yarn guides which lay a reinforcing yarn at the heel of the stocking. As the reinforcement was triangular with the point above the heel gradually widening below without reentrant angles, it was needful to rotate the spindle automatically in but one direction in order to complete the pattern. When the reinforcement had been knitted the spindle was rotated by hand in the reverse direction, or "racked out", until the stops were restored to their initial position, ready to knit the next stocking. A means for automatically rotating the spindle in the desired single direction was provided by a ratchet wheel mounted on the spindle, which was worked by a pawl pushed by a cam on the main shaft; the operation of the pawl was controlled by a mechanism actuated by a "button" type of pattern belt or chain. The reinforcement could not be knitted from a single yarn carrier operating over a single area of the fabric, because the reinforced area was divided, in the completed stocking, by the seam which united the selvages of the stocking web. It was thus necessary to knit the reinforcement in two areas, using two yarn carriers, each with a throw of the desired variation in length, reaching from the selvage on either side of the stocking web inward upon the main fabric. For this purpose the lugs on the carrier rods which, in cooperation with the stops, controlled the throw, was located between the end stops of the full-fashioned machine and the stops moved by the threaded nuts on the attachment.

It will be observed that this device, while not completely anticipating that of the patent, nevertheless exhibited every element of the claim except the "pattern-controlled means for determining direction of rotation of the spindle." This lack was supplied by Nusbaum, whose machine was in common use as early as 1917. As already indicated, the use of such a device in full-fashioned knitting machines to secure selvage variations was known long before the Schletter application. In order to effect this type of fashioning, the yarn carrier stops were moved and their movements controlled by stop nuts mounted on spindles with threads in reverse located at either end of the knitting machine. Two-way movement of the nuts was effected by mechanisms, under pattern-belt control, suitable to rotate the spindle in either direction.

The Nusbaum machine was a modification of the existing flat-knitting machine and was designed for knitting reinforcements of variable width on sweaters which were themselves not full fashioned, that is, not narrowed in the knitting. The modification was devised for varying the throw of a secondary yarn carrier supplying yarn to needles knitting upon the main fabric a reinforcement or plaiting. To accomplish this, Nusbaum rebuilt an old full-fashioned machine by using the existing end nuts as a means of controlling the movements of the stops which determine the length of throw of a secondary yarn carrier, and supplying a new carrier bar for the primary yarn. Since the garment was not full-fashioned he placed fixed stops at the ends of the machine so that the throw of the primary thread carrier was constant. He used the old automatically reversible spindle of the full-fashioned machine as a means, wanting in the Gotham mechanism, for increasing or diminishing at will the throw of the secondary yarn carrier. Instead of the single reversibly threaded spindle of the Gotham machine, Nusbaum retained the two threaded shafts located at the ends of the principal machine, each bearing twin ratchet wheels, each of which was operated by a pawl controlled through an intermediate apparatus by buttons appropriately spaced on a pattern belt. Only a single belt was used bearing four rows of buttons, which by reversing the motion of the spindle as desired operated to vary the throw of the yarn carrier in conformity to the desired pattern.

It is true, as petitioner urges, that the threaded spindles were located at the ends of the Nusbaum machine, and that they were separate shafts although capable of being operated in unison as if united in a single spindle such as that shown by the Gotham attachment. Even with the double spindle synchronously operated instead of the single spindle of the Gotham it was substantially the device claimed by Schletter. In converting a full-fashioned knitting machine into a different type of straight-knitting machine which did not fashion the main fabric, Nusbaum embodied in it a device for accurately controlling yarn guides for laying a secondary yarn less than the length of the course being knitted, which was capable of producing designs having reentrant angles. This, according to the specifications, is one of the objects to be achieved by the patented device. The other is the making of multiple designs and split-seam work.

As the pattern of the reinforcement or plait was to be wholly within a single area on the main fabric and did not extend to the selvage, Nusbaum used a single yarn guide instead of the two which were required in the Gotham attachment because the reinforcements were upon detached areas of the fabric. Hence his machine as set up could not do split-seam work or make double designs, which could only be knitted by employing a plurality of yarn guides with corresponding controls. But the use of the device for these different methods of knitting the secondary yarn involves but an obvious adaptation of the claimed combination to the particular work to be done. That may be accomplished by using the device exhibited by Nusbaum as well as that claimed by the patent, with the requisite number of controlled yarn guides in the case of multiple designs and with stops, both sides of which are used as carrier rod controls in the case of split-seam work. This addition of yarn guides and the varied use of the stops, even if invention, are not embraced in the claims before us.

[1] [2] The addition of the reversing mechanism, used by Nusbaum and previously used in the full-fashioned machine, to the elements exhibited by the Gotham, for the purpose of effecting variations in the throw of the secondary yarn carrier in precisely the manner in which the throw of the primary yarn carrier had been controlled in full-fashioned machines, was plainly not invention. The addition of a new and useful element to an old combination may be patentable; but the addition must be the result of invention rather than the mere exercise of the skill of the calling, and not one plainly indicated by the prior art. *Electric Cable Joint Co.* v. *Brooklyn Edison Co.*, 292 U. S. 69, 79, 80; *Altoona Publix Theatres, Inc.*, v. *American Tri-Ergon Corporation*, 294 U. S. 477, 486. The art of machine design in the knitting machine field is a highly developed one. The addition to the combination of the Gotham attachment of a means for automatically reversing the rotary threaded spindle to perform the very function it had performed in the full-fashioned knitting machine was not beyond the skill of the art and was plainly foreshadowed, if not completely anticipated, by Nusbaum.

The claims in suit do not embrace a train of mechanism of any particular type for the transmission of control from the power shaft to the pawls and so cannot rest on any differences between the train employed by Schletter and that of earlier devices. As the court below pointed out, if the patent is valid it is either because of the novelty of the conception of employing the Nusbaum device in an attachment for a full-fashioned machine, which Nusbaum had not done, or because of technical difficulties in executing that conception. If there were such difficulties, which could be overcome only by invention, Schletter did not show what they were or define such an invention by the claims before us. He did show in his specifications how to provide, by familiar mechanical means, for one necessary relationship of the attachment to the principal machine—the necessity that the threaded spindle remain stationary while the fashioning stops are moving. For this no invention is claimed, nor well could be in view of the state of the art.

[3] Petitioner relies on the novelty of conception reinforced by an alleged commercial success. Commercial success may be decisive where invention is in doubt, but an insuperable obstacle to the invocation of that doctrine here is our inability, like that of the court below, to say

"that an art which knew how to reinforce 'full-fashioned' webs without re-entrant angles, and straight edged webs with such angles, required some uncommon talent merely to conceive of combining the two, for, as we have said, the patent can only stand on the bare conception."

It is significant that the courts which, in *Textile Machine Works* v. *Alfred Hofmann, Inc.*, supra, found invention, supported by commercial success, pointed to the novelty not of this conception but of adding to the elements of the Gotham machine the automatic pattern controlled means for reversing the screw spindle. But neither court made mention of the Nusbaum machine which supplied that element. Upon the record before us we cannot say that the commercial success is attributable to novelty of the bare conception of the use of the attachment with full-fashioned knitting machines rather than to the skill with which the patentee devised mechanisms for making the attachment effective, but for which he made no claim, or to the strength of the hands into which the patent came. Compare *Paramount Publix Corporation* v. *American Tri-Ergon Corporation*, 192 U. S. 464, 474, with *Altoona Publix Theatres, Inc.*, v. *American Tri-Ergon Corporation*, supra, 487.

TRADE-MARKS

OFFICIAL GAZETTE, FEBRUARY 15, 1938

[VOL. 487. No. 3]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1

Raw or Partly Prepared Materials

Ser. No. 400,688. G. & A. LABORATORIES, INC., Savannah, Ga. Filed Dec. 10, 1937.

GALEX

For Resin.
Claims use since Oct. 4, 1937.

Ser. No. 400,756. RALPH RAYMOND EMLONG, doing business as Emlong's Nursery, Stevensville, Mich. Filed Dec. 13, 1937.

PRIDE-O-MICH

For Fruit Plants and Fruit Trees.
Claims use since 1936.

Ser. No. 400,899. BELL & ZOLLER COAL COMPANY, Chicago, Ill. Filed Dec. 16, 1937.

SUPER-X

For Coal.
Claims use since Sept. 1, 1937.

CLASS 2

Receptacles

Ser. No. 396,126. THE B. F. GOODRICH COMPANY, New York, N. Y., and Akron, Ohio. Filed Aug. 7, 1937.

For Rubber Lined Tanks, Containers Such as Pails, Boxes, Carboys, and Bottles Which are Made Entirely or in Part of Rubber and/or Synthetic Rubber Like Materials, and Battery Jars of Heat Plastic Materials, Such as Rubber, Bituminous, or Synthetic Rubber Like Materials.

For Kidney Pills.
Claims use since June, 1922.

Ser. No. 399,281. WALGREEN CO., Chicago, Ill. Filed Nov. 3, 1937.

Octine

For Medicine—Namely, Eye Wash and Eye Drops.
Claims use since July 5, 1929.

Ser. No. 399,344. DIARSENOL COMPANY, INCORPORATED, Buffalo, N. Y. Filed Nov. 5, 1937.

NEODIARSENOL

For Preparation of Arsenic Designed for the Treatment of Syphilis and Other Spirochetal Diseases.
Claims use since July 1, 1917.

Ser. No. 399,419. MEDICINAL RESEARCH LABORATORIES, Philadelphia, Pa. Filed Nov. 6, 1937.

TUSSILIXIR

For Preparation Used in the Treatment of Whooping Cough, Bronchitis, and Other Spasmodic Coughs.
Claims use since March, 1934.

Ser. No. 399,448. GIBBS & COMPANY, Chicago, Ill. Filed Nov. 8, 1937.

Maison Henri

For Eye-brow Pencils.
Claims use since Nov. 15, 1932.

Ser. No. 399,547. ARNOLD, HOFFMAN & CO. INCORPORATED, Providence, R. I. Filed Nov. 10, 1937.

AHCO

For Chemical Products for Use in Processing Textiles.
Claims use since April, 1928.

Ser. No. 399,548. ARNOLD, HOFFMAN & CO. INCORPORATED, Providence, R. I. Filed Nov. 10, 1937.

AHCOL

For Chemical Products for Use in Processing Textiles.
Claims use since Mar. 7, 1937.

Ser. No. 399,549. ARNOLD, HOFFMAN & CO. INCORPORATED, Providence, R. I. Filed Nov. 10, 1937.

R P G

For Chemical Products for Use in Processing Textiles.
Claims use since November, 1932.

Ser. No. 399,550. ARNOLD, HOFFMAN & CO. INCORPORATED, Providence, R. I. Filed Nov. 10, 1937.

SYNTHRAPOL

For Chemical Products for Use in Processing Textiles.
Claims use since November, 1934.

Ser. No. 399,551. ARNOLD, HOFFMAN & CO. INCORPORATED, Providence, R. I. Filed Nov. 10, 1937.

SYNTHAROL

For Chemical Products for Use in Processing Textiles.
Claims use since 1933.

Ser. No. 399,552. ARNOLD, HOFFMAN & CO. INCORPORATED, Providence, R. I. Filed Nov. 10, 1937.

SYNTHRAVON

For Chemical Products for Use in Processing Textiles.
Claims use since 1934.

Ser. No. 399,553. ARNOLD, HOFFMAN & CO. INCORPORATED, Providence, R. I. Filed Nov. 10, 1937.

TRAGTEX

For Chemical Products for Use in Processing Textiles.
Claims use since June 22, 1933.

Ser. No. 399,778. CLARENCE E. SHAW, Pittsburgh, Pa. Filed Nov. 15, 1937.

PATHOLAX

For Medicinal Compounds Intended for Internal Use and Having Laxative Properties.
Claims use since Oct. 28, 1937.

Ser. No. 399,782. SOY BEAN PROCESSING COMPANY, INC., Waterloo, Iowa. Filed Nov. 15, 1937.

SOY-O-SPRAY

The words "Soy" and "Spray" are disclaimed apart from the mark.
For Soy Bean Insecticides.
Claims use since Oct. 26, 1937.

Ser. No. 399,881. LUIS M. CABALLERO, Habana, Cuba. Filed Nov. 18, 1937.

MAX-NEZURIX

For Pharmaceutical Preparation Consisting of a Laxative and Alkaline Effervescent Compound.
Claims use since June 1, 1937.

Ser. No. 399,985. IODINE PRODUCTS CO., Philadelphia, Pa. Filed. Nov. 17, 1937.

NOVIDOL

For Iodine Compound for Use in the Nose.
Claims use since May, 1936.

Ser. No. 400,101. THE HARRIS LABORATORIES, INC., Tuckahoe, N. Y. Filed Nov. 24, 1937.

VITASOL

For Liquid Tonic Containing Vitamins.
Claims use since Mar. 28, 1937.

Ser. No. 400,157. GUSSIE FUNCHES, St. Louis, Mo. Filed Nov. 26, 1937.

The words "Hand Lotion" are disclaimed apart from the mark.
For Hand Lotion.
Claims use since 1929.

Ser. No. 400,228. FACE-O-LITE, INC., Lincoln, Nebr. Filed Nov. 29, 1937.

The representation of the label per se and the term "Lincoln, Nebr." are disclaimed apart from the mark. The representation of the female head is fanciful.
For Astringent.
Claims use since Oct. 20, 1937.

Ser. No. 401,539. ZENITH PRODUCTS COMPANY, Wellsville, Ohio. Filed Jan. 4, 1938.

Best In Show

For Conditioning Capsules for Dogs.
Claims use since Mar. 15, 1937.

CLASS 7

Cordage

Ser. No. 400,895. AMERICAN CHAIN & CABLE COMPANY, INC., Bridgeport, Conn. Filed Dec. 16, 1937.

GALACCO

For Wire Rope and Wire Strand.
Claims use since Nov. 20, 1937.

CLASS 12

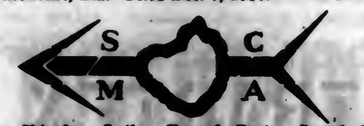
Construction Materials

Ser. No. 359,757. UNITED STATES GYPSUM COMPANY, Chicago, Ill. Filed Dec. 29, 1934.

USG

For Bituminous Roofing, Shingles, Waterproof Building Paper, Insulating and Building Paper, Sheathing Paper, Felt for Construction Purposes, Bituminous Emulsion, Bituminous Cement and Roof Coating, Building Board Composed of Pressed Vegetable Fibers, Fibrous Insulating Board, Acoustical Tile, Metallic Clips for Building Structures, Mortar, Sound and Vibration Insulating Mountings, Connections, and Floors, and Plaster Retarder.
Claims use since about 1920 as to retarder; since about 1924 as to building board composed of pressed vegetable fibers; since about 1930 as to mortar, sound, and vibration insulating mountings, connections, and floors; since about 1932 as to metallic clips, bituminous roofing, and shingles, insulating and building paper, waterproof paper, sheathing paper, bituminous emulsion, bituminous cement and roof coating, building paper, and felt; and since 1934 as to fibrous insulating board and acoustical tile.

Ser. No. 393,685. ASH GROVE LIME & PORTLAND CEMENT COMPANY, Kansas City, Mo. Filed June 5, 1937.



The words "Masonry Cement" are disclaimed apart from the mark. The drawing is lined for red and blue.
For Building Cement.
Claims use since November, 1927.

Ser. No. 400,516. JOHN M. MECK, New York, N. Y. Filed Dec. 6, 1937.

No claim is made to the words "Como" and "Window" and to the representation of the goods apart from the mark.
For Windows and Window Screens.
Claims use since Nov. 1, 1937.

Ser. No. 400,552. CUMMER SONS CYPRESS COMPANY, Jacksonville, Fla. Filed Dec. 7, 1937.

For Shingles, Laths, Turned Posts, Sawed Posts, Sawed Lumber, Planed Lumber, Sawed Timber, and Planed Timbers.
Claims use since May 1, 1936.

Ser. No. 400,843. MEDUSA PORTLAND CEMENT COMPANY, Cleveland, Ohio. Filed Dec. 14, 1937.

The words "High Early Strength" and "Cleveland, Ohio" are disclaimed apart from the mark.
For Portland Cement.
Claims use since Apr. 21, 1936.

CLASS 14

Metals and Metal Castings and Forgings

Ser. No. 401,207. THE CARPENTER STEEL COMPANY, Reading, Pa. Filed Dec. 24, 1937.

STAR-MAX

For Steel in Bars, Billets, and Shapes.
Claims use since Dec. 7, 1937.

CLASS 16

Paints and Painters' Materials

Ser. No. 396,073. THE B. F. GOODRICH COMPANY, New York, N. Y., and Akron, Ohio. Filed Aug. 6, 1937.

For Acid Seal Paint, Touch-Up Enamel, and Automobile Body Paint, Automobile Polish and Furniture Polish and Cleaner, Polishing Wax for Floors and Automobiles.
Claims use since May, 1930.

CLASS 19

Vehicles, Not Including Engines

Ser. No. 400,361. AMERICAN AUTOMATIC DEVICES CO., Chicago, Ill. Filed Dec. 2, 1937.

THE EXTENDED EYE

For Vehicle Rear View Mirrors.
Claims use since Nov. 24, 1937.

Ser. No. 400,412. THE GOODYEAR TIRE & RUBBER COMPANY, INC., Wilmington, Del., and Akron, Ohio. Filed Dec. 3, 1937.

HI-WAY PATROL

For Bicycles.
Claims use since Sept. 29, 1937.

Ser. No. 400,587. BOEING AIRCRAFT COMPANY, Seattle, Wash. Filed Dec. 8, 1937.

FLYING FORTRESS

For Airplanes and Structural Parts Thereof.
Claims use since Dec. 2, 1937.

Ser. No. 400,740. WINDSOR-LLOYD PRODUCTS, INC., Wilmington, Del. Filed Dec. 11, 1937.

FLYING Scot

For Bicycles.
Claims use since Oct. 1, 1937.

CLASS 21

Electrical Apparatus, Machines, and Supplies

Ser. No. 394,910. RECORD-O-TONE, INC., Los Angeles and Hollywood, Calif. Filed July 6, 1937.

RECORD-O-TONE

The words "Record" and "Tone" are disclaimed apart from the mark.
For Machines, Apparatus, and Parts for the Electrical Transmission and Reception of Pictures, and Machines, Apparatus, and Parts for Radio Alarm Equipment, and Machines, Apparatus, and Parts for Electrically Recording and Electrically Producing Sound.
Claims use since July 8, 1932.

Ser. No. 397,084. RCA MANUFACTURING COMPANY, INC., Camden and Harrison, N. J. Filed Sept. 3, 1937.

TELLITE

For Fluorescent Screens for Use in Cathode Ray Tubes.
Claims use since July 29, 1937.

Ser. No. 398,525. CHISHOLM-RYDER CO., INC., Niagara Falls, N. Y. Filed Oct. 15, 1937.

PREMAX

For Radio Aerial Equipment.
Claims use since Apr. 1, 1933.

Ser. No. 400,782. MICRO SWITCH CORPORATION, Freeport, Ill. Filed Dec. 13, 1937.

MOTOR-COP

For Overload and Overheat Protectors for Electric Motors and for Circuit Controlling Protectors for Electric Power Translating Devices in General.
Claims use since Mar. 1, 1937.

Ser. No. 400,918. NATIONAL ELECTRIC PRODUCTS CORPORATION, Pittsburgh, Pa. Filed Dec. 16, 1937.

>|<

For Insulated Electrical Conductor Wires.
Claims use since Oct. 8, 1937.

CLASS 22

Games, Toys, and Sporting Goods

Ser. No. 400,372. PHILIP N. HARDIN, doing business as H & H Sales Company, Fortville, Ind. Filed Dec. 2, 1937.

Star Headliner

For Ticket and Punch Board Games.
Claims use since Nov. 24, 1933.

Ser. No. 401,006. WILLIAM H. THOMAS, Pittsburgh, Pa. Filed Dec. 17, 1937.

ROLL-N-SPELL

For Educational Game Consisting of a Plurality of Cubes Upon Each Side of Which is Shown a Letter of the Alphabet, the Aim Being to Compose as Many Correct Words as Possible by Combining All or Certain Letters Appearing at the Top of the Cubes at Each Throw Thereof.
Claims use since Nov. 18, 1937.

Ser. No. 401,073. PARKER BROTHERS, INC., Portland, Maine, and Salem, Mass. Filed Dec. 20, 1937.

CROSSWORD ANAGRAMS

No claim is made to the word "Crossword" apart from the mark.
For Card Game.
Claims use since Dec. 1, 1937.

Ser. No. 401,511. KENNETH SMITH, Lenexa, Kans. Filed Jan. 3, 1938.

DARTWIN

For Golf Clubs and Parts Thereof.
Claims use since Nov. 27, 1937.

Ser. No. 401,620. RONZONE & LANGE, New York, N. Y. Filed Jan. 6, 1938.

SWING-IT

For Ring and Peg Game.
Claims use since Dec. 17, 1937.

CLASS 23

Cutlery, Machinery, and Tools, and Parts Thereof

Ser. No. 396,127. THE B. F. GOODRICH COMPANY, New York, N. Y., and Akron, Ohio. Filed Aug. 7, 1937.

For Paper Machine Rolls, Wringer Rolls, Typewriter Platens, Computing Machine Platens, Tabulating Machine Platens, Textile Machine Rolls and Spinning Cots, and Other Rubber Surfaced Rolls, Bolster Aprons or Dehairing Belts Used in the Leather Tanning Industry, Paper Machine Aprons, Rubber Shaft Bearings, and Universal Joint Discs of Fabric and/or Rubber.
Claims use since February, 1926.

Ser. No. 399,454. MICROMATIC HONE CORPORATION, Detroit, Mich. Filed Nov. 8, 1937.

HYDROHONE

For Hone Machine for Grinding Cylinder Walls.
Claims use since Sept. 23, 1937.

Ser. No. 400,708. UTILITY INSTRUMENT COMPANY, Cranford, N. J. Filed Dec. 10, 1937.

Shav-O-Matic

For Electric Razors.
Claims use since Nov. 24, 1937.

Ser. No. 400,906. THE DORR COMPANY, INC., New York, N. Y. Filed Dec. 16, 1937.

BIOFILTER

For Apparatus for the Treatment of Solids Suspended in Liquids in Sewage and Trade-Waste Systems Such as Trickling Filters, Thickeners, and Clarifiers and/or Digesters.
Claims use since Nov. 20, 1937.

Ser. No. 400,907. THE DORR COMPANY, INC., New York, N. Y. Filed Dec. 16, 1937.

BIOROBIC

For Apparatus for the Treatment of Solids Suspended in Liquids in Sewage and Trade-Waste Systems Such as Trickling Filters, Thickeners, and Clarifiers and/or Digesters.
Claims use since Nov. 20, 1937.

Ser. No. 400,930. THE DORR COMPANY, INC., New York, N. Y. Filed Dec. 17, 1937.

CLARIGESTER

For Apparatus for the Treatment of Solids Suspended in Liquids in Sewage Systems Such as Thickeners and Clarifiers and/or Digesters.
Claims use since Nov. 15, 1937.

CLASS 24

Laundry Appliances and Machines

Ser. No. 400,852. WALTER D. PATTON, doing business as Patton Products Company, Los Angeles, Calif. Filed Dec. 14, 1937.

AUTOCRAT

For Dry Cleaning Machinery.
Claims use since June 1, 1932.

Ser. No. 401,204. THE AMERICAN LAUNDRY MACHINERY COMPANY, Cincinnati, Ohio. Filed Dec. 24, 1937.

ZARMOETTE

For Pressing Machines.
Claims use since May 14, 1937.

Ser. No. 401,656. THE FEDERAL WASHBOARD COMPANY, Chicago, Ill. Filed Jan. 7, 1938.

No 40

For Wash-Boards.
Claims use since Sept. 15, 1926.

Ser. No. 401,657. THE FEDERAL WASHBOARD COMPANY, Chicago, Ill. Filed Jan. 7, 1938.

No 60

For Wash-Boards.
Claims use since Sept. 15, 1926.

Ser. No. 401,658. THE FEDERAL WASHBOARD COMPANY, Chicago, Ill. Filed Jan. 7, 1938.

No. 70

For Wash-Boards.
Claims use since May 1, 1917.

Ser. No. 401,659. THE FEDERAL WASHBOARD COMPANY, Chicago, Ill. Filed Jan. 7, 1938.

No. 72

For Wash-Boards.
Claims use since May 1, 1917.

Ser. No. 401,660. THE FEDERAL WASHBOARD COMPANY, Chicago, Ill. Filed Jan. 7, 1938.

No 80

For Wash-Boards.
Claims use since Sept. 15, 1926.

Ser. No. 401,661. THE FEDERAL WASHBOARD COMPANY, Chicago, Ill. Filed Jan. 7, 1938.

No 85

For Wash-Boards.
Claims use since Sept. 15, 1926.

Ser. No. 401,674. NATIONAL WASHBOARD COMPANY, Chicago, Ill. Filed Jan. 7, 1938.

No 50

For Wash-Boards.
Claims use since October, 1934.

CLASS 26

Measuring and Scientific Appliances

Ser. No. 400,786. NATIONAL BROACH & MACHINE CO., Detroit, Mich. Filed Dec. 13, 1937.

The drawing is lined for red.
For Gauges and Machines for Sound Testing Gears.
Claims use since Apr. 26, 1924.

CLASS 28

Jewelry and Precious-Metal Ware

Ser. No. 401,110. THE GRADUATE SCHOOL OF BANKING, New York, N. Y. Filed Dec. 21, 1937.

For Badges, Pendants, Emblems, and Buttons, Consisting Wholly or Partly of Precious Metal.
Claims use since Jan. 20, 1935.

CLASS 32

Furniture and Upholstery

Ser. No. 386,136. WELLS HISTORICAL MUSEUM, Southbridge, Mass. Filed Nov. 30, 1936.

For Antique and Reproductions of Antique Household Furniture, Including Beds, Chairs, Tables, Chests of Drawers, Stools, Desks, Sideboards, Stands, Sofas, and Picture and Mirror Frames.
Claims use since Nov. 16, 1936.

CLASS 33

Glassware

Ser. No. 398,743. UNITED STATES GLASS COMPANY, Pittsburgh, Pa. Filed Oct. 20, 1937.

The drawing is lined for blue and gold.
For Glass Articles—Namely, Plates, Trays, Jars, Jugs, Boxes, Decanters, Pitchers, Bowls, Bottles, Platters, Vases, Footed Pieces, Holders, Salt Shakers, Tumblers, Tubs, Compotes, Cups, Saucers, Lids, Covers, Goblets, Stemware, Boats, Coasters, Caster and Drinking Sets, and Bar Ware.
Claims use since Oct. 11, 1937.

Claims use since Nov. 16, 1936.

TRADE-MARK REGISTRATIONS RENEWED

119,967. WHEAT-FLOUR. Registered December 25, 1917. LAWRENCEBURG ROLLER MILLS CO., Lawrenceburg, Ind., a corporation of Indiana. Renewed December 25, 1937.

120,087. SOAP. Registered January 8, 1918. THE N. K. FAIRBANK COMPANY, Union Township, near Guttenberg, N. J., and Chicago, Ill. Renewed January 8, 1938, to Hecker Products Corporation, New York, N. Y., a corporation of New Jersey, assignee.

120,088. A SCOURING COMPOUND. Registered January 8, 1918. THE N. K. FAIRBANK COMPANY, Union Township, near Guttenberg, N. J., and Chicago, Ill. Renewed January 8, 1938, to Hecker Products Corporation, New York, N. Y., a corporation of New Jersey, assignee.

120,105. BURNERS AND WICKS FOR STOVES, FURNACES, AND RANGES. Registered January 8, 1918. THE HUSSEFELD COMPANY, Cincinnati, Ohio, a corporation of Ohio. Renewed January 8, 1938.

120,317. INSULATED WIRE. Registered February 5, 1918. ATLANTIC INSULATED WIRE & CABLE COMPANY, Jersey City, N. J., and New York, N. Y. Renewed February 5, 1938, to General Cable Corporation, New York, N. Y., a corporation of New Jersey, assignee by mesne assignments.

120,318. INSULATED WIRE. Registered February 5, 1918. ATLANTIC INSULATED WIRE & CABLE COMPANY, Jersey City, N. J., and New York, N. Y. Renewed February 5, 1938, to General Cable Corporation, New York, N. Y., a corporation of New Jersey, assignee by mesne assignments.

120,344. HOSIERY. Registered February 5, 1918. CHAS. CHIPMAN'S SONS CO., INC., New York, N. Y., a corporation of New York. Renewed February 5, 1938.

120,438. CERTAIN NAMED WIRELESS APPARATUS. Registered February 5, 1918. SEARS, ROEBUCK AND CO., Chicago, Ill., a corporation of New York. Renewed February 5, 1938.

120,716. CANNED FRUITS AND CANNED VEGETABLES, DRIED FRUITS, AND RAISINS. Registered March 5, 1918. CALIFORNIA PACKING CORPORATION, San Francisco, Calif., a corporation of New York. Renewed March 5, 1938.

120,831. CANNED FISH. Registered March 12, 1918. CALIFORNIA PACKING CORPORATION, San Francisco, Calif., a corporation of New York. Renewed March 12, 1938.

121,406. HOSIERY. Registered April 30, 1918. CHIPMAN KNITTING MILLS, Easton, Pa. Renewed April 30, 1938, to Chipman Knitting Mills, Spring Grove, Easton, Pa., a corporation of Pennsylvania.

121,699. CANNED SALMON. Registered May 21, 1918. CALIFORNIA PACKING CORPORATION, San Francisco, Calif., a corporation of New York. Renewed May 21, 1938.

121,700. CANNED FRUITS AND CANNED VEGETABLES. Registered May 21, 1918. CALIFORNIA PACKING CORPORATION, San Francisco, Calif., a corporation of New York. Renewed May 21, 1938.

121,743. CANDY BREATH-DEODORIZERS. Registered May 28, 1918. AMERICAN CHICLE COMPANY, New York, N. Y. Renewed May 28, 1938, to American Chicle Company, Long Island City, N. Y., a corporation of New Jersey.

121,745. VULCANIZED FIBER. Registered May 28, 1918. AMERICAN VULCANIZED FIBRE COMPANY. Renewed May 28, 1938, to National Vulcanized Fibre Co., Wilmington, Del., a corporation of Delaware, assignee.

121,758. HOSIERY. Registered May 28, 1918. CHIPMAN KNITTING MILLS, Easton and Selinsgrove, Pa. Renewed May 28, 1938, to Chipman Knitting Mills, Spring Grove, Easton, Pa., a corporation of Pennsylvania.

121,813. COTTON PIECE GOODS. Registered May 28, 1918. PACIFIC MILLS, Lawrence and Boston, Mass. Renewed May 28, 1938, to Pacific Mills, Boston, Mass., a corporation of Massachusetts.

121,818. SALTED PEANUTS AND PEANUT BARS. Registered May 28, 1918. PLANTERS NUT & CHOCOLATE CO., Wilkes-Barre, Pa. Renewed May 28, 1938, to Planters Nut & Chocolate Company, Wilkes-Barre, Pa., and Suffolk, Va., a corporation of Pennsylvania.

121,900. LEATHER-DRESSINGS, LEATHER-SEASONINGS, LEATHER-FILLERS, AND LEATHER-VARNISH. Registered June 11, 1918. INNIS, SPEIDEN & CO., INC. Renewed June 11, 1938, to Innis, Speiden & Co., New York, N. Y., a corporation of Delaware, assignee.

122,068. POPCORN. Registered June 25, 1918. CHARLES CRETORS. Renewed June 25, 1938, to Hazael D. Cretors, Chicago, Ill., assignee by mesne assignments.

122,101. COTTON PIECE GOODS. Registered June 25, 1918. PACIFIC MILLS, Lawrence and Boston, Mass. Renewed June 25, 1938, to Pacific Mills, Boston, Mass., a corporation of Massachusetts.

LABELS

REGISTERED FEBRUARY 15, 1938

50,719.—*Title:* GENERAL CAPS. For Caps for Bottles and Jars. GENERAL CAN COMPANY, Chicago, Ill. Published December 13, 1937.

50,720.—*Title:* CODURAL. For Unguentum. HART DRUG CORPORATION, Miami, Fla. Published January 5, 1938.

50,721.—*Title:* ALLANTUREA. For Unguentum. HART DRUG CORPORATION, Miami, Fla. Published January 5, 1938.

50,722.—*Title:* HERSHEY'S MILK THE PUREST KIND. For Skimmed Powdered Milk. HERSHEY CREAMERY COMPANY, Harrisburg, Pa. Published August 5, 1937.

50,723.—*Title:* KENTUCKY BULK. For Straight Bourbon Whiskey. KENTUCKY BULK COMPANY, INC., doing business as Kentucky Bulk Co., Chicago, Ill. Published October 15, 1937.

50,724.—*Title:* ZEPHYR DE LUXE. For Brooms. H. E. LINDSTROM, doing business as Acme Broom Company, Sedalia, Mo. Published October 7, 1937.

50,725.—*Title:* LIPTON PURE IMPERIAL GUNPOWDER TEA (GREEN AND BLACK). For Pure Imperial Gunpowder Tea. THOMAS J. LIPTON, INC., Hoboken, N. J., Chicago, Ill., and San Francisco, Calif. Published October 1, 1937.

50,726.—*Title:* AIR-VENT BOWL COVER. For Water Proof Silk Covers for Food Bowls. ARNO REINHOLD, doing business as Reinhold Company, Cleveland, Ohio. Published December 1, 1937.

50,727.—*Title:* AIR-VENT BOWL COVERS. For Water Proof Silk Covers for Food Bowls. ARNO REINHOLD, doing business as Reinhold Company, Cleveland, Ohio. Published December 1, 1937.

50,728.—*Title:* AIR-VENT BOWL COVER. For Water Proof Silk Covers for Food Bowls. ARNO REINHOLD, doing business as Reinhold Company, Cleveland, Ohio. Published December 1, 1937.

50,729.—*Title:* BREAKFAST FOOD BOX COVERS. For Water Proof Silk Covers for Food Boxes. ARNO REINHOLD, doing business as Reinhold Company, Cleveland, Ohio. Published December 1, 1937.

50,730.—*Title:* BOTTLE COVERS. For Water Proof Silk Covers for Bottles. ARNO REINHOLD, doing business as Reinhold Company, Cleveland, Ohio. Published December 1, 1937.

50,731.—*Title:* MILK BOTTLE COVERS. For Water Proof Silk Covers for Milk Bottles. ARNO REINHOLD, doing business as Reinhold Company, Cleveland, Ohio. Published December 1, 1937.

50,732.—*Title:* AIR-VENT BOWL COVERS. For Water Proof Silk Covers for Food Bowls. ARNO REINHOLD, doing business as Reinhold Company, Cleveland, Ohio. Published December 1, 1937.

50,733.—*Title:* AIR-VENT BOWL COVER. For Water Proof Silk Covers for Food Bowls. ARNO REINHOLD, doing business as Reinhold Company, Cleveland, Ohio. Published December 1, 1937.

50,734.—*Title:* WRIGLEY'S DOUBLE MINT. For Chewing Gum. WM. WRIGLEY JR. COMPANY, Chicago, Ill. Published December 29, 1937.

PRINTS

REGISTERED FEBRUARY 15, 1938

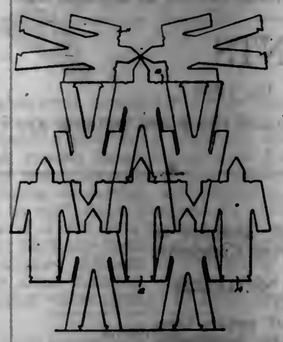
16,692.—*Title:* GENUINE 6 x 3 RIBBED SOCKS. For Socks. INTERWOVEN STOCKING COMPANY, New Brunswick, N. J. Published November 3, 1937.

16,693.—*Title:* HE RUNS THE UNION PACIFIC WITH THE PEN THAT HAS WHAT IT TAKES. For Fountain Pens, Mechanical Pencils, and Ink. THE PARKER PEN COMPANY, Janesville, Wis. Published January 15, 1938.

16,694.—*Title:* YANKEE LAMPS AND SPECIALTIES. For Directional Signals. YANKEE METAL PRODUCTS CORP., Norwalk, Conn. Published December 6, 1937.

16,695.—*Title:* YANKEE LAMPS AND SPECIALTIES. For Door Mirrors. YANKEE METAL PRODUCTS CORP., Norwalk, Conn. Published December 6, 1937.

REISSUES



FEBRUARY 15, 1938

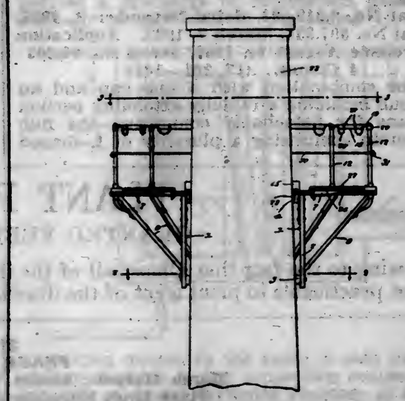
20,652
BLOCK TOY

Clinton J. Hecht, Los Angeles, Calif., assignor to Lane Rhodes and William H. Hammer, both of Santa Monica, Calif.

Original No. 2,076,709, dated April 27, 1937, Serial No. 63,262, February 10, 1936. Application for reissue October 9, 1937, Serial No. 168,297

23 Claims. (Cl. 46—115)

1. A toy comprising a plurality of identically shaped blocks of substantial thickness representing a human form, adapted for being assembled edgewise upon each other in a vertical plane, to form various groups in stable equilibrium; said blocks having head and neck portions extending perpendicularly from the shoulder portions, and notches extending transversely across the shoulder portions at a distance from the neck approximately equal to half the width of the neck; the blocks having central pointed head extremities, and other sharp transversely extending corners for engaging said notches of similar blocks; and the blocks being adapted for mutual peripheral engagement to cooperatively maintain group equilibrium while in positions suggesting instability, through opposing gravitational moments by non-vertical force moments.



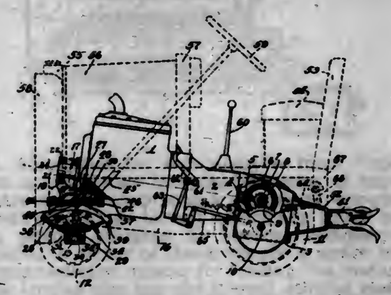
20,653
SCAFFOLD

Clyde K. Lamb, Cleveland, Ohio, assignor to The Safety Scaffold Corporation, Cleveland, Ohio, a corporation of Ohio

Original No. 2,066,984, dated January 5, 1937, Serial No. 747,941, October 11, 1934. Renewed August 18, 1936. Application for reissue April 29, 1937, Serial No. 139,724

7 Claims. (Cl. 304—13)

1. In a scaffold of the character described, a plurality of floor board supporting brackets adapted to be mounted on the structure upon which work is to be done, posts rising vertically from said brackets, and guard rail sections connecting adjacent posts, each guard rail section including a pair of telescoping members, each member being provided at one end with a hinged leaf secured to a post, a flexible element secured at one end to the leaf equipped end of each element, and a frame member secured to the free end of the flexible element and embracing the



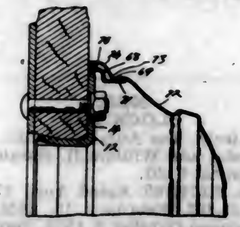
telescoping members of the sections for retaining said members in assembled relation.

20,654
GASOLINE TRACTOR

William Schroeder, Chicago, Ill., assignor to The Mercury Manufacturing Company, Chicago, Ill., a corporation of Illinois

Original No. 2,015,911, dated October 1, 1935, Serial No. 746,354, October 1, 1934. Application for reissue June 17, 1937, Serial No. 148,760

8 Claims. (Cl. 180—27)



1. A tractor including a backbone comprising a unit construction consisting of an engine, transmission and rear axle assembly connected together for straight line drive; a front steering wheel structure; a horizontally disposed ring gear connected to said wheel structure for turning it; a mounting for said ring gear; said mounting carrying a substantially vertically disposed ring of compressible, resilient material such as rubber or rubber composition; a pivot member carried by the front of said backbone and entered in said ring and thereby supported for limited vertical and also rotative movement; the arrangement constituting a cushion support for the front end

of said backbone and enabling swivel movement of the front wheel with respect to the backbone about said pivot member as a center.

20,655
VEHICLE WHEEL CONSTRUCTION
Charles W. Sinclair, Detroit, Mich., assignor, by mesne assignments, to The Kelsey-Hayes Wheel Company, Detroit, Mich., a corporation of Delaware
Original No. 2,019,584, dated November 5, 1935, Serial No. 597,334, March 7, 1932. Application for reissue August 15, 1936, Serial No. 96,203
4 Claims. (Cl. 301—108)

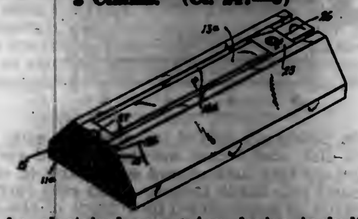
3. The combination with a hub cap and an outer hub including a radially extending portion of means for detachably connecting the hub cap thereto comprising a plurality of L-shaped retention devices having one of their legs connected to the said radially extending portion and their other legs extending axially outwardly

therefrom, the outer extremity of each of said retention devices being deformed to engage cooperative means carried by the hub cap.

PLANT PATENTS

GRANTED FEBRUARY 15, 1938

Owing to the fact that almost all of the illustrations of the plant patents are in colors, it is not practicable to print a cut of the drawing.



271
PEACH TREE
Marsh Harpole, Mount Vernon, Ill., assignor to Stark Bro's Nurseries and Orchards Company, Louisiana, Mo.
Application May 20, 1937, Serial No. 143,828
1 Claim. (Cl. 47—62)

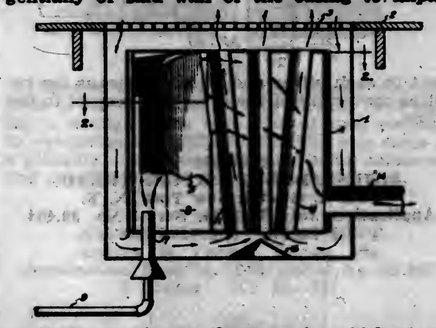
The new and distinct variety of peach tree, characterized by its extraordinary hardiness, vigorous growth, and late season of ripening, substantially as described.

PATENTS

GRANTED FEBRUARY 15, 1938

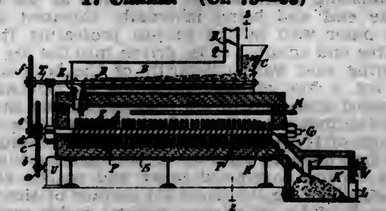
2,106,681
ELECTRICAL CONNECTING DEVICE
Henry Cecil Acuff, Knoxville, Tenn.
Application January 6, 1937, Serial No. 119,177
3 Claims. (Cl. 247—3)

1. An electrical connector device including a one piece elongated member consisting of a flexible composition insulating material, said member having spaced longitudinal slots for receiving at any point therealong the contact prongs of an electrical connector, and electrical conductor wires in said slots disposed to contact said prongs, each of the slots having a lateral groove therein for partially receiving its conductor wire, and a U-shaped element of insulating material having its arms inserted into the slots to press the conductor wires inward of their grooves.



2,106,682
LOCKING DEVICE
Roy O. Allen, Athens, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a corporation of New Jersey
Application March 18, 1937, Serial No. 131,712
1 Claim. (Cl. 151—6)

In a locking device, the combination of an inner member and an outer member threaded thereon, an arcuate groove in the thread of the inner member, an unsecured spring clip freely embracing a portion of the outer member, an aperture in the outer member, an arcuate hump shaped to conform with the arcuate groove formed by the spring clip and extending through said aperture into the arcuate groove to normally lock the members against relative rotation, surfaces defining the aperture on the outer member to lift the hump out of the groove upon relative rotary movement between the members, and an annular spring groove on the outer member to prevent movement of the spring clip longitudinally of the outer member.

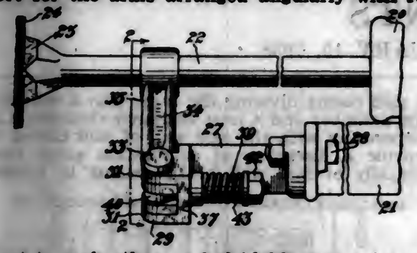


2,106,683
HOT AIR FURNACE
Barclay B. W. Cooper, Oklahoma City, Okla.
Application October 10, 1936, Serial No. 105,633
3 Claims. (Cl. 126—109)

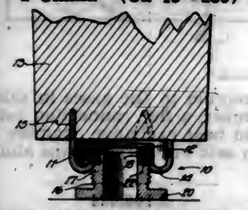
1. In a hot air furnace, a housing, a casing positioned within said housing in spaced relation therewith to form an air heating passage, means in said casing dividing the same into a combustion chamber and a heat exchange chamber and cooperating with the side wall of said casing to provide a discharge of combustion gases tangentially of said wall of the casing to impart

a whirling motion to the gases in said heat exchange chamber, a flue connection communicating with said heat exchange chamber at a point spaced from said discharge means along the axis of whirling.

2,106,684
APPARATUS FOR SWEATING OUT FUSIBLE METALS
William F. Eppensteiner, Rahway, N. J., assignor to The American Metal Company, Limited, New York, N. Y., a corporation of New York
Application April 30, 1934, Serial No. 723,062
17 Claims. (Cl. 75—63)



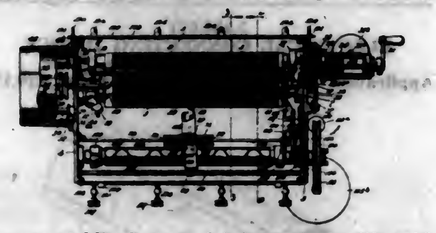
1. Apparatus for separating a more fusible from a less fusible material by means of superheated steam, comprising a stationary elongated sweating chamber having a normally closed bottom portion adapted to support comminuted material, a source of steam supply, a steam inlet to said chamber, means for feeding the material to be treated into one end thereof, stirring means therein for agitating and propelling the material, and an outlet for discharging the residual material from the opposite end thereof, with means for discharging the fused-out substance accumulating in the bottom of the chamber.



2,106,685
CENTRALIZER FOR DRILL STEELS
George H. Fuehrer, Phillipsburg, and George W. Hulshizer, Stewartsville, N. J., assignors to Ingersoll-Rand Company, Jersey City, N. J., a corporation of New Jersey
Application May 3, 1937, Serial No. 141,394
7 Claims. (Cl. 255—45)

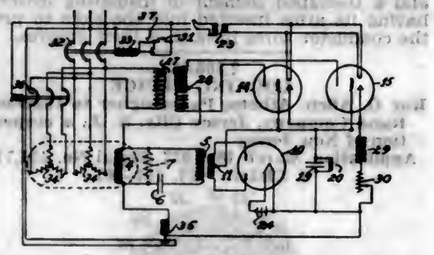
1. A centralizer for drill steels, comprising a

support, a pair of guide arms, pivots in the support for the arms arranged angularly with respect to each other, and yieldable means for resisting movement of the arms with respect to the pivots.



2,108,036
ADJUSTABLE FURNITURE TREAD
Paul A. Gowell, New York, N. Y.
Application July 9, 1935, Serial No. 30,454
1 Claim. (Cl. 45—139)

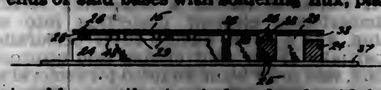
A supporting foot for furniture legs comprising a body member including inner and outer spaced cylindrical walls integrally connected at one end, said connection presenting a curved bottom wall sloping from said outer wall inwardly toward said inner wall, said inner wall terminating short of said outer wall at the opposite end and being internally threaded and said outer wall having prongs projecting from its free end adapted to be driven into the leg for securing said walls outwardly of the bottom of the leg, a foot member including an externally threaded stem threadedly engaged in said inner wall for movement toward and away from the bottom of the leg, a flange on the outer end of said foot member forming an enlarged base, said stem having a reduced inner end spaced concentrically from the threaded surface of the inner wall, and a cylindrical resilient gasket snugly fitted on said reduced inner end of the stem for movement therewith, said gasket projecting beyond the inner end of the stem and having frictional engagement with both the stem and the threads of said inner wall to retain the stem in threadedly adjusted position in the body.



2,108,037
RECORDER
Carl H. Au, Washington, D. C.
Application April 7, 1933, Serial No. 664,992
4 Claims. (Cl. 234—71)

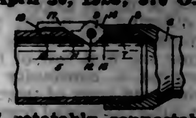
1. In a recorder having means for supporting and operating a record sheet, the combination of a carriage movable transversely across said sheet, a stylograph carried by the carriage and contacting with said sheet for producing a record line thereon, a control drum for reciprocating said carriage, means associated with the control drum for reversing the movement of the carriage while said control drum is moving in the same direction, means for rotating said control drum responsive to the changes in a variable movement to be recorded, a second stylograph contacting with and producing a record line on said sheet, a control disk operatively connected to said drum and driven in synchronism therewith, means for supporting said last-named stylograph including

an arm yieldingly moved into contact with said control disk, and a cam member on said control disk for shifting said second stylograph to offset the record line made thereby when said carriage is reversed by a continued movement of the control drum in the same direction.



2,108,038
SYNCHRONIZING ALTERNATING CURRENT MOTOR
Joseph Arthur Balmford, East Orange, N. J.
Application November 14, 1933, Serial No. 697,918
6 Claims. (Cl. 171—116)

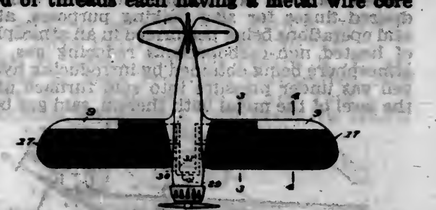
1. In an alternating current motor control system, a power source, a motor having a field winding and a plurality of armature windings, means for supplying power to said field winding only at periods when said motor is running in substantial synchronism, connecting means operating irrespective of frequency associated with the field circuit of said motor for maintaining the circuit between said power source and one of said armature windings only while said motor is operating at substantially synchronous speed.



2,108,039
PRINTING PLATE UNIT
Gilbert A. Betts, Buffalo, N. Y., assignor to The Universal Engraving & Colorplate Company, Incorporated, Buffalo, N. Y.
Application March 11, 1937, Serial No. 130,281
11 Claims. (Cl. 101—401.2)

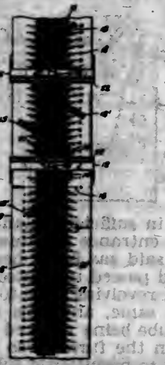
1. The method of forming a printing plate unit with a printing character accurately located thereon, with which said units may be assembled in any desired order without spacing or with standard spacing and the characters thereon will register to exact predetermined positions in printing, which comprises mounting a plurality of characters of which printing plate units are desired on a copy plate in a predetermined, accurately spaced arrangement, providing a plurality of register marks on said copy plate having a predetermined and accurate location with respect to the characters mounted on said plate, preparing a photo-engraving on metal of said copy plate accurately to scale, providing a plurality of apertures of standard predetermined sizes in a mounting block, and in the same relative location with respect to one another as the characters on said photo-engraving providing projecting pins on a face of said block in accurate correspondence to said register marks on said photo-engraving, drilling holes in said photo-engraving at said register marks to snugly receive said pins, inserting in said apertures, metal bases of standard, accurate sizes and of greater length than the thickness of said block, treating the rear face of said photo-engraving and the corresponding ends of said bases with soldering flux, placing

sheet solder on the treated ends of said bases, placing said photo-engraving over said block and said treated ends of said bases with said pins received in said drilled holes, inverting this assembly and resting it with the photo-engraving face downwardly on a suitable surface, heating said photo-engraving and bases until the sheet solder between the bases and the photo-engraving becomes fluid, then simultaneously cooling the same and pressing said bases and said engraving together so as to solder said bases to said engraving, removing said photo-engraving with attached bases from said block, cutting said engraving between said bases to form individual printing units, decreasing the lateral dimensions of the engraving section on each unit until that section is at least as small as, and within the lateral limits of, the base to which it is attached.



2,108,040
LATCH
William R. Bischdorn, Hartford, Conn., and Forrest K. Howard, East Falls Church, Va.
Application March 15, 1937, Serial No. 130,964
2 Claims. (Cl. 285—146)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

2. A pair of rotatably connectable members, one of said members being a latch-supporting member and the other an engaged member having a curved serrated face, spaced lugs on the latch-supporting member, a pin passing through the lugs and offset with respect to the engaged member, a latch disposed between the lugs and mounted on the pin, a short arm on the latch having a curved serrated face for engaging the complementary face of the engaged member, and a long actuating arm on the latch.

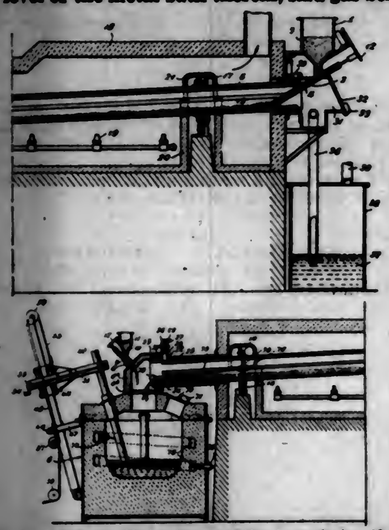


2,108,041
AEROPLANE
William Colvin, Jr., Troy, N. Y.; Ella F. Colvin and Ruth E. Sharpe, executrices of said William Colvin, Jr., deceased, assignors to Paul Gayne, New York, N. Y.
Application August 21, 1934, Serial No. 740,334
5 Claims. (C. 244—124)

1. In an aeroplane, a wing including a frame and a covering therefor formed of a continuous piece of woven fabric folded longitudinally upon itself and connected along its longitudinal edge portions by a flexible lacing, said fabric having a substantial portion of the warp thereof composed of threads each having a metal wire core

enclosed in wrappings of textile thread, and portions of the weft composed of threads each having a strengthening wire core of steel enclosed in wrappings of textile thread, the wire cores of a plurality of said warp threads being connected and constituting an electrical heating unit.

2,108,042
NAVIGATIONAL INSTRUMENT
Andrew W. Comrie, Miami, Fla.
Application June 24, 1936, Serial No. 87,087
3 Claims. (Cl. 33—60)



1. A navigating instrument comprising a panel, a chart located on said panel and including scale denoting meridians of longitude and selected parallels of latitude, a carriage slidably mounted on the panel and traversing a face of the latter on which the chart is located, an arm pivotally connected to each side edge of said carriage with the pivots in alinement with one another and each arm having a scale denoting miles and course-denoting positions whereby a person having knowledge of the number of miles traveled from a point of departure may, by selecting the proper arm and moving it along its respective zero line until the pivot thereof registers with the parallel of latitude left and adjusting the said last-named arm for the course sailed, determine at sight the latitude arrived at and the difference in longitude.

2,108,043
PROCESS FOR MAKING STEEL AND IRON ALLOYS
Donald M. Crist, San Francisco, Calif., assignor to Titanium Steel Alloy Company, a corporation of Delaware
Application September 21, 1934, Serial No. 744,393
5 Claims. (Cl. 75—10)

1. The method of producing substantially carbon-free metals or alloys which consists in passing the finely divided ores or concentrates of said

metals or alloys continuously through a revolving tube, discharging the reduced and partially reduced material into the melting chamber of an electric furnace and melting said material into a molten bath in said furnace together with the desired fluxes for slag making purposes, all of said operations being performed in an atmosphere of heated non-carbonaceous reducing gas, said atmosphere being obtained by introducing hydrogen gas under pressure into said furnace above the level of the metal bath therein, said gas being

introduced in sufficient quantity to substantially exclude the entrance of atmospheric air into the apparatus, said gas being heated in said electric furnace and passed in heated condition over the ores in said revolving tube to reduce or partially reduce the same, any ores not reduced in the revolving tube being reduced by the reducing atmosphere in the furnace so as to generate sufficient heat to maintain a substantially balanced condition between the amount of reduction taking place in the reaction chamber and the amount of reduction taking place in the furnace.

2,108,044
PLASTIC MATERIALS AND TO METHODS OF PRODUCTION THEREOF

John William Croom Crawford and James McGrath, Ardrossan, Scotland, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain

No Drawing. Application March 23, 1935, Serial No. 12,728. In Great Britain October 25, 1933

15 Claims. (Cl. 260—2)

1. A process for the preparation of methacrylic acid ester polymers in granular form which comprises dispersing and polymerizing while thus dispersed a monomeric methacrylic acid ester in a non-solvent therefor by means of a dispersing agent and stirring, the concentration of the dispersing agent being not substantially greater than an amount sufficient to maintain the ester in the dispersed phase while stirring is continued, and, to prevent coalescence of the dispersed particles during polymerization, the quantity of dispersing agent also being insufficient to give a permanently dispersed product.

2,108,045
CONTAINER

William S. Dirlam, Portland, Oreg., assignor to American Can Company, New York, N. Y., a corporation of New Jersey

Application February 6, 1937, Serial No. 124,477

4 Claims. (Cl. 221—63)

1. A container having a dispensing opening, an imperforate element projecting into said opening, and a cover having sifter perforations for partially or for fully closing said dispensing opening, said cover being adapted for removal and replacement into different positions within said dispensing opening, in one such position said sifter perforations being in sealing engagement with said imperforate element and with the perforations blocked off and the dispensing opening fully closed and in another position with said sifter perforations free of said imperforate element and providing communication with the interior of said container.

2,108,046
PILE FABRIC AND METHOD OF MAKING THE SAME

Albert W. Drobile, Wayne, Pa., assignor to Collins & Aikman Corporation, Philadelphia, Pa., a corporation of Delaware

Application September 1, 1934, Serial No. 742,396

12 Claims. (Cl. 139—397)

1. A pile fabric having a repeat including in sequence a row of uncut loops, a second row of uncut loops differing in height from the first row and forming a continuity of the pile warp threads forming the first row of loops, a row of cut tufts forming a continuity of pile warp threads forming said rows of uncut loops, a pair of rows of cut tufts connected together by bights, a further row of cut tufts, and a row of uncut loops forming a continuity of the pile warp threads forming said last named row of cut tufts.

2,108,047
NONTARNISH ALLOY

Birger Egeberg, Meriden, Conn., and Roy W. Tindula, Buffalo, N. Y., assignors to International Silver Company, Meriden, Conn., a corporation of New Jersey

No Drawing. Original application December 24, 1934, Serial No. 759,053. Divided and this application April 20, 1937, Serial No. 137,913

14 Claims. (Cl. 75—171)

1. An alloy containing nickel, chromium, copper, manganese and iron in the approximate proportions of 4 to 20% chromium, 36 to 70% nickel, 2 to 18% manganese, 1.5 to 18% zinc, 1 to 10% iron and the balance copper, not less than 5%, with traces of other elements including a small trace of carbon.

2,108,048
ALLOY

Birger Egeberg, Meriden, Conn., and Roy W. Tindula, Buffalo, N. Y., assignors to International Silver Company, Meriden, Conn., a corporation of New Jersey

No Drawing. Original application December 24, 1934, Serial No. 759,053. Divided and this application April 20, 1937, Serial No. 137,913

14 Claims. (Cl. 75—171)

1. An alloy containing nickel, chromium, copper, and iron in the approximate proportions of 4 to 20% chromium, 36 to 70% nickel, 2 to 18% zinc, 1 to 10% iron and the balance copper, not less than 5%, with traces of other elements including a small trace of carbon.

2,108,049
NONTARNISH ALLOYS

Birger Egeberg, Meriden, Conn., and Roy W. Tindula, Buffalo, N. Y., assignors to International Silver Company, Meriden, Conn., a corporation of New Jersey

No Drawing. Original application December 24, 1934, Serial No. 759,053. Divided and this application April 20, 1937, Serial No. 137,914

13 Claims. (Cl. 75—171)

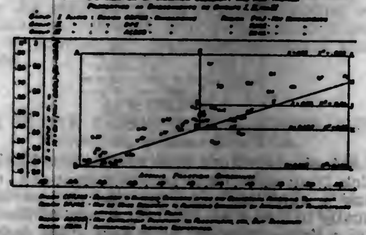
1. An alloy containing nickel, chromium, copper, manganese and iron in the approximate proportions of 4 to 20% chromium, 36 to 70% nickel, 2 to 18% manganese, 2 to 18% zinc, and the balance copper, not less than 5%, with traces of other elements including a small trace of carbon.

2,108,050
ALLOYS

Birger Egeberg, Meriden, Conn., and Roy W. Tindula, Buffalo, N. Y., assignors to International Silver Company, Meriden, Conn., a corporation of New Jersey

No Drawing. Original application December 24, 1934, Serial No. 759,053. Divided and this application April 20, 1937, Serial No. 137,915

10 Claims. (Cl. 75—171)



1. An alloy containing nickel, chromium, zinc and copper in the approximate proportions of 4 to 20% chromium, 36 to 70% nickel, 2 to 18% zinc, and the balance copper, not less than 5%, with traces of other elements including a small trace of carbon.

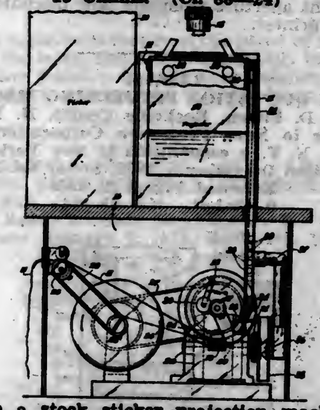
2,108,051
NONTARNISH ALLOY

Birger Egeberg and Roy W. Tindula, Meriden, Conn., assignors to International Silver Company, Meriden, Conn., a corporation of New Jersey

Application December 24, 1934, Serial No. 759,053

11 Claims. (Cl. 75—171)

3. An alloy containing nickel, chromium, copper, manganese and iron in the approximate proportions of 4 to 20% chromium, 36 to 70% nickel, 2 to 18% manganese, 1 to 10% iron and the balance copper, not less than 5%, with traces of other elements including a small trace of carbon.



2,108,052
INK DRYING MEANS FOR STOCK QUOTATION PROJECTING MACHINES

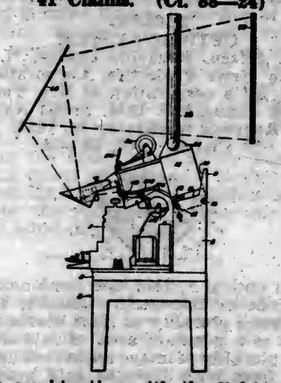
August D. Eitzen, Rockville Centre, N. Y., assignor to News Projection Corporation, New York, N. Y., a corporation of New York

Application September 4, 1929, Serial No. 390,372

Renewed May 27, 1933

13 Claims. (Cl. 88—24)

1. In a stock sticker projection machine, a ticker adapted to produce inked impressions on a tape prior to its discharge from said ticker, a projecting device, an inspection area, a tape-pulling mechanism for drawing the tape to said inspection area through said device as it is discharged by said ticker, and means for drying the inked impressions on the tape during its passage to the tape-pulling mechanism after the tape leaves said device and before it passes to said tape pulling mechanism.



2,108,053
BROAD TAPE PROJECTOR

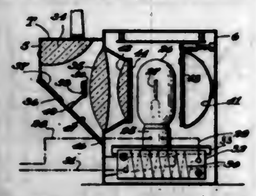
August D. Eitzen, Rockville Centre, N. Y., assignor to News Projection Corporation, New York, N. Y., a corporation of New York

Application October 15, 1930, Serial No. 488,724

Renewed October 10, 1936

41 Claims. (Cl. 88—24)

1. The combination with the light aperture of a projecting machine of a broad tape, a printer



for printing a plurality of lines of printed matter on said tape and including means for feeding the tape a line space at a time upwardly out of the printer after the completion of each line of printed matter, said light aperture being disposed directly above said printer at the tape discharge end of said printer, a condensing lens being disposed adjacent to said light aperture with a segment cut from the lower side of effective focusing area of said lens to clear said printer and yet permit location of the light aperture directly above the printer at the tape discharge end thereof, and means for drawing the tape through said light aperture from the tape discharge end of said printer.

2,106,054

STOCK QUOTATION PROJECTING MACHINE

August D. Eitsen, Rockville Centre, N. Y., assignor to News Projection Corporation, New York, N. Y., a corporation of New York

Application December 5, 1933, Serial No. 700,959
Renewed August 22, 1936
9 Claims. (Cl. 88—24)

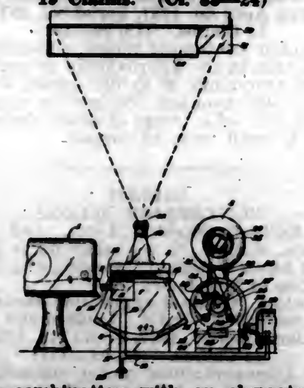
1. The combination with an electric lamp, of a projecting screen, a light aperture for receiving marked tape or the like, means for directing the light rays from said lamp through the marked tape at the light aperture to produce an image impressed light beam, a resistance interposed in the lamp circuit in series with the lamp to overcome the rush of the current through the filament of the lamp, a wire frame mounted between said light aperture and said lamp, and a green colored screen supported by said frame and thereby interposed between the light rays and the tape substantially to absorb the infra red radiation and the like thereby to reduce the heat rays to a minimum before the light beam passes through the tape in turn to protect the tape at the light aperture from injury by such heat rays.

2,106,055

OPTICAL SYSTEM

August D. Eitsen, Rockville Centre, N. Y., assignor to News Projection Corporation, New York, N. Y., a corporation of New York

Application January 2, 1934, Serial No. 704,847
Renewed September 19, 1936
20 Claims. (Cl. 88—24)



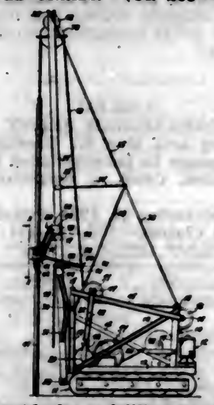
1. In an optical system, the combination with a translucent or transparent master, of means for directing a plurality of light beams at opposite faces of a common area of said master to produce a plurality of image impressed light cones emerging from both faces of said master, and screens for receiving the image impressed light cones so produced.

2,106,056

NEWS PROJECTING MACHINE

August D. Eitsen, Rockville Centre, N. Y., assignor to News Projection Corporation, New York, N. Y., a corporation of New York

Application March 15, 1934, Serial No. 715,588
Renewed April 3, 1937
19 Claims. (Cl. 88—24)



1. The combination with an elongated light aperture for receiving marked tape, a source of light, and means including a mirror longer than and spaced from said light aperture, having an arcuate surface concentric to the axis thereof and disposed in longitudinal alinement with the path of travel of the tape for receiving the light rays from said source of light and directing them through the tape at said light aperture, the axial length of which mirror is shorter than the arcuate length thereof.

2,106,057

TOOL GUIDE FOR DRILLING MACHINES

John A. Elmes, Beaver Falls, Pa., assignor to Keystone Driller Company, Beaver Falls, Pa., a corporation of Pennsylvania

Application January 13, 1937, Serial No. 120,422
11 Claims. (Cl. 255—1)

1. A tool guide for a drilling machine having a derrick from which the tool is suspended, comprising a guide member for said tool arranged vertically in line with the major axis of the machine, a link connected with said guide member and derrick by pivots extending transversely relative to said major axis whereby said guide member is at all times disposed vertically in line with the major axis of the machine and means for holding said tool guide at different distances from said derrick.

2,106,058

ROCK DRILLING MECHANISM

Elmer G. Gartin, Claremont, N. H., assignor to Sullivan Machinery Company, a corporation of Massachusetts

Application January 4, 1936, Serial No. 57,563
25 Claims. (Cl. 121—9)

1. In a rock drilling mechanism, a support presenting a guideway, a rock drill guided for movement along said support guideway, a feeding motor for feeding the rock drill along the support guideway, and a feeding motor for moving said first mentioned feeding motor and rock drill into adjusted position with respect to the work prior to the feeding operation of said first mentioned feeding motor, said feeding motors having motive medium supply-controlling means including means for limiting motive medium delivery to one of the same exclusively.

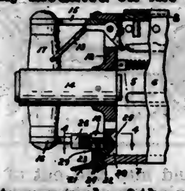
2,106,059

FRICTIONAL MOTION CONTROLLING ELEMENT

Rudolph W. Glasner, Chicago, Ill.

Application October 30, 1935, Serial No. 47,442
5 Claims. (Cl. 188—72)

1. In combination, a frictional motion controlling element, a lining carrying element with which the first said element cooperates, said lining carrying element being of sectional construction, a lining section carried by and disposed within the confines of the edges of each of the first said sections, and means for separably securing the sections of said element together with the adjacent edges of proximate sections separated to provide air circulation passages therebetween.



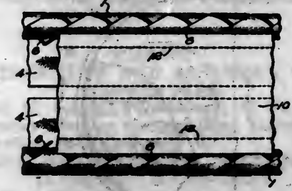
2,106,060

BACK PLATE LATCH FOR MACHINE GUNS

Samuel G. Green, Gray, Ga.

Application December 9, 1936, Serial No. 114,972
2 Claims. (Cl. 89—1)
(Granted under the act of March 2, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a machine gun, a receiver, a back plate slidably mounted in the receiver by a lowering movement, a bar on the lower part of the back plate, a latch pivotally carried by the back plate underneath the bar and arranged to engage the receiver to hold the back plate in place, a spring between the bar and latch, a channeled locking member pivotally mounted on the bar and movable in a plane transversely of the plane of movement of the latch, and a spring normally holding the locking member in embracing relation with the bar and in engagement with the latch.



2,106,061

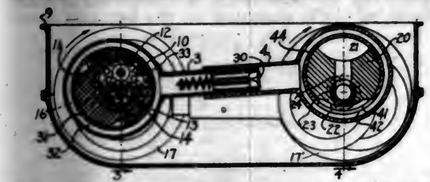
ORNAMENTAL WELTING AND ARTICLE HAVING SUCH WELTING INCORPORATED THEREIN

Roger W. Hale, Rumford, R. I.

Application January 7, 1937, Serial No. 119,468
3 Claims. (Cl. 2—278)

1. As an article of manufacture and sale complete in itself, an ornamental welting having a substantially cylindrical member of braid-like superficial appearance and character with facets having obliquely arranged margins, the surface of said member being substantially wholly exposed when said welting is in its completed condition as a welting, said welting being adapted to be used in the making of other, but ultimate, articles of manufacture utilizing a welting, and said braid-like cylindrical member thereof adapted when said welting is incorporated into such ultimate article to be substantially wholly exposed to view as an ornamental portion of said ultimate article, said cylindrical braid-like member being of indefinite but prolonged length; said welting having as a second member thereof a binding of a length corresponding to that of the said cylindrical braid-like member, said binding being applied to said cylindrical braid-like member only along a relatively narrow longitudinal line of contact of both said members, said two members being secured together by a longitudinally extending line of stitching penetrating the binding and also penetrating the braid substantially along margins of such facets adjacent said binding, so that said line of stitching is to a substantial extent obscured by the superficial appearance of said cylindrical braid-like member.

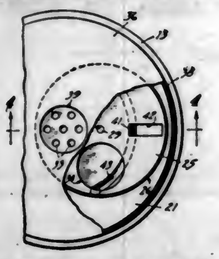
2,106,062



VARIABLE TRANSMISSION

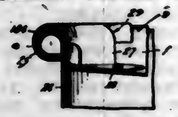
Edwin S. Hall, New Haven, Conn.

Application July 7, 1933, Serial No. 679,281
23 Claims. (Cl. 74—113)



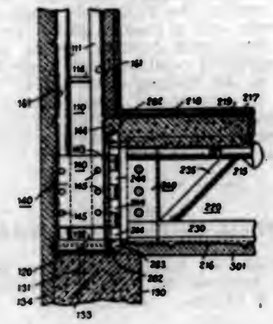
1. Means for transmitting power between spaced parallel shafts comprising a series of units each including a connecting rod comprising a piston and cylinder, a crank on each of

said shafts and for each unit and operably connected to said connecting rod, and valve means associated with one of said cranks for controlling



the flow of fluid into and out of said cylinders, and a check valve operably associated with each cylinder to permit fluid to flow into but not out of said cylinder.

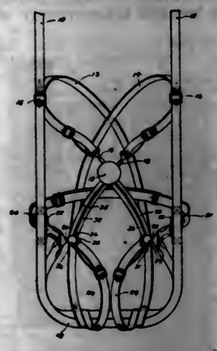
2,108,063
CONTAINER
John M. Hothersall, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a corporation of New Jersey
Application April 11, 1935, Serial No. 15,872
4 Claims. (Cl. 221—64)



1. A dispensing top for a container having in combination, a stationary top adapted to be attached to a container and having a depressed circular pocket, a dispensing opening formed in and eccentric to said pocket, a disc seated in said pocket and rotatable therein and having sifting openings and a closing portion and a slot extending radially toward the periphery of said disc, and an outer closure rotatably mounted on said top and formed with a dispensing opening in line with the path of said sifting openings and closing portion of said disc and having a depending finger engaging the slot of the disc, the outer end of said radial slot constituting means for limiting the rotary movement imparted by said outer closure through said finger to said disk in both directions to open and close said dispensing opening.

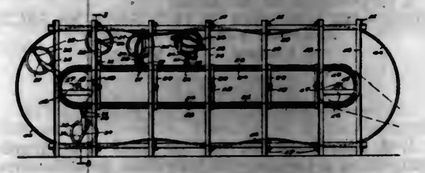
2,108,064
METHOD OF MAKING CONTAINER CLOSURES
John M. Hothersall, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a corporation of New Jersey
Application June 29, 1934, Serial No. 733,147
9 Claims. (Cl. 113—121)

1. The method of producing a multipart closure for containers from a one-piece blank without spoilage or waste, which comprises shaping the blank into a cup member having two concentric walls, cutting between the said concentric walls and dividing said cup member into an outer ring and an inner cover part, and reshaping said ring by drawing a portion thereof into a smaller diameter to produce an annular sealing band, and securing said band to the wall of said inner cover part to form a closure applicable as a unit to a container.



2,108,065
BUILDING CONSTRUCTION AND STRUCTURAL ELEMENT THEREFOR
Guy F. Kotrbaty, New York, N. Y., assignor to Fer-O-Con Corporation, New York, N. Y., a corporation of Delaware
Application April 5, 1935, Serial No. 14,808
6 Claims. (Cl. 72—1)

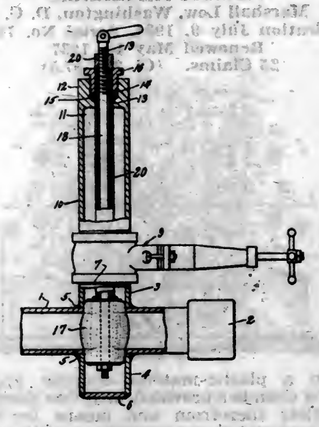
1. An improved steel skeleton for building constructions, comprising channel members having gripping flanges formed at the top edge, composite stud members in the channels, said channels serving as aligning channels and supports for the shoe sections of composite stud members, the shoes being movable longitudinally of the channels whereby to permit variation of the interstud wall space; means for locking stud assemblies in and to the starting and aligning channel; wall panel securing and gripping sections formed in the outer surfaces of the composite stud members; connection plates secured to the stud members at floor heights; floor members secured to the connection plates, roof rafters joined to the tops of stud members and connected to each other at the ridge of the structure, attic flooring suspended from and secured to and between the ridge rafters; the said flooring members and roof rafter members being generally of truss-form construction.



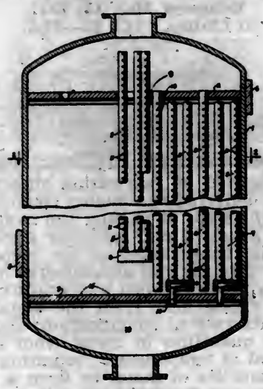
2,108,066
PARACHUTE HARNESS
Stig Ove Christian Kuhlemann, Stockholm, Sweden, assignor to Carl H. Lundholm Aktiebolag, Stockholm, Sweden, a corporation of Sweden
Application August 15, 1936, Serial No. 96,282
In Sweden August 23, 1935
10 Claims. (Cl. 244—151)

1. In a parachute supporting device, the combination of a body encircling strap having at least one of its ends for placement at the front of the wearer, a pair of leg straps, a separate device releasably connecting each of said leg straps to part of the supporting device so as to hold said leg straps in taut lateral position, and a fastening device releasably fastening the end of the body encircling strap which is placed at the front of the wearer and adapted to control

the release of said leg strap holding devices, whereby upon release of said release fastening device the end of the body encircling strap is disconnected and the leg strap holding devices released so as to permit the wearer to free himself from the supporting device without releasing any other couplings.



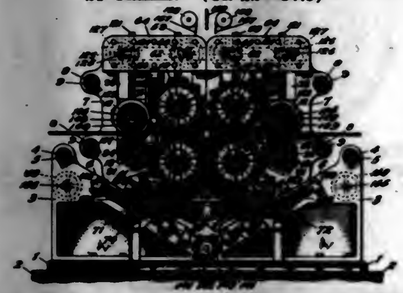
2,108,067
MACHINE FOR MOLDING CHOCOLATE ARTICLES AND THE LIKE
David Lantinberg and Leon D. Lantinberg, Brooklyn, N. Y., assignors to N. D. Q. Specialty Corporation, Brooklyn, N. Y., a corporation of New York
Application December 28, 1934, Serial No. 759,584
11 Claims. (Cl. 107—8)



1. In a casting apparatus, a main track, a sinuous track arranged in substantially concentric relation to the main track, a mold carrier supported on one of said tracks and having a rolling element engaging the other track, said mold carrier including a mold carrying frame around which said rolling element extends and which rolling element engages said sinuous track.

2,108,068
PRESSURE CONTROL FITTING
Timothy Allan Larry, Los Angeles, Calif.
Application October 15, 1934, Serial No. 748,257
11 Claims. (Cl. 138—92)

1. In a device as described, a hollow valve housing having a cylindrical inside surface, one end being closed and the other end open, the housing having lateral openings for pipes entering through the cylindrical surface, the said surface extending below and above the said openings, the opening opposite the closed end being adapted for the insertion of an expansible cylindrical valve.

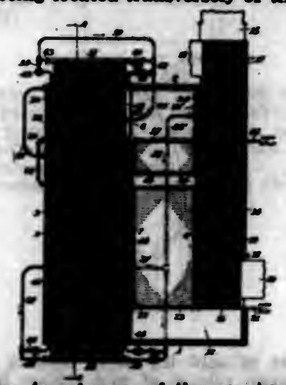


2,108,069
STRUCTURE AND ASSEMBLY OF CONVERTERS
Raymond C. Lassiat, Woodbury, N. J., assignor to Houdry Process Corporation, Dover, Del., a corporation of Delaware
Application October 23, 1935, Serial No. 46,354
13 Claims. (Cl. 23—288)

1. Apparatus for treating fluids which comprises a casing providing a reaction chamber and a manifolding chamber adjacent one end of said reaction chamber and separated from the latter by a partition member having perforations or openings therein, a plurality of conduits arranged in substantial parallelism within said reaction chamber, and a number of fluid ducts extending through said openings in said partition, each connecting a plurality of said conduits with said manifolding chamber, so that the number of openings through said partition member is substantially less than the number of said conduits which communicate with said manifolding chamber therethrough.

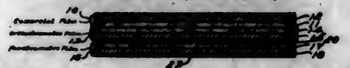
2,108,070
METHOD OF AND APPARATUS FOR SHAPING PLASTIC MATERIALS
Marshall Low, Washington, D. C.
Application July 9, 1934, Serial No. 734,348
Renewed May 13, 1937
25 Claims. (Cl. 22—57.5)

14. In a plastic-material-shaping apparatus having a chamber provided with two sheet forming outlets therefrom and means for feeding plastic material in segregated quantities successively to said chamber and thence through said outlets; a pair of rotatable rolls provided with a plurality of circumferentially arranged longitudinally extending elevations and depressions, said rolls forming two walls of said chamber, a wall of each of said outlets and portions of said feeding means.



2,108,071
METHOD OF AND APPARATUS FOR SHAPING PLASTIC MATERIALS
Marshall Low, Washington, D. C.
Application July 9, 1934, Serial No. 734,349
Renewed May 13, 1937
31 Claims. (Cl. 22—57.5)

1. The method of fabricating sheets or bars from metal delivered in a molten condition which comprises the steps of passing the molten metal through a series of non-oxidizing atmospheres; reducing the temperature of the metal during its passage through said atmospheres in accordance with a predetermined temperature gradient to extract excess heat from the metal and to accelerate its rate of solidification; successively segregating quantities of metal from the metal thus reduced in temperature; reuniting the segregated quantities of metal to form a homogeneous mass; and finally shaping the metal into sheet or bar form when the same attains a sufficiently plastic condition and while it is still hot from its original heat.



2,108,072
STEAM GENERATOR
Charles E. Lucke, New York, N. Y., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a corporation of New Jersey
Application February 27, 1931, Serial No. 518,623
Renewed July 1, 1936
4 Claims. (Cl. 122—235)

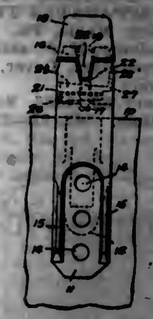
1. In combination, a forced flow vapor generator including a furnace receiving and radiantly burning elements of combustion, a gas passage having a 180° gas turning zone connecting the same with said furnace, a fluid passage comprising groups of tubes with the tubes of each group in parallel and one of said groups having parallel lengths disposed along the walls of the furnace, said groups successively connected for serial progression of the fluid therethrough from liquid entrance to vapor outlet, one of said groups being located transversely of the furnace

wall tubes in advance of the gas turning zone and across the path of the gases to form a radiant heat shield for another of said groups across the gas passage beyond the gas turning zone, the said last two mentioned groups being spaced marginal to the turning zone to provide therein an unoccupied chamber whereby the gases passing through the first of the last two mentioned groups are enabled to become evenly distributed throughout the area of the succeeding group crossing the gas passage.

2,108,073
COLOR FILM PACK
Archibald H. MacDonald, Detroit, Mich., assignor to The Coleray Corporation, Detroit, Mich., a corporation of Michigan
Application September 28, 1933, Serial No. 691,331
Renewed February 12, 1937
6 Claims. (Cl. 95—2)

1. A film pack for use in color photography comprising a commercial type film, an orthochromatic film, and a panchromatic film, a color filter formed of thin cellulose tissue interposed between said orthochromatic film and said panchromatic film, the said films and the said filter being fully enclosed in a covering formed of a thin, transparent cellulose tissue.

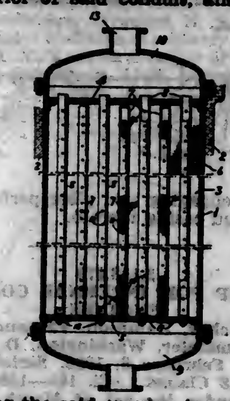
2,108,074
SPECTACLES
Edward F. McMahon, Clinton, Md.
Application October 26, 1935, Serial No. 46,866
4 Claims. (Cl. 88—41)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. Spectacles comprising a pair of lenses, a pair of vertically spaced bridge members connecting said lenses, a screw element carried by one of said bridge members, and a nut element carried by the other of said bridge members for

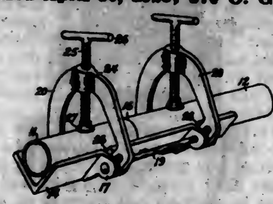
threaded engagement with said screw element, said elements being relatively rotatable to vary

the spacing of said bridge members and hence the distance between said lenses.



2,108,075
DIPPER TOOTH
George W. Mock, South Milwaukee, Wis., assignor to Bucyrus-Erie Company, South Milwaukee, Wis., a corporation of Delaware
Application May 20, 1936, Serial No. 80,639
2 Claims. (Cl. 37—142)

2. In a tip for an excavator tooth, the combination of: a digging edge; a supported portion, adapted to engage the supporting portion of a tooth base; and a rearwardly projecting tang, adapted to engage a slot on the tooth base, and having itself a transversely cut longitudinally disposed slot, which slot has at its rearward end a pair of flat rearward bearing faces forwardly inclined at substantially the same angle to the direction of application of the tang and adapted to engage corresponding faces on a locking wedge.

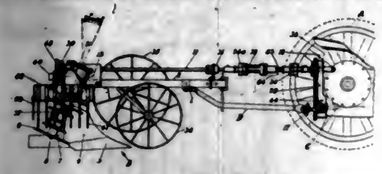


2,108,076
APPARATUS FOR TREATING FLUIDS
Thomas B. Prickett, Woodbury, N. J., assignor to Hendry Process Corporation, Dover, Del., a corporation of Delaware
Application December 2, 1935, Serial No. 52,692
12 Claims. (Cl. 23—288)

12. In apparatus for treating fluids, a casing providing a reaction chamber bounded at one end by a partition member having an opening therethrough, contact or catalytic material within said chamber and substantially filling the same, a perforated conduit in registering relation with the opening in said partition member and extending across and within said reaction chamber and terminating adjacent the opposite end of said reaction chamber to be embedded in said contact material, there being an opening in said conduit adjacent said opposite end of said reaction chamber, a stud-like member extending through the aforementioned opening in said partition member and having means adjacent one end thereof for detachably engaging said conduit and at the other end thereof for engagement with the face of said partition member opposite from said reaction chamber, said stud-like member having an opening extending therethrough to give access to the interior of said conduit, and removable

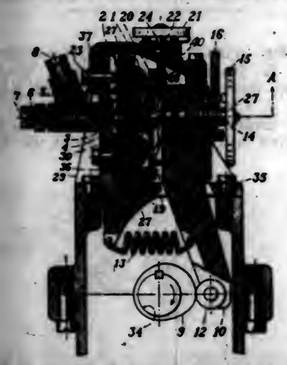
means sealing the said opening in said stud-like member.

2,108,077
PIPE JOINT WELDING CLAMP
Van K. Robinson, Bremerton, Wash.
Application December 2, 1935, Serial No. 52,516
3 Claims. (Cl. 113—102)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A clamp for securing a plurality of pipe sections in fixed relative position comprising angle iron means provided with angularly disposed contact surfaces adapted to engage a pipe section at points spaced on its periphery and also spaced along the length of the pipe and means for securing the pipe section on the angle iron means comprising a pair of spaced apart yokes having inturned ends, one inturned end of each yoke having a hinge slot therein and a common hinge pin means secured to the side of the angle irons the other inturned end of each yoke being extendible under said angle iron means to abut thereagainst in secured position.

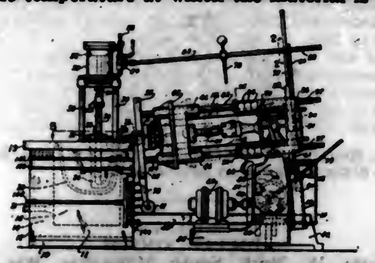
2,108,078
ROTARY ATTACHMENT FOR TRACTOR PLOWS
Thomas K. Russell, New York, N. Y., assignor to The Plow-Wake Corporation, a corporation of Delaware
Application August 8, 1933, Serial No. 684,150
Renewed April 29, 1937
37 Claims. (Cl. 97—43)



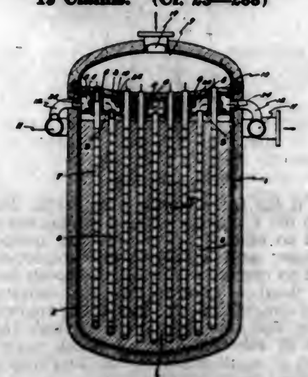
1. In an attachment for plows adapted to be drawn and operated by a motor tractor comprising a revoluble soil pulverizing unit adapted to be mounted on the plow beam and comprising a gear casing, the combination, with said above described apparatus, of a substantially flat, perforated, vertically-disposed bracket plate bolted to said plow beam with its face more remote from

said beam exposed and adapted to fit against a plane surface on the exterior of said gear-casing,

and means engaging said plate perforations for fastening said casing thereto.



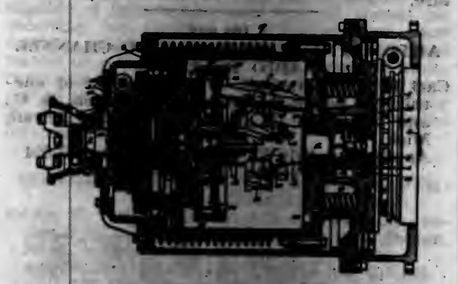
2,106,679
FUEL PUMP FOR INTERNAL COMBUSTION ENGINES
Oscar W. Schey, Hampton, Va., and George T. Hemmeter, Washington, D. C.
Application February 8, 1936, Serial No. 63,008
18 Claims. (Cl. 103—150)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In a pump of the class described, in combination, a housing, a diaphragm secured to the housing forming a chamber jointly with the housing, an intake passage and an outlet passage leading to a common port in the housing in communication with the chamber, check valves in the respective passages, an adjustable actuating means for deflecting the diaphragm to close the port, and means for regulating the initial volume of the chamber.

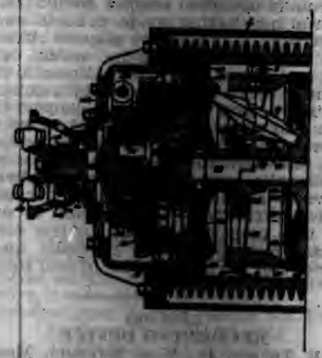
2,106,680
METHOD FOR CASTING METALS
John A. Schultz, Jr., and John A. Zapf, Toledo, Ohio; Mary T. Schultz, executrix of the estate of said Schultz, deceased, assignors to Schultz Machine Company, Toledo, Ohio
Application March 19, 1934, Serial No. 716,248
2 Claims. (Cl. 22—200)

2. The method of making castings from zinc-base material which comprises maintaining the material to be injected into a die at substantially a temperature ranging from slightly above the melting point to ten per cent higher than the material melting point; injecting said material into the die at a pressure per square inch of not less than one thousand three hundred pounds, and not greater than the order of two thousand pounds; and maintaining the rate of heat radiation of the die so as to provide a substantially uniform temperature at the die surface in contact with the material not to exceed sixty per cent of the temperature at which the material is injected, the temperatures being determined according to Fahrenheit scale.



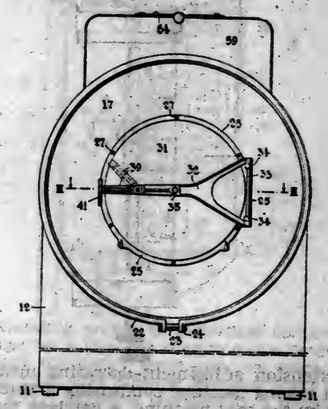
2,106,681
TEMPERATURE CONTROL OF CONTACT MASSES AND APPARATUS THEREFOR
Hubert A. Shabaker, Media, Pa., and Raymond C. Lassiat, Woodbury, N. J., assignors to Houdry Process Corporation, Dover, Del., a corporation of Delaware
Application January 30, 1935, Serial No. 4,020
19 Claims. (Cl. 23—288)

1. In apparatus for effecting treatment of fluids, a casing, a perforated partition therein defining a manifolding chamber at one end thereof, a second perforated partition in spaced relation to said first partition to define a second manifolding chamber in contiguity with said first manifolding chamber and one end of a reaction chamber, a contact mass in said reaction chamber, a series of perforated fluid conduits mounted in the perforations of said first partition and extending into said reaction chamber to be embedded in said mass for distributing reactant fluids therethrough, and a series of perforated fluid conduits mounted in the perforations of said second partition and extending into said reaction chamber to be embedded in said mass for conducting fluid reaction products from said mass into said second manifolding chamber to form an insulating blanket of fluid between said mass and said first manifolding chamber.



2,106,683
TRANSMISSION MECHANISM
John S. Sharpe, Haverford, Pa.
Application July 20, 1936, Serial No. 91,001
10 Claims. (Cl. 74—231)

1. In a planetary rolling-adhesion transmission mechanism, the combination with a rotary member, of a planetary torque-transmitting roller having tractive contact with said member, and centrifugal means including an actuating weight

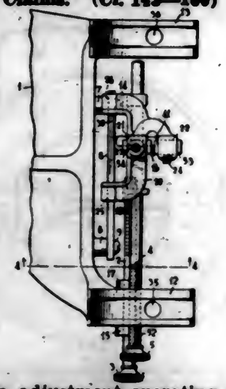


movably mounted in said member for exerting a force upon the roller in opposition to the gyroscopic forces generated in said roller as a result of the planetary movement.

2,106,682
TRANSMISSION MECHANISM
John S. Sharpe, Haverford, Pa.
Application August 25, 1934, Serial No. 741,468
24 Claims. (Cl. 74—235)

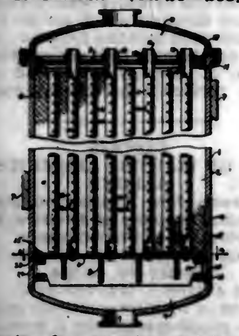
1. A transmission comprising interconnected planetary systems mounted for joint rotation as a unit with the elements of each system in relatively fixed relation, one of said systems being of the geared or positive type and the other being of the rolling adhesion or friction type, a driven member connected to the first-named system, a driving member connected to the planetary element of the second-named system, means for relatively adjusting said planetary element in its system to vary the torque ratio of the driving and driven members, said planetary element in a given adjusted position effecting a balance of forces tending to rotate the systems in said unitary relation, and means for controlling the movement of an element of each of said systems for transmission of power between the driving and driven members when said planetary element is in another position of adjustment, said means comprising an overrunning clutch device effective to prevent rotation of said controlled element in one direction while permitting free rotation thereof in the opposite direction, and means associated with said clutch for permitting a limited rotation of said element in the first-named direction.

2,106,684
DRYING APPARATUS
William Strobridge, Syracuse, N. Y., assignor to United States Hoffman Machinery Corporation, New York, N. Y., a corporation of Delaware
Application January 4, 1937, Serial No. 119,629
9 Claims. (Cl. 34—5)



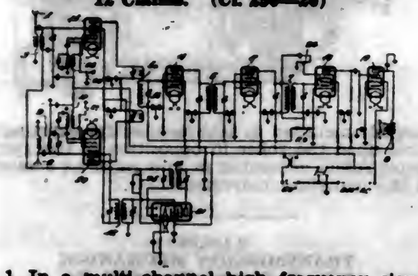
1. A drying apparatus, comprising a casing; a hollow drying cylinder rotatably mounted within said casing, said cylinder comprising a perforate peripheral wall and two end walls, one of said walls being imperforate and the other of said end walls having a circular opening formed centrally therein, the adjacent wall of the casing likewise having a circular opening therein in axial alignment with the circular opening formed in the end wall aforesaid; a closure for the opening in the casing; means for sealing the cylinder adjacent the last named end wall with reference to the casing to prevent the passage of air between said parts at this point; an annular flange carried by the casing and extending inwardly into the central opening in the adjacent end wall of the cylinder, the outer peripheral face of said flange standing in spaced relation to the edge of the opening in the cylinder wall, forming therewith an orifice through which air may be drawn in an axial direction into the cylinder; and means for drawing air through said orifice into the central portion of the cylinder and outwardly through the perforate peripheral wall thereof.

2,106,685
METHOD OF MAKING ALUMINUM BASE ALLOYS
Philip T. Stroup, New Kensington, Pa., assignor to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application January 9, 1936, Serial No. 58,344
8 Claims. (Cl. 75—138)



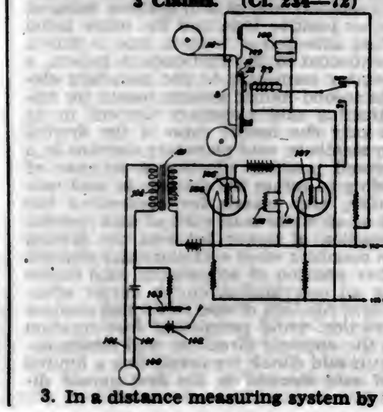
1. A method of making relatively gas-free aluminum base alloys containing a metal which in its form prior to being added to the said alloy is able to acquire an oxide film capable of sorbing an appreciable amount of gas and moisture when exposed to the atmosphere, said method comprising coating said oxidizable metal with at least one of the class of poly-chlorinated hydrocarbons which are normally solid at room temperature, and adding said coated metal to the molten aluminum.

2,108,026
EXTENSION CONTROL MEANS FOR TOOL GUIDES
Herbert E. Tanis, Milwaukee, Wis., assignor to Delta Manufacturing Company, Milwaukee, Wis.
Application May 27, 1935, Serial No. 23,759
4 Claims. (Cl. 143—160)



1. Extension adjustment-operating means for a band sawing machine comprising a track supported by the said machine, a carriage mounted movably on said track, a saw-blade lateral guide member supported by said carriage, forwardly extending means for moving the carriage along said track, a thrust-receiving rear guide member for the saw-blade, and independent forwardly extending means for moving said second guide member in a direction parallel to the movement of the carriage but independently thereof.

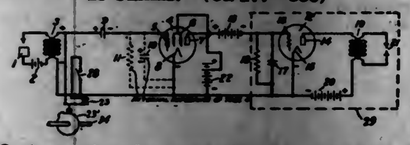
2,108,027
APPARATUS FOR CONTACT TREATMENT OF MATERIALS
Clarence H. Thayer, Wallingford, Pa., assignor, by mesne assignments, to Hendry Process Corporation, Wilmington, Del., a corporation of Delaware
Application November 9, 1935, Serial No. 48,974
19 Claims. (Cl. 23—288)



5. Apparatus for carrying out treating operations which comprises a casing providing a reaction chamber, perforated inlet and outlet conduits extending within said chamber, and means including a sheet structure adjacent one end of said chamber and non-fixedly borne by said casing to provide relative movement therebetween, both said inlet and outlet conduits being mounted in the sheet structure of said last-mentioned means so as to be supported by such means and one type only of said conduits having fluid communication through said sheet structure.

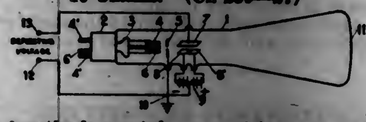
2,108,083
AUTOMATIC INTERCEPT TWO-CHANNEL RADIO RECEIVER
Carl R. Tufts, Detroit, Mich., assignor of one-third to Edwin L. Powell, Washington, D. C., and one-third to Charles E. Motte, Detroit, Mich.
Application July 17, 1934, Serial No. 735,694
12 Claims. (Cl. 250—20)

1. In a multi-channel high frequency signal receiving system, a normally operative selector circuit, a plurality of auxiliary selector circuits, said normally operative selector circuit including an electron tube having anode, cathode, and control electrodes, said auxiliary selector circuits including electron tubes having anode, cathode, control, and screen electrodes, automatic control means individual to each of said auxiliary selector circuits, and electronically coupled thereto through said screen electrodes and connected in common to the control electrode in the electron tube in said normally operative selector circuit, said automatic control means being individually operative by signal energy received through the respective auxiliary selector circuit to produce cut-off bias potential on said control electrode to render inoperative said normally operative selector circuit for the duration of said signal energy.



2,108,089
RECORDING DEVICE
Edwin E. Turner, Jr., West Roxbury, Mass., assignor to Submarine Signal Company, Boston, Mass., a corporation of Maine
Application September 4, 1931, Serial No. 561,213
3 Claims. (Cl. 234—72)

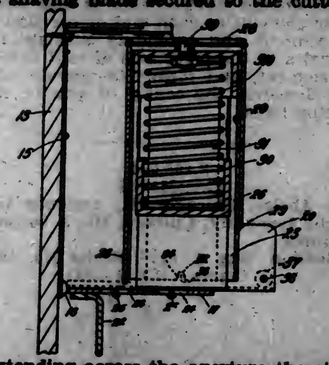
3. In a distance measuring system by the use of



compressional waves, a marking means consisting of an electromagnet and an armature having a marker thereon, amplifying means normally maintaining current in said electromagnet and capable of interrupting said current, means for receiving an impulse of compressional wave energy, means responsive to said last named means to cause said amplifying means to interrupt said current, and means operatively connected to said amplifying means for controlling the time of building up of the current after the interruption has occurred.

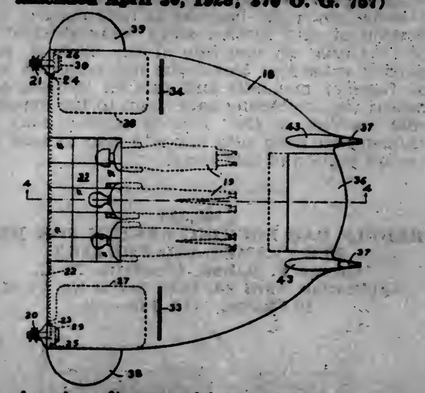
2,108,090
APPARATUS FOR DISTANCE AND DEPTH MEASUREMENT
Edwin E. Turner, Jr., West Roxbury, Mass., assignor to Submarine Signal Company, Boston, Mass., a corporation of Maine
Application July 12, 1933, Serial No. 680,206
13 Claims. (Cl. 177—336)

2. Apparatus for recording or indicating in each of a series of successive time intervals the receipt, in a field of compressional wave energy impulses having various intensities, of the impulses having a peak value of intensity equal to or greater than the impulse of the highest peak value occurring during a preceding time interval, comprising a compressional wave energy receiver, a vacuum tube circuit, an indicator operated thereby, and means for negatively biasing one of the vacuum tubes in said circuit to a value determined in each time interval by the maximum intensity of the impulse having the greatest peak value received during said preceding time interval.



2,108,091
CATHODE RAY DEVICE
Manfred von Ardenne, Berlin, Germany, assignor, by mesne assignments, to Radio Corporation of America, a corporation of Delaware
Application June 4, 1934, Serial No. 728,235
In Germany July 22, 1933
19 Claims. (Cl. 250—27)

2. A cathode ray tube comprising an envelope; means for producing a concentrated electron beam therein; means including a pair of electrostatic electron plates for deflecting said beam; and biasing means for securing a predetermined electric potential distribution over at least one of said deflecting plates to produce two additional substantially constant fields of opposite sign and normally perpendicular to the deflecting plates within the deflecting space enclosed by said deflecting plates for correcting irregularities of sensitivity of deflection for different deflecting angles of said beam.



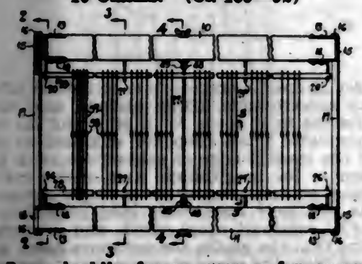
2,108,092
BAR SOAP DISPENSER
John E. Wheatley, Norwood, Ohio
Application June 14, 1935, Serial No. 26,638
5 Claims. (Cl. 146—62)

1. In a soap dispenser the combination of a mounting frame, an inner frame thereon, a soap bar adapter slidable in the inner frame, a feed plunger assembly insertable in the adapter and removably connected with the inner frame, a cutter slide having an aperture therein mounted for reciprocation across the open end of the adapter, and a shaving blade secured to the cutter slide

and extending across the aperture therein, said blade having a straight edge and clearance faces extending uniformly from opposite sides of the straight edge and forming between them an included angle which is bisected by a perpendicular from the plane of the cutter slide through the apex of said angle.

2,108,093
AIRCRAFT
Charles H. Zimmerman, Hampton, Va.
Application April 30, 1935, Serial No. 18,960
11 Claims. (Cl. 244—36)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. An aircraft, comprising a structure affording an aerodynamic lifting surface, said structure having in it space for a pilot and for load, a controllable pitch propeller mounted at each tip of the leading edge of said structure in fixed relation to the longitudinal axis of the craft, a separate engine connected to each propeller, means positively connecting said propellers together to rotate at equal speeds and in such directions that the blades thereof move down when farthest from the plane of symmetry of the craft, a movable control element adapted to form, in effect, a portion of the upper and lower surfaces of said structure and also of the trailing edge thereof, the said element being mounted on a



pivoted axis rearwardly of its foremost portion and adjacent its upper surface, whereby when the trailing edge of said element is raised a slot is opened to permit air to pass from the lower surface of said structure over the upper surface of the element, said slot having its greatest width on the lower surface of said structure a control element at each end of the first-mentioned element and extending substantially at right angles to the pivot axis of said first-mentioned element, and means to operate all said control elements, the center of gravity of said craft being fixed.

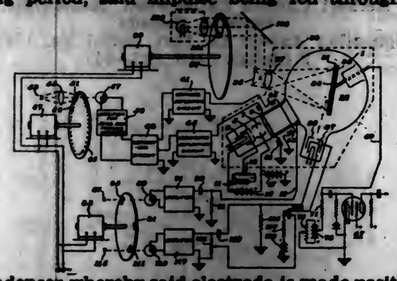
2,108,094
GARMENT
Jerome Abeles, Chicago, Ill., assignor to The Fermit Company, Chicago, Ill., a corporation of Illinois
Application May 6, 1935, Serial No. 19,944
1 Claim. (Cl. 2—38)

A garment of the class described comprising a body encircling portion having an opening, a slide fastener for closing the opening comprising cooperating rows of fastener members secured to opposite sides of the opening, means including a tension strap for connecting opposite sides of the opening adjacent the bottom end of the fastener to prevent tearing stresses on the end of the fastener when the fastener is fully opened, one portion of said tension strap being stitched to the material on one side of the opening, said portion extending lengthwise alongside the row of fastener members and parallel thereto, and means for connecting said strap to the opposite side opening so that tearing stresses may be transmitted from said opposite side to said attached portion of said strap.

2,108,095
HEDDLE BAR LOCKING SYSTEM FOR HEDDLE FRAMES AND THE LIKE
George F. Bahan, Charlotte, N. C.
Application April 20, 1936, Serial No. 75,433
10 Claims. (Cl. 139—92)

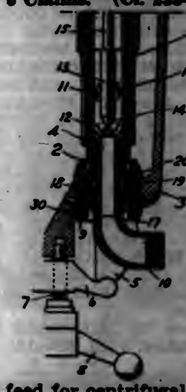
2. In a heddle frame, means for removably supporting a heddle bar intermediate its ends, comprising a member secured to the frame having vertically stepped notches therein for supporting the heddle bar, a second member secured to said frame in spaced relation to said first member and having vertically stepped notches therein stepped in an opposite direction to the notches in the first member for supporting the heddle bar, said first member having a projecting lip adjacent its recess for overlapping one edge of said bar, said second member having a projecting lip adjacent its recess for overlapping the other edge of said bar to confine both edges of said bar within said recesses, the interior proximate edge of each overlapping lip diverging at an angle relative to said heddle bars when in position to allow said bar to be inserted or removed from said recesses.

2,108,096
MERCHANDISE DISPLAY APPARATUS
James E. Barsi, Newark, N. J., assignor to Anheuser-Busch, Inc., St. Louis, Mo., a corporation of Missouri
Application June 18, 1937, Serial No. 148,922
14 Claims. (Cl. 40—126)



1. A merchandise display apparatus, consisting of a collapsible supporting structure made to represent or simulate a plurality of containers of the kind in which an advertised product is packed and constructed so as to be capable of being folded or collapsed when not in use, a tapered bottom tray mounted on said supporting structure and containing samples of the advertised product, and a shelf on said supporting structure having a continuous or unbroken surface on which is removably mounted articles or packages containing material that is adapted for use in connection with the advertised product.

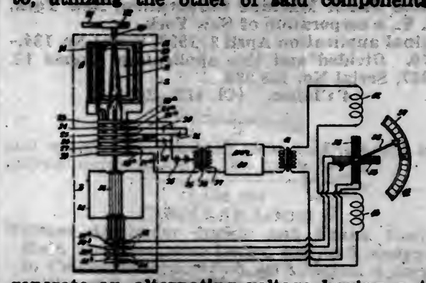
2,108,097
TELEVISION TRANSMITTER
Alda V. Bedford, Collingswood, and Ray D. Kell, Haddonfield, N. J., assignors, by mesne assignments, to Radio Corporation of America, New York, N. Y., a corporation of Delaware
Application August 31, 1934, Serial No. 742,200
18 Claims. (Cl. 178—7.2)



6. In a picture transmitting system, a cathode-ray tube comprising an evacuated container, a mosaic of light-sensitive elements therein, a conducting plate, said elements being mounted adjacent to said plate whereby they are capacitively connected thereto, an electrode common to said elements and positioned to collect photoelectrons therefrom, means for generating an electron beam in said container, means for scanning said mosaic periodically with said electron beam whereby said mosaic is brought to an equilibrium potential at the end of each scanning period due to the emission of secondary electrons from said mosaic, and means for impressing a

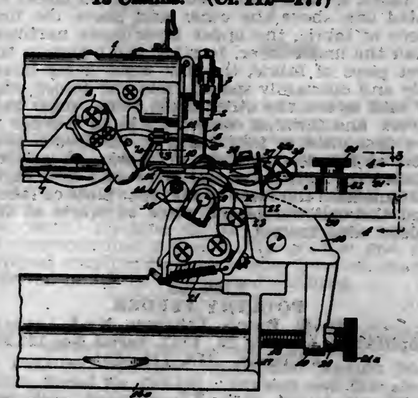
negative voltage impulse between said conducting plate and said electrode at the end of each scanning period, said impulse being fed through a

condenser whereby said electrode is made positive with respect to said plate at the end of said impulse.



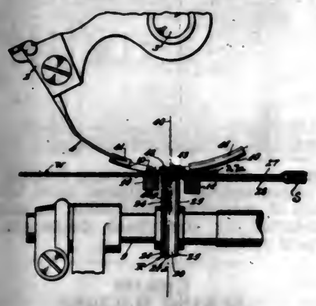
2,108,098
FEED FOR CENTRIFUGAL SEPARATORS
Nore Einar Bergner, Stockholm, Sweden, assignor to The De Laval Separator Company, New York, N. Y., a corporation of New Jersey
Application December 21, 1934, Serial No. 758,689
In Sweden December 28, 1933
6 Claims. (Cl. 233—45)

2. A bowl feed for centrifugal separators comprising a rotatable hollow bowl spindle, having a contracted lower neck, a stationary member provided with a channel through which liquid is adapted to flow into the bowl spindle, a tube extending into said channel and thereby supported by said member and also extending into but spaced from the inner wall of the lower neck of the spindle, and wings within and extending longitudinally of the spindle above said neck and terminating at their lower ends adjacent the upper outlet end of said tube, said wings extending inward from the wall of the spindle to substantially within the space directly above the flow space enclosed by the tube.



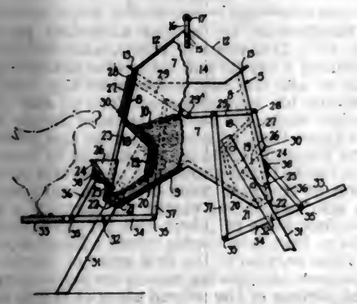
2,108,099
DEVICE FOR INDICATING DIRECTION OF MOVEMENT
Josiah A. Brooks, Port Washington, N. Y.
Application April 4, 1935, Serial No. 14,564
19 Claims. (Cl. 33—204)

1. The method of determining the direction of rectilinear movement in a given plane cutting a magnetic field at an angle such that said field can be resolved into a component lying in said plane and a component normal to said plane, which comprises utilising one of said components to generate an alternating voltage having a definite time phase relationship with respect thereto, utilizing the other of said components to



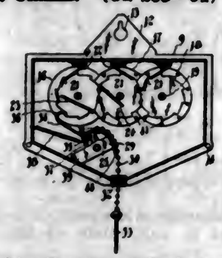
generate an alternating voltage having a time phase characteristic dependent upon the actual direction of rectilinear movement in said plane, and determining the phase displacement between said voltages.

2,108,100
SEWING MACHINE
Mario Bueno, Brooklyn, N. Y., assignor to U. S. Blind Stitch Machine Corporation, New York, N. Y., a corporation of New York
Application April 2, 1937, Serial No. 134,470
13 Claims. (Cl. 112—177)



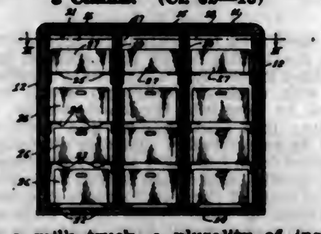
1. Mechanism for sewing a second piece of fabric to a first piece of fabric, said mechanism comprising a needle and means for actuating the needle to and fro, said mechanism also comprising means for supporting portions of said pieces of fabric while the second piece of fabric is located above the first piece of fabric and while the second piece of fabric is folded so as to have two layers located one above the other and above a portion of the first piece of fabric, said mechanism also comprising means for forming a bight in the first piece of fabric and for operating the needle so that said needle forms a blind stitch in said bight portion of the first piece of fabric, said mechanism also having means for supporting the folded portion of the second piece of fabric in the path of the needle which forms said blind stitch and in such relation to the path of said needle as to form a second blind stitch in the folded portion of the second piece of fabric, said mechanism also including means for regulating the lateral distance between the bight portion of the first piece of fabric and the folded portion of the second piece of fabric.

2,106,101
METHOD OF SEWING
Mario Buono, Brooklyn, N. Y., assignor to U. S. Blind Stitch Machine Corporation, New York, N. Y., a corporation of New York
Original application April 2, 1937, Serial No. 134,470. Divided and this application August 13, 1937, Serial No. 158,898
4 Claims. (Cl. 112—267)



1. A method of sewing a second piece of fabric to a first piece of fabric and while the second piece of fabric is on top of the first piece of fabric, which consists in folding the second piece of fabric so that it has two superposed layers located one above the other and above the first piece of fabric, the upper layer being narrower than the under layer, forming two bights in the first piece of fabric, the first bight being laterally and outwardly spaced from the folded edge of said layers, the other bight being under said layers, and forming connecting blind stitches in the first piece of fabric and in the folded portion of the second piece of fabric, by passing thread through the material of said first bight intermediate the faces of said first piece of fabric and through the second piece of fabric at the folded edge thereof.

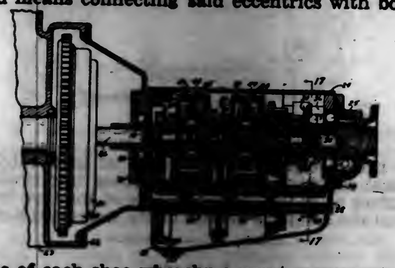
2,106,102
POULTRY FEEDER
Ira C. Busch, Lebanon, N. J.
Application January 25, 1937, Serial No. 122,268
6 Claims. (Cl. 119—55)



1. In a poultry feeder, in combination, a bin having a side opening, an upper and a lower door for closing said opening, a foot-board pivotally associated with the bin and movable downwardly by the weight of a fowl, and connections between the foot-board and the doors whereby downward movement of the foot-board causes an opening movement of said doors.

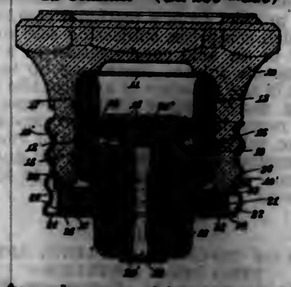
2,106,103
TALLY KEEPER
Herbert Clifford Catherwood, Hagersville, Ontario, Canada
Application August 13, 1937, Serial No. 158,873
2 Claims. (Cl. 235—91)

1. The combination in a tally keeper, of a casing including an apertured bottom wall, a ratchet wheel journalled in the casing for operating a counting mechanism, a quadrant in the casing below the ratchet wheel and composed of a pair of spaced side plates connected by a pivotally mounted hub, and a curved wall attached to the side plates having an outer face on an arc of a circle whose centre is common with the hub axis, said side plates being prolonged oppositely to the curved wall to present fingers for contact with the aforesaid bottom wall of the casing to serve as stops; a flexible element trained over the said curved wall of the quadrant and secured at an end thereto and extending through said apertured bottom wall, a trip dog pivotally carried by the quadrant radially of its hub for engaging the teeth of the ratchet wheel, and a spring connected to the trip dog such as to retain it in contact with the ratchet wheel and to retract the quadrant when actuated by the flexible element.



2,106,104
MILK TRUCK
Almon J. Cordrey, Chicago, Ill., assignor to Liquid Carbonic Corporation, Chicago, Ill., a corporation of Delaware
Application June 29, 1936, Serial No. 87,882
3 Claims. (Cl. 62—13)

1. In a milk truck, a plurality of insulated cold storage compartments, brackets in said compartments for supporting cases of milk in spaced vertical relation in each compartment, additional brackets near the top of each compartment, trays slidable on said additional brackets having front and rear sections therein and dry ice disposed in said rear sections.



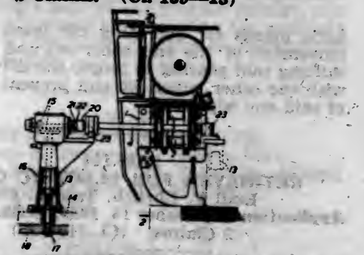
2,106,105
AUTOMATIC AUTOMOTIVE TRANSMISSION MECHANISM
Frederick W. Cotterman, Dayton, Ohio, assignor of one-half to Bessie D. Apple, Dayton, Ohio
Application June 5, 1933, Serial No. 674,280
11 Claims. (Cl. 192—103)

1. A centrifugal clutch comprising, a frame, a drum rotatable independently of said frame, arcuate shoes carried by said frame adapted for frictional engagement with said drum, centrifugal weights having arcuate movement about hinges at the ends of the shoes, eccentrics turnable by the swinging movement of said weights, and means connecting said eccentrics with both

ends of each shoe whereby a great movement of said weights moves both ends of said shoes a small but substantially equal distance to or from said drum, a portion of said connecting means being yieldable thereby permitting farther arcuate movement of said weights after said shoes engage said drum.

2,106,106
FUSE PLUG
John T. Dalcher, Lawrence Harbor, N. J.
Application April 5, 1937, Serial No. 135,072
12 Claims. (Cl. 200—120)

12. A fuse plug comprising a transparent body portion having a chamber in its lower end; a fuse ribbon; a ribbon holder insertable into said chamber to position said ribbon, said holder having a recess in its lower end; a contact holder the upper end of which is insertable into said recess; a contact centrally disposed in said holder and contacting with one end of said ribbon, said contact holder having an annular flange provided with a plurality of radial depressions; means for locking said flange to body portion; a metal screw shell threaded to said body portion and contacting with the other end of said ribbon, said shell having an inwardly extending flange; and projections on said shell flange projecting into the depressions in said contact holder flange.



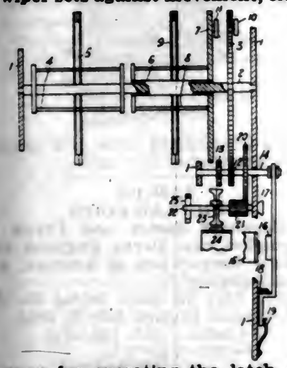
2,106,107
MEANS FOR ANCHORING STRUCTURAL ELEMENTS TO CONCRETE SUPPORTING BODIES
Russell J. De Wees, Dallas, Tex.
Application December 3, 1935, Serial No. 53,581
2 Claims. (Cl. 72—101)

1. An insert for forming a continuous groove or channel in a concrete structure, said insert consisting of a shell of substantial T-shape, one side thereof having a longitudinal opening, a filler element of rectangular cross-section fitted in

said opening to normally close said opening and prevent deformation of the insert.

2,106,108
CIRCULAR LOOM
William Alexander Dickie and Frank Corbyn Hale, Spondon, near Derby, England, assignors to Celanese Corporation of America, a corporation of Delaware
Application May 16, 1936, Serial No. 80,178
In Great Britain July 2, 1935
2 Claims. (Cl. 139—13)

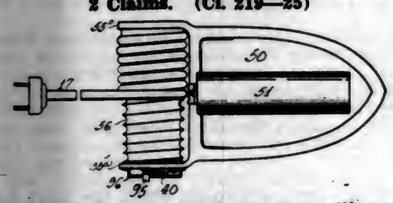
1. Circular loom of the type comprising means for positioning the shuttles by means of vane wheels mounted in spaced relationship on a rotatable shaft so as to engage correspondingly spaced rollers in a shuttle, said loom comprising means to adjust the shaft parallel to itself and towards and away from the shuttle so as to provide correct meshing of the vane wheels with the corresponding rollers in the shuttle and a universal coupling through which the shaft may be driven in any of its adjusted positions.



2,106,109
MANUFACTURE OF ORGANIC COMPOUNDS
Henry Dreyfus, London, England
No Drawing. Original application August 25, 1932, Serial No. 630,737. Divided and this application September 5, 1935, Serial No. 39,285. In Great Britain September 1, 1932
7 Claims. (Cl. 260—54)

1. Process for the manufacture of a cyclic ether, which comprises subjecting to the action of heat a polyhydric alcohol in admixture with an oxide of a metal selected from the group consisting of alkali metals and alkaline earth metals, the metal radicle and the alcohol radicle being present in substantially the proportions which react to form a metal alcoholate, passing gaseous hydrogen chloride into the reaction mixture while the said reaction mixture is being heated, and removing the cyclic ether as it is formed.

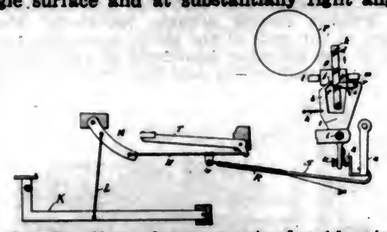
2,106,110
AUTOMATIC SWITCH FOR USE IN TELEPHONE OR LIKE SYSTEMS
Henry John Edwards, Dartford, England, assignor to Siemens Brothers & Company Limited, London, England
Application December 2, 1935, Serial No. 52,548
In Great Britain December 20, 1934
6 Claims. (Cl. 179—24)



1. A selecting switch having a plurality of

wiper sets, a common driving means, gearing normally coupling said means to one wiper set and tending to drive that set, a latch normally holding the wiper sets against movement, electromag-

netic means for operating the latch to permit movement of the one wiper set and means for shifting said gearing to couple the driving means with the other wiper set and prevent movement of said one wiper set.



2,108,111
RETRIEVER FOR ELECTRIC CORDS
Emil E. Ehrlich, Tampa, Fla.
Application September 16, 1935, Serial No. 40,713
2 Claims. (Cl. 219—25)

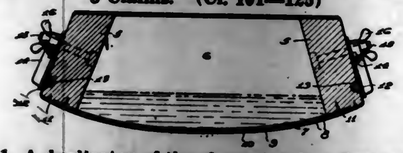
1. In combination, an electric iron with a cord and a retriever for said cord, comprising a body for the iron having a heating element and having a pair of rearwardly extending frame members substantially aligning with and parallel to the sides of the body at the rear, a retrieving drum mounted between said frame members with the centre of the drum in line with the body of the iron, means for automatically rotating said drum, said electric cord being wound upon said drum and connected into the circuit between the electric supply and the heating element of the iron.

2,108,112
ESCAPEMENT
Fritz Eibert, Munich, Germany, assignor to Robert Wolff, Basel, Switzerland
Application November 20, 1934, Serial No. 753,796
In Germany April 3, 1934
5 Claims. (Cl. 197—88)

5. An escapement device for typewriters comprising a powered ratchet wheel having teeth, detaining and displacement pawls adapted to engage one of said teeth at a time and having surfaces co-operating with corresponding surfaces on said ratchet wheel teeth, at least one of said co-operating surfaces being at an angle other than right angle to the direction of movement of said ratchet wheel, means for actuating said pawls during the forward stroke of a type lever to permit movement of said ratchet wheel by one tooth, and a safety catch surface adjoining said angle surface and at substantially right angles

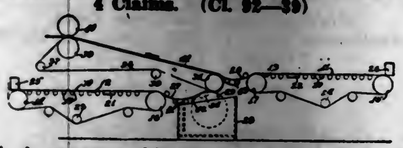
to the direction of movement of said ratchet wheel capable of locking the other co-operating surface after the forward stroke of the type lever until the complete release of the depressed key.

2,108,113
PROCESS OF PRODUCING CONDENSATION PRODUCTS OF METHYLOL COMPOUNDS OF UREA
Karl Eisenmann, Ludwigshafen-on-the-Rhine, and Hans Scheuermann, Oggersheim, Germany, assignors, by mesne assignments, to Plaskon Company, Incorporated, Toledo, Ohio, a corporation of Delaware
No Drawing. Application November 3, 1934, Serial No. 751,414. In Germany November 10, 1933
12 Claims. (Cl. 260—3)



1. The process of producing a resinous condensation product from a methylol compound of a urea which comprises subjecting said methylol compound to an acid condensation in a monohydric alcoholic solvent containing up to 6 carbon atoms in the presence of an aliphatic alcohol containing more than 8 carbon atoms in its molecule, neutralizing the reaction mixture, expelling the solvent and heating the remaining resinous product to between about 80° and about 130° C. until it has become soluble in aromatic hydrocarbons.

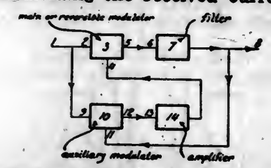
2,108,114
METHOD OF HOODING, FILLING, AND CAPPING MILK BOTTLES
William G. Feard, Jr., Kalamazoo, Mich.
Application June 11, 1936, Serial No. 84,725
2 Claims. (Cl. 226—73)



1. The method of hooding, filling and capping milk bottles having pouring lips and a cap seating shoulder comprising protecting said pouring lips and cap seating shoulder by placing on the bottle and over the pouring lips and cap seating shoulder thereof before filling the bottle a hood of paper or the like having a central aperture of a size smaller than the opening of the bottle, locating said aperture centrally of the opening of the bottle, fastening said hood in place on the bottle, filling the bottle, and then clamping the hood in place over the pouring lips and cap seating shoulder of the bottle, and sealing the bottle by inserting a disk cover into the neck of the bottle over the aperture in the hood and on the cap seating shoulder of the bottle.

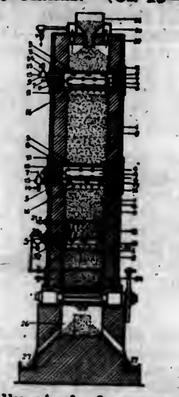
2,108,115
HAND DUPLICATOR
Levi Foss, Wilmot, S. Dak.
Application August 13, 1936, Serial No. 95,888
5 Claims. (Cl. 101—125)

1. A duplicator of the character described comprising a sheet of metal shaped to form a longitudinally arcuate perforate bottom and side walls, a pair of wooden blocks constituting end walls which lie between and are secured to the side walls and the bottoms of which blocks are only partially covered by the metallic bottom, a blanket stretched over said metallic bottom and fastened to the uncovered portions of said blocks, a stencil sheet overlying said blanket, and means upon the end walls for engaging said stencil sheet, said means comprising rods having a seating in transverse grooves formed in the outer faces of said blocks, and means for forcing said rods toward and into said grooves and for holding them in place with respect to said grooves.



2,108,116
PAPER MAKING MACHINE
Henry Street Furminger, Appleton, Wis.
Application May 4, 1936, Serial No. 77,777
4 Claims. (Cl. 92—39)

1. A paper making machine including two spaced opposed Fourdrinier wires having their upper runs traveling toward each other, a cylinder mold in the space between the two wires, means for forming paper webs on said wires, means located to contact a bare web from one of the wires for guiding the web directly from the wire onto the cylinder mold, a looped felt above the cylinder mold and entirely in spaced relation above the wire delivering the web to the mold, said felt having its upper run traveling in a direction opposite to the direction of travel of the upper run of the wire therebeneath, a couch roll within the loop of said felt in pressure relation with the cylinder mold at a point located after the point where the Fourdrinier web is deposited on the mold to contact the felt against the web for picking up the web to travel with the felt around the couch roll and on the upper run of the felt and means located to contact the bare web from the other Fourdrinier wire for guiding said web directly from said wire onto the web already on the felt.

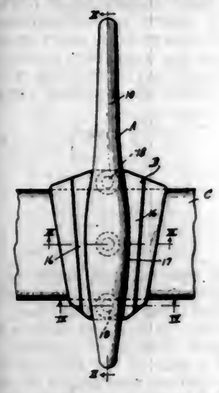


2,108,117
SIGNALING SYSTEM
Henri Gardere and André Paul Pages, Paris, France, assignors, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application January 24, 1936, Serial No. 60,607
In France June 6, 1935
2 Claims. (Cl. 250—20)

1. In a signaling system wherein signals are transmitted as modulations of the alternating carrier current and wherein there is utilized at the receiver for demodulation of the received signal energy a local unmodulated current of carrier frequency which is fed together with the received signal energy to a main modulator, the method of obtaining said local unmodulated current from the received modulated current, which consists in dividing the received current in two

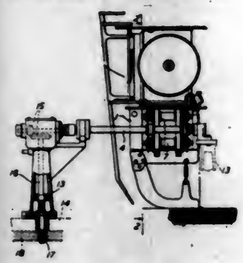
parts, sending one of said parts to a receiver through the main modulator and through a filtering device, providing an auxiliary modulator, sending the other part of the received current to the said auxiliary modulator, sending to said latter modulator a part of the filtered current, and supplying the current modulated in the auxiliary modulator to the main modulator through an amplifying device.

2,108,118
METALLURGICAL FURNACE
William E. Greenawalt, Denver, Colo.
Application February 4, 1933, Serial No. 655,201
Renewed February 24, 1936
19 Claims. (Cl. 13—20)



16. A metallurgical furnace comprising, a chamber adapted to contain the material to be treated, a hollow heating member within the furnace contacting with the material in the shaft, a heating element within the hollow heating member spaced out of contact with it, and means for introducing gaseous fluid into the hollow heating member and from there into the material in the furnace.

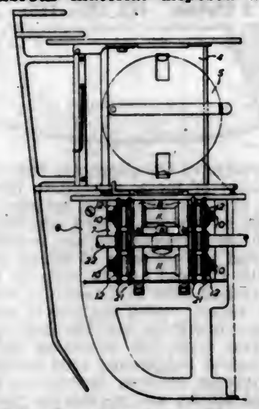
2,108,119
BUMPER GUARD
Jay H. Gould, Royal Oak, Mich., assignor to Oakes Products Corporation, Detroit, Mich., a corporation of Michigan
Application March 27, 1937, Serial No. 133,322
8 Claims. (Cl. 293—55)



8. A guard assembly for bumper impact bars comprising a guard bar, a plate wider than said guard bar serving as a support and escutcheon, said plate being shaped at its front and rear

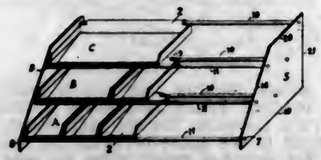
sides to fit the contour of said guard bar and the impact bar respectively, and means for securing

said guard bar to an impact bar with the plate clamped therebetween.



2,108,120
CIRCULAR LOOM
Frank Corbyn Hale, Spondon, near Derby, England, assignor to Celanese Corporation of America, a corporation of Delaware
Application May 16, 1936, Serial No. 80,177
In Great Britain July 2, 1935
2 Claims. (Cl. 139—13)

1. Circular loom of the type described, wherein each shuttle is positioned by means of vane wheels making engagement with one side of the shuttle at positions spaced apart with respect to the length of the shuttle and by means of a pair of rollers also spaced apart with respect to the length of the shuttle at positions providing for both rollers to oppose the thrust of the vane wheels and a circular race against which the rollers bear on the side of the shuttle remote from the vane wheels, the vane wheels and the pair of rollers being disposed symmetrically with respect to the shuttle.

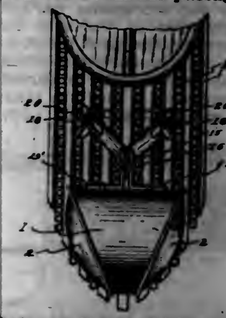


2,108,121
CIRCULAR LOOM
Frank Corbyn Hale and James Russell Yorke, Spondon, near Derby, England, assignors to Celanese Corporation of America, a corporation of Delaware
Application December 16, 1936, Serial No. 116,072
In Great Britain January 17, 1936
6 Claims. (Cl. 139—13)

1. Circular loom shuttle of the type which is positioned in the loom by vane wheels, comprising rotatable rollers adapted to be engaged by the vane wheels, each of said rollers being provided with a flange for receiving thrust from the side of a vane wheel and a separate flange of tough resilient fibrous material disposed adjacent to

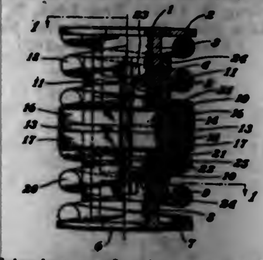
the side of the thrust-receiving flange which contacts with the vane wheel, and spaced from said side to form an annular groove sufficiently wide to permit free entry therein of the edge of the vane wheel.

2,108,122
ASSEMBLY RACK
Gordon L. Hall, Old Lyme, Conn.
Application April 9, 1936, Serial No. 73,500
1 Claim. (Cl. 211—126)



An assembly rack having flat metal ends for the attachment of cross pieces which act as supports for a plurality of rows of containers which, starting with the bottom row, are arranged successively higher and nearer the back of the rack, overlapping each other but leaving room at the front of each bin in any row for grasping an assembly part from it without interference from the bin next above said containers each being formed from a single piece of metal, and comprising a forward sloping bottom, sides sloping inward at their bottoms, an inward sloping front and a back, the forward lower ends of the sides being turned upon the front and the back ends of the sides being turned upon the back.

2,108,123
VEHICLE SIGNAL LIGHT
Walter Hux Hill, Chicago, Ill.
Application October 23, 1936, Serial No. 107,132
1 Claim. (Cl. 177—329)

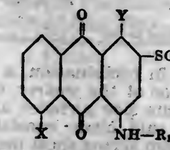


The combination with the vertical bars of the radiator shield of an automobile, of a wedge shaped casing, lenses arranged in the sides of said casing and provided with indicia, and a bracket for adjustably securing said casing to the vehicle, said bracket including angle pieces secured to the rear end of said casing and connected together, Y-shaped links adjustably connected to said angle pieces, said links being

formed with elongated slots in one end, screws having elongated heads for passage through said

slots and between the shield bars, and wing nuts for said screws.

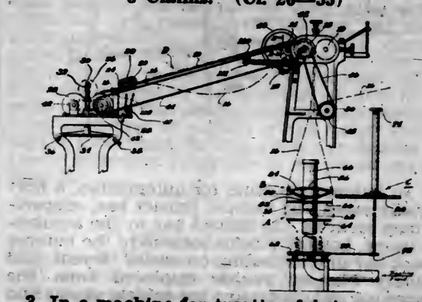
2,108,124
CUSHIONING DEVICE
Roy C. Hobson, Cleveland Heights, Ohio, assignor to National Malleable and Steel Castings Company, Cleveland, Ohio, a corporation of Ohio
Application January 21, 1936, Serial No. 60,056
15 Claims. (Cl. 267—9)



1. A cushioning mechanism comprising a pair of followers, friction shoes each engaging both of said followers, spring means surrounding said shoes and engaging an end of each follower and means cooperating with said spring means for transmitting pressure applied thereto inwardly against said shoes to force the latter into engagement with said followers.

2,108,125
CELLULOSE PRODUCTS AND METHOD OF MAKING
Samuel Isaac Heddesen, New Brunswick, N. J., and Roy Mackay Melkiejohn, New York, N. Y., assignors to General Chemical Company, New York, N. Y., a corporation of New York
No Drawing. Application December 5, 1935, Serial No. 53,002
11 Claims. (Cl. 260—146)

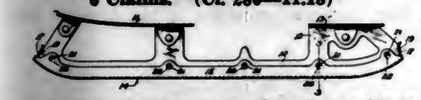
1. The method of preparing from cellulose fibers low viscosity cellulose, which directly on nitration by the method herein described yields a nitrocellulose of ½ second viscosity, which comprises removing non-cellulosic materials from the cellulose fibers, subjecting the resultant product to mercerization, and thereafter subjecting the mercerized cellulose to the action of a dilute alkaline solution having an alkalinity equal to at least ¼% of caustic alkali at a temperature between about 150° C. and about 200° C. for between about 3 and about 24 hours.



2,108,126
AZO-DYESTUFFS OF THE ANTHRAQUINONE SERIES
Ernst Honold, Frankfort-on-the-Main-Fechenheim, and Carl Taube, Wiesdorf, near Cologne-on-the-Rhine, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application October 21, 1936, Serial No. 106,330. In Germany October 23, 1935
4 Claims. (Cl. 260—56.5)

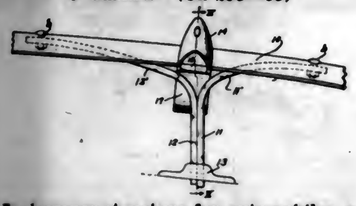
1. The monoazo dyestuffs of the general formula:

wherein X stands for a member selected from the group consisting of hydrogen and acylamino, Y stands for a member selected from the group consisting of —NH_2 and —OH, R_1 stands for a radicle selected from the group consisting of the behzene and phenyl-pyrazolone series, R_2 means a radicle of the benzene series and R_1 and R_2 contain at least one member selected from the group consisting of hydrogen, —SO_3Na and —COONa, which dyestuffs dye wool from an acid bath olive-green to green shades of excellent fastness and possess affinity to cotton too.



2,108,127
FABRIC TREATMENT AND APPARATUS THEREFOR
Maurice M. Kasanof, deceased, late of New York, N. Y., by Abraham Kriegel, Rockaway, Long Island, N. Y., and David R. Kasanof, Brookline, Mass., executors
Application October 25, 1935, Serial No. 46,736
5 Claims. (Cl. 26—55)

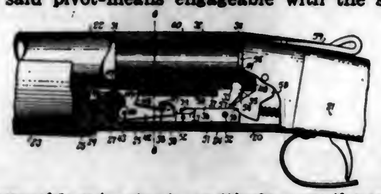
3. In a machine for treating fabrics, a vertical conduit provided with apertures arranged for the outward discharge of fluid therefrom, a platform rotatable in relation to said conduit adapted for gathering thereon the untreated fabric preparatory to treatment, means for guiding said fabric across the discharge of treating fluid so as to treat the same, means for receiving said treated fabric and for guiding it, said means being in the form of arms projecting outwardly from the conduit and serving to engage said treated fabric at spaced points on the circumference thereof, and thereby giving visible indication of angular displacements of said fabric, and manually operable means for rotating said platform positioned at a point removed from the platform from which angular displacement of



the fabric may be viewed as the fabric leaves said guiding means, whereby an attendant observing the travel of said fabric over said guiding means, may, by rotating said platform, correct any angular deviations of said fabric in its travel.

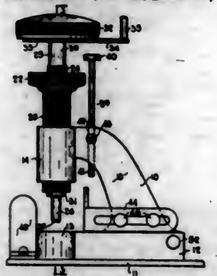
2,108,128
ICE SKATE
Frank W. Kinney, Groveland, Mass.
Application January 28, 1937, Serial No. 122,705
6 Claims. (Cl. 280—11.18)

1. A skate having, in combination, a blade for application to the shoe of the wearer, said blade having parallel opposite side surfaces, and a runner attachment for said blade consisting of a channel member of thin spring sheet metal molded to provide oppositely disposed resilient parallel side walls fitting flatwise directly against the opposite sides of said blade and to provide a bottom wall fitting directly against the bottom of said blade throughout the length thereof, the lower corners of said runner attachment being exteriorly sharpened, and means removably securing said attachment in position on said blade, said means comprising a plurality of sockets on one of said members and a plurality of studs on the other of said members, the latter being adapted to interlock with said sockets when the attachment is placed in position on said blade.



2,108,129
BUMPER GUARD STRUCTURE
Norman Y. Kristensen, Detroit, Mich., assignor to Oakes Products Corporation, Detroit, Mich., a corporation of Michigan
Application April 5, 1937, Serial No. 135,006
9 Claims. (Cl. 293—55)

1. In bumper structure for automobiles, a horizontally extending bumper impact bar, supporting bars securing the impact bar to the automobile frame, bumper guards secured to the bumper impact bar and extending crosswise thereof, and auxiliary bumper guards displaced from the bumper bar guards toward the vehicle wheels and extending a distance downwardly below the bumper bar guards to prevent bumper bars on other cars passing below the bumper bar guards from reaching the vehicle fenders.

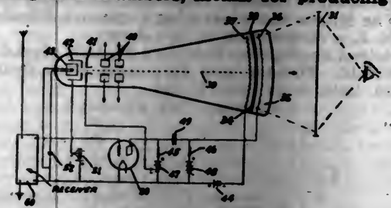


2,108,130
EXTRACTOR MECHANISM FOR BREAK-DOWN FIREARMS
George S. Lewis, New Haven, Conn., assignor to Winchester Repeating Arms Company, New Haven, Conn., a corporation of Maryland
Application February 7, 1935, Serial No. 5,417
6 Claims. (Cl. 42—46)

1. In a breakdown firearm, the combination with a butt-unit and a complementary barrel-unit having a cartridge-chamber; transversely-extending pivot-means pivoting the said barrel unit to the said butt-unit; of a reciprocable cartridge-extractor for extracting cartridges from the cartridge-chamber of the said barrel-unit; spring-means urging the said reciprocable cartridge-extractor into its cartridge-extracting position; a pivotal latch having a thrust-shoulder extending upwardly in a position rearwardly of the said pivot-means engageable with the said

reciprocable extractor to positively move the same and also having a detent rigid with respect to the said thrust-shoulder and releasably engaged with the extractor to restrain the movement of the same under the urge of the said spring-means; and means coacting with the said pivotal latch upon the breakdown of the firearm and swinging the said pivotal latch in a direction to engage its thrust-shoulder with the said extractor and to disengage its detent therefrom.

2,108,131
DRILLING MACHINE AND DEVICE
Myron H. Lewis, New York, N. Y.
Application May 23, 1935, Serial No. 23,064
3 Claims. (Cl. 164—101)



3. In a drilling machine, a base formed with a recess therein adapted to receive a somewhat soft material, a neck portion integral with said base, said neck portion terminating in a frame spindle, a clamping spindle mounted in the latter, and a hollow drill spindle operably mounted in said clamping spindle, said neck portion being formed with a vertical bore therein, a drill stop adjustably mounted in said bore, the upper end of said drill stop terminating in a knob, an operable knob upon the hollow drill spindle adapted to cooperate with the knob upon the drill stop, a detachable, hollow cutter mounted upon said drill spindle, said cutter having a cutting edge slightly smaller in diameter than the hollow conduit of the cutter and drill spindle, and means permitting adjustment of the material to be drilled, substantially as shown and described.

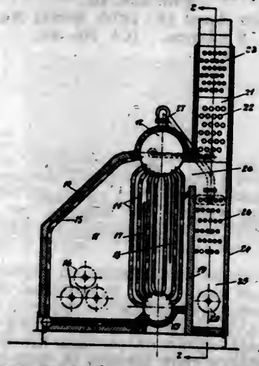
2,108,132
TELEVISION DEVICE
Luis A. Lera, Brooklyn, N. Y., assignor to Radio Patents Corporation, New York, N. Y., a corporation of New York
Application September 5, 1933, Serial No. 688,087
1 Claim. (Cl. 250—27.5)

A cathode ray device for receiving signal energy for transformation into picture images com-

prising a first evacuated chamber, a second chamber containing a light-producing gas, an insulating partition separating said chambers and having a plurality of conductive elements embedded therein forming a scanning mosaic, each of said elements forming a conducting path connecting said chambers, means for producing an

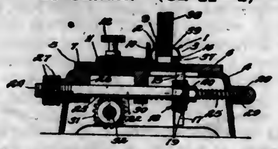
electron beam in said first chamber for scanning said mosaic, a metallic grid in said first chamber disposed opposite said mosaic and electrically charged to focus the electron beam upon the several elemental areas of said mosaic, and a grid-like anode in said second chamber disposed close to and opposite said partition.

2,108,133
PROCESS FOR PRODUCING HIGH MOLECULAR ALCOHOLS FROM THE CORRESPONDING KETONES
Francis John McCall, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application November 25, 1936, Serial No. 112,709
14 Claims. (Cl. 260—156)



1. The process which comprises bringing a mixture of hydrogen and a saturated straight-chain aliphatic ketone having from 13 to 17 carbon atoms in contact with a highly active nickel catalyst at a temperature between 75° and 200° C.

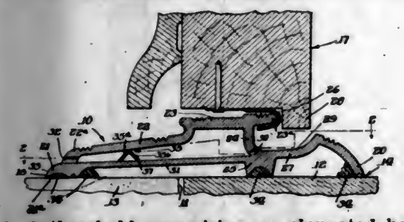
2,108,134
SNOW PLOW
William A. McNulty, Chicago, Ill.
Application October 13, 1936, Serial No. 105,374
2 Claims. (Cl. 37—36)



1. A snow plow comprising a guiding and supporting frame, a pair of flanger blades slidably mounted upon the said guiding and supporting frame and slidably guided thereby for movement into lowered or effective position and into raised or ineffective position, a pair of wings pivotally mounted upon the said guiding and supporting frame, one adjacent the outer end of each of the said flanger blades, for movement into extended or effective position and into folded or ineffective position, relative to the said flanger blades, and means for simultaneously moving both of the said flanger blades and both of the said wings into and out of their effective positions, said means including a rock shaft extending horizontally across the said frame rearwardly of the said flanger blades, a pair of horizontally spaced arms carried by the said rock shaft and extending forwardly from the said rock shaft above the said flanger blades, a pair of flexible elements each attached to one of the said arms and each attached to one of the said flanger blades, a second rock shaft extending horizontally across the said guiding and supporting frame rearwardly of and parallel to the said first-named rock shaft, means operatively interconnecting the said rock shafts, means operatively interconnecting each of the said wings to the said second-named rock shaft, and means for rocking the said shafts.

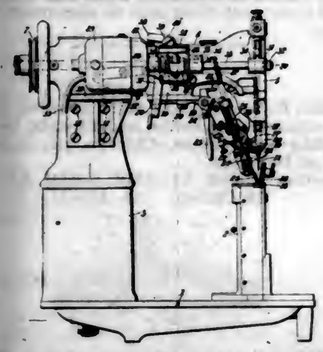
2,108,135
STEAM GENERATOR
Joseph J. Nells, Brooklyn, N. Y., assignor to Foster Wheeler Corporation, New York, N. Y., a corporation of New York
Application May 15, 1935, Serial No. 21,519
4 Claims. (Cl. 122—485)

2. A steam generating plant comprising a setting, a vertically extending partition in the setting forming a steam generating section and a superheating section, a steam generator in the steam generating section, a superheater in the superheating section and connected to the steam generator, separately controlled means for firing each section, and gas outlets from each section connected to a common offtake flue, the steam generator and the superheater being disposed ahead of the point of junction of the gas outlets from said sections with the common offtake flue with respect to the direction of flow of the gases passing from said sections, the arrangement being such that by control of the means for firing the superheater section alone any desired degree of superheat from zero to maximum may be obtained.



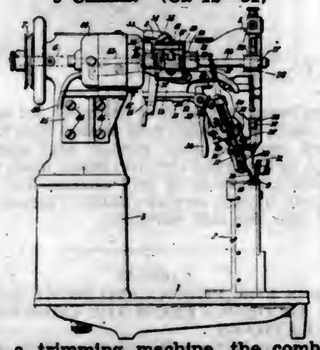
2,108,136
BINDING MACHINE
Christian B. Nelson and Isidore Spinner, Chicago, Ill., assignors, by mesne assignments, to Plastic Binding Corporation, Chicago, Ill., a corporation of Delaware
Application March 23, 1936, Serial No. 70,355
13 Claims. (Cl. 11—1)

11. A device of the class described, comprising in combination a working plate, a row of spaced-apart pins fixed thereto, a backing member disposed substantially parallel to said row of pins, means for adjusting said member relative to said



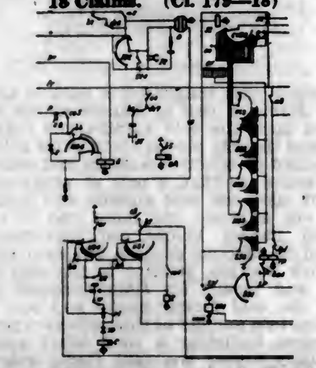
pins, said plate having a plurality of slots therein, said slots being disposed between said pins in spaced relation thereto and perpendicular to said row of pins, a plurality of spreader hooks supported in alignment by a common structure disposed beneath said plate, each of said hooks extending through one of said slots, respectively, means for actuating said hook supporting structure to move said hooks from a position adjacent said row of pins, spring means for returning said hooks to said position, and means for adjustably limiting the extent of said motion.

2,108,137
THRESHOLD
Philip R. Oftedal and Donald G. Kingsley, Chicago, Ill.
Application April 18, 1936, Serial No. 75,157
8 Claims. (Cl. 20—64)



1. A threshold comprising an elongated body having inner and outer supporting flanges extending downwardly along its opposite edges, and providing a longitudinally extending upwardly facing trough adjacent to said inner flange, a water discharge port formed in said body adjacent to said outer flange but spaced a substantial distance above the lower edge of said flange, said port being located at a lower level than the bottom of said trough, and drainage means providing a devious outwardly sloping drainage path from said trough to said port.

2,108,138
SEWING AND TRIMMING MACHINE
Roy Stanley Painter, Hannibal, Mo., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application February 27, 1936, Serial No. 66,012
14 Claims. (Cl. 112—127)



1. The combination with a sewing machine having a reciprocatory needle and needle-reciprocating mechanism, of a trimmer mechanism including a reciprocatory knife having effective work-severing movements adjacent said needle, and means operable independently of said needle-reciprocating mechanism for reciprocating said knife.

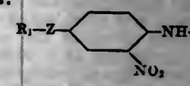
2,108,139
TRIMMING MACHINE
Roy Stanley Painter, Hannibal, Mo., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Original application February 27, 1936, Serial No. 66,012. Divided and this application October 20, 1936, Serial No. 106,524
9 Claims. (Cl. 12—51)

1. In a trimming machine, the combination with means for supporting and marginally feeding sheet material work in the plane thereof, of trimming means including a reciprocatory ply-trimming element having a work-severing cutting edge substantially parallel to the line of feed, and means to vary the work-advancing speed of the feeding means relative to the frequency of reciprocation of the trimming-element without stopping the machine.

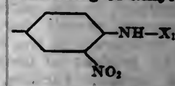
2,108,140
TELEPHONE SYSTEM
William George Patterson and Reginald Griffith Dixon, London, England, assignors to Siemens Brothers & Company Limited, London, England
Application February 12, 1936, Serial No. 63,612
In Great Britain March 18, 1935
18 Claims. (Cl. 179—18)

1. In a register sender, numerical registers for registering the numerical digits of called subscriber's telephone numbers, a plurality of office registers for registering the office code digits of the called numbers, means responsive to a call

for taking one of said numerical registers into use and for connecting one of said office registers with said numerical register, a stepping switch associated with said office registers, registers in said office register operated responsive to the receipt of the office code digits of a called number for marking said stepping switch in accordance with the office code digits received, said stepping switch operated step-by-step in search of said marking, an output impulsing circuit associated with said numerical register, an impulsing device associated with said impulsing circuit operated in step with said stepping switch for interrupting said impulsing circuit, means for transmitting a signal from said office register in response to said switch finding said marking, and means responsive to said signal for rendering further operation of said impulsing device ineffective to interrupt said impulsing circuit.



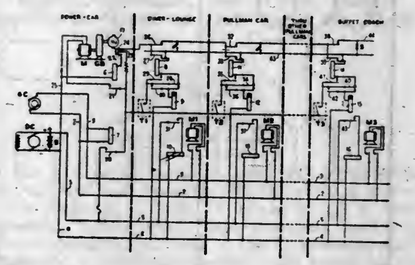
2,108,141
LIQUID FUEL BURNER
George W. Pontius, Jr., South Bend, Ind., assignor to International Engineering Corporation, Chicago, Ill., a corporation of Illinois
Application January 2, 1936, Serial No. 57,114
2 Claims. (Cl. 299—142)



2. A liquid-fuel burner comprising a part having a convex upper surface with its outline having two sides meeting in a sharp angle and with sharp peripheral edges, means for discharging liquid fuel onto the highest part of said surface to flow toward said edges, and means for blowing a stream of air across said surface toward said sharp angle to take up said fuel.

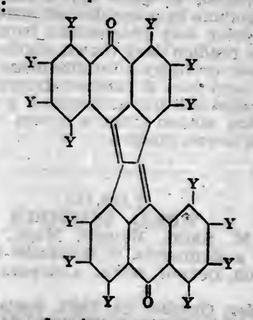
2,108,142
ACID WOOL DYESTUFFS
Heinrich Ritter, Frankfort-on-the-Main-Fechenheim, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application August 12, 1936, Serial No. 95,623. In Germany August 13, 1935
4 Claims. (Cl. 260—64)

1. The acid wool dyestuffs of the general formula:



wherein R_1 stands for a member selected from the group consisting of alkyl, cycloalkyl, aryl and

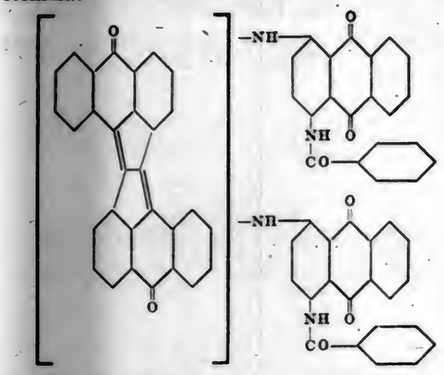
Z stands for a member selected from the group consisting of SO_2, CO, SO_2-aryl-SO_2 and CO-aryl-CO, n stands for the number 1 or 2, X_1 stands for a member selected from the group consisting of aryl-NH-aryl, cycloalkyl-NH-aryl (aryl meaning in each occurrence of the above significations a radicle selected from the group consisting of the benzene and naphthalene series), which dyestuffs dye animal fibers various shades of very good levelling power and fastness properties, partly of an excellently good fastness to light, partly of an especially good fastness to washing, ironing, sea water and perspiration.



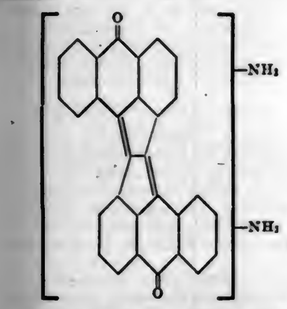
2,108,143
MOTOR STARTING SYSTEM
Norman H. Saunders, Chicago, Ill., assignor, by mesne assignments, to Associated Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware
Application August 2, 1935, Serial No. 34,355
11 Claims. (Cl. 172—239)

4. In a motor starting system, a plurality of motors, a start control circuit, means for sending spaced impulses over said circuit, individual starting switches for said motors, and means for causing each of a plurality of successive impulses to operate a different starting switch.

2,108,144
VAT DYESTUFFS CONTAINING NITROGEN AND PROCESS OF MAKING SAME
Heinz Scheyer, Frankfort-on-the-Main, and Emil Schwamberger, Frankfort-on-the-Main-Fechenheim, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application October 4, 1935, Serial No. 43,508. In Germany October 10, 1934
5 Claims. (Cl. 260—61)



2. Vat dyestuffs containing nitrogen of the general formula:



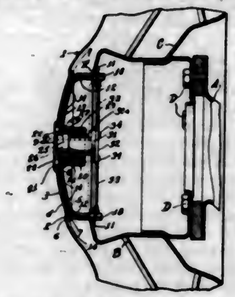
obtained by condensing aminocompounds containing no more than two aminogroups in the positions signified in the above formula by Y with halogen compounds containing at least one replaceable halogen atom and a member of the group consisting of the anthraquinone, violanthrone and anthanthrone radicles, corresponding to the above formula when one or two radicles signified by Y are radicles of the grouping —NH—A, wherein A means a member of the group consisting of the anthraquinone, violanthrone and anthanthrone radicles, the remainder being hydrogen, which dyestuffs dye cotton from the vat in most cases brown shades which turn

more towards yellow when the dyestuffs are aftertreated with condensing agents.

3. A vat dyestuff containing nitrogen of the formula:

obtained by condensing a diamino compound of the formula:

with 1 - chloro - 4 - benzoylaminoanthraquinone, which dyestuff is when dry a black crystalline powder, soluble in concentrated sulfuric acid with a violet color and dyes cotton from a brownish violet vat reddish dark brown shades, which dyestuff is converted by aftertreatment with chlorosulfonic acid into a further dyestuff, soluble in concentrated sulfuric acid with a pure blue color and dyeing cotton from a brown vat very fast yellowish brown shades.



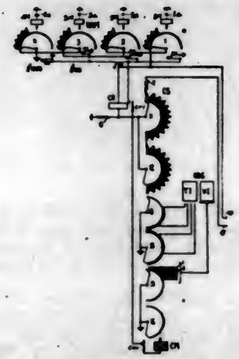
2,108,145

WHEEL ASSEMBLY

Bladen M. Short, Detroit, Mich., assignor, by mesne assignments, to Houdaille-Hershey Corporation, Detroit, Mich., a corporation of Michigan

Application October 21, 1933, Serial No. 694,541
9 Claims. (Cl. 150—54)

1. In combination with a spare wheel support having means accessible from the front through the wheel hub for mounting the spare wheel: releasable guard means for preventing access to said mounting means, mechanism for locking the guard means in operative position against unauthorized release, said mechanism comprising movable means arranged to be spaced from the hub to enable the guard means to be applied to and removed from the hub, or to be disposed behind a part of the hub and cooperate with the guard means in straddling a part of the hub to lock the guard means thereon, as desired, and key-controlled means movable axially and cooperating with the first movable means so as to



cause the first movable means to occupy selectively either of said positions.

2,108,146

RATIO COMPUTER

Lancelot Martin Simpson, Thorner, near Leeds, England, assignor, by mesne assignments, to Automatic Telephone & Electric Company Limited, London, England

Application August 26, 1930, Serial No. 477,806
In Great Britain August 27, 1929
3 Claims. (Cl. 235—61)

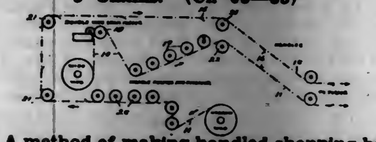
1. Ratio indicating apparatus for indicating the inverse ratio of each of a plurality of variable factors to the sum total of all of the said factors, said apparatus consisting of a Wheatstone bridge for each variable factor comprising two pairs of ratio arms, means individual to each bridge for varying the resistance of one arm of the first pair in proportion to the corresponding variable factor, common means for simultaneously varying the resistance of the other arm of the first pair of all bridges in proportion to the sum total of all variable factors, a multiposition switch, having a normal position, associated with each bridge circuit, means for automatically operating said switch when a change in resistance in either or both of the arms of the first pair takes place to vary the resistance of one arm of the second pair in units of a fixed resistance until said bridge is balanced, the number of units by which the resistance is varied corresponding to the number of positions in which said switch comes to rest from its normal position, said number of units or the position in which said switch comes to rest indicating the desired ratio.

2,108,147

PRODUCTION OF AMINES

Walter Speer, Ludwigshafen-on-the-Rhine, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany

No Drawing. Application September 8, 1934, Serial No. 743,310. In Germany September 9, 1933
8 Claims. (Cl. 260—127)



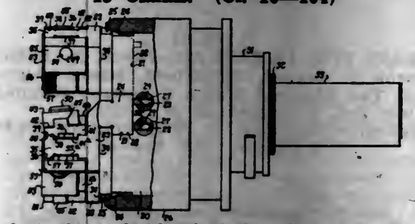
1. The process of producing amines containing at most one hydrogen atom attached to an amino nitrogen atom which comprises causing a carbonyl compound selected from the group consisting of ketones and aldehydes to act at a temperature between about 100° and about 350° C. in the presence of a non-cyclic, saturated alkyl ester of formic acid on an amine containing from 1 to 2 hydrogen atoms attached to an amino nitrogen atom.

2,108,148

METHOD OF MAKING HANDLED SHOPPING BAGS

Harford K. Steen, Newburgh, N. Y.

Original application December 5, 1935, Serial No. 52,955. Divided and this application November 2, 1936, Serial No. 106,824
5 Claims. (Cl. 93—35)



1. A method of making handled shopping bags, which consists in causing bag making webs to travel in parallel relation, and applying an adhesive to one or more of the parallel edges of said webs for subsequently securing said webs together in the form of a tube, of forming cord handles of different widths and attaching the same to the webs, tubing the webs and bottoming into a bag so that said handles will lie in a nested position, one within the other when the bag is folded.

2,108,149

CHASER HOLDER FOR DIE HEADS

Royce M. Strickland, New Haven, Conn., assignor to The Geometric Tool Company, New Haven, Conn., a corporation of Connecticut

Application June 24, 1936, Serial No. 86,919
15 Claims. (Cl. 10—104)

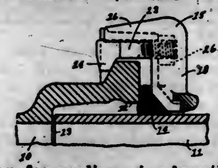
1. A chaser-holder including in combination: a holder-body designed and adapted to be mounted in a die-head and having chaser-locating means thereon; a slide-like chaser-backing member adjustably mounted upon the said holder-body with capacity for bodily rectilinear movement toward and away from the work relative to the holder-body and having chaser-locating means engageable with the said chaser-locating means of the said holder-body; and clamping-means serving to clamp the said chaser-backing member against the said holder-body and to maintain the chaser-locating means of the said chaser-backing member in interlocking engagement with the similar means of the said holder-body.

2,108,150

SIGHT FOR FIREARMS

Carl G. Swebilius, New Haven, Conn.

Application March 12, 1936, Serial No. 68,438
4 Claims. (Cl. 33—56)



1. In a firearm, a sight having a cylindrical head slidably and rotatably mounted in a groove in the firearm, a pair of plungers in a bore traversing said groove, said plungers being on opposite sides of said head, a spring pressing each plunger into engagement with said head, means on said head whereby said plunger may lock the same in adjusted positions, and a screw threaded into said bore for adjusting the pressure applied by said springs to said plungers.

2,108,151

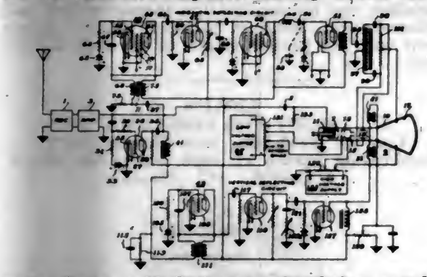
CLAMP

Ralph J. Teeter, Cadillac, Mich.

Application August 17, 1934, Serial No. 740,251
3 Claims. (Cl. 285—119)

1. A clamp for sealing pipe lengths having bell and spigot connecting ends against leakage at their joints comprising a plurality of segmental links, one end of each link having a hooked portion and the other end of each having a reversely hooked portion adapting the several links to be detachably interlocked together and each of said links having a flanged portion adapted to overhang the bell end portion of a pipe length and to engage a packing ring disposed adjacent the connecting ends of the pipe lengths, and tightening means operatively associated with the links adapted to tensionally engage against the bell end portion of the pipe length for effecting pressure on the packing ring to seal the pipe joint between the two lengths of pipe.

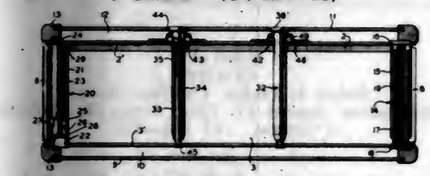
2,108,152



ELECTRICAL CONTROL APPARATUS

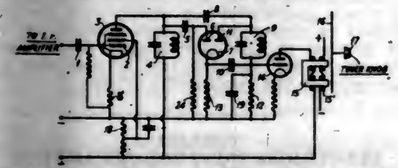
William A. Tolson, Westmont, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application June 26, 1934, Serial No. 732,415
4 Claims. (Cl. 250—36)



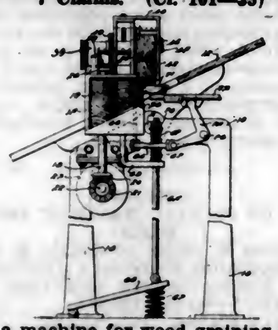
1. In combination, a generator of electrical impulses comprising an electric discharge tube having a control grid and having plate and grid circuits coupled to make said tube tend to oscillate, means for applying a biasing potential to said grid such that said generator can oscillate to produce an electrical impulse only in response to receiving a potential on said grid from a source external

to said oscillator, and a non-oscillatory generator of electrical impulses having a saw-tooth



wave shape, said first generator being coupled directly to said second generator.

2,108,153
LOOSE LEAF BINDER
Paul O. Unger, Elmhurst, Ill., assignor to Wilson-Jones Company, Chicago, Ill., a corporation of Massachusetts
Application October 14, 1935, Serial No. 44,830
7 Claims. (Cl. 129—13)

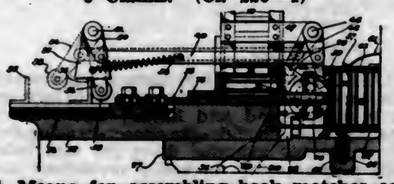


3. In a loose leaf binder, a plate member, a flanged member secured to said plate member with its flange spaced therefrom, and a headed post provided with a projection below the head of said post, said projection being adapted to be positioned between said plate member and said flange.

2,108,154
RECEIVER TUNING CIRCUITS
Carel Jan van Loon, Eindhoven, Netherlands, assignor to N. V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands, a corporation of the Netherlands
Application July 30, 1936, Serial No. 93,354
In Germany October 26, 1935
11 Claims. (Cl. 250—40)

1. In combination with the adjustable tuner element of a radio receiver, means to control adjustment of the tuner element, a control network for said means comprising a pair of rectifiers, a resonant signal input circuit, tuned to a desired signal frequency, coupled to one rectifier, a second signal input circuit, tuned to said desired frequency coupled to the second rectifier, the selectivity at the second circuit being greater, means for impressing signals on said signal circuits, means responsive to current flow in said one rectifier for preventing current flow in the second rectifier until the signal amplitude at the second input circuit attains a desired value, and means responsive to current flow in the second rectifier for controlling the operation of said first means.

2,108,155
WOOD GRAINING APPARATUS
Roy E. Woolems, Detroit, Mich., assignor to Parker-Wolverine Company, Detroit, Mich., a corporation of Michigan
Application March 1, 1937, Serial No. 128,475
7 Claims. (Cl. 101—35)



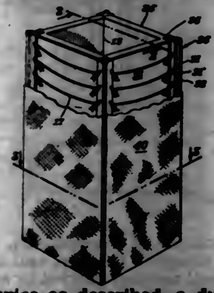
1. In a machine for wood graining molding, a pair of transfer rolls, means for supporting a molding to be grained with respect to said rolls, and means for effecting movement of one of said rolls and said supporting means to bring said rolls simultaneously into engagement therewith.

2,108,156
PROCESS FOR THE PRODUCTION OF KETONES
Charles G. Wortz, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 2, 1937, Serial No. 123,604
17 Claims. (Cl. 260—134)

1. The process for the decarboxylation of a carboxylic group to a ketone group which comprises bringing a monocarboxylic compound selected from the class consisting of alkyl, aralkyl, and hydrogenated aralkyl monocarboxylic acids and esters of said acids in the vapor phase, at a temperature between 250° and 500° C., in contact with a chromite of a metal selected from the class consisting of manganese and zinc.

2,108,157
MEANS FOR ASSEMBLING BOOK MATCHES
Joseph E. Zomnir, Springfield, Mass., assignor to The Diamond Match Company, Wilmington, Del., a corporation of Delaware
Application November 14, 1936, Serial No. 110,854
6 Claims. (Cl. 226—4)

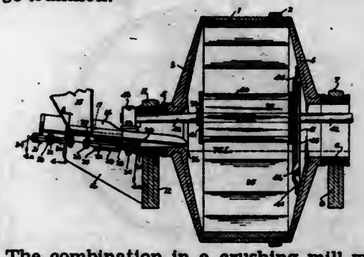
1. Means for assembling book matches each having a cover which presents a smooth back and a free edge front fold, comprising means for supporting a stack of books with the head ends of alternate books reversed and the fronts of the books of each alternate pair facing the same way (upward or downward), means for feeding the books in succession, means including an oscillatory book receiving and supporting element into which each succeeding book is radially delivered sidewise in the same path by the feeder, and means for oscillating said element to swing the books clockwise and counterclockwise in alternate succession through a determined path before their successive discharge from the said element, whereby the endwise reversed books are also sidewise reversed with the smooth back of each book in opposed relation to the front of the adjacent book.



2,108,158
ORNAMENT CONSTRUCTION
Ralph C. Bangs, Providence, R. I., assignor to Lee K. Stupell
Application February 14, 1935, Serial No. 6,529
10 Claims. (Cl. 40—140)

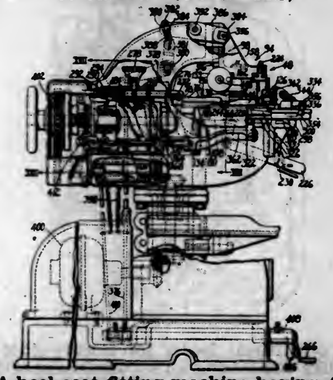
1. In combination, an ornament having lock points, a base element having a space for receiving said ornament, and a plurality of adjacent aligned fingers extending from said base element into said space, each finger having an opening with resilient edges.

3. In an ornament construction, circular recesses in the rear surface thereof, and points having conical bases and heads tapering towards the head end, said bases being locked in said recesses.



2,108,159
AIR CONDUIT
Waldemar J. Barman, Los Angeles, Calif.
Application July 6, 1937, Serial No. 152,228
8 Claims. (Cl. 138—63)

1. In a device as described, a duct for transmission of air or the like having angular corners and a covering of heat insulation combined with rigid angle devices secured outside of the insulating cover in alignment with the angular corners of the duct and an outside covering of fabric or the like stretched over said angle devices.

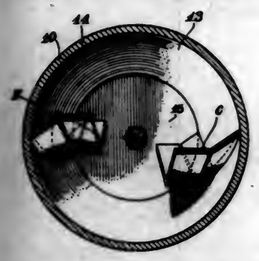


2,108,160
CRUSHING MILL
William A. Beaudry, Wallace, Idaho
Application November 9, 1935, Serial No. 49,045
4 Claims. (Cl. 83—11)

3. The combination in a crushing mill of the horizontal axis type having tapering heads and trunnions therein, of an annular flange surrounding the intake trunnion and adapted to deflect falling material toward the center of the drum, an annular deflecting ring concentrated with the discharge trunnion and mounted on one of said heads, a rotary bat mounted within the drum between said flange and ring and a stationary baffle plate mounted between said ring and discharge trunnion.

4. The combination in a crushing mill with a rotary drum, of a rotary bat therein, said bat being of cruciform shape in cross section and comprising angular plates forming grooves, said plates arranged in pairs, the adjoining edges of each pair of plates having a wear-bar and means for fastening said bar to said adjoining edges, and said bat having circular heads at its opposite ends forming end walls for the grooves.

2,108,161
HEEL-SEAT FITTING MACHINE
Earl A. Bessom, Meadville, Pa., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application January 14, 1937, Serial No. 120,603
77 Claims. (Cl. 12—31.5)

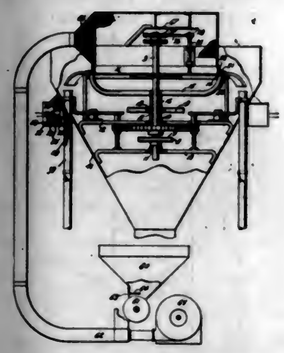


1. A heel-seat fitting machine having, in combination, a pair of knives movable in converging paths, one of said knives having a leading cutting edge which is arched transversely of its path of movement and the other knife having cutting edges which are arched transversely of their respective paths of movement and are spaced from each other lengthwise of said paths, and mechanism for operating the knives.

2,108,162
BUTTER CHURN
Frank G. Clark, Minneapolis, Minn.
Application September 13, 1935, Serial No. 40,447
7 Claims. (Cl. 259—89)

1. A butter churn or the like, comprising a rotatable body portion having a chamber therein

for receiving the cream or liquid to be churned, plow shelves positioned within said body and held stationary with the inner wall of said body and extending throughout the length thereof, said plow shelves being spaced apart circumferentially on the inner surface of said body and having a



central apex portion ahead of the ends thereof during rotation to equalize the churning load within said churn, thereby dividing and equalizing the churning strain on the shelves and against the wall and ends of said churn throughout the operation thereof.

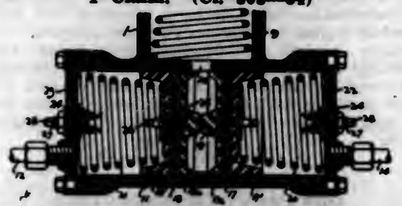
2,108,163

CENTRIFUGAL FEEDING DEVICE

Ralph R. Clark, Lancaster, Pa., assignor to Armstrong Cork Company, Lancaster, Pa., a corporation of Pennsylvania

Application January 29, 1935, Serial No. 3,993
11 Claims. (Cl. 221—136)

1. A centrifugal feeder for closure liner disks or the like comprising an accumulating and conveying member adapted to receive and convey a single series of disks disposed thereon and freely movable therewith, a centrifuging member coaxial with said accumulating and conveying member adapted to move disks fed heterogeneously thereto onto the member, and means for rotating said conveying member and centrifuging member at different speeds.



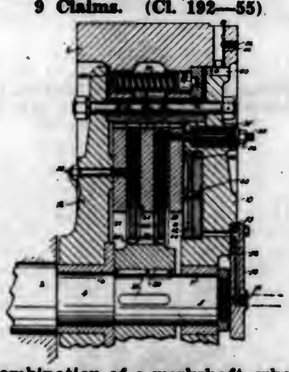
9. In a feeding device, the combination of means for centrifuging and conveying articles to a feed chute, a skimmer guard adapted to prevent radial movement of articles on said conveying means, a shaft mounted adjacent the leading edge of the skimmer guard and lying substantially parallel to the edge thereof, means on the shaft adapted to urge articles coming into contact therewith away from the guard and means for rotating the shaft.

2,108,164

HYDRAULIC BRAKING SYSTEM

Leroy Cornwell, Spokane, Wash., assignor of one-half to Paul H. Hull, C. Herman Redell, and Rollen F. Stewart, Spokane, Wash.

Application May 1, 1936, Serial No. 77,294
1 Claim. (Cl. 303—84)



In a hydraulic braking system, the combination of a distributing cylinder having removable heads and brake-pressure pipes connected thereto, a pair of spaced floating pistons having abutting bosses to provide a central space, an inlet port and an outlet port communicating with said space, said outlet port communicating with a duct in a longitudinal wall of the cylinder and said duct having ports opening into the cylinder adjacent its opposite ends, and a three-way valve in said duct at each side of said outlet port for controlling passage of pressure-fluid therethrough.

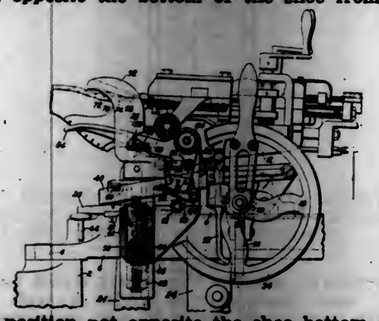
2,108,165

COMBINATION SAFETY SLIP AND DRIVE MECHANISM

William W. Criley, Cleveland, Ohio

Application August 15, 1935, Serial No. 36,317
9 Claims. (Cl. 192—55)

1. A combination of a workshaft, wheel carrying elements mounted thereon and spaced apart, a heavy flywheel member carried by said elements, a friction clutch between said elements and within said flywheel member, with a safety friction means between said elements and the flywheel, and springs of predetermined modulus exerting pressure against said safety friction means.



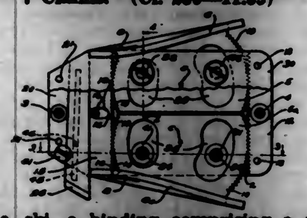
2,108,166

LASTING MACHINE

René E. Duplessis, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey

Application April 13, 1937, Serial No. 136,642
26 Claims. (Cl. 12—14)

1. In a lasting machine, the combination with means for wiping the marginal portion of an upper around an end of a shoe inwardly over an insole and against a lip on the insole, of a holddown for engaging the insole and supporting the lip against the inward pressure of the wiping means, said holddown being movable to a position opposite the bottom of the shoe from an



idle position not opposite the shoe bottom and thereafter further movable heightwise of the shoe into engagement with the insole, and means for imparting to the holddown in such further movement heightwise of the shoe a movement lengthwise of the shoe toward the lip of the insole.

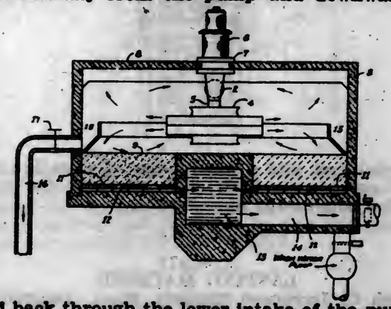
2,108,167

SKI BINDING

Sidney Gerber, Seattle, Wash.

Application June 20, 1936, Serial No. 86,327
7 Claims. (Cl. 280—11.35)

2. In a ski, a binding comprising a pair of oppositely related clamp plates mounted on the ski runner and adjustable from and toward each other; each plate having an upturned flange along its outer edge and having serrated opposite end edges curved about an intermediate center point, a cross bar fixed on the ski and having a toothed edge adapted to be engaged by corresponding toothed end edges of said clamp plates, a locking bar movably fixed on the ski transversely thereof and having a toothed edge adapted to interlock with the other ends of said clamp plates, an abutment bar fixed across the ski and a tapered wedge bar interposed between the abutment and locking bar, and adjustable to secure or to release the locking bar from holding engagement with the clamp plates.



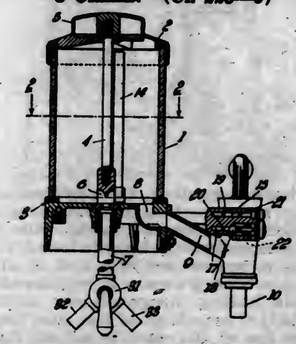
2,108,168

DEVICE FOR CLARIFYING LIQUIDS

Harry N. Jenks, Berkeley, Calif.

Application December 26, 1933, Serial No. 703,903
3 Claims. (Cl. 210—123)

1. A water treatment unit comprising a chamber having an inlet for raw water and coagulant in its upper portion and an outlet for treated water at its base, a filter bed located in the lower portion of the chamber and supporting a mass of water that extends from the upper surface of said filter bed to the upper part of the chamber, a trough extended around the inner circumference of the chamber and situated above the filter bed, means comprising a double-suction pump for producing prolonged circulation of the water and coagulant laterally from the pump toward the inlet edge of the trough and thence upwardly and back through the upper intake of the pump and for producing similar circulation laterally from the pump and downwardly



and back through the lower intake of the pump, and means for producing at intervals a reverse flow of filtered water upwardly through the filter bed, heavier impurities being thrown by centrifugal force into the above mentioned trough as a result of the circulation produced by said pump.

2,108,169

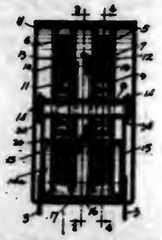
DEVICE FOR DISPENSING AERATED LIQUIDS

Edgar John Jofeh and Jacques Gregoire Trilling, London, England

Application August 28, 1935, Serial No. 38,179
In Great Britain October 10, 1934
8 Claims. (Cl. 225—9)

7. A device for dispensing aerated liquids comprising a container, a supply pipe for liquid under pressure in open communication with the lower part of said container, a liquid delivery passage communicating with the lower part of said container, a supply passage for gas under pressure communicating with the upper part of said container, and valve means for opening either the liquid delivery passage or gas inlet passage to discharge the liquid from the container either through the liquid delivery passage or through the liquid supply pipe.

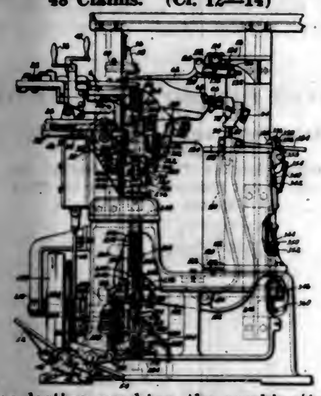
2,108,170



ELECTRICAL CORD EXTENSION DEVICE

John W. Johnson, St. Maries, Idaho

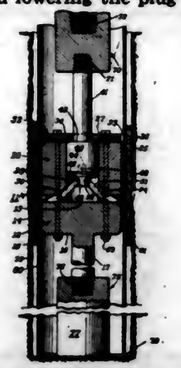
Application February 11, 1936, Serial No. 63,887
2 Claims. (Cl. 173—367)



1. In an extension-device for electric-cords, the combination with a pair of spaced oppositely

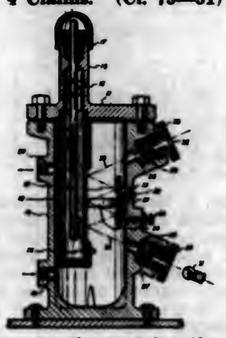
rotatable, spring-wound, opposed reels each having a conductor ring, of a spring blade mounted

on each reel, and a brush mounted on each blade and each brush frictionally engaging the conductor ring on the opposite reel.



2,108,171
LASTING MACHINE
Jacob C. Jorgensen, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application April 12, 1937, Serial No. 136,373
48 Claims. (Cl. 12—14)

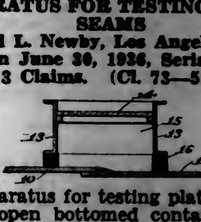
1. In a lasting machine, the combination with toe-lasting means, of shoe-positioning means mounted for swinging movement with a shoe about an axis extending heightwise of the shoe in a location nearer the heel end of the shoe than said toe-lasting means in response to pressure of said lasting means on one side or the other of the toe exteriorly of the shoe bottom to permit the toe of the shoe to adjust itself laterally to the lasting means.



2,108,172
CASING PERFORATOR
Charles B. Margrave, Los Angeles, Calif., assignor of one-half to Albert I. Breslow, Los Angeles, Calif.
Application January 11, 1937, Serial No. 120,026
10 Claims. (Cl. 164—0.4)

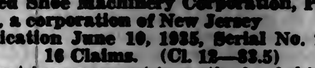
1. A casing perforator comprising in combination a substantial block assembly having diametrically opposite straight transverse guide openings and a central bore connected thereto, perforators rectilineally slidably mounted in the openings, a plug slidably mounted in the bore, toggle links, means connecting the toggle links between the plug and the perforators, a supporting means connected to the lower end of the block assembly for supporting the block in a desired position in a well casing, means attached to the plug for connection to a string of drill pipe for raising and lowering the plug whereby when

the plug is elevated the perforators are retracted and when the plug is lowered said perforators are forced outwardly to perforate the casing.



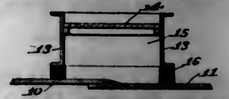
2,108,173
APPARATUS FOR DETERMINING DEW POINT OF GASES
Armor B. Martin, Butte, Mont., and Henry N. Wade, Los Angeles, Calif.
Application November 28, 1936, Serial No. 113,270
4 Claims. (Cl. 73—51)

4. Apparatus for determining the dewpoint of a gas, comprising: a heat-conductive wall having a permanent light reflecting surface formed thereon; means for projecting a light beam onto said surface; means for causing said light beam to be repeatedly reflected from said surface; means for contacting said gas with said reflecting surface; means for progressively cooling said wall; means for determining the momentary temperature of said wall, and means for observing a change in the intensity of said repeatedly reflected light beam.



2,108,174
APPARATUS FOR SHOOTING WELLS
Orland C. Mays, Wink, Tex.
Application August 15, 1936, Serial No. 96,182
7 Claims. (Cl. 102—4)

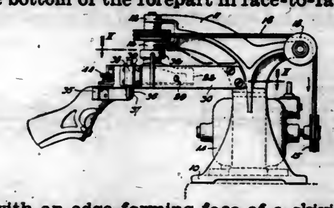
1. An anchor comprising an upper member having a central conical bore; a lower member in axial alignment therewith having a bail supporting element formed on its lower surface; a plurality of circumferentially disposed flukes pivoted about the lower end of said upper member; a like plurality of links radially positioned in alignment with said flukes, one end of each link being pivotally connected to one of said



flukes intermediate its ends, and the other end of each of said links being pivotally connected about the periphery of said lower member.

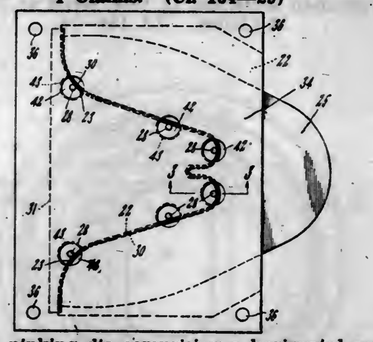
2,108,175
WAIST BAND ADJUSTMENT FOR GARMENTS
Harry E. Miller, East Cleveland, Ohio
Application May 22, 1936, Serial No. 81,222
1 Claim. (Cl. 2—237)

A garment having front and rear sections to form a side seam, a side pocket with an entrance opening at said seam, said seam terminating below the upper end of said opening to form a placket, a waistband attached to said garment having a portion attached to the front section thereof and outwardly overlapping another portion that is secured to said rear section, the overlapping portion forming an extension that extends beyond the upper end of said pocket opening, a substantially triangular piece secured to the lower edge of said extension and having one side secured to the edge of the bottom facing of said side pocket and to the garment above said pocket, forming a flap adapted to overlie the rear section of said garment; said rear portion of the waistband having a plurality of fastening means at the side and said extension of the front portion of the waistband having a single fastening means adapted to selectively engage any one of said first-named fastening means to hold the parts together and to provide adjustability of the waistband and the garment, said fastening means being exteriorly accessible.



2,108,176
APPARATUS FOR TESTING PLATE SEAMS
Howard L. Newby, Los Angeles, Calif.
Application June 30, 1936, Serial No. 88,161
3 Claims. (Cl. 73—51)

1. An apparatus for testing plate seams, comprising an open bottomed container having a transparent wall and having a deformable gasket, means for creating a partial vacuum in the container, and means for determining that a partial vacuum exists within the container.



2,108,177
METHOD OF AND MACHINE FOR TRIMMING
William H. Nutt, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application June 10, 1935, Serial No. 25,766
16 Claims. (Cl. 12—33.5)

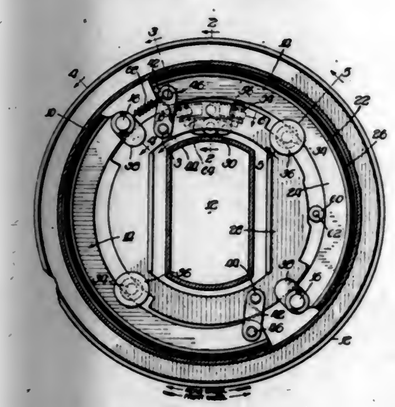
1. That improvement in methods of skiving the pleats from the toe of the overdrawn margin of upper materials that confront the bottom of the insole of a lasted shoe which consists in placing the unpleated portions of said margin at the sides of the bottom of the forepart in face-to-face con-

tact with an edge-forming face of a skiving element while the pleats at the toe of the shoe lie beyond the skiving edge, and moving the shoe lengthwise heel-end foremost to feed the pleats at the toe against the skiving edge.

2,108,178
APPARATUS FOR TRIMMING OR PINKING LEATHER OR THE LIKE
Stig E. Rosenberg, Brockton, Mass.
Application February 24, 1936, Serial No. 65,200
4 Claims. (Cl. 164—29)

1. A pinking die comprising a horizontal supporting table for a piece of leather, said table having a beveled edge portion similar in contour to the edge portion of the leather to be trimmed, gage pins engageable by said edge portion of the leather, means supporting said gage pins adjacent to said beveled edge portion of said table, a knife-supporting plate yieldingly mounted over said table, a knife mounted on the under side of said plate, and means guiding said plate so that downward movement thereof brings said knife into contact with said beveled edge of the table, said plate having apertures therethrough above said gage pins to permit sighting of said pins and the portions of the work adjacent thereto.

2,108,179
BEAN SNIPPING MACHINE
Frank P. Ryder, deceased, late of Niagara Falls, N. Y., by Stephen M. Ryder, executor, Niagara Falls, N. Y., assignor to Chisholm-Ryder Company, Inc., Niagara Falls, N. Y., a corporation of New York
Original application January 10, 1933, Serial No. 651,032. Divided and this application May 4, 1936, Serial No. 77,885
4 Claims. (Cl. 146—86)

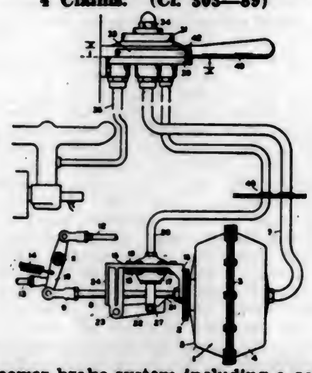


1. In a bean snipping machine having a cylindrical shell mounted to rotate on an axis approximately horizontal having its sides provided with

perforations adapted to permit the tips of bean pods to protrude, a knife extending lengthwise of the cylindrical shell having its cutting edge in contact with its exterior surface in position to cut off tips protruding from said perforations and means for supporting and reciprocating the

knife comprising a longitudinally extending rod having means at one end for reciprocating it longitudinally and having at its other end a bearing sleeve adapted to permit the rod to rotate and to reciprocate longitudinally and a holder for the bearing supported in a swivel bearing.

2,108,180
BRAKE
Albert A. Schramm and Arthur A. Schramm, Chicago, Ill.
Application September 14, 1934, Serial No. 743,935
11 Claims. (Cl. 188—78)

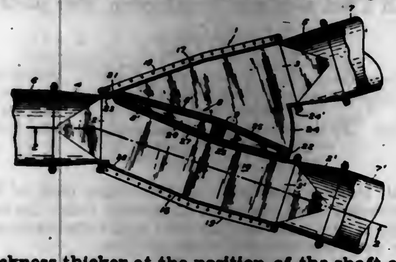


1. A brake including: a brake support; a pair of identical brake shoes pivotably anchored to said support at widely spaced points and extending in the same circumferential direction from said points; and means for applying said shoes against the drum including: an applicator member, means for operating said applicator member by rotating it about a point between the free ends of said shoes, and a link extending in the same circumferential direction and inwardly from the free end of each shoe to a point on said applicator member which approaches the original position of the point of engagement of said link with said shoe as said applicator member is operated, the links for the two shoes being identical in nature, and the applicator member being substantially freely floating in the plane of its operation when in its operated position whereby the pressure on the two shoes is substantially equalized; and means for limiting the movement of said applicator member in the direction of its thrust on a brake shoe when the forces exerted thereon are out of balance.

2,108,181
PROCESS FOR PREPARING ANATOMICAL CASTS OF HUMAN AND ANIMAL ORGANS
August Schummer, Giessen, and Ernst Trommsdorff, Darmstadt, Germany, assignors to Röhm & Haas Company, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application January 14, 1936, Serial No. 59,092. In Germany January 15, 1935
5 Claims. (Cl. 35—20)

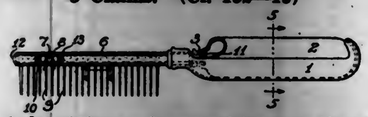
1. The process for preparing anatomical casts of the interior structure of human and animal organs which comprises filling the canals and cavities of the organ with a polymerizable organic substance capable of forming a hard polymer, solidifying said substance by subjecting it to polymerizing influences and subsequently treating the organ with chemicals which destroy the natural material thereof without affecting the polymerized material.

2,108,182
POWER BRAKE SYSTEM
Dudley F. Searle, Oakland, Calif.
Application May 16, 1935, Serial No. 22,164
4 Claims. (Cl. 303—89)



1. A power brake system including a source of fluid pressure; braking means actuated by said fluid pressure; locking means actuated by the fluid pressure and adapted to lock said braking means in operative position; a control valve interposed between said fluid pressure source and said braking and locking means and having an operating handle movable to admit the fluid pressure into said braking and locking means selectively; and a movable dog normally preventing the necessary movement of said handle to admit fluid pressure into said locking means.

2,108,183
DREDGE PIPE Y VALVE
John G. Sjoberg, Oakland, Calif., assignor to Pacific Coast Engineering Company, Inc., Oakland, Calif., a corporation of California
Application January 9, 1937, Serial No. 119,827
8 Claims. (Cl. 251—13)



1. A dredge pipe line Y valve comprising a casing of rectangular cross section having an inlet opening at its forward end and two spaced outlet openings at its rearward end, a gate fitting within said casing pivotally mounted on a vertical shaft intermediate the forward and rearward edges of the gate to swing the forward edge of the gate across said inlet opening against either side wall of the casing and the rearward edge of the gate from one to the other adjacent edges of the spaced

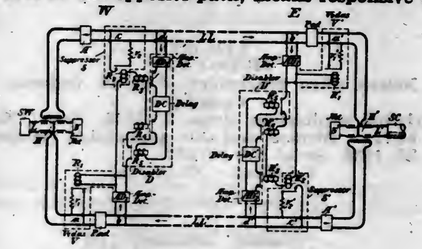
outlet openings, a curved wall extending between said outlet openings against which the rearward end of the gate seals, said gate being of tapering

thickness thicker at the position of the shaft and provided with a frame integrally secured to the shaft.

2,108,184
FOUNTAIN COMB
Arthur W. Wallenius, Glendale, Calif.
Application March 8, 1937, Serial No. 129,569
3 Claims. (Cl. 132—13)

1. A fountain comb comprising a main rib in the form of a hollow tube having one closed end and one open end, a handle attached adjacent to the open end of said main rib, and provided with a casing to receive a fluid reservoir, a fluid reservoir positioned within said handle and in communication with the open end of the main rib and with the hollow space therein, a plurality of teeth attached to and protruding from said main rib, and a plurality of fluid ducts in communication with the hollow tube of the main rib, said ducts completely surrounding each of said teeth.

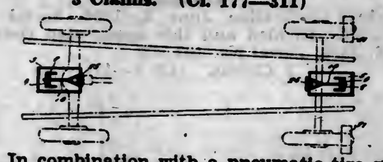
2,108,185
SLIDER FOR FASTENERS
George Wintritz, Springdale, Conn., assignor to Talon, Inc., a corporation of Pennsylvania
Application July 27, 1933, Serial No. 682,479
4 Claims. (Cl. 24—205)



3. A slider for slide fasteners comprising parallel wings, a central wing connection at one end of the slider, a lug adjacent said wing connection, a pull tab pivoted to said lug, the wing adjacent said lug having the slits 15 one on each side of said lug extending through the end of the wing having said connection and providing flexible side portions 17 on opposite sides of said wing connection, and cam means on said pull tab for pressing said flexible portions inwardly to lock the slider.

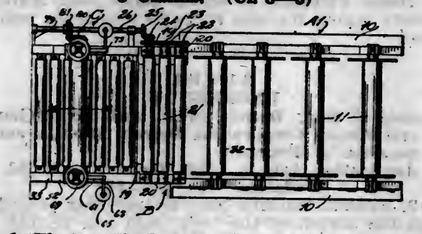
2,108,186
TWO-WAY SIGNALING SYSTEM
Leonard Gladstone Abraham, Madison, N. J., assignor to the American Telephone and Telegraph Company, a corporation of New York
Application October 29, 1936, Serial No. 108,279
5 Claims. (Cl. 178—44)

2. In a two-way telephone system, two separated stations, two paths connecting said sta-



tions and adapted for transmission in opposite directions, means associated with the receiving section of each of said paths for normally introducing an appreciable loss in said section, means responsive to voice waves reaching the receiving section of either of said paths for removing the loss normally introduced therein independently of the presence or absence of voice waves in the opposite path, means responsive to

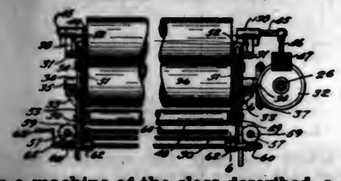
Delay of DC (DC') = one-way delay of LL' from A' to b' (LL' from A' to b').
Zero level transmissivity of R_2 (R_2') should be lower than transmissivity of R_1' (R_1) or R_3' (R_3) under all conditions of net loss of the circuit.
Transport of relay R_2 (R_2') or of relay R_3' (R_3) should not exceed the hangover of supervisor S (S').



voice waves reaching the receiving section of either of said paths for closing a circuit designed to introduce an appreciable loss in the transmitting section of the opposite path, and means responsive to earlier arriving voice waves in said transmitting section for opening said circuit but only after a delay approximately equal to the one-way delay of the system between said stations.

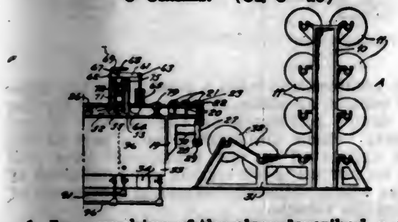
2,108,187
SIGNAL DEVICE
Walter R. Armstrong, Sr., New Orleans, La.
Application April 16, 1937, Serial No. 137,346
3 Claims. (Cl. 177—311)

1. In combination with a pneumatic tire supported vehicle, an alarm device, a control for the alarm device positioned on the support of the stationary vehicle and underlying a part of the vehicle supported by the pneumatic tires and means for operating the control upon deflation of the tires which causes a downward movement of a part of the vehicle.



2,108,188
PROCESS OF YARN DYEING, DRESSING, AND LOOM BEAMING
Nelson A. Batchelder, Welland, Ontario, Canada
Application June 5, 1936, Serial No. 83,791
3 Claims. (Cl. 8—5)

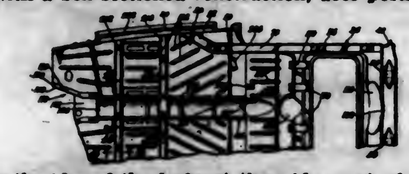
1. That method of continuous dyeing of yarn



collected from a plurality of undyed yarn bodies which consists in absorbing the starting torque resultant from the unwinding of the yarn from said yarn bodies and then power feeding the yarn at a predetermined positive speed from said bodies to and through a series of successive dye treatments while maintaining a constant uniform lineal speed of all parts of said yarn without appreciably tensioning the yarn.

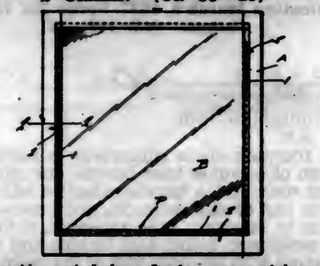
2,108,189
SIZING VAT
Nelson Allen Batcheider, Welland, Ontario, Canada
Original application June 5, 1936, Serial No. 83,791. Divided and this application October 26, 1936, Serial No. 107,577
7 Claims. (Cl. 8—19)

1. In a machine of the class described, a sizing vat, a plurality of dipping rolls located within said sizing vat, means exterior of the vat for raising and lowering the dipping rolls, and squeezing rolls in said vat arranged in pairs alternating with the dipping rolls, each pair being located forwardly of a respective dipping roll.



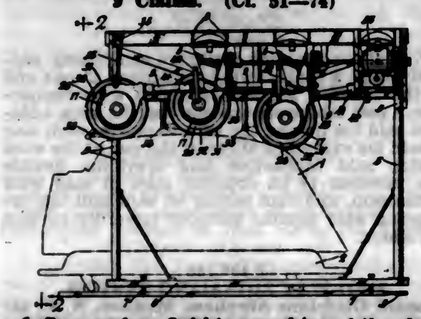
2,108,190
DYEING MACHINE
Nelson Allen Batcheider, Welland, Ontario, Canada
Original application June 5, 1936, Serial No. 83,791. Divided and this application October 26, 1936, Serial No. 107,578
3 Claims. (Cl. 8—19)

1. In a machine of the class described, a dyeing and treating vat having guide rollers therein positioned alternately upwardly and downwardly, a set of feed rolls feeding material to said vat, and a tensioning roll over which material passes to the set of feed rolls, said tensioning roll comprising a freely swinging revoluble roller and spring means urging the said roller to tensioning position.



2,108,191
UNDERBODY
Russell S. Begg, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application July 9, 1936, Serial No. 89,693
14 Claims. (Cl. 296—28)

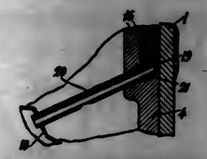
2. In an automobile body, an underpan extending the length of the body, said pan having a narrow rear part and a wide front part, downturned edge flanges on the narrow rear part, longitudinal channel shaped members secured to the flanges and to the pan and forming therewith a box-sectioned construction, door posts at



both sides of the body at the wider part of the underpan, said channels extending from the rear edge of the narrower section and terminating at the door posts of the wider section.

2,108,192
PUTTY RETAINER
Sigward L. Bergen, Dallas, Wis.
Application July 12, 1937, Serial No. 153,238
2 Claims. (Cl. 85—15)

1. A putty retaining device comprising a single strand of wire passing longitudinally through the putty receiving space of a member and means for supporting the wire in spaced relation from the walls of such putty receiving space, whereby said wire will be embedded in the putty when the putty is put in the space.



2,108,193
SANDING MACHINE
Tracy F. Brackett, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application October 30, 1936, Serial No. 108,350
9 Claims. (Cl. 51—74)

1. In a surface finishing machine of the character described, a yieldable mounting for a work engaging surface including an annular flexible container for fluid under pressure having incorporated in the wall thereof two sets of reinforcing cords, one set extending circumferentially and

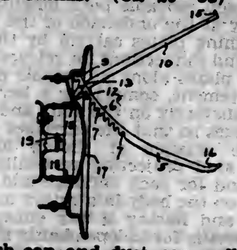
the other transversely thereof for limiting distention of the wall under fluid pressure to predetermined shape.

2,108,194
PISTON
Harold D. Church, Cleveland, Ohio, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application January 9, 1935, Serial No. 947
5 Claims. (Cl. 309—3)

1. In a piston of the character described, a skirt having near the headed end thereof a packing ring groove, and a series of shouldered bores extending downwardly and inwardly in intersecting relation with the groove, a series of drain tubes, each having an enlargement seating in said shouldered bore and a packing ring in said groove holding the tubes against displacement.

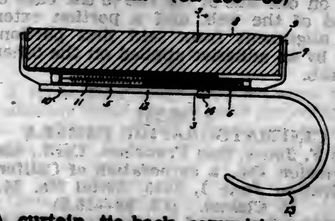
2,108,195
DRILL HOLE CLEANING DEVICE
Raymond L. Crow, Lawrence, Kans.
Application October 20, 1936, Serial No. 106,667
5 Claims. (Cl. 255—60)

1. A drill hole cleaning device comprising a section of flexible tubing having a sharpened edge at one end thereof, a tubular handle open at both ends, means for connecting said tubular handle to one end of the tubing with the bores of the handle and tubing in open communication, and spirally extending means formed in the bore of said section of tubing for packing and holding drillings received therein when the device is forced into a drill hole.



2,108,196
BRACKET
Harrison Davies, The Plains, Ohio
Application May 3, 1937, Serial No. 140,527
2 Claims. (Cl. 248—233)

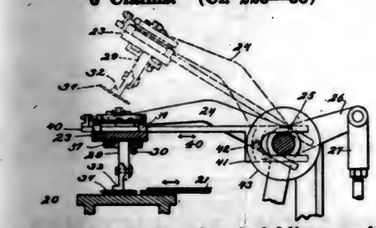
1. A device of the class described, comprising a strip-like hanger provided with means for supporting an article, the hanger being provided with an outwardly bulged part forming a cavity, the hanger being supplied with a reduced slot leading downwardly to the cavity, the upper edge of the outwardly bulged part being downwardly con-



caved, to form pointed tongues in the hanger, on each side of the slot, at the lower end of the slot.

2,108,197
HUB CAP AND DUST CAP PULLER
Virgil L. Du Sang, Kokomo, Ind.
Application July 11, 1936, Serial No. 90,058
4 Claims. (Cl. 29—85)

1. In a hub cap and dust cap puller, a lever formed as a handle at one end and having the opposite end formed to bear against a portion of a wheel, said lever being slotted longitudinally for an appreciable distance beginning near the bearing end, in combination with a second lever passing through the slot in the first lever, means for fulcruming the two levers together at selective places in the slot, said second lever having a handle portion on the same side of the fulcrum as the handle of the first lever and said second lever having its other end formed to contact with a cap and unseat it when the handle ends of both levers are moved apart and manipulated.



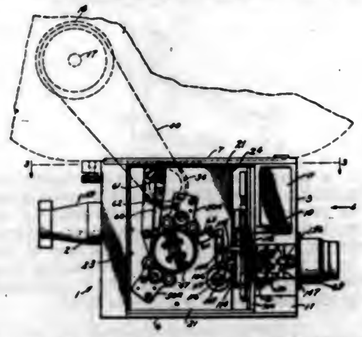
2,108,198
WINDOW CURTAIN TIE-BACK
Walter Egger, Pekin, Ill.
Application February 27, 1937, Serial No. 128,298
2 Claims. (Cl. 156—33)

1. A curtain tie-back comprising a pair of spring retracted telescoping members, window frame gripping jaws on the outer ends of said members, a tie-back arm pivotally secured to one of said members adjacent the jaw thereon and

a catch adjacent the other of the jaws releasably securing said tie-back arm to said tie-back members.

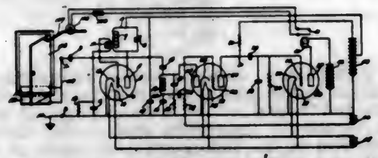
2,108,199
FOLDING MACHINE
Alfred G. Gilbert, South Acton, Mass., assignor to Reece Folding Machine Company, Boston, Mass., a corporation of Maine
Application December 18, 1935, Serial No. 54,999
6 Claims. (Cl. 223—38)

1. In or for a collar blank folding machine a templet fitted to descend upon and rise from the blank, and having a rigid body, a pair of end carriages each movable both longitudinally and transversely at the underside of the body, a pair of end defining plates carried by the respective carriages, and connections for retracting said carriages and plates along adjustable different angles of movement, comprising a bar movable to and fro transverely on the body and engaged by both carriages so that the carriages move therewith while capable of sliding longitudinally thereof, a stud projecting vertically from each carriage, and for each carriage and stud a disk adjustable on the body in a rotary manner about such stud and having a way engaged by such stud, and means for independently fixing each of the two disks in a predetermined angular adjustment, thereby determining independently the angles of movement of the two carriages and defining plates.



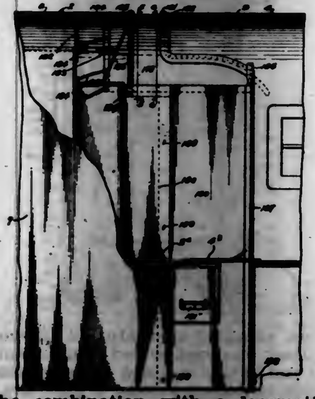
2,108,200
BINDER TAB FOR WEB ROLLS
Albert J. Horton, White Plains, N. Y., assignor to R. Hoe & Co., Inc., New York, N. Y., a corporation of New York
Application February 8, 1935, Serial No. 5,667
13 Claims. (Cl. 242—58)

11. In combination with the free end of the web of a web roll, a tab formed of material having substantially equal tear resisting strength throughout its structure, and including a portion extending over and secured by an adhesive applied on one side of the tab to the edge of the free end of the web, and a portion extending out of alignment from said first portion and secured by an adhesive applied on the other side of the tab.



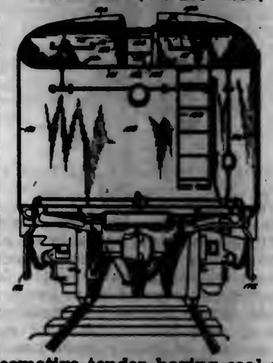
2,108,201
CINEMATOGRAPHIC CAMERA
Charles F. Jones, San Francisco, Calif., assignor to Tricolor, Inc., a corporation of California
Application June 1, 1935, Serial No. 24,514
15 Claims. (Cl. 88—16.6)

1. A camera adapted to simultaneously expose a plurality of cinematographic films, comprising: a light tight casing having a lens therein and a light dividing means in line with said lens; a shutter optically aligned with said lens and said light dividing means; an aperture plate with an aperture in the path of each light beam emerging from said light dividing means; vertical guide means disposed in said casing; a vertically reciprocating carriage slidable on said guide means and provided with a pair of arms extending laterally of said aperture plates and adjacent thereto; a single pair of substantially horizontal pull down pins slidably mounted in each of said arms, one end of said pins being adapted to engage the perforations of a film disposed longitudinally of said



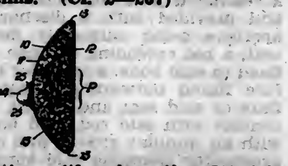
aperture plate, and the other end of said pins being connected to a cross-arm vertically slidable in a guide adapted to be oscillated by a cam operated shaft; cam means for vertically reciprocating said carriage; driving means for operating both of said cam means; a spring operated pressure plate opposite said aperture adapted to hold said films against said aperture plates while said pull-down pins are out of engagement therewith; means for feeding said films to said pull down pins; and take-up means adapted to withdraw said films from said casing after their exposure.

2,108,202
DETECTOR SYSTEM
Frederick G. Kelly, Jr., Hamden, Conn., assignor to American Teletector Corporation, New Haven, Conn., a corporation of Connecticut
Application May 12, 1933, Serial No. 670,737
6 Claims. (Cl. 250—27)



1. In a vacuum tube apparatus, an antenna having a capacity to ground, means for discriminating against seasonal changes in said antenna-ground capacity comprising an oscillator connected to said antenna and having its frequency of oscillation variable in response to changes in antenna-ground capacity, means for establishing a source of direct current potential which varies in value with variations in oscillator frequency, a coupling circuit comprising a condenser and a resistance connected to said source and having a time constant smaller than the time duration of said seasonal changes in antenna-ground capacity, an amplifier connected to said coupling circuit, and translating means connected to said amplifier and responsive to the output thereof.

2,108,203
STREAMLINED LOCOMOTIVE AND TENDER AND VESTIBULE CURTAIN STRUCTURE THEREFOR
William L. Lentz, Tuckahoe, N. Y., and Carl F. Kantola, Ashtabula, Ohio, assignors to The New York Central Railroad Company, a corporation of New York
Original application September 26, 1935, Serial No. 42,342. Divided and this application July 21, 1936, Serial No. 91,780
8 Claims. (Cl. 105—2)

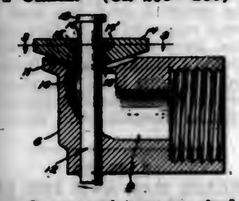


1. The combination with a locomotive and tender, of a gap closure between the adjacent relatively movable ends of such structures comprising a top cover fixed at one edge to one of the structures, means on the other structure for slidably guiding said top and maintaining a streamline relation of the top cover with the roofs of the adjacent structures, means for yieldingly connecting it at its opposite edge to the second-named structure, and flexible side covers closing the sides of the gap between said structures.

2,108,204
LOCOMOTIVE TENDER
William L. Lentz, Tuckahoe, N. Y., and Carl F. Kantola, Ashtabula, Ohio, assignors to The New York Central Railroad Company, a corporation of New York
Original application September 26, 1935, Serial No. 42,342. Divided and this application August 4, 1936, Serial No. 94,270
12 Claims. (Cl. 105—231)

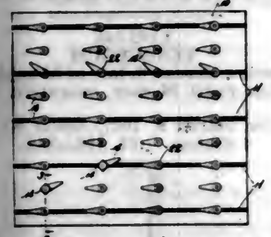
1. A locomotive tender having coal and water receiving spaces, a streamlined shell enclosing said spaces and including top, front, rear and side walls, said front wall being provided with coal discharging means and said top wall being provided at its forward portion with a coal filling opening and in rear thereof with a high level water filling opening, said top wall terminating at its extreme rear end in a depressed platform having a low level water filling opening therein and a depressed passage leading forwardly therefrom toward the high level filling opening, steps in said passage giving access therefrom to the high level filling opening, and closures for said openings.

2,108,205
BREAST PAD AND THE LIKE
Elsie L. Martin, Drexel Hill, Pa.
Application December 1, 1936, Serial No. 113,737
7 Claims. (Cl. 2—267)



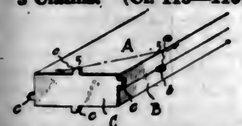
1. The combination with a brassière fitted to the body of a wearer and conformable to her normal bust, of a breast pad in a breast portion of a said brassière filled with loose compressively elastic shreds so that the pad is plastically molded by the brassière, when worn, into substantially the form of the wearer's normal breast, and is also plastically and elastically deformable, substantially like a normal breast.

2,108,206
TENACULUM
Sidney Meeker, deceased, late of Memphis, Tenn., by Lillian Pearl Meeker, executrix, Memphis, Tenn.
Application March 9, 1937, Serial No. 129,942
4 Claims. (Cl. 128—353)



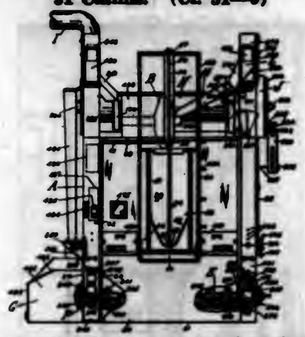
2. A tenaculum comprising a barrel having a substantially dome-shaped head projecting therefrom, a plunger slidably mounted in the barrel, said barrel having slots arranged rearwardly of said head, teeth carried by the inner end portion of the plunger and movable through said slots from a position within the barrel to a position where they project through the sides of the barrel, means in the barrel for spreading said teeth as they are moved outwardly through said slots, and means for locking the plunger to the barrel with the teeth in projected position.

2,108,207
LAWN SPRINKLER
Hugh Bertram Parker, Jacksonville, Fla.
Application June 29, 1936, Serial No. 88,854
1 Claim. (Cl. 299—120)



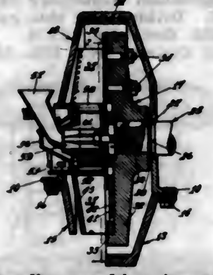
A spray nozzle comprising a main body adapted to be connected to a source of liquid supply, a restricted part connected to said main body, and provided with a discharge aperture, said aperture being outwardly flared to provide a seat, a rod extending through said aperture and fixed to said body, a spreader head having a surface flared outwardly to correspond with the flare of said seat and having a bore in slidable contact with said rod, said bore being provided with an annular groove, and a split ring in said groove for clamping said spreader head in any desired position of adjustment on said rod.

2,108,208
MUSIC CHART
Cary H. Randolph, St. Louis, Mo.
Application September 2, 1936, Serial No. 99,134
4 Claims. (Cl. 84—471)



1. In a device for teaching music including a body lined to represent a music staff and having sockets at various points along the staff for reception of note symbols, means for indicating the position on the staff of successive notes, said means including pointer arms pivotally attached to the body adjacent the sockets.

2,108,209
ASSEMBLING PORTIONS OF HOLLOW ARTICLES
Alfred F. Reilly, North Attleboro, Mass., assignor to Evans Case Company, North Attleboro, Mass., a corporation of Massachusetts
Application September 16, 1937, Serial No. 164,248
3 Claims. (Cl. 113—116)



1. Preparing adjacent parts of hollow articles for assembly comprising providing lugs at intervals on each part, placing the parts together with abutting edges and registering lugs, fastening the lugs together to hold the parts in adjusted position, fastening the abutting edges of the pieces, and removing the lugs.

2,108,210
ABRADING APPARATUS
William A. Rosenberger, Hagerstown, Md., assignor to Pangborn Corporation, Hagerstown, Md., a corporation of Maryland
Application November 3, 1934, Serial No. 751,364
31 Claims. (Cl. 51—9)

1. In an abrading apparatus, in sub-combination, at least one open-ended drum mounted for rotation and having a closed end so shaped as to cause work contained therein to gravitate toward the open end thereof, a rockable member located adjacent the open end of said drum for preventing work from escaping from the latter, power operated means for causing said member to rock into a work-discharging position, and means for automatically stopping said member when it attains discharging position under the influence of said power means.

2,108,211
ABRADING MACHINE
William A. Rosenberger and Walter L. Keefer, Hagerstown, Md., assignors to Pangborn Corporation, a corporation of Maryland
Original application May 17, 1934, Serial No. 726,188. Divided and this application August 29, 1936, Serial No. 98,500
8 Claims. (Cl. 51—9)

1. In an abrading machine, in combination, a disc-like runner-head, a plurality of blades disposed substantially radially with respect to said head, means mounting said blades for guided sliding movement toward and away from the axis of said head, means for limiting outward movement of said blades, and leaf springs engaging a surface of said runner-head and said blades for resisting inward movement of said blades.

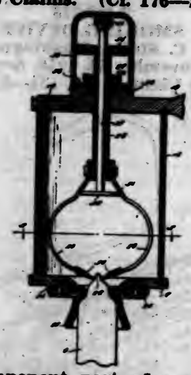
2,108,213
METAL-WALLED VACUUM CHAMBER OR CONTAINER
Eugene L. Schelling, Ridgewood, N. J., assignor to The Shellwood-Johnson Company, Paterson, N. J., a corporation of New Jersey
Application August 1, 1934, Serial No. 737,863
7 Claims. (Cl. 220—15)

4. A vacuum chamber comprising sheet metal walls enclosing gas-tightly the vacuum space, and of such character as to be subject to collapse or inward deflection in practical use, and, occupying such vacuum space, a rigidly packed filling composed of a mass of hard granules of appreciable size and relatively small contacts between them, and forming interconnected interstices throughout the mass; such filling by reason of such character having the properties of preventing to a substantial degree heat conduction through its own mass, and allowing susbtantially free gas flow through its mass for evacuation of the space, and constituting a substantially rigid internal bracing support from chamber wall to wall, thereby to resist effectively a substantial deflection thereof by external pressure.

2,108,212
HYDROGENATED PRODUCTS
Norman D. Scott and Joseph Frederic Walker, Niagara Falls, N. Y., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Original application October 20, 1933, Serial No. 694,516. Divided and this application July 25, 1934, Serial No. 736,960
11 Claims. (Cl. 260—2)

1. A process for making a resinous polymer comprising reacting the dihydro derivative of a hydrocarbon selected from the group consisting of acenaphthene and naphthalene homologs with an alkali metal addition compound of one of said hydrocarbons and hydrolyzing the reaction product.

2,108,214
POLISHING COMPOSITION
Leroy W. Shuger, Baltimore, Md., assignor to Baltimore Paint and Color Works, Inc., Baltimore, Md., a corporation of Maryland
No Drawing. Application March 12, 1936, Serial No. 68,542
5 Claims. (Cl. 134—94)

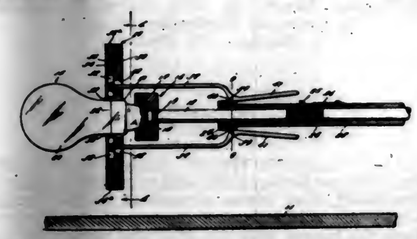


2. An emulsion polishing composition highly resistant to weather ravages comprising as a luster restorer, an odorless, stearine-free fish oil, as a lubricator and cleanser, mineral oil, and water, and in which the water is the continuous phase.

2,108,215
AUTOMOBILE BODY
Karl Stief and Ronald K. Evans, Russelsheim-on-the-Main, Germany, assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application August 30, 1935, Serial No. 38,530
In Germany September 28, 1934
19 Claims. (Cl. 296—28)

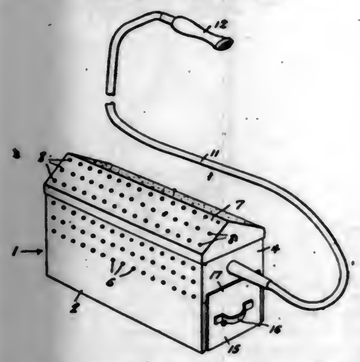
9. In a chassisless vehicle, channel-shaped side sills, a tunnel between the sills to accommodate a drive shaft, floor plates connected to the tunnel and to the side sills and closing the space between the tunnel and the sills, said plates closing the open side of the channel-shaped side sills to form a box-sectioned construction, and transverse seat supports secured between the sills and the tunnel and over the plates.

2,108,216
RARE GAS SALVAGING DEVICE
Louis C. Stringer, Chicago, Ill., assignor to Electronics Supply Corp., a corporation of Delaware
Application April 29, 1937, Serial No. 139,824
12 Claims. (Cl. 176—2)



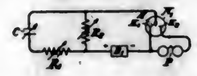
8. As a component part of a rare gas collector of the class described, a glass cylinder having an annulus at its bottom, a rubber adapter ring attached to and depending from said annulus and designed to accommodate an end of the tube to be tapped, a packing gland at the opposite end of said cylinder, a sleeve mounted for sliding and rotation in said packing gland, a rod slidable in said sleeve, the sleeve and rod having operating means located on the exterior of the cylinder, a pair of spring fingers mounted on the inner end of the sleeve, a disk mounted on the inner end of the rod cooperable with said spring fingers for spreading the fingers, and cutting blades on the free ends of said fingers.

2,108,217
TUBE CUTTING DEVICE
Louis C. Stringer, Chicago, Ill., assignor to Electronics Supply Corp., a corporation of Delaware
Application May 5, 1937, Serial No. 140,957
10 Claims. (Cl. 33—21)



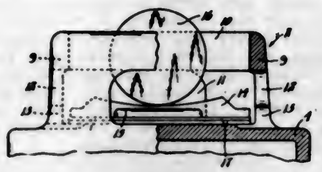
1. A fragile tube cutting device of the class described comprising a support, an arbor on said

support, said arbor being provided with an adapter fixture against which one end of a bulb is held, a mandrel mounted for oscillation and sliding on said arbor, said mandrel including an annular cutter head adjustable toward and from said adapter fixture.



8. A scoring device for glass tube severance of the class described comprising a relatively fixed abutment against which one end of the work is adapted to be held by hand, and a complemental oscillatory scoring unit of a hand rotated type, said scoring unit being located in spaced longitudinal alignment with the abutment and being adapted to encircle the work to circumscribe a breakable score line around the work at a predetermined distance from said abutment.

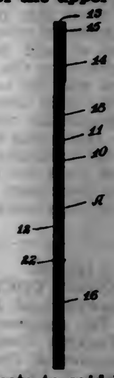
2,108,218
SMOKING DEVICE
Harvey C. Stultz, Washington, D. C.
Application November 16, 1936, Serial No. 111,117
1 Claim. (Cl. 131—51)



A smoking device of the class described comprising a rectangular metallic casing including a bottom, end walls and side walls, the top of the casing being open and the side walls having perforations therein in substantially the upper halves of said walls, a neck projecting inwardly from one of the end walls, said neck projecting into the perforated part of the casing, the said end wall having an opening in its lower half, a drawer passing through the opening into the unperforated part of the casing, a holder for cigarettes and cigars having a reduced part passing through the neck and a head located in the perforated part of the casing, a tube connected with the projecting portion of the reduced part, a mouth piece on the free end of the tube, a substantially anticlinal perforated cover fitting over the upper open end of the casing, the internal walls of the casing and cover being plain and unobstructed with the exception of the neck.

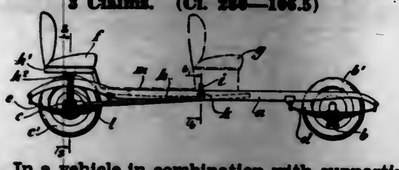
2,108,219
GAS TUBE CIRCUITS
Leland K. Swart, Mountain Lakes, N. J., assignor to American Telephone and Telegraph Company, a corporation of New York
Application July 3, 1936, Serial No. 88,905
6 Claims. (Cl. 250—36)

1. The combination of a condenser, a resistor shunting the condenser, a three-electrode gas-filled tube, and a source of potential connected in series both with two of the electrodes of the tube and said resistor and having a potential which exceeds the breakdown voltage between said two electrodes of the tube, and an indicating device having a single pair of terminals connected between one of said two electrodes and the third electrode of said tube and responsive to the ionization of the gas within the tube.



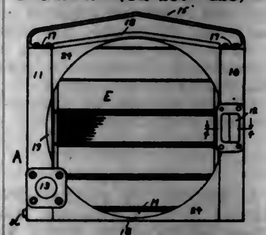
2,108,220
SIDE BEARING FOR CAR TRUCKS
Edwin W. Webb, Chicago, Ill., assignor to Standard Car Truck Company, Chicago, Ill., a corporation of New Jersey
Application October 7, 1937, Serial No. 167,748
4 Claims. (Cl. 308—226)

1. In a car truck, a side bearing comprising an open topped housing, a tread plate received therein and a bearing member received within said housing and working on said tread plate, said housing having four walls, one of said walls having an opening therein provided with its widest portion spaced above the bottom of the housing, the widest portion of said opening being of such size as to receive tread plate shims therethrough whereby shims may be inserted into and withdrawn from said housing through said opening, the opening equipped wall below the portion of the opening through which the shims may be received forming a stop preventing horizontal movement of inserted shims toward the opening equipped wall.



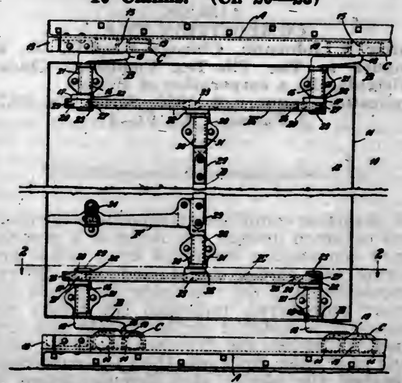
2,108,221
CALENDAR
Orion P. Winford, St. Paul, Minn., assignor to Brown & Bigelow, St. Paul, Minn., a corporation of Minnesota
Application January 28, 1937, Serial No. 122,751
7 Claims. (Cl. 40—119)

1. A calendar comprising a backing sheet, a series of sheets overlying said backing sheet, a line of perforations dividing each sheet of said series of sheets into two large divisions one above the other, the lower one of said divisions bearing calendar indicia, and means extending through the lower edge of the upper of said divisions for



securing said sheets to said backing sheet adjacent said line of perforations.

2,108,222
SEAT SUSPENSION FOR VEHICLES
Charles S. Wray, Atlantic Highlands, N. J.
Application April 3, 1936, Serial No. 72,469
3 Claims. (Cl. 280—106.5)

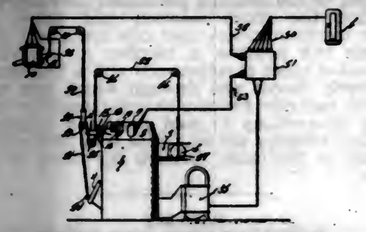


1. In a vehicle in combination with supporting wheels, a supporting frame and supporting springs interposed operatively between the wheels and the frame, a seat sub-frame independent of said springs pivotally mounted on the said main frame and connected thereto at the pivot point only, and springs independent of the first springs operatively interposed between the sub-frame and one set of wheels to restrain pivotal movements of the said sub-frame, whereby the first springs serve to cushion movement of the supporting frame and the second springs serve as the sole cushioning means between the sub-frame and the said one set of wheels.

2,108,223
AIR COOLING DEVICE FOR COMPRESSORS
Fred M. Young, Racine, Wis.
Application October 25, 1935, Serial No. 46,683
1 Claim. (Cl. 257—125)

A heat transfer device, comprising two vertically positioned headers having means connecting their lower and upper ends forming a frame, an inlet connection on the rear of one header and an outlet connection near the bottom of and on the rear of the other header, a liquid drain connection at the bottom of said outlet header, a number of horizontally positioned core units occupying the space between said upper and lower frame members, said core units each comprising two headers, a number of operatively connected tubes therebetween and a multiplicity of closely spaced fins through which said tubes extend, said core headers having removable operating connections to said vertically positioned headers whereby air may pass from one vertical header to the other through the tubes of said cores.

2,108,224
REFRIGERATOR CAR DOOR
Stacy B. Haseltine, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a corporation of Delaware
Application January 30, 1935, Serial No. 4,052
10 Claims. (Cl. 20—23)

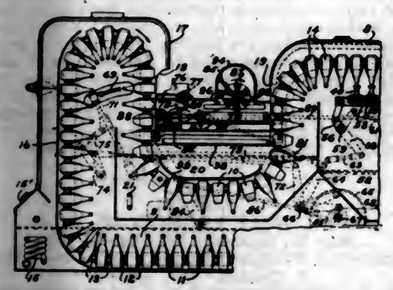


1. In a door construction for cars having a wall member provided with a door opening, the combination with a door adapted to close said opening; of guide tracks on said wall member above and below said door opening; carrier means slidably guided on each track; a pair of top and a pair of bottom crank members mounted on the door for rotation about vertical axes; a crank arm on each crank member having a crank pin at the outer end journaled in the corresponding carrier; an operating shaft on said door rotatable about a vertical axis, said shaft being rotatable through an angle of 180 degrees; a top and bottom rod, respectively connecting the top pair and the bottom pair of crank members for movement in unison; means for guiding said rods for movement in a plane parallel to the door; and operating connections between said shaft and rods and between said rods and crank members for effecting movement of said crank members through an angle of 90 degrees upon rotation of said shaft through an angle of 180 degrees.

2,108,225
HEAT REGULATOR
Roy W. Johnson, Milwaukee, Wis.
Application December 29, 1933, Serial No. 704,373
9 Claims. (Cl. 236—9)

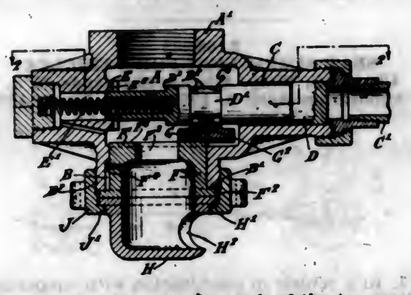
6. A control device for a heater having a damper and comprising an operating lever adapted to be connected to the damper, a pivotally supported mounting lever having a pivotal connection with the operating lever to provide a shiftable fulcrum therefor, a power driven crank

pin, said operating lever having a slot in which said crank pin is operatively fitted, and a thermostat subjected to the temperature of the heater



and interconnected with said mounting lever to shift the same in accordance with temperature variations in said heater.

2,108,226
COMPOSITION TILE
Walter S. Johnston, Chicago Heights, Ill., assignor to The Tile-Tex Company, Chicago Heights, Ill., a corporation of Illinois
Application January 6, 1936, Serial No. 57,778
4 Claims. (Cl. 94—3)



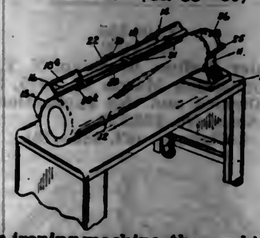
1. A surface comprising composition tile pieces, some of which include tile blocks of a predetermined composition embraced by a cup-shaped backing and border constructed of a different composition, and the remaining tile pieces comprising unbordered, unbacked tile blocks constructed of a material similar to said first-mentioned tile blocks, the first-mentioned tile blocks being of a lesser thickness than the unbordered, unbacked tile blocks, said first-mentioned tile pieces being in checkered relationship with respect to unbordered, unbacked tile blocks and being in corner abutting relationship with respect to each other.

2,108,227
BOTTLE WASHING MACHINE
Archie E. Ladewig and George F. Soelch, Waukesha, Wis.
Application February 25, 1935, Serial No. 8,042
7 Claims. (Cl. 15—61)

1. In combination, a casing forming a liquid basin, a series of bottle carrier pockets, a conveyor for transporting said pockets in succession through said basin to subject the bottles being transported thereby to a soaking action and for subsequently transporting said pockets along successive oppositely directed paths, means for removing the bottles from said pockets after the latter have been withdrawn from said basin and while traversing one of said paths, means for reversing and for advancing the removed bottles along their own axes and for scrubbing the exteriors thereof during said removal from said pockets and for subsequently returning the bottles to pockets while traversing the other of said paths, and means for catching the labels and other debris removed from the bottles while the same are withdrawn from said pockets and for preventing said debris from being deposited within said basin.

2,108,228
CYLINDER COCK
Ralph A. Light, Cynwyd, and Joseph W. Price, Jr., Philadelphia, Pa., assignors to The United States Metallic Packing Company, Philadelphia, Pa., a corporation of Pennsylvania
Application January 3, 1935, Serial No. 244
1 Claim. (Cl. 121—124)

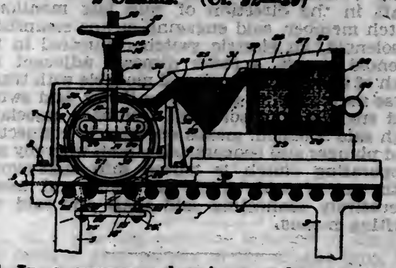
In a locomotive cylinder cock of the type comprising a casing, a separable closure for the lower end of the casing having an exhaust port and a slide valve seat upon its upper surface, means for securely clamping the closure to the bottom of the casing, a cylinder extending through the wall of the casing and adapted to be connected to a source of fluid pressure at its outer end, a piston working in said cylinder and a slide valve connected to be actuated by said piston and working on the slide valve seat on the upper surface of the bottom closure in which the movements of the piston and valve are limited by abutments contacted at the end of each piston stroke to open or close the valve, the improvement which consists in forming the exhaust port through the bottom closure as an elongated and comparatively narrow opening, forming the bottom closure and the lower end of the casing with interengaging means whereby the bottom closure will be so aligned that the elongated exhaust port will be so disposed that its longer dimension will lie transverse to the line of movement of the piston and combining therewith a comparatively long and narrow slide valve adapted to open and close the exhaust port as the piston is actuated in one direction or the other.



2,108,229
ANATOMICAL SKELETON
Martha M. Metz, Talmage, Kans.
Application July 5, 1935, Serial No. 29,955
10 Claims. (Cl. 35—17)

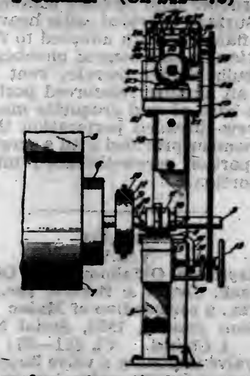
1. Means for mounting the vertebrae of an anatomical skeleton, comprising plates respectively on the upper and lower sides of each vertebra, cords interlacing adjacent plates of adjacent vertebra but permitting relative movement

of the plates, and means for securing the plates to the respective vertebrae.



2,108,230
GUARD FOR SHOE OF IRONING MACHINES
Anthony W. Molinaro, Oak Park, Ill., assignor to Electric Household Utilities Corporation, Chicago, Ill., a corporation of Illinois
Application March 1, 1937, Serial No. 128,325
7 Claims. (Cl. 38—69)

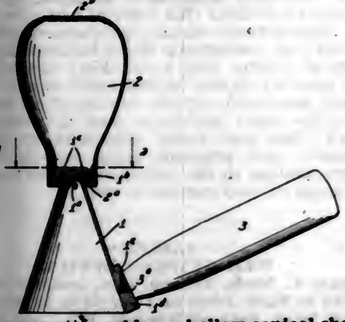
1. In an ironing machine, the combination with a rotatable roll, an ironer shoe mounted for cooperation with the roll and having means for heating said shoe; of an elongated element comprising a piece of material of low heat conductivity disposed substantially parallel and in spaced-apart relation to the leading edge of the shoe to form an air passage between said leading edge of the shoe and said elongated element, said elongated element being disposed in close proximity to the roll to protect the fingers of the operator from contacting said leading edge of the shoe in the normal ironing operation, and means for rigidly securing said elongated piece of material to the shoe in such spaced relation thereto.



4. In an ironing machine, the combination of a rotatable roll, an ironer shoe mounted for cooperation with the roll, said shoe including heating means therefor, a sole plate, formed at its leading edge with an up-turned flange, and a back plate connected to the sole plate and enclosing the heating means, said back plate having a front wall portion disposed inside of and extending below the upper edge of said flange, an elongated element of low heat conductivity disposed substantially parallel and in spaced-apart relation to the leading edge of the shoe, and means for securing said element to the shoe in such spaced apart relation, said means including a plurality of longitudinally spaced-apart clips each having a portion substantially surrounding a portion of the element, said surrounded portion having a reduced cross-section to prevent longitudinal shifting of said element, and each having a hook portion adapted to extend over the upper edge of said flange of the sole plate and downwardly and under the lower edge of said front wall portion of the back plate.

2,108,231
METHOD OF MAKING PAPER
William C. Nash, Neenah, Wis.
Application March 14, 1935, Serial No. 10,990
2 Claims. (Cl. 92—39)

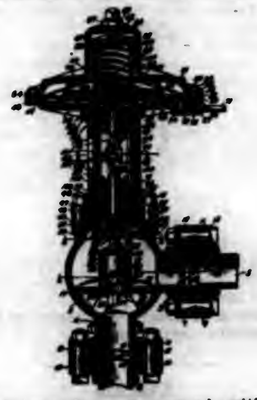
1. In a process wherein a pulp comprising kapok fibers and fibers having the characteristics of felting into a relatively strong structure is deposited upon a continuously moving foraminated surface to form a composite mat having a lower relatively thick layer of kapok fibers and an upper relatively thin layer of said other fibers, the improvement which comprises, depositing a fibrous pulp comprising fibers having characteristics of felting into a relatively strong structure upon a rotating foraminated surface to form a mat upon said surface, and bonding said mat upon the upper surface of said first mentioned kapok fiber mat under substantially constant pressure, said pressure being self-variable in direct relation to the variations in the aggregate thickness of said composite mat.



2,108,232
WEB GUIDING DEVICE
William C. Nash, Neenah, Wis., assignor of one-fifth to Mary Jones and one-fifth to Marie Duvall Nash, both of Neenah, Wis., one-fifth to William M. Nash, Chicago, Ill., and one-fifth to Ray A. Nash, New Rochelle, N. Y.
Application May 1, 1935, Serial No. 19,157
3 Claims. (Cl. 242—76)

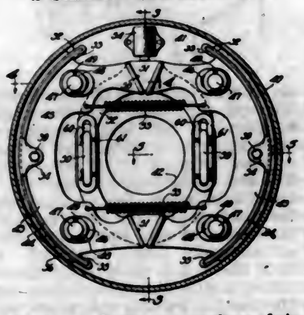
1. A device for automatically maintaining the lateral edge of a continuously advancing flexible web in substantially constant alignment which

comprises, means for shifting said web laterally, and means for actuating said web shifting means when said web moves laterally from its normal path, said actuating means comprising a pair of continuously oppositely rotating clutch members, a shaft upon which said members are freely rotatable, a cooperating clutch member slidably but non-rotatably mounted upon said shaft, means actuated by lateral displacement of the web from its normal path for engaging said cooperating clutch member and one of said continuously rotating clutch members to rotate said shaft in the direction of said last mentioned clutch member, said engaging means comprising a solenoid, an electric switch connected in the solenoid circuit, a feeler disposed adjacent the path of travel of the web and movable with transverse movement of the web to throw said switch and energize said solenoid, a plunger associated with said solenoid, means operatively connecting said plunger and cooperating clutch whereby said cooperating clutch is moved into engagement with one of said clutch members, and means operatively connecting said shaft and said web shifting means.



2,108,233
CROQUETTE MOLDER
Carl Wilhelm Pudlich, San Diego, Calif.
Application October 23, 1935, Serial No. 46,332
1 Claim. (Cl. 107—19)

In a croquette molder, a hollow conical shaped member provided with an outwardly extended flange portion at its apex and also provided with perforations extending through said flanged portion, a rubber bulb member compressible over its whole surface provided with heavy inwardly extending flange portion adapted to fit over said flange portion on said conical member for securing said bulb rigidly thereto, vent means for said bulb, an angular reinforced portion on one side of the base of said croquette mold provided with a screw-threaded perforation therein, and a handle member provided with a screw-threaded extended portion screw-threaded into said reinforced portion.



2,108,234
VALVE
Gwynne Raymond, Oklahoma City, Okla., assignor to Black, Sivalls & Bryson, Inc., Oklahoma City, Okla., a corporation of Maine
Application June 1, 1936, Serial No. 82,825
4 Claims. (Cl. 251—27)

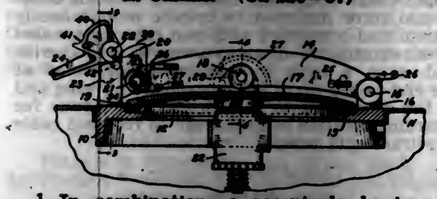
1. In a valve including a valve housing, a valve cage supported in the valve housing and provided with a cylindrical bore and a lateral port opening in the side of said cage, said bore having annular stop shoulders above and below said lateral port, a seat member in said cage having a shoulder engaging the stop shoulder below said lateral port, an adapter ring pressed into the

cylindrical bore in engagement with the stop shoulder above said lateral port, and a cylindrical valve plug having close sliding contact with the adapter ring to support the valve plug in concentric relation with the seat member.

2,108,235
BRAKE
Peter Ruffino, Brooklyn, N. Y.
Original application March 22, 1935, Serial No. 12,345. Divided and this application January 13, 1937, Serial No. 120,327
2 Claims. (Cl. 188—78)

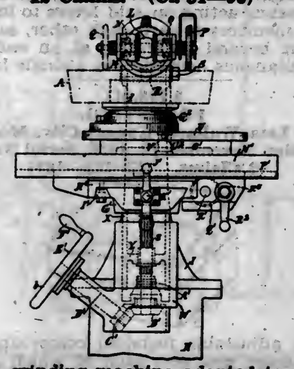
1. In a brake, a drum, an anchor plate, a pair of opposed brake shoes slidably mounted on said anchor plate for movement toward and away from each other, a yoke member slidably mounted on said anchor plate within said drum for movement at right angle to the sliding movement of said shoes, a pair of diametrically alined V-shaped wedges fixedly carried by said yoke member, inclined wedge surfaces provided on the opposed adjacent ends of said shoes with which the inclined surfaces of said V-shaped wedges respectively engage, spring means acting upon said shoes to normally hold the same in a retracted position, and actuating means for sliding said yoke member in a direction at a right angle to the direction of sliding movement of said brake shoes to cause said wedges to slide said shoes to an extended position into braking engagement with said brake drum against the tension of said spring means.

2,108,236
FINGER EXERCISING DEVICE
Henry Scott, New York, N. Y.
Application November 13, 1936, Serial No. 110,602
9 Claims. (Cl. 272—67)



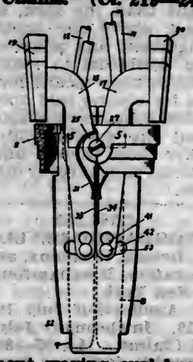
1. In a finger exercising device, a covering for one hand at least partly but loosely surrounding the fingers, impedances of different magnitudes to impede the required movements of the fingers, the impedance to the movement of the finger that is naturally least apt being greatest, and a similar covering for the other hand with the impedances impeding to a greater extent the required movements of the fingers.

2,108,237
METAL CUTTING TOOL
Harold O. Smith, West Orange, N. J., assignor of one-half to Richard C. Johnson, West Orange, N. J.
Application December 24, 1936, Serial No. 117,448
12 Claims. (Cl. 29—96)



1. A metal cutting tool comprising a shank having a longitudinal recess, a cutter blade longitudinally slidable in said recess, a disk of spring material mounted on said shank at one side of said recess and said blade and having a transverse slot forming a resilient wing to flex in a plane parallel to the direction of sliding of the blade, and means connecting said blade to said wing, whereby the wing will yieldingly resist sliding of said blade under the working thrust on the blade.

2,108,238
CLOSURE
Henry A. Strelow, Milwaukee, Wis., assignor to The Heil Co., Milwaukee, Wis., a corporation of Wisconsin
Application September 26, 1936, Serial No. 102,635
12 Claims. (Cl. 220—57)



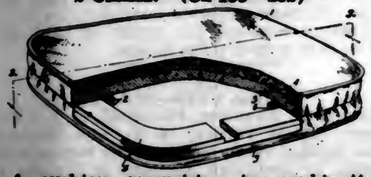
1. In combination, a receptacle having an opening, a closure pivotally attached to said receptacle and swingable toward and away from said opening, automatically functioning means for holding said closure in sealing contact with said receptacle when said closure is swung toward said opening, and other means for subsequently finally locking said closure in sealing position, said other means being movable to release said automatic holding means.

2,108,239
CUTTER SHARPENING MACHINE
William E. Sykes, Buffalo, N. Y.
Application February 8, 1934, Serial No. 710,261
12 Claims. (Cl. 51—96)

1. In a grinding machine adapted to sharpen the faces of gear cutters of the shaper type, the combination with a grinding wheel and a work supporting plate angularly mounted with respect to each other, of pivot means for mounting said plate for arcuate operating movement in its own plane, means for adjusting said plate and the pivotal point thereof with respect to the axis and face of said wheel whereby said plate may be swung about said pivot means through an arc beneath said wheel, and a work holding device disposed on said plate at a point remote from said pivot means, said work holding device comprising a part adapted to engage the bore of a cutter mounted thereon, and a second pivot means connecting said device to said plate, said second pivot means being upright with respect to said plate and located remote from the center of said work holding device, whereby said device may be adjustably rotated on said plate to vary the distance between the center of said device and the first named pivot means.

2,108,240
SPIRAL CURL HEATER
William A. V. Thomsen, Plainfield, N. J., Carl G. Gross, Mount Vernon, N. Y., and Warner S. Luci, Linden, N. J., assignors, by mesne assignments, to American Machine & Metals, Inc., New York, N. Y., a corporation of Delaware
Application December 17, 1935, Serial No. 54,856
3 Claims. (Cl. 219—24)

1. A permanent waving curl heater including in combination a casing, two opposed double

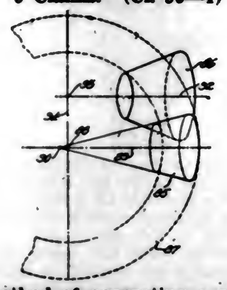


armed levers pivotally mounted within said casing, two elongated inwardly curved curl heating members, each heating member being pivotally mounted between the arms of each of said levers at a median point on the heating members and spring means acting on said levers to impel said heating members toward each other, said levers extending beyond the casing at an end thereof for simultaneous operation by a single hand.

2,108,241
FOOTSTOOL
Leta Wallace, Kansas City, Mo.
Application November 12, 1936, Serial No. 110,471
2 Claims. (Cl. 155—169)

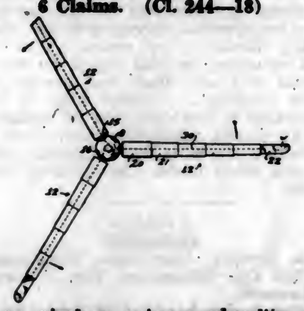
1. An adjustable footstool comprising a pair of connected members each of which are complementary frustums of a rectangular prism, said prism having different dimensions of length, width and height, the plane of separation of said frustums being disposed at an angle to the base, said frustums having different average heights and means for detachably holding said frustums together, whereby the prism may be turned to rest on different bases to vary the height of the footstool and said frustums adapted to be turned and secured in reversed position to give a footstool of different average height, said frustums adapted to be separated and individually used to give footstools of lower effective heights.

2,108,242
ADJUSTABLE CUSHION
Leta Wallace, Kansas City, Mo.
Application November 14, 1936, Serial No. 110,883
2 Claims. (Cl. 155—182)



1. A cushion comprising in combination a flexible cover member in the form of a sack having an open end, a plurality of plates each of less area and height than the sack, said plates set within said sack above one another loosely in substantial alignment and adapted to be selectively removed therefrom to reduce the height of the cushion, securing means for said sack including means for closing said open end and an elongated flexible member positioned circumferentially around the cushion intermediate the upper and lower faces thereof adapted to draw in surplus material of said cover member between adjacent plates.

2,108,243
PHOTOGRAPHIC DEVELOPER
Bruno Wendt, Dessau, Germany, assignor to Agfa Ansco Corporation, Binghamton, N. Y., a corporation of New York
No Drawing. Application July 16, 1936, Serial No. 90,919. In Germany July 23, 1935
5 Claims. (Cl. 95—88)

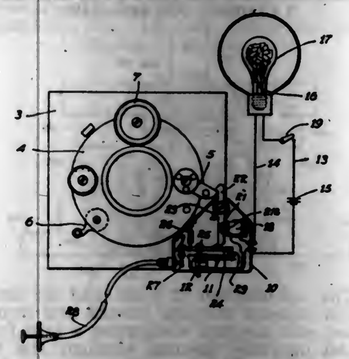


1. A photographic developer comprising an N-hydroxyalkylated p-phenylenediamine.

2,108,244
METHOD OF CUTTING GEARS
Ernest Wildhaber, Irondequoit, N. Y., assignor to Gleason Works, Rochester, N. Y., a corporation of New York
Application February 1, 1936, Serial No. 61,981
9 Claims. (Cl. 90—4)

7. The method of generating a pair of spiral bevel gears so that mating tooth surfaces of the gears will have less than full length tooth contact when in mesh which comprises generating the two members of the pair conjugate to complementary crown gears, each of which has tooth surfaces whose pitch line elements are of general involute lengthwise curvature and identical on opposite sides of the teeth and whose axes are offset from the apexes of the respective gears.

2,108,245
GYRATORY AIRPLANE WING
Thomas Ash, Jr., Los Angeles, Calif.
Application June 2, 1936, Serial No. 83,096
6 Claims. (Cl. 244—18)



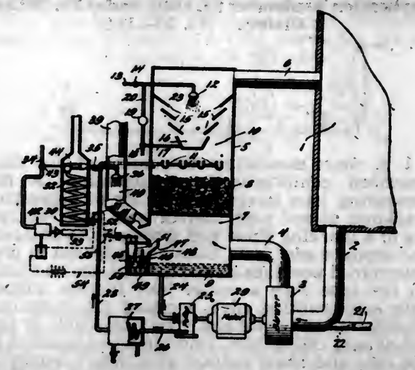
1. In an airplane rotor a plurality of telescopic wings projecting from said rotor, a drum in said rotor mounted to revolve independently thereof and connected with said rotor by a coiled spring causing the drum to normally revolve with said rotor, a cable to each wing connected at one end to the tip of the corresponding wing and at the other end to said drum, and means for retarding rotation of said drum to reel said cable to retract said wings.

2,108,246
PHOTOGRAPHIC APPARATUS
Thomas McG. Aiken, Pittsburgh, Pa.
Application October 12, 1936, Serial No. 105,168
6 Claims. (Cl. 67—29)

1. The combination with a camera shutter which is adapted to be placed under operating tension, of a magnetically-controlled restraining device therefor, a photoflash lamp having its fuse in series with the magnet of said device,

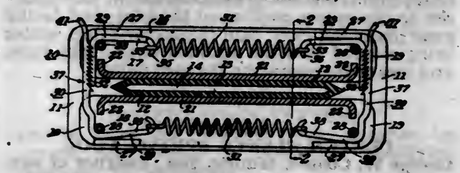
and means for supplying electric current to the circuit of said fuse and magnet, the circuit through the magnet being broken through the rupture of said fuse.

4. The method of timing the movement of a camera shutter with respect to the illumination of an electrical photoflash lamp, which comprises restraining the shutter against movement under spring tension, by an electrical circuit through the lamp, and causing the restraining force to be released through rupturing of the lamp circuit by the flashing of the lamp.



2,108,247
BRACELET AND METHOD OF MAKING THE SAME
Paul J. Bellavance, Attleboro, Mass.
Application January 28, 1937, Serial No. 122,767
4 Claims. (Cl. 29—160.6)

1. A bracelet structure comprising two or more longitudinally curved sections having lateral flanges inbent from flat stock of uniform thickness to form internal channels therebetween, holding members connecting adjacent ends of said bracelet sections and each having a portion fitting within the internal channel of one of said sections and abutting against the lateral flanges carried thereby, and clamping lugs struck down from said flanges engaging portions of said holding members for securing each holding member firmly to a bracelet section.

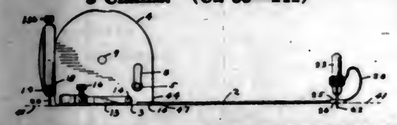


2,108,248
CONDITIONING AIR OR GAS
Francis R. Bichowsky, Ann Arbor, Mich.
Application November 7, 1934, Serial No. 751,959
Renewed July 17, 1937
12 Claims. (Cl. 183—120)

1. The process of conditioning air in an enclosure which comprises withdrawing an air stream from the enclosure, dividing the air stream into two portions and passing said portions through separate contact zones, contacting said air streams with two different streams of hygroscopic liquid from a main body of such liquid and returning the streams of hygroscopic liquid to the main body, and venting one air stream outside the enclosure and returning the other air stream to the enclosure whereby to condition

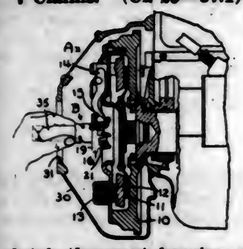
the air in the enclosure and simultaneously maintain predetermined hygroscopic conditions in the main body of the liquid.

2,108,249
HAIR CLAMP
William H. Bleuel, Derment, Pa., and Samuel Steck, Warren, Ohio
Application February 26, 1936, Serial No. 65,794
4 Claims. (Cl. 132—33)



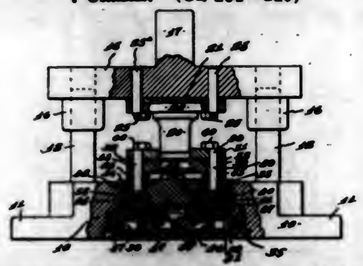
1. A hair clamp comprising structurally independent jaw members arranged to be interengaged when assembled and having complementary clamping surfaces, guiding members on the ends of one jaw member disposed intermediate of the upper and lower edges of the clamping surface and extending therebeyond, and means on said guiding members arranged to detachably engage the ends of the other jaw member to secure said jaw members together.

2,108,250
HYDROGENATED HEAVY OIL
William H. Carmody, Pittsburgh, Pa., assignor to The Neville Company, a corporation of Pennsylvania
No Drawing. Application November 28, 1936, Serial No. 113,260
4 Claims. (Cl. 260—7)



1. As a composition of matter a heavy oil consisting primarily of the soft fluid steam-volatile product of those polymerizables found in crude solvent naphtha resulting from polymerization and reaction of those polymerizables with a phenolic substance in a mixture of crude solvent naphtha and a phenolic reactive and modified further by hydrogenation up to a point at which hydrogen modification serves to render the phenolic heavy oil approximately colorless and odorless and below a point at which the phenolic heavy oil loses its inherent capacity to dissolve cellulose acetate.

2,108,251
CURVILINEAR MEASURING INSTRUMENT
Cuyler L. Clark, Baltimore, Md.
Application September 28, 1936, Serial No. 102,853
3 Claims. (Cl. 33—141)



1. A chart measuring instrument of the class described comprising in combination, a flat measuring tape having a plurality of measuring markings at one edge thereof, said edge consisting of a marking guide and setting holes adjacent the opposite edge, said holes being spaced in predetermined positions along the edge, an end plate on the tape with a center hole therein aligned with said marking edge, a center pin resiliently attached to the plate and freely moveable in and out of said center hole, said pin when inserted in the hole and chart surface providing a center of movement for the tape to radially position therewith and circumferentially move therearound, a case for resiliently and extensibly holding the tape and having a flattened peripheral portion adapted to rest flat on a chart and direct the extensible movement of the tape parallel thereto, a cam point mounted on the case arranged to lock in the holes in the said tape and hold the case and tape in predetermined relation with one another and to give a predetermined setting, arms on the case to keep same upright, a rotameter having a chart contacting wheel mounted on the case opposite to the egress position of the tape, and facing away from the case, said rotameter wheel center being aligned with the marking edge of the tape, and means for operating the cam point.

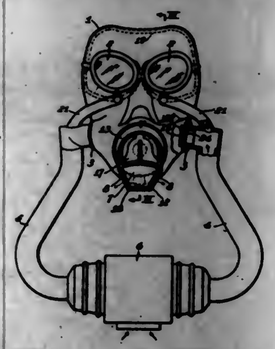
2,108,252
CLUTCH SLEEVE SPRING TOOL
George W. Cooper, Muncie, Ind., assignor of one-quarter to Frank E. Hill and one-quarter to William Miller, both of Muncie, Ind.
Application April 23, 1937, Serial No. 138,655
7 Claims. (Cl. 29—87.1)

1. In a clutch throwout bearing sleeve spring resetting tool, a handle portion having a forward end and a forward edge, and a second portion at the forward end of said first portion and having a forward edge with a plurality of spaced apart lugs projecting longitudinally from said forward edge, one of said portions being movable longitudinally of the other portion, the outer circumference of one of said portions being very slightly less than the central opening through a conventional clutch throwout bearing sleeve and the greatest width of each of said lugs being less than the width of that portion of each of the springs, associated with said conventional clutch throwout bearing sleeve, which normally confines the free ends of conventional clutch pressure levers.

2,108,253
DIE SHOE
John C. Dense, Rochester, N. Y.
Application June 27, 1935, Serial No. 28,695
7 Claims. (Cl. 164—110)

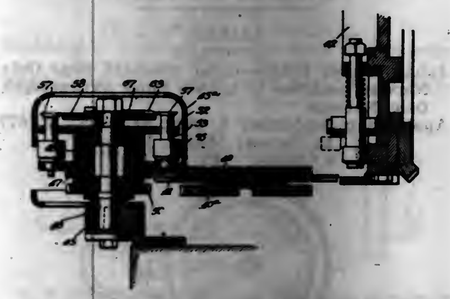
1. The combination of a die and die shoe, of a punch element movable toward and from the die shoe, said die shoe comprising a base formed with an aperture opening through the upper face thereof, a die carrier slidably mounted in said aperture and being formed with a slot extending across its upper face, a fixed die support mounted on the base and extending transversely to said aperture and through said slot in the die carrier, means for detachably securing a die to the upper face of the die carrier with the die arranged in spaced apart relationship from the upper face of said support, said die carrier being cooperable with the punch element, upon movement of the same toward the die shoe, to press the die downwardly into engagement with said die support.

2,108,254
METHOD OF PRODUCING STEEL
Michael J. Devaney, Chicago, Ill.
No Drawing. Application March 11, 1936, Serial No. 68,245
7 Claims. (Cl. 75—45)



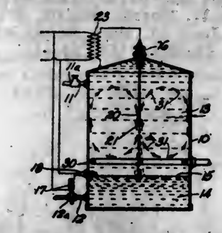
1. The method of producing an improved grade of rimmed steel which comprises pouring steel of rimming qualities into an ingot mould, allowing said ingot to naturally cool for a period of time to produce the desired thickness of rim, adding a deoxidizing agent to the metal in the upper portion of the ingot only, to stop rimming action, and then allowing the ingot to completely solidify.

2,108,255
BUTTON
John A. Devender and William A. Devender, Jackson Heights, N. Y.
Application July 31, 1936, Serial No. 93,563
18 Claims. (Cl. 24—95)



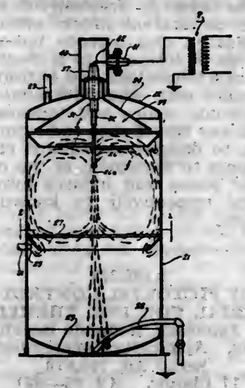
1. In a button, in combination, a button top having a body portion and a downturned peripheral flange, and a one-piece collet interfitting with the button top in gripping relation thereto and constituting the button back, said collet being formed to provide a circularly uninterrupted fastener receiving opening bounded by a fastener turning surface and including circularly continuous bodies of metal integral with the turning surface at the inner and outer sides of the opening.

2,108,256
BREATHING APPARATUS
Joseph B. Dym, Pittsburgh, Pa., assignor to Mine Safety Appliances Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application May 13, 1936, Serial No. 79,509
11 Claims. (Cl. 128—141)



1. Breathing apparatus comprising a face-piece, an eye-piece mounted therein, an air hose connected at one end to said face-piece, means associated with the interior of said face-piece and adapted to engage the face of a wearer for dividing the face-piece into eye and breathing compartments sealed from each other, a tube connecting said hose to said eye compartment, a check valve mounted in said hose between said tube and breathing compartment, and an exhalation valve associated with said breathing compartment.

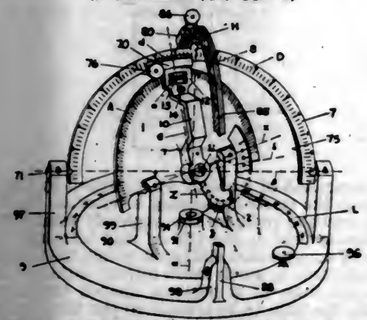
2,108,257
DETECTOR MECHANISM FOR CROWN CAP ASSEMBLING MACHINES
Roy Earling, Baltimore, Md., assignor to Crown Cork & Seal Company, Inc., Baltimore, Md., a corporation of New York
Application May 16, 1934, Serial No. 726,013
7 Claims. (Cl. 209—82)



1. A mechanism for gauging caps upon a cap conveyor, comprising a rotatable member, cap engaging means movable in said member, means to position said engaging means on a cap, cam means to move said engaging means out of engagement with a cap of a predetermined configuration, means to hold said engaging means in contact with a cap not of said predetermined configuration, said cam means being movable with respect to said engaging means to prevent the latter from being held against movement by contact thereof with a cap of improper configuration.

2,108,258
ELECTRIC DEHYDRATOR
Harmon F. Fisher, Long Beach, Calif., assignor to Petroleum Rectifying Company of California, Los Angeles, Calif., a corporation of California
Application November 30, 1931, Serial No. 577,997
15 Claims. (Cl. 204—24)

1. A method of treating an emulsion by the use of a rod-like electrode having a terminal portion, which method includes the steps of: establishing an electric field at the end of said terminal portion and around said electrode, which field around said electrode is much more intense adjacent said electrode than at a position spaced therefrom; moving the fluid to be treated in the most intense portion of said field around said electrode and in a direction toward said terminal portion whereby said fluid moves from said terminal portion and is influenced by said field at the end of said terminal portion; and maintaining a dielectric material in a portion of said field around said electrode, which portion is less intense than that portion of the field through which said fluid to be treated is moved, said dielectric material being of higher dielectric strength than said fluid to be treated.

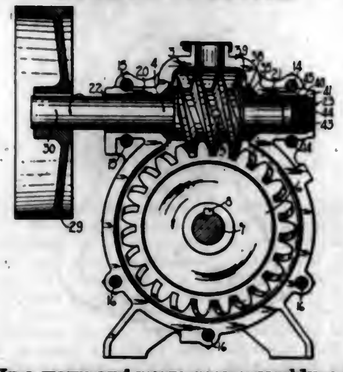


2,108,259
DEHYDRATION SYSTEM
John M. Cage, Los Angeles, Calif., assignor, by mesne assignments, to Petroleum Rectifying Company of California
Application April 25, 1930, Serial No. 447,203
4 Claims. (Cl. 204—24)

1. In combination in an electric treater for emulsions: a tank providing top and bottom members cooperating in defining a chamber; and means for setting up a ring circulation in said tank which is upward immediately inside said tank and downward in the central portion of said tank, said means including a central live electrode extending downward in said tank and a baffle plate extending inward from said tank

below said top member for deflecting inward toward said live central electrode any emulsion rising immediately inside said tank toward said baffle plate.

2,108,260
NAVIGATIONAL INSTRUMENT
Charles W. Harris, Seattle, Wash.
Application June 14, 1935, Serial No. 26,589
2 Claims. (Cl. 33—1)



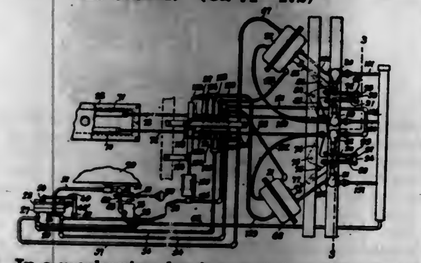
1. A navigational instrument comprising a fixed hour-angle scale, a pivoted declination scale disposed at all times in a plane normal to the plane of said hour-angle scale and swingable relatively thereto, an hour-angle index fixed upon said declination scale and swingable therewith over said fixed hour-angle scale, a declination index swingable along the declination scale, a pivoted altitude scale, an altitude index swingable along said altitude scale and pivotally connected to said declination index to move conjointly therewith but swingable relatively thereto, a latitude indicator disposed at all times in a plane normal to the plane of said hour-angle indicator, and including an index rotatable about an axis in the plane of the hour-angle scale and normal to the pivot axis of the altitude scale, a pivoted azimuth indicator disposed at all times in a plane normal to the plane of said altitude indicator, the axes of rotation of said hour-angle index, declination index, altitude index, azimuth indicator, and latitude index being so interrelated as to intersect in a common point, and means interconnecting said latitude and azimuth indicators with said hour-angle, declination and altitude scales and indexes to effect movement of any two of such indicators or scales and indexes, to designate resultant characteristics, in response to movement of the other three indicators or scales and indexes into positions corresponding respectively to known or given characteristics.

2,108,261
METHOD OF PICTORIAL CONTROL AND MATERIAL FOR USE THEREIN
Paul H. Jamieson, Redondo Beach, Calif.
No Drawing. Application September 19, 1934, Serial No. 744,670
17 Claims. (Cl. 95—88)

1. In the art of photographic pictorial control, the method of treating a silver deposit in a gelatine emulsion, which comprises: separately applying to such an emulsion a non-aqueous iodine solution containing an oleaginous iodine solvent, and an aqueous medium for controlling the hydration of the gelatine in such emulsion, and subsequently subjecting said emulsion to a photographic "fixing" treatment.

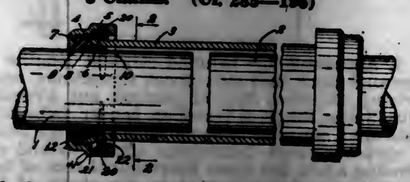
2,108,262
WORM AND WORM GEAR ASSEMBLY
Frank D. Jones, Ottumwa, Iowa, assignor to Dain Manufacturing Company of Iowa, Ottumwa, Iowa, a corporation of Iowa
Application November 3, 1933, Serial No. 696,526
3 Claims. (Cl. 308—166)

1. In a worm and worm gear assembly, a worm, a shaft upon which said worm is fixed, a housing consisting of two opposing half sections enclosing said worm and said shaft, said housing sections having opposing recesses therein forming a bearing opening, a radial bearing slidingly supported in said opening, one end of said shaft being journaled and supported in said bearing, said bearing being provided with means at one end for resisting the end thrust of said worm, a member abutting the other end of said bearing and slidably disposed in said opening, abutment means having a threaded perforation therein disposed longitudinally of said opening, a screw in said threaded perforation and bearing against said member whereby said bearing may be shifted longitudinally in said opening by adjusting said screw to take up wear upon said thrust resisting means, and means for clamping said housing sections together to lock said bearing in any position of adjustment.



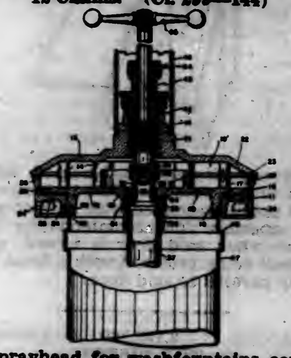
2,108,263
COMPASS
Johan Henrik L'Abée-Lund, Slemdal, near Oslo, Norway, assignor to L'Abée Lund Aktieselskab, Oslo, Norway
Application September 3, 1935, Serial No. 39,077
In Norway May 8, 1934
8 Claims. (Cl. 33—224)

1. A compass comprising a case, a compass magnet rotatably mounted in said case, means operable from outside the compass and capable of being coupled with said magnet, a pointer for indicating the march direction rotatably mounted in said case and adjustably connected to said magnet, means operable from outside the compass and capable of being coupled with said pointer, a member for compensating the magnetic



variation rotatably mounted in said case and adjustably connected to the compass magnet and to said pointer, and means operable from outside the compass and capable of being coupled with said member, whereby said pointer and said member are adjustable from outside the compass in relation to each other and to said compass magnet.

2,108,264
GEAR SHIFTING MECHANISM
James A. McDaniel, Memphis, Tenn.
Application August 9, 1933, Serial No. 684,449
16 Claims. (Cl. 74—472)



1. In a mechanism having an internal combustion engine, an intake manifold therefor and change-speed gearing, the combination of gear-shifting devices, means whereby the character of the gear change may be predetermined, means operated by the suction of the intake manifold for actuating the gear-shifting devices, said means including sliding transmission rods, pistons connected to said rods for moving them in opposite senses to produce different speeds, casings for said pistons, connections from said manifold to said casings for causing suction effects at opposite sides of the pistons, pipes for admitting air to that side of the piston where suction is not being exerted, valves in said pipes, and means for normally locking a valve positively in open position during the operation of a corresponding piston.

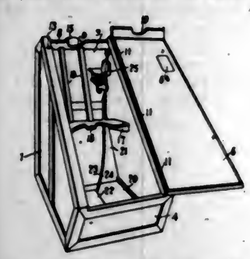
2,108,265
PIPE OR ROD COUPLING
Stoddard B. Martin, Lakewood, Ohio, and Charles Bernard Waechter, Bradford, Pa.
Application December 14, 1936, Serial No. 115,672
3 Claims. (Cl. 285—196)

1. A coupling of the class described including a sleeve for accommodating a pipe or rod end and having one end inclined outwardly, packing means carried by the pipe or rod end and abutting said pipe or rod end and the inner wall of the inclined sleeve end, a cap having portions overlying the packing means and the inclined wall of the sleeve and having an annular flange encircling said adjacent sleeve end, said flanged portion having a plurality of internally formed inclined bearing surfaces formed therein, and means to compress the packing against the sleeve inclined wall and the adjacent pipe or rod end, said last named means including a plurality of wedge members insertable within the annular flange and slidable circumferentially of the pipe or rod end into engagement with the respective inclined bearing surfaces formed within the annular flange.

2,108,266
WASH FOUNTAIN SPRAY HEAD
Howard A. Mullett, Milwaukee, Wis., assignor to Bradley Washfountain Company, Milwaukee, Wis., a corporation of Wisconsin
Application October 16, 1936, Serial No. 105,896
12 Claims. (Cl. 299—144)

1. A sprayhead for washfountains comprising separable members formed to provide a chamber having downwardly inclined peripheral spraying orifices, one of said members having spaced top and bottom walls, the other of said members being a ring member movable to a cleaning position to permit flushing of said chamber, and means for introducing water into said chamber, the movement of said ring member to a cleaning position not interfering with the operation of said last named means.

2,108,267
BLADE FOR SAFETY RAZORS
Bernard O'Neill, Sheffield, England, assignor, by mesne assignments, to American Safety Razor Corporation, Brooklyn, N. Y., a corporation of Virginia
Application August 21, 1935, Serial No. 37,245
In Great Britain February 7, 1935
1 Claim. (Cl. 30—348)

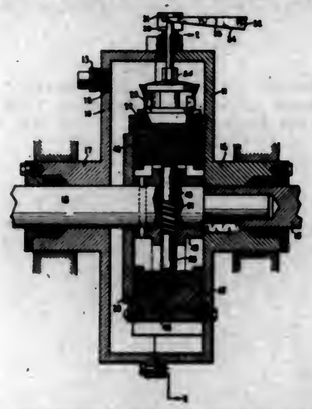


An improved blade for safety razors comprising in combination a single cutting edge, a reinforcing sheath along the opposite edge, and very slight corrugations formed in the metal of the blade having axes of propagation substantially parallel to said cutting edge but converging and diverging slightly with respect to each other, said corrugations extending from a region adjacent said sheath to the point at which said blade tapers to form the operative portion of the blade.

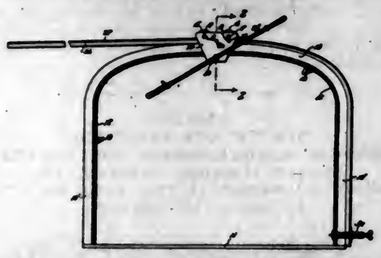
2,108,268
ELECTROTHERMO BATH
Ira M. Peterman, Gettysburg, Ohio, assignor to The Peterman Incubator Company, Gettysburg, Ohio, a corporation of Ohio
Application September 28, 1936, Serial No. 102,923
11 Claims. (Cl. 128—374)

11. In an electrothermo bath, a cabinet having a base wall having attached thereto a pair of

vertical side walls and a plurality of inclined walls, said walls being connected by a framework hingedly supporting an inclined door adapted, of its own weight, to be retained in closed position, one of said inclined walls being adapted to provide a foot rest and another of said walls, substantially opposite said last-named wall, being provided with a notch adapted to cooperate with a second notch associated with said door, to provide an aperture for accommodating the neck of a user when said door is closed, said last-named wall being provided with a head rest substantially parallel to said door.



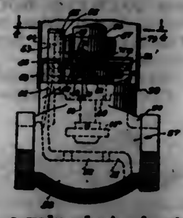
2,108,269
TOY PISTOL
Robert J. Rickenbacher, Columbus, Ohio, assignor to The Kilgore Mfg. Company, Westerville, Ohio, a corporation of Ohio
Application July 20, 1935, Serial No. 32,340
25 Claims. (Cl. 42—57)



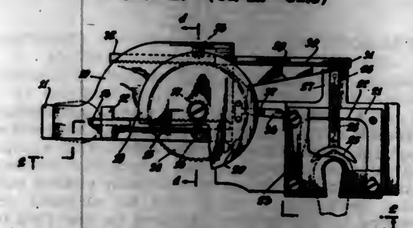
1. In a toy pistol, the combination of a removable ammunition carrier having an anvil, a pistol with a barrel for supporting said carrier, means for firing the ammunition in said carrier, means for feeding the ammunition step by step to be so fired, a revolving cylinder mounted adjacent said barrel with its axis parallel thereto to simulate the cartridge-holding cylinder of a revolver, and means for moving said cylinder step by step with the movement of the ammunition on the carrier.

2,108,270
FLUID-OPERATED CHANGE-SPEED GEAR
Clarence T. Rogers, New York, N. Y., assignor to Edward T. Condon, New York, N. Y.
Application November 24, 1934, Serial No. 754,581
4 Claims. (Cl. 192—58)

1. A fluid-operated change-speed gear comprising a liquid-sealed housing, a driving shaft for rotating the same, a casing eccentrically mounted within the housing and rotatable therewith, said casing being provided with a permanently open, peripheral, liquid-admission port and with a peripheral, liquid-outlet port circumferentially spaced from the said admission port, a valve for controlling the outflow of liquid through said outlet port, a lever pivotally mounted upon the casing having its one end adapted to bear upon the valve and its opposite end weighted to react centrifugally for closing the valve, a spring mounted in the opposite end of the lever and compressed between said opposite end and the inner face of the housing wall, a rotor mounted concentrically within the casing and a driven shaft rotatable therewith and extending coaxially through one side of the housing, and oppositely directed vanes rotatable with the rotor and slidable radially thereof to contact the inner surface of the surrounding eccentrically disposed casing, there being contained within the housing and casing a suitable liquid.



2,108,271
CHANNEL-IRON BENDING APPARATUS
Howard H. Samuel, Hackettstown, N. J.
Application July 15, 1936, Serial No. 90,672
8 Claims. (Cl. 153—32)

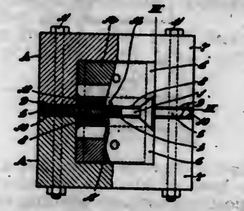


1. Apparatus for bending straight lengths of metallic stock into curvilinear formations, comprising an anvil bar of desired but irregular curvilinear shape, a traveling bender embracing said anvil bar so as to be movable along the same, a sprocket chain immovably affixed to and extending along the inner longitudinal face of said anvil bar and conforming to the shape of the latter, the cross pins of said chain constituting equi-spaced rack teeth adapted to conform themselves to the anvil bar curvature without alteration of pitch through all variations of the irregular circular pitch line required to follow said anvil bar curvature, a drive sprocket carried by said traveling bender to mesh with said sprocket chain, means to rotate said sprocket, and bending roll means journaled in said traveling bender to oppose and cooperate with the outer face of said anvil bar, the stock to be worked being disposed between said bending roll means and the outer face of said anvil bar.

2,108,272
COMBINED VALVE AND PRESSURE GAUGE
Alfred Seyfarth, Altenburg, Germany, assignor to Charles L. Gulick and Siegfried Ruppricht, both of New York, N. Y.
Application December 27, 1935, Serial No. 56,323
8 Claims. (Cl. 73—109)

5. In a gauge, a valve device having a plurality of pressure chambers formed therein, a portion of said device comprising a support for elements of said gauge, and an operative member of said valve extending from said support, a Bourdon element carried on said support about said member and having its interior communicating with one of said chambers, a second Bourdon element carried on said support about said member and having its interior communicating with the other of said chambers, a pivot shaft carried on said support, a pair of indicator arms pivotally supported on said shaft, a graduated scale plate positioned on said member in cooperative relation to one of said arms and a second graduated scale plate spaced apart from said first scale plate and positioned in cooperative relation to said second arm, a link member connecting said first Bourdon element to one of said arms, a link member connecting said second Bourdon to the other of said arms, and an enclosure for said gauge formed in part by said support, said enclosure having a window formed therein through which said indicator arms and said scale plates are visible.

2,108,273
MACHINE FOR TREATING HEEL SEATS OF SHOES
Edward F. Small, Newtonville, Mass., assignor to Compo Shoe Machinery Corporation, Boston, Mass., a corporation of Delaware
Application September 12, 1936, Serial No. 100,437
3 Claims. (Cl. 12—31.5)



1. A heel seat cutting-on machine comprising, cutting means for severing a marginal strip from the outsole at the heel seat of a shoe, a movable rest engageable with said shoe to position it with respect to said cutting means, a sliding wedge guided for movement with respect to said rest and arranged to present different portions of its wedge face as a limiting abutment for said rest, a pointer adapted to be moved into registry with a heel size indicator, and means for transmitting movement from said pointer to said wedge.

2,108,274
STOCK FEEDING APPARATUS FOR SCREW-MACHINES
Herbert E. Tautz and Martin Heinrich, Milwaukee, Wis., assignors to said Herbert E. Tautz
Application May 22, 1936, Serial No. 81,256
5 Claims. (Cl. 29—59)

1. The combination, with a machine tool having means for clamping bar stock, of a supporting guide for receiving the bar stock, means for impelling the stock along said supporting guide to said clamping means, and means controlled conjointly with said clamping means for actuating said impelling means upon the release of said clamping means, said actuating means including a friction clutch and a resiliently mounted movable member for engaging said clutch and for limiting the frictional engagement of said clutch.

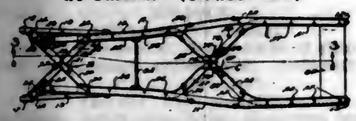
2,108,275
ELECTROMAGNETIC DEVICE AND METHOD OF MAKING SAME
Roelof Vermeulen and Arend Thomas Van Urk, Eindhoven, Netherlands, assignors to N. V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands
Application April 17, 1935, Serial No. 16,872
In Germany May 17, 1934
6 Claims. (Cl. 179—100.41)

1. An electromagnetic device comprising, a coil, means for producing a magnetic field, a member of non-magnetic material having supporting surfaces lying in a common plane, a pole piece rigidly secured to said member and having pole faces lying in the plane of said supporting surfaces, an armature adjacently disposed to said pole faces, and means for suspending said armature from the supporting surfaces of said member.

2,108,276
JOINT COMPOUND
Lewis L. Wadsworth, Winchester, Mass.
No Drawing. Application January 4, 1936, Serial No. 57,515
2 Claims. (Cl. 106—8)

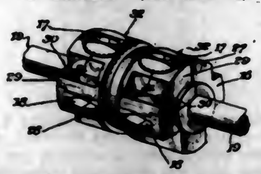
1. An improved joint compound comprising substantially the following elements: Quick-setting cement, two pounds, finely divided metallic aluminum, .02 of one per cent of the weight of the cement, finely divided, degreased iron filings, four per cent of the weight of cement, lamp black, two per cent of the weight of cement, fine, sharp clear sand, one-fourth of the bulk of cement, finely powdered hydraulic lime, one-tenth of the bulk of cement.

2,106,277
REACTING HYDROCARBONS WITH ALKALI METALS
Joseph F. Walker, Niagara Falls, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 15, 1936, Serial No. 64,172
17 Claims. (Cl. 260—168)



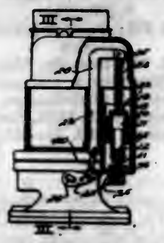
1. A method of effecting the addition of an alkali metal to a polycyclic aromatic hydrocarbon which comprises reacting the alkali metal and said hydrocarbon in a reaction medium comprising a dialkylamino aliphatic mono ether containing not more than 7 carbon atoms, having a chain of not more than two carbon atoms between the oxygen atom and any nitrogen atom and having no alkyl attached to the ether oxygen atom which contains more than 2 carbon atoms, the alkyl radicals of any dialkyl amino group in said ether containing not more than 3 carbon atoms each, in sufficient amount to promote the reaction.

2,106,278
PACKAGE
Calvin R. Webber, Brooklyn, N. Y., assignor to Packers Tar Soap, Inc., a corporation of New York
Application January 29, 1934, Serial No. 708,727
5 Claims. (Cl. 206—47)



1. A container having a closure, and a foldable display slide within the container shiftable to exposed position without opening said closure, said slide having an extension adapted to be unfolded when the slide is in exposed position.

2,106,279
MOTOR VEHICLE FRAME
Thomas R. M. Wheat, Highland Park, Mich., assignor to Chrysler Corporation, Detroit, Mich., a corporation of Delaware
Application February 21, 1934, Serial No. 712,276
26 Claims. (Cl. 280—106)



1. A motor vehicle frame structure including spaced side members extending longitudinally of the frame structure, means connecting said side members near one end of said frame structure, said frame structure having arms at said end thereof, said arms diverging longitudinally of the frame structure from said connecting means to provide load receiving end portions respectively spaced longitudinally beyond the ends of said side members, said connecting means for said side members being disposed between said diverging arms and said side members whereby said connecting means structurally connects said diverging arms with said side members.

2,106,280
MACHINE FOR PACKING BOOK MATCHES
Charles F. Wright, Akron, Ohio, assignor to The Diamond Match Company, New York, N. Y., a corporation of Delaware
Application May 8, 1937, Serial No. 141,384
5 Claims. (Cl. 226—4)

1. In a machine for packing match books each including a cover having a flat back and a folded front portion, the combination with means for feeding the books end to end with the heads of their respective matches pointing in the same direction, of positioning means including a turret for receiving the said books and reversing the endwise position of alternate books as to the match heads and coincidentally facewise reversing the alternate books carried by the turret, and means for ejecting said books successively from the turret, whereby each alternate book is disposed with its flat back in contact with the folded front of the next adjacent book.

2,106,281
CARBURETOR
Frederick O. Ball and Thomas M. Ball, Detroit, Mich.
Application April 2, 1934, Serial No. 718,576
8 Claims. (Cl. 261—34)

1. In a carburetor, pick-up pump mechanism including a fuel chamber having an outlet for supplying fuel to an internal combustion engine fuel mixture passage, a fuel displacing member in said chamber, means for normally closing said outlet including a valve and an element responsive to the pressure applied on the fuel of said chamber by said fuel displacing member for holding said valve in open position, and apparatus for operating said fuel displacing member having a resilient element constructed and arranged to continue the fuel discharging operation thereof after actuation of said operating apparatus is discontinued and including an element movable relative to said fluid displacing member constructed and arranged to limit the opening of said valve when said operating apparatus is actuated rapidly.

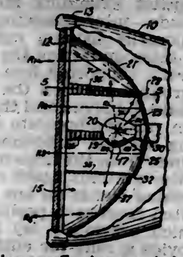
2,106,282
PROCESS OF BLEACHING BEESWAX
Donald J. Campbell and Le Roy P. Lemdon, Niagara Falls, N. Y., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application April 30, 1935, Serial No. 18,071
13 Claims. (Cl. 87—19)

1. In a process of bleaching beeswax the step which comprises treating the wax while in a molten condition with a solution of hydrogen peroxide in the presence of zinc oxide as a bleaching promoter.

2,106,283
AIR CONDITIONING DEVICE
Ralph L. Drew, North Plymouth, and Stephen A. Reed, Duxbury, Mass., assignors to Plymouth Cordage Company, North Plymouth, Mass., a corporation of Massachusetts
Application May 18, 1935, Serial No. 22,206
10 Claims. (Cl. 183—49)

1. An air filtering unit comprising a container having openwork front and rear faces; filtering contents therefor comprising a flat mat of loosely associated hard vegetable fibres; and an interior grid, crossing the container beside a face of the mat, and pressing against the fibres at said face, having thin strips of substantial breadth set edgewise in the direction of air flow, crossing each other and halved together.

2,106,284
METHOD OF PRODUCING PHOTOGRAPHIC EFFECTS AND FILMS THEREFOR
Charles B. Dreyer, Los Angeles, Calif., assignor of one-half to Henry F. Beeger, Los Angeles, Calif.
Application April 2, 1934, Serial No. 718,559
2 Claims. (Cl. 95—9)



1. A film for use in making monochromatic negatives, the prints of which are adapted to create the effect of depth, comprising: a carrier strip provided with two closely adjacent emulsions on one side of the carrier strip, both of said emulsions being of the panchromatic type, said emulsions being separated by a thin layer of translucent material adapted to diffuse light, said layer being sufficiently permeable to light to permit printing, said layer of translucent material including a dye adapted to substantially prevent one of said emulsions from recording a portion of the spectrum to which the other emulsion is sensitive.

2,106,285
METHOD AND APPARATUS FOR MAKING AND TREATING ARTIFICIAL FIBERS
Henry C. Forrest, Merchantville, N. J.
Application February 20, 1935, Serial No. 7,326
8 Claims. (Cl. 18—8)

7. In an apparatus for manufacturing artificial fibers, a device for extruding a multiplicity of filaments, means for collecting the filaments into an untwisted rope, a tank, a pair of vertically spaced rollers in said tank, means for causing said rope to spiral about said rollers to form a multiplicity of vertical reaches between the rollers, and means for maintaining a liquid in said tank with its surface at a level between the upper and lower ends of said vertical reaches.

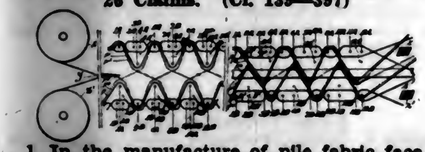
2,106,286
LAMP CONSTRUCTION
Charles E. Godley, Ferndale, Mich., assignor to United Lens Corporation, Detroit, Mich., a corporation of Delaware
Application December 18, 1935, Serial No. 54,964
5 Claims. (Cl. 240—41.36)

5. A one piece reflector containing horizontally positioned paraboloid reflecting surfaces having slightly spaced foci; a transition surface interposed between adjacent paraboloid surfaces, said transition surface formed with a series of interconnected convex flutes extending transversely along said transition surface, and the axis of each of said flutes being angularly arranged with respect to the axis of the reflector.

2,106,287
MEANS FOR CHECKING AND RECORDING EGG PRODUCTION OF HENS
Orlando E. Kellum, Moreno, Calif.
Application October 2, 1933, Serial No. 691,962
10 Claims. (Cl. 119—47)

1. An apparatus for recording the egg production of hens comprising: an enclosed coop having an opening, a gate normally locked against egress from the nest and forming a closure for said

opening, a photographic unit mounted adjacent a margin of said opening and operable by said gate when it is opened by the passage of a hen through said opening, for photographically recording a number, symbol, or character affixed



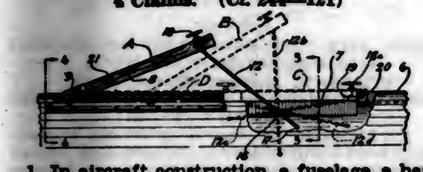
to the body of the hen within the range of said photographic unit, and means rendered operative by the deposit of an egg in said coop for unlocking said gate to permit the egress of a hen from the nest.

2,108,288

MANUFACTURE OF PILE FABRICS

Joseph Kubicky, Brandywine Summit, Pa., assignor to Collins & Aikman Corporation, Philadelphia, Pa., a corporation of Delaware

Application May 29, 1934, Serial No. 728,142
26 Claims. (Cl. 139—397)



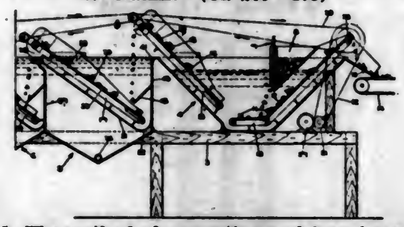
1. In the manufacture of pile fabric face to face with the ground of one fabric on one side of warpwise extending members having free ends and the ground of the other farbric on the other side of the warpwise extending members, the steps which include—interconnecting said two grounds by temporarily looping cut tuft pile-forming yarn for interconnecting the grounds on wefts of sets of wefts supported free from interlacing with the grounds between the selvages on opposite sides of said members and thereby forming bights of such yarn on opposite sides of said members, weaving off the interconnected portions of said grounds from the ends of said members, spreading the grounds apart so that the yarn sections forming bights on one side of said members are shifted from such positions and the yarn sections which previously lay between the sets of bights provide a zone for cutting said interconnecting yarns, and cutting such yarn sections.

2,108,289

AIRCRAFT WINDSHIELD AND HATCH

Isaac M. Laddon, Buffalo, N. Y., assignor to Consolidated Aircraft Corporation, a corporation of Delaware

Application June 6, 1935, Serial No. 25,234
4 Claims. (Cl. 244—121)



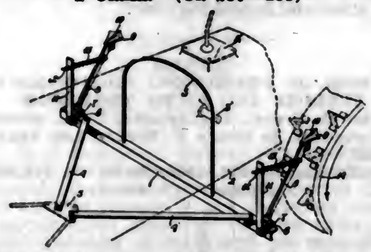
1. In aircraft construction, a fuselage, a hatch comprising an opening therein, a cover member comprising a laterally curved sheet provided with a transparent portion, longitudinally extending guide rails attached to the said fuselage, rollers pivotally attached to forward corners of the said cover member and engaging the said guide rails such that fore and aft movement of the cover member and pivotal movement of the same about the said rollers are permitted, and adjusting means associated with the opposite corners of the said cover member whereby the same is releasably held at any position of the said rollers within the said rails and at any angular position of the cover member with respect to the said fuselage.

2,108,290

METHOD OF CLEANING COAL AND FLUID SEPARATING MEDIUM THEREFOR

Nils D. Levin and Samuel H. Yost, Columbus, Ohio, assignors to The Jeffrey Manufacturing Company, a corporation of Ohio

Application October 11, 1934, Serial No. 747,906
17 Claims. (Cl. 209—173)



1. The method of separating coal from heavier impurities which comprises introducing raw coal into a separating medium composed of naturally finely divided argillaceous material held in substantially quiescent suspension in water by a relatively small quantity of a deflocculating agent, and removing the cleaned coal from the separating medium.

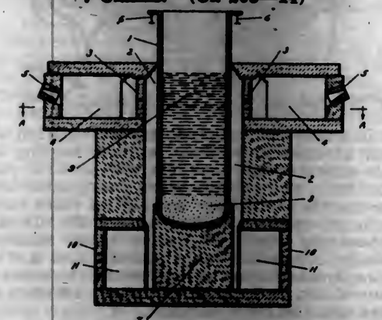
2,108,291

TRACTOR WHEEL SCRAPER

Malcolm Roy McNally, Lumsden, Saskatchewan, Canada, assignor of one-half to W. Beattie Ramsay, Lumsden, Saskatchewan, Canada

Application May 20, 1936, Serial No. 80,884
1 Claim. (Cl. 280—158)

Improvements in tractor wheel scrapers comprising a transversely positioned angle bar secured to the under side of a tractor forward of the traction wheels thereof, a vertical cantilevered flat bar secured at the lower end thereof at a point adjacent the end of said angle bar, a bearing secured to said angle bar in transverse alignment with respect to said flat bar and an arm pivotally secured to said bearing and extending upwardly therefrom at an angle with respect to said flat bar, said arm terminating in a scraping blade of a curved configuration and



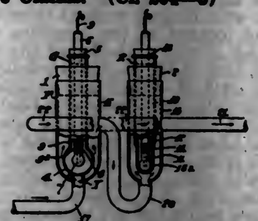
comprising a central upstanding rib and a pair of scraping faces curving away upon either side of said rib so that when bearing against the periphery of a traction wheel the whole scraping edge will be in contact therewith with the end of said rib in advanced position, a screw threaded rod secured at one end at a point upon said arm, the said rod passing through an aperture adjacent the upper end of said flat bar, a coiled compression spring extending over said rod between said arm and said flat bar, the end of said rod which passes through said flat bar being secured against withdrawal, said spring being designed to maintain said blade in continual engagement with the periphery of said traction wheel.

2,108,292

FURNACE AND METHOD OF FIRING

Willard S. McVay, Niagara Falls, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

Application April 21, 1936, Serial No. 75,589
7 Claims. (Cl. 262—14)



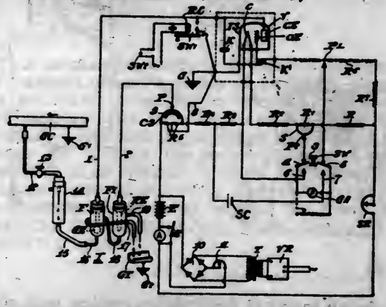
1. A furnace comprising a combustion chamber situated on a higher plane than the lower portion of the object being heated and horizontally opposite a higher portion of said object, a chamber enclosing said object and connecting indirectly at the top through and around a baffle wall with the combustion chamber and at the bottom with a flue, said baffle wall being situated horizontally between the combustion chamber and the object being heated and being adapted to prevent direct impingement of flame and gases from the combustion chamber upon said object.

2,108,293

APPARATUS FOR MEASURING ION-CONCENTRATION

George A. Perley, Philadelphia, Pa., assignor to Leeds & Northrup Company, Philadelphia, Pa., a corporation of Pennsylvania

Application January 10, 1936, Serial No. 58,554
6 Claims. (Cl. 204—5)



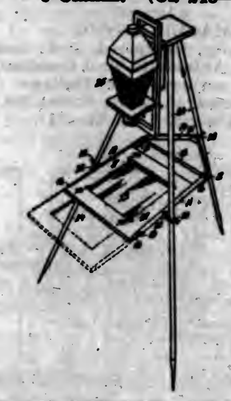
1. An ion-concentration cell comprising a hydrogen-ion electrode, a reference electrode, and a flow-channel comprising separate chambers for said electrodes, an inlet for the hydrogen-ion electrode chamber so disposed that solution entering the flow-channel directly impinges on the active surface of the hydrogen-ion electrode, and a connection for conducting solution from said hydrogen-ion electrode chamber to the reference electrode chamber.

2,108,294

METHOD AND APPARATUS FOR MEASURING ION-CONCENTRATION

Edgar D. Doyle and George A. Perley, Philadelphia, Pa., assignors to Leeds & Northrup Company, Philadelphia, Pa., a corporation of Pennsylvania

Application January 11, 1936, Serial No. 58,623
8 Claims. (Cl. 204—5)

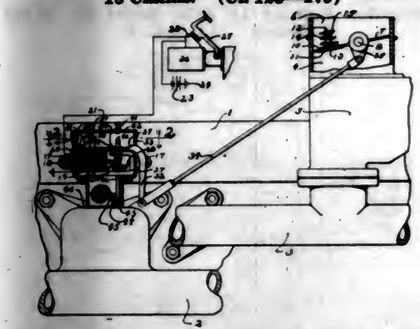


1. A system for continuous measurement of the ion-concentration of a solution comprising an ion-concentration cell, a circuit including said ion-concentration cell and a calibrated source of variable voltage, means for indicating unbalance between the voltages of said source and said cell, means for insulating the electrodes of said cell from ground, and means for feeding the solution to, and discharging it from, said cell in streams which are broken into drops to avoid a conductive path from said electrodes to ground through the solution.

2,108,295

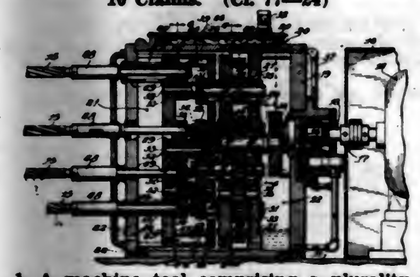
UNIVERSAL EASEL TABLE

Otto J. Prucha, Denver, Colo.



Application March 25, 1935, Serial No. 12,891
6 Claims. (Cl. 248—1)

6. In an adjustable table of the character described, a U-shaped frame adapted to rpceive and

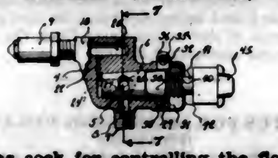


slidably support a panel unit, a terminal extension in hinged cooperation with the closed end of said frame, means operable to clamp said extension in the desired angular relation with said frame, and a clamp swiveled to each of the parallel legs of said frame and to said extension whereby the assembly may be removably secured to and mounted between suitable spaced supports.

2,108,296
AUTOMATIC CHOKE
Andre J. E. Rosalet, Detroit, Mich., assignor to Chrysler Corporation, Detroit, Mich., a corporation of Delaware
Application May 18, 1931, Serial No. 538,133
13 Claims. (Cl. 123—179)

1. In an internal combustion engine unit comprising a carburetor having a choke valve and having operating means for urging said valve toward a closed position to condition said engine for starting; means for predetermining the opening and closing movements of said valve with respect to the temperature of said engine including variable means having a member constructed and arranged to positively limit closing of said choke valve by said operating means; a member carried by said variable means for regulating opening of said choke valve after actuation of said operating means is discontinued; and a temperature responsive means disposed adjacent said engine and directly subjected to temperature changes thereof and coacting with said variable means for controlling the position of said members.

2,108,297
MACHINE TOOL
Robert A. Schafer, Richmond, Ind., assignor to The National Automatic Tool Company, Richmond, Ind., a corporation of Indiana
Application August 15, 1932, Serial No. 628,780
10 Claims. (Cl. 77—24)

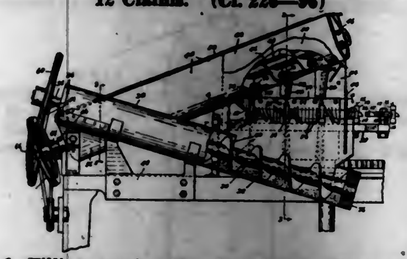


1. A machine tool comprising a plurality of driving elements distributed in regular order in fixed positions over the field of the tool, a common drive for said driving elements, a separate unitary spindle box adapted to be removably mounted upon said machine tool, adapted rotatably to support a plurality of rotary tools adjacent said driving elements and in desired relation to the work, and intermediate driving elements operatively connecting each spindle to one of the first said driving elements, said spindle box providing bearings for both ends of said intermediate driving elements.

2,108,298
ELECTRIC COOKING APPLIANCE
Frank W. Scharf, Western Springs, Ill., assignor to McGraw Electric Company, Chicago, Ill., a corporation of Delaware
Application December 19, 1935, Serial No. 55,184
20 Claims. (Cl. 219—19)

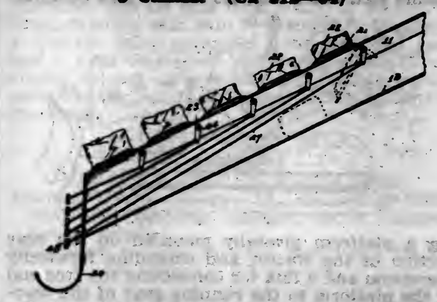
1. In a cooking appliance, the combination with a pair of cooking surfaces, electric heating elements adjacent one face of the respective cooking surfaces and covers over the respective heating elements at said one face, of an outer casing outside of each cover and spaced therefrom, a substantially air-tight hollow hinge structure pivotally connecting said casings and an air-moving means in one of said casings to cause air to move into and out of the space between the covers and the outer casings.

2,108,299
GAS COCK
Elmer G. Steffen, Cleveland Heights, Ohio, assignor to Milwaukee Gas Specialty Company, Milwaukee, Wis., a corporation of Wisconsin
Application March 13, 1936, Serial No. 68,621
2 Claims. (Cl. 251—105)



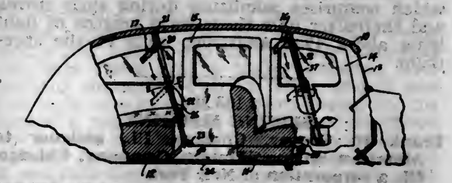
1. A gas cock for controlling the flow of gas to a simmering burner and a main burner, comprising a valve body having a substantially Y-shaped cross section on a transverse plane and having a tapered bore to receive a valve plug arranged with its axis normal to said transverse plane and located at the juncture of the arms and the leg of the Y, the leg of the Y having an inlet port therethrough communicating with the bore, the axis of which lies on said transverse plane, and said valve body also having two parallel spaced outlet ports in the arms of said Y with their axes parallel to the axis of the tapered bore and lying on a plane normal to the axis of the inlet port, said outlet ports being communicated with said tapered bore, one of said outlet ports being for the simmering burner and the other being for the main burner, and a rotatable valve plug seated in said bore, said plug having open passages communicable with the ports and so disposed with respect to the locations of the points of communication of the ports with the bore that upon continued rotation of the plug in one direction and from a predetermined closed position first the simmering burner is supplied with fuel, next both the simmering and the main burners are supplied with the full volume of fuel, and next both the simmering and main burners are supplied with a reduced volume of fuel.

2,108,300
BOX
Dan Sullivan, Fort Worth, Tex., assignor to Pollock Paper & Box Company, Dallas, Tex., a corporation of Texas
Application January 20, 1936, Serial No. 59,524
1 Claim. (Cl. 229—15)



The herein described box comprising, an outer collar member, an upper tray having a bottom affording a partition for dividing the box into upper and lower compartments and a surrounding upstanding marginal flange secured to the inside of the upper portion of the collar member with its upper edge substantially flush with the edge of the collar member, a lower tray having a surrounding upstanding flange adapted to fit slidably in the lower portion of said collar member with the upper edge of said upstanding flange abutting the bottom of the upper tray and said lower tray having an outwardly extending flange extension of its bottom against which the lower edge of said collar member abuts, and a marginally walled cover adapted to fit interchangeably as a closure for either the upper or the lower tray.

2,108,301
FILLING MECHANISM FOR ELECTRIC FUSES
Elmer H. Tayler, Newburyport, Mass., assignor to The Chase-Shawmut Company, Newburyport, Mass., a corporation of Massachusetts
Application February 14, 1936, Serial No. 63,907
12 Claims. (Cl. 226—96)

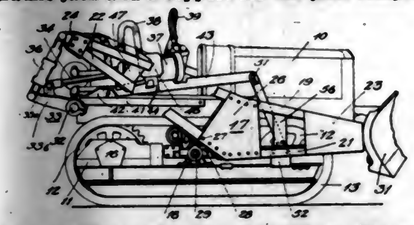


1. Filling mechanism for electric fuses comprising means providing a discharge opening for filling material, means including a continuously rotating conveyor worm that sweeps across said opening for conveying filling material to and for causing filling material to pass through said opening in a continuous stream, means for advancing a succession of open fuse casings into and out of the path of material falling from said opening, and a conveyor worm operative to collect and discharge directly into said first named conveyor worm material which does not enter the fuse casings.

2,108,302
PACKAGE DELIVERING APPARATUS
Edward Barrett, Des Moines, Iowa
Application November 16, 1936, Serial No. 111,625
6 Claims. (Cl. 312—94)

1. A package delivering apparatus, comprising an inclined chute, a series of packages supporting platforms arranged in line above the chute and substantially parallel therewith, each being pivotally supported at its upper rear end, a latch device for holding the lower front end of the platform in its normal position for supporting a package, and a manually operated means for each platform extended beyond the lower front platform for tripping the latch device of the selected platform.

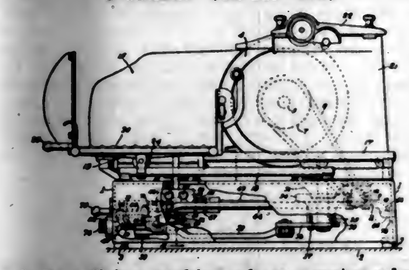
2,108,303
SAFETY DEVICE FOR AUTOMOBILES
Raymond Beddow, Toledo, Ohio
Application November 25, 1936, Serial No. 112,755
1 Claim. (Cl. 280—150)



A safety device for automobiles comprising, in combination with a closed body having a front seat, windshield and side doors, a safety belt adapted to be disposed when in use in position between the windshield and seat, spring means carried by each door for urging said belt to position of use, means providing a separable connection between said spring means and belt enabling separation of these parts upon opening of the door, a catch controlling said spring means, and means for releasing said catch to render said spring means operative.

2,108,304
EARTH MOVING DEVICE
Roy E. Choate, Waldo E. Rodler, and William I. Leech, Cedar Rapids, Iowa, assignors to La Plant-Choate Manufacturing Co. Inc., Cedar Rapids, Iowa, a corporation of Delaware
Application September 5, 1933, Serial No. 688,178
1 Claim. (Cl. 37—144)

In an earth moving device including a tractor and running gears for the tractor, a side frame pivotally mounted on the running gears and extending substantially the length of the tractor and projecting in front thereof, a plow blade mounted on the front end of the side frame, a



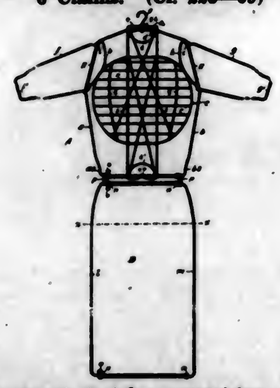
cross shaft pivotally mounted at the rear of the tractor and having a lever arm fixed thereon, a link for connecting the lever arm on the cross shaft with the rear end of the side frame, a hydraulic jack and a support for the jack comprising a platform pivotally mounted on the rear portion of the tractor and extending forwardly therefrom and a link for connecting the free end of the platform to the running gear of the tractor, the jack being pivotally mounted upon the platform and operatively connected with the lever arm on the cross shaft.

2,108,305
PROCESS FOR CURING AND PRESERVING PLANT PRODUCTS
Mayne R. Coe, Washington, D. C., assignor to the Government and the People of the United States of America
No Drawing. Original application December 9, 1933, Serial No. 701,733. Divided and this application September 24, 1936, Serial No. 102,351
6 Claims. (Cl. 99—8)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In the process of air curing hops, the step which comprises admitting during such curing and thereafter only those wave lengths of light lying above 4900 Angstrom units of the spectrum.

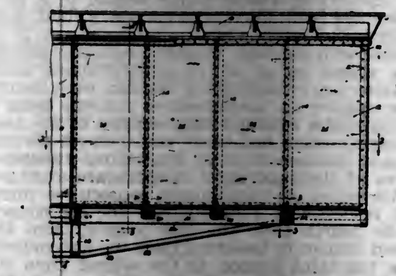
2,108,306
SLICING MACHINE
Frank H. Cooper, Chicago, Ill., assignor to American Slicing Machine Company, Chicago, Ill., a corporation of New York
Application September 24, 1936, Serial No. 102,287
5 Claims. (Cl. 146—102)

1. In a slicing machine, a base, a motor, a knife, a driving connection between the motor and the knife, a reciprocating carriage, a driving connection between said carriage and said motor, including a rod, a member reciprocable along and rotatable about said rod, a driving connection between said member and the motor, effective when the member is at one position in its rotation about said rod, and ineffective at another position, adapted to reciprocate said member along said rod, and a connection between said member and said carriage effective when the member is at one position in its rotation about said rod, and ineffective at another position, and manually operable means for rotating said member about said rod, into and out of said effective position, whereby the driving connection is made and broken in response to such rotation.



2,108,307
TRAILER COUPLER
Conrad De Valle, Oakland, Calif.
Application August 5, 1935, Serial No. 34,710
5 Claims. (Cl. 280—33.1)

1. In a trailer coupler, a plate adapted to be supported on a truck, a fifth wheel carried by the trailer and slidable over said plate, a pair of pivoted jaws on the plate engageable by the fifth wheel to bring them to a clamping position relative thereto and flanges on said jaws overlying the edges of the fifth wheel to prevent vertical movement thereof when it is surrounded by the jaws.

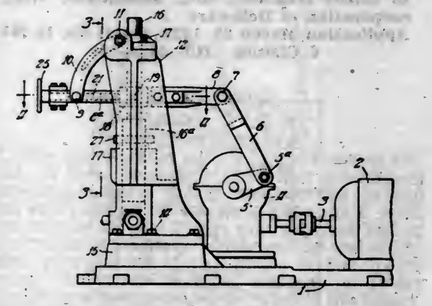


4. In combination with a coupler for a truck and trailer, a jack frame pivoted to the trailer, a subframe pivoted to the trailer forwardly of the jack frame pivot, said subframe carrying the trailer coupler member whereby it will be raised and lowered upon coupling and uncoupling of the trailer and extending rearwardly of the jack frame pivot, and a link connecting the rear end of the subframe with the jack frame to cause the jack frame to be raised and lowered with the subframe.

2,108,308
ADJUSTABLE GARMENT SIZER AND STRETCHER
Margaret Dickey, Portland, Oreg.
Application December 16, 1935, Serial No. 54,689
6 Claims. (Cl. 223—69)

1. A garment stretcher comprising a skirt section and a blouse body section, means detachably supporting the skirt section from the blouse body section, wire arm pieces detachably supported by the sides of the blouse body section, said arm pieces arrangeable to extend outward from the sides of the blouse body section or inward within said body section, and a wire bust-forming section detachably supportable on said blouse body section.

2,108,309
HOUSE CAR CONSTRUCTION
Frank Ditchfield, Cleveland, Ohio, assignor to The Youngstown Steel Door Company, Cleveland, Ohio, a corporation of Ohio
Application August 24, 1935, Serial No. 37,717
7 Claims. (Cl. 105—404)

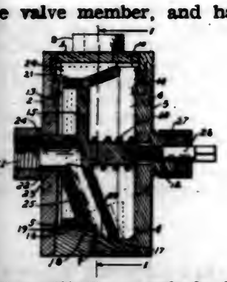


1. A metallic railway house car converted from a house car having originally wooden side walls and metallic underframe including a center sill, bolsters, cross bearers and intermediate sills secured to and extending downwardly below said cross bearers, said converted car comprising said original sills, bolsters and cross bearers, metallic side sills secured to the ends of said bolsters and cross bearers, compression members secured to said side sills extending downwardly and inwardly and secured to said intermediate sills below said cross bearers, compression members secured to said intermediate sills below said cross bearers extending inwardly and upwardly and secured to the upper portion of said center sill, said compression members carrying the horizontal component of the stresses imposed thereon to said center sill whereby said intermediate sill is subjected to the vertical component of said stresses and metallic side walls comprising intermediate and door posts, side plates and metallic sheathing, said posts being rigidly secured to said side sills and side plates, said sheathing being secured to said posts, side sills and side plates.

2,108,310
ROLL GRINDING MACHINE
Herbert J. Griffing, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a corporation of Massachusetts
Application December 20, 1935, Serial No. 55,444
14 Claims. (Cl. 51—95)

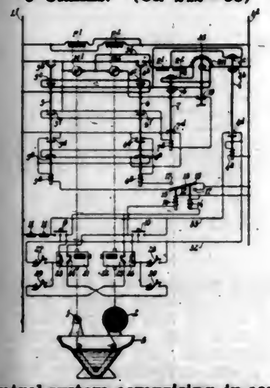
1. A grinding machine comprising a base, a rotatable grinding wheel and a rotatable work support which are movable longitudinally relative to each other, a transversely movable slide, a pivotally mounted support on said slide for said grinding wheel, means to move said slide to cause a relative approaching or receding movement between the grinding wheel and work support, a rotatable cam on said slide which is rotated in timed relation with said longitudinal movement, a follower roller arranged to engage said cam, and a lever to support said roller which is anchored to said slide and is arranged to engage said pivotally mounted support to rock the grinding wheel.

2,108,311
VARIABLE STROKE MECHANISM
Albert J. Harris, Chicago, Ill., assignor to Hills-McCanna Company, Chicago, Ill., a corporation of Illinois
Application October 26, 1934, Serial No. 750,057
2 Claims. (Cl. 74—40)



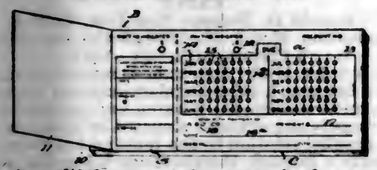
1. Actuating means for a pump piston, comprising a power member having a rotary crank arm, a link having one end pivotally connected with said crank arm, a piston-actuating lever pivotally connected with the other end of said link, said piston-actuating lever being in the form of a yoke extending crosswise of the piston and having members on opposite sides of the piston, a carriage along which the side members of said yoke are slidable and provided with pivot pins forming a pivotal connection with the piston, swinging supporting links pivoted at one end to the end of said yoke opposite said link and pivoted at the other end to the piston casing, and means for adjusting said piston connecting carriage lengthwise of said yoke, said means comprising a rotary threaded bar or rod having one end connected with said carriage so as to permit rotary but prevent longitudinal movement, said threaded bar engaging a threaded member on the yoke, and a rotary handle on said bar rod to turn the same and thereby cause said threaded bar rod to adjust said carriage.

2,108,312
VALVE
Harold H. Holmes, San Jose, Calif.
Application March 10, 1936, Serial No. 68,034
6 Claims. (Cl. 251—144)



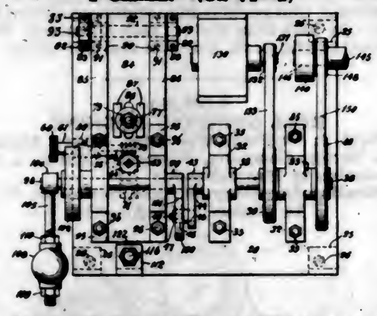
6. A valve of the character described comprising, a housing, a valve member mounted for axial movement therein, the housing and member having cooperating surfaces disposed in both angular and parallel relation to the housing axis whereby to form a passage therebetween when the valve member is moved axially, and passages leading to the passage so formed through both the hous-

ing and the valve member, and having direct



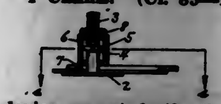
communication with the angularly disposed surfaces in offset relation to each other.

2,108,313
MOTOR CONTROL SYSTEM
Bayard M. Horter, Whitefish Bay, Wis., assignor to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware
Application March 25, 1935, Serial No. 12,789
6 Claims. (Cl. 242—55)



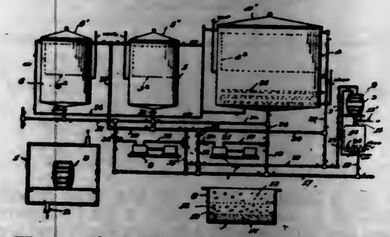
1. A control system comprising, in combination, a pair of direct current dynamo electric machines for transferring material from either of two rolls to the other, each of said machines having a shunt field winding, means for selectively establishing power connections for the armatures of said machines to effect starting of either of said machines as a motor and to thereafter render the other of said machines operable as a braking generator, an armature regulating resistance common to said machines and means associated with said former means for shunting said regulating resistance during starting of either of said machines as a motor.

2,108,314
MULTIPLE PAYMENT COUPON BOOK
Edward A. Kelly, Indianapolis, Ind.
Application February 10, 1936, Serial No. 63,250
4 Claims. (Cl. 283—66)



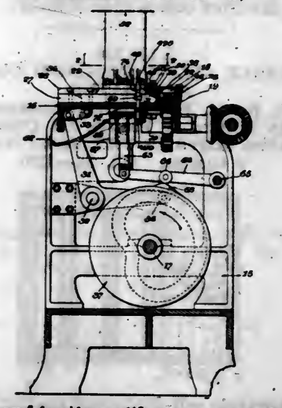
1. A multiple payment coupon book comprising a plurality of coupons superposed one upon another, each coupon except the first four coupons and the last four coupons having thereon five continuously numbered identifying spaces, the first and last coupon each having a single numbered identifying space, the second coupon and the next to the last coupon each having two continuously numbered identifying spaces, the third coupon and the third from the last coupon each having three continuously numbered identifying spaces, and the fourth coupon and the fourth from the last coupon each having four continuously numbered identifying spaces, said identifying spaces being located in a predetermined position on each coupon, so that each numbered identifying space on any coupon is in register with similarly located numbered identifying spaces on all of the other coupons while the latter are in superposed relation, each identifying number on the respective coupons being a duplicate of a corresponding number of the next adjacent coupon but offset with respect thereto in such manner that all registering numbered spaces of the superposed coupons are arranged in five series of continuously consecutive numbers, respectively, running from the top coupon to the fourth from the last coupon, from the second coupon to the third from the last coupon, from the third coupon to the second from the last coupon, and from the fourth coupon to the last coupon of the superposed coupons, each coupon also containing predeterminedly positioned date indicia which are in register with correspondingly positioned date indicia of each of the other coupons while said coupons are arranged in a group and in superposed relation in the numerical order indicated by the registering continuously numbered identifying spaces running from the top to the bottom of the group of superposed coupons, so that the registering date indicia also run successively from the top to the bottom of the superposed coupons.

2,108,315
ROTATING SHAFT CONTROLLING APPARATUS
Vincent Ligueri, Bayonne, N. J.
Application July 11, 1936, Serial No. 90,269
4 Claims. (Cl. 74—1)



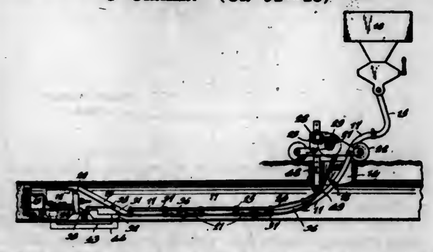
1. In a rotating shaft controlling apparatus the combination of a base plate, a controlling beam having one end thereof hinged to the base plate, a pair of journal brackets supported on said beam, a controlling shaft journaled in said brackets, an arm extending from one end of said controlling shaft, a controlling weight carried by said arm, a supporting bracket extending up from said base plate, a spring suspended from the upper portion of the supporting bracket and the lower end of said spring connected to the controlling beam, an arm having an elongated opening extending from the other end of the controlling shaft, a pair of journal brackets extending up from the base plate, a main shaft journaled in the latter journal brackets, a crank extending from one end of the main shaft, a journal pin extending from said crank, a roller journaled on said journal pin extending into the elongated opening of said arm, means to rotate said main shaft, the rotations of the main shaft transmitted to the controlling shaft through said crank and arm, the coaction of the arm with its controlling weight and said spring oscillating said beam, a journal bracket extending up from said base plate, a shaft to be controlled journaled in the latter journal bracket and transmission means between the shaft to be controlled and the main shaft.

2,108,316
BOLT LOSS PREVENTION MEANS
Frank E. Love, Oklahoma City, Okla.
Application July 9, 1936, Serial No. 89,699
4 Claims. (Cl. 85—1)



1. In a device, as set forth, the combination with a locking barrel having a well and axially aligned openings in the end walls of the barrel, of a partially threaded bolt shank passable through said openings, a head for said bolt shank, and remote from one end of the barrel, a nut for said bolt shank, and bearing against one end of said barrel, an annular groove in said shank and within the well intermediate of the end walls of the barrel, and a keeper movable longitudinally with relation to said barrel within the well and resiliently co-operating with the annular groove of the bolt shank and being of a size greater than the openings through which the bolt passes.

2,108,317
METHOD OF AGING WHISKY
Thomas T. Miller, Peoria, Ill., assignor of five-twelfths to Alfred J. Bair, Peoria, Ill.
Application May 6, 1935, Serial No. 19,937
4 Claims. (Cl. 99—48)



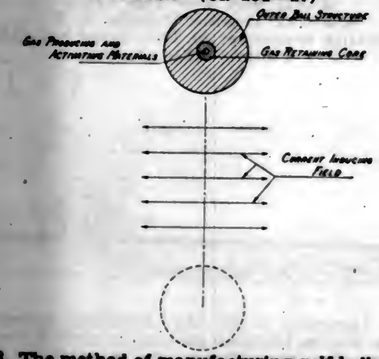
3. The method of producing whisky having flavor and aroma characteristic of aged whisky, which method comprises subjecting whisky spirits lacking the characteristics of aged whisky in a container in the presence of air and at a temperature of from 80° F. to 110° F. for about twenty-four hours to contact with finely divided wood from oaken whisky barrels which have previously held aged whisky and which wood has been impregnated with such whisky in the course of the aging thereof, said wood consisting substantially of that portion of the wood of the barrel which lies immediately beneath the charred portion and interiorly of the outer and substantially unaffected portion of a barrel.

2,108,318
COVER FEEDING AND FOLDING MECHANISM FOR BOOKING MACHINES
John R. Nolan, Larchmont, N. Y., assignor to The Diamond Match Company, Wilmington, Del., a corporation of Delaware
Application September 19, 1936, Serial No. 101,579
12 Claims. (Cl. 93—2)

1. The combination with a cover-receiving element, of cover feeding and folding mechanism comprising a cover feeder reciprocative to and from said element, means for positioning a cover strip flatwise on said feeder and with one end of the strip projecting beyond the acting end of the feeder preparatory to the stroke of the feeder toward the cover-receiving element, a folder movable in a path intersecting that of the feeder, which folder when in one position overhangs the path of the feeder and when in another position underlies the latter path, and means for operating said strip positioning means, feeder and folder in timed relation, whereby in one movement of the folder the projecting end of the cover strip supported by the feeder is bent at the adjacent end of the feeder by the folder, and whereby in the stroke of the feeder toward the receiving element said feeder co-acts with the folder to flex the bent end of the cover strip toward the opposing face of the feeder, thus delivering the end-folded cover to the cover-receiving element.

2,108,319
FEED APPARATUS FOR PIPE COATING MACHINES AND THE LIKE
Albert G. Perkins, Warsaw, N. Y.
Application September 16, 1935, Serial No. 40,679
8 Claims. (Cl. 91—18)

8. Apparatus of the type described, comprising a coating machine adapted to move through a pipe line, propelling means mounted on the coating machine for causing movement thereof,



a flexible conveying tube movable within the pipe line and adapted for communication at its discharge end with the coating machine, the feed end of the tube extending externally of the pipe for connection to a material feed unit, and propelling means disposed externally of the pipe line and operatively connected to the tube to draw the latter through the pipe line as the treating machine moves therethrough.

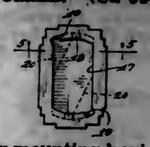
2,108,320
PORTABLE SELF-CONTAINED COOLING APPARATUS
Frank B. Rentz, Wells, Minn., assignor of one-half to Willard E. Fantle, La Crosse, Wis.
Application March 15, 1937, Serial No. 130,987
4 Claims. (Cl. 62—130)

1. A portable self-contained cooling apparatus comprising an outer shell and a main compartment for a heat exchange medium, a receptacle for a cooling medium located in said main compartment, upper and lower tanks connected respectively to upper and lower parts of said main compartment, radiator tubes connecting said upper and lower tanks, a motor driven pump in the connection between said lower tank and the lower portion of said main compartment and a motor driven fan for forcing air between the said radiator tubes, and which outer shell is extended beyond said main compartment to provide an air intake chamber provided at opposite sides with air intake and discharge passages, said fan and motor being arranged in the air intake chamber of said chamber aligned with said inlet and outlet passages, and a drip pan extended along the bottom of said air chamber and below the radiator elements.

2,108,321
GOLF BALL AND THE LIKE
Herbert S. Riddle, Springfield, Mass.
Application July 24, 1934, Serial No. 736,689
5 Claims. (Cl. 154—17)

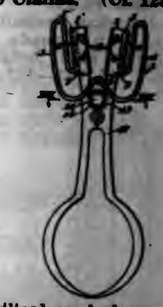
3. The method of manufacturing golf balls and the like which comprises enclosing within the center portion of the ball a quantity of gas producing material, completing the ball structure as desired and activating the gas producing material by the generation of heat at the center portion of the ball without raising the temperature of the other portions of the ball substantially above their normal tolerance.

2,108,322
WEATHER GUARD
Joel R. Thorp, West Allis, Wis., assignor to The Fulton Company, West Allis, Wis., a corporation of Wisconsin
Application December 28, 1936, Serial No. 117,756
6 Claims. (Cl. 296—84)



1. In combination with a window having upper and lower forwardly interconnected reveals, a deflector shield having upper and lower forwardly interconnected edge portions swingable in close proximity to the reveals, brackets swingably supporting said shield directly from said reveals, and a weather guard cooperable with said shield edge portions and being secured to said reveals independently of said brackets, said guard being applicable to or removable from said reveals without disturbing said shield supporting brackets.

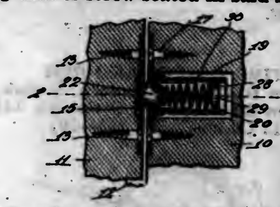
2,108,323
LOGGING TRAILER
Samuel Weiss, Portland, Oreg., assignor to Vaughan Motor Company, Inc., Portland, Oreg., a corporation of Oregon
Application January 27, 1936, Serial No. 60,968
6 Claims. (Cl. 280—124)



1. In a logging trailer of the type described including a transverse shaft, a load supporting frame pivotally mounted on said shaft and a pair of wheel axles, the combination of axle-boxes attached to said axles, said axle-boxes provided with upper extensions, leaf springs, upper and lower clamping plates securing said leaf springs between them, said transverse shaft pivotally supported by a pair of said clamping plates, the ends of said leaf springs slidably resting on said axle-boxes, means for limiting the lateral movement of each of said spring ends in either direction on said axle-boxes, lower and upper parallel link assemblies connecting said axle-boxes with said lower plates, and connecting the ends of said upper extensions with said upper plates, respectively, and universal joints in said link assemblies.

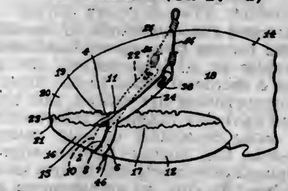
2,108,324
FINGER RING OR THE LIKE
Joseph H. White and Alexander Fitzner, Chicago, Ill., assignors to Spies Brothers, Inc., Chicago, Ill., a corporation of Illinois
Application July 21, 1937, Serial No. 154,688
13 Claims. (Cl. 63—29)

4. In a jewelry mounting having a substantially flat seat at least over the peripheral portion thereof, a plate adapted to carry a stone, signet or the like having a substantially flat portion for engaging said seat, and members having snap engagement therebetween and disposed on said mounting and said plate for detachably securing said plate on said seat, said snap engaging members being disposed outwardly of the plane of said seat and being operated to secure and to detach said plate to and from said seat respectively by a relative rotative movement between said plate and seat.



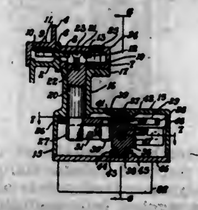
2,108,325
FUNIS CLAMP
Charles E. Ziegler, Pittsburgh, Pa.
Application November 2, 1936, Serial No. 108,688
9 Claims. (Cl. 128—346)

1. An umbilical cord clamp comprising a pair of cooperating cord-engaging jaws each provided with a bore extending longitudinally of the jaw from the rear end thereof, and a looped metal spring having its end portions secured in said bores and urging the jaws toward each other, the intermediate portion of said spring being disposed at the rear end of said jaws, and the portions of said spring between said intermediate and end portions being in the form of loops extending toward the other end of the jaws.



2,108,326
DOOR LATCH
George R. Adams, Los Angeles, Calif.
Application November 11, 1936, Serial No. 110,228
3 Claims. (Cl. 292—73)

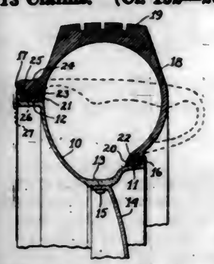
1. In a door latch, a plate adapted to be secured to a door jamb, said plate having an opening, an internally threaded flange surrounding said opening and projecting from said plate, a housing screw seated in said flange so as to be screwed in opposite directions through the opening in said plate, a spring-pressed ball within said housing, said flange being provided with a slot that extends partially around its circumference to form a narrow band, a portion of which band is indented, and that portion of the housing that is screw seated in said flange being



provided with a longitudinally disposed groove that is adapted to receive the indented portion of said band.

2,108,327
LOBSTER CLAW LOCK
Leon Joachim Barwood, Cambridge, Mass.
Application August 16, 1935, Serial No. 36,490
6 Claims. (Cl. 17—1)

1. A lobster-claw lock having an opening for receiving a claw of a lobster leg, the opening having a wall that is adapted to be interposed between the said claw and the other claw of the leg, the lock being provided with a tongue projecting from the said wall for engaging an inner edge of the first-named claw, and means for locking the first-named claw in said opening and the second-named claw contiguous thereto with said wall interposed between the claws and with the tongue engaging the said inner edge of the first-named claw.

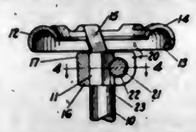


2,108,328
AUTOMATIC OPERATOR FOR CASEMENT WINDOWS AND THE LIKE
Ralph W. Carnahan, near Dayton, Ohio, assignor to The S. H. Thomson Manufacturing Company, Dayton, Ohio, a corporation of Ohio
Application October 4, 1935, Serial No. 43,534
2 Claims. (Cl. 268—19)

1. The combination with a stationary frame, a casement hingedly mounted therein for a swinging movement, a guide, a member movable along said guide, electrical means for shifting said member along said guide, an arm secured to said casement, a shaft for rotating said arm, a second arm loosely secured at one end to said shaft and connected at its other end to said movable member for actuation by the latter, a projection on the second arm, and a flat spring secured at one end to said projection and at its

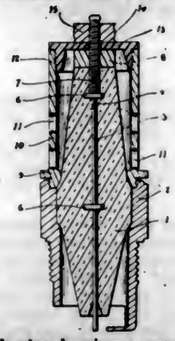
other end to said shaft to provide a yielding connection between the movable member and the casement.

2,108,329
TIRE CASING AND RIM
Burton D. Carter, Aberdeen, S. Dak.
Application May 10, 1937, Serial No. 141,635
13 Claims. (Cl. 152—20)



1. In a tire and rim construction, the combination of a rim having two spaced bead seats separated laterally by a drop center, one of said seats having a diameter equal to the inner diameter of the cooperating tire casing, and the other of said seats having a diameter intermediate the inner and outer diameters of said casing, and a straight-side tire casing having edge beads of inner diameters respectively fitting said seats, said larger bead having an enlargement extending laterally outwardly from said casing to constitute an emergency tread.

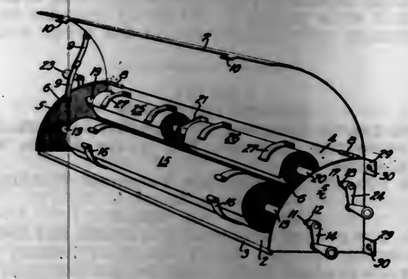
2,108,330
PIPE CUTTER
James T. Ellis, Lake Charles, La.
Application December 2, 1935, Serial No. 52,498
13 Claims. (Cl. 164—9.7)



12. A pipe cutter having a hollow body, a plurality of levers disposed substantially longitudinally of said body at spaced points about its circumference and pivoted intermediate their ends to said body to swing outwardly and inwardly at their respective ends with respect to the axis of said body, an outwardly directed blade fixedly mounted on each lever adjacent one end thereof, and an actuator within said body common to all of said levers and cutters and having oppositely disposed longitudinally tapered cam parts adapted simultaneously to contact with each lever above and below its pivotal support to simultaneously and positively move said levers and blades in either direction upon longitudinal movement of said actuator, and to positively position all of said levers and blades according to the position of said actuator.

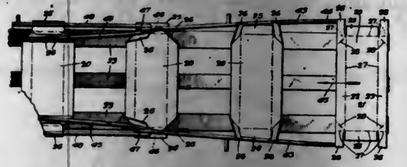
2,108,331
HANDWHEEL
John R. Graves, Bergenfield, N. J.
Application March 13, 1937, Serial No. 130,654
1 Claim. (Cl. 287—53)

A hand wheel having an offset hub adapted to be non-rotatably secured to a valve stem, said hub having a radial slot and a pair of lugs defining the said slot between them, the said lugs having outer faces parallel to each other, one of said lugs being connected with the wheel throughout its length and the other lug having a free end, a bolt transversely across the said lugs adapted to draw the lugs together and bind the hub tightly upon an end of the stem and to engage a groove in and transversely across the said end to prevent longitudinal dislodgment between the said wheel and stem.



2,108,332
SPARK PLUG
Emile Guillon and Josephat Perrault, Valmarie, Saskatchewan, Canada
Application November 8, 1935, Serial No. 48,915
4 Claims. (Cl. 123—169)

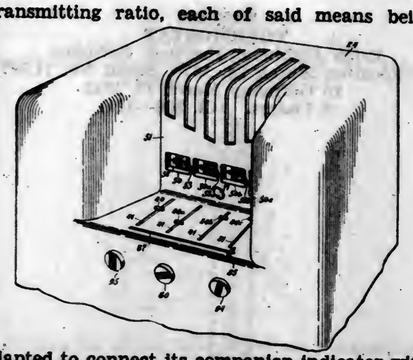
1. In a spark plug having a usual base and porcelain, a two-piece central electrode in said porcelain and a gap between the two parts thereof, the lower piece of said electrode having a wide thin flange embedded in the porcelain at its major diameter where it seats in the plug base, and the upper piece having a similar though somewhat smaller flange near its lower end and a substantially thickened and completely threaded part rising upwards from said flange to a point beyond the porcelain top.



2,108,333
RACK FOR STORING LINENS
Maurine Sims Hardin and Lena D. Sims, Berkeley, Calif.
Application January 28, 1936, Serial No. 61,208
2 Claims. (Cl. 242—55.3)

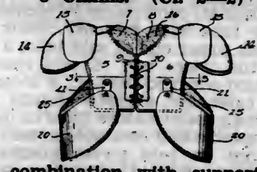
1. A rack for storing sheet-like fabrics comprising a receptacle provided with end walls and a back wall, a bracket rigidly secured to said back wall and projected transversely across said receptacle, a shaft having one end rotatively mounted in one end of the receptacle, the other end of said shaft having a reduced portion projected through and rotatively mounted in said bracket, a second shaft having a bore in one end complemental to the projected portion of the first mentioned shaft, said second shaft having one end adjacent said bracket rotatively supported by said projected

end and its other end rotatively supported by the other end of the receptacle, so that the shafts are in alinement but independently rotatable, a third shaft rotatively mounted in the ends of said receptacle, and means connected with each shaft for rotating the same.



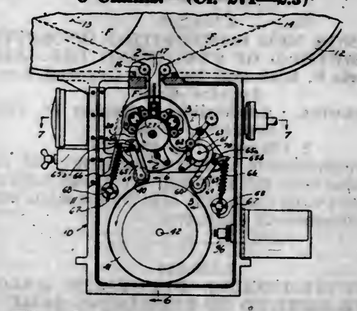
2,108,334
BOX MAKING APPARATUS
Charles G. Hayes, La Grange, Ill., assignor to Chicago Carton Company, Chicago, Ill., a corporation of Illinois
Application June 29, 1936, Serial No. 87,853
3 Claims. (Cl. 93—52)

1. Apparatus for setting up trays of the class described, comprising means for propelling a blank in an edgewise direction, stationary guide means for engaging a portion of said blank to effect folding of such portion rearwardly of the blank as an incident to the travel thereof, stationary guide means for engaging another portion of the blank and operative as an incident to the travel thereof to effect folding of such portion upwardly and inwardly in the direction of travel of the blank and downwardly into overlying relation to a portion thereof.



2,108,335
RADIO TUNING CONTROL
Albert E. Hedger, Buffalo, N. Y.
Application October 21, 1936, Serial No. 106,341
14 Claims. (Cl. 250—20)

1. A radio tuning control associated with the tuning condenser of a radio receiving set and comprising: a pair of graduated indicators having their graduations of different length and normally disconnected from the condenser; and a pair of condenser actuating means of different transmitting ratio, each of said means being



adapted to connect its companion indicator with the condenser.

2,108,336
BODY PROTECTIVE ARMOR
Nelean D. Helland, Milwaukee, Wis.
Application June 16, 1937, Serial No. 148,446
8 Claims. (Cl. 2—2)

1. The combination with supporting means having front and rear portions, of a rib guard element connected to the rear portion of the supporting means and provided with a pivotal connection with the front portion thereof.

2,108,337
FILM DRIVING MEANS
Louis B. Hoffmann, Hollywood, Calif., assignor to Mitchell Camera Corporation, West Hollywood, Calif., a corporation of Delaware
Application November 2, 1936, Serial No. 108,780
8 Claims. (Cl. 271—2.3)

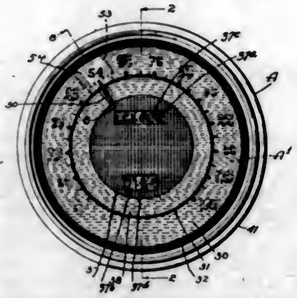
1. Film driving means comprising two film drive sprockets adapted to engage spaced points of a film strip, said film strip forming a film loop between said sprockets, drive means for said sprockets, driving interconnections between said drive means and said sprockets, a mechanical vibration filter in the driving interconnection between said drive means and the second sprocket engaged by the film strip, a film driven drum drivingly engaged by the film loop between the two sprockets, an inertia mass rigidly associated with the second sprocket, and another inertia mass rigidly associated with the film driven drum.

2,108,338
THERMOSTAT
Erich Juchheim, Ilmenau, Germany
Application March 28, 1936, Serial No. 71,417
In Germany March 12, 1935
6 Claims. (Cl. 200—141)

1. A thermostat, comprising in combination a thermometer tube with mercury filling, an extension on the upper end of said tube, a widened portion on the upper end of said extension, a bearing in said widened portion, a second bearing in said extension, a screw spindle mounted in said bearings, an armature fixed on the upper end of said spindle and rotatable in said widened portion, a nut on said screw spindle secured against rotation in said extension, a magnet rotatable on said widened portion and adapted to turn said spindle through the intermediary of said armature to shift said nut axially on said spindle, a contact wire extending downwards from said nut into said thermometer tube and adapted to form an adjustable contact for mercury filling of said thermometer, and a circuit connected up with said mercury and with said contact wire through the intermediary of said nut, said spindle and the bearings in said extension.

2,108,339
BEARINGS, NEW COMPOSITION OF MATTER AND METHOD OF PRODUCING THE SAME
Morris P. Kirk and Isaac H. Grancell, Los Angeles, Calif.
No Drawing. Application December 14, 1936, Serial No. 115,810
2 Claims. (Cl. 106—23)

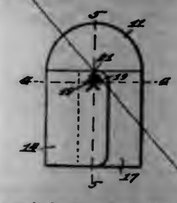
1. A composition of matter consisting of rubber loaded with metallic lead which has been impregnated with castor oil, said composition being of a homogeneous character.



2,108,340
DESACETYL-PSEUDO BUFOTALIN HALOID AND METHOD OF PREPARING SAME
Heizaburo Kondo, Shibuya-ku, Tokyo, Shunichi Ikawa, Hongo-ku, Tokyo, and Yoshito Kobayashi, Asabu-ku, Tokyo, Japan
No Drawing. Original application August 22, 1934, Serial No. 740,872, now Patent No. 2,062,667. Divided and this application November 3, 1936, Serial No. 108,974
2 Claims. (Cl. 260—25)

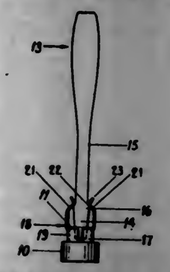
1. Method of preparing pseudo-bufotalin haloid, which consists in dissolving the dried venom secretion obtained from Chinese toads in alcohol, adding petroleum ether thereto and shaking the solution, removing the petroleum ether separated as the upper layer and further adding ether to the alcoholic solution which forms the lower layer, taking away the resinous matter thus separated, vaporizing the alcohol-ether solution, dissolving the residue in alcohol and pouring it into water, and precipitating it, dissolving the thus-separated precipitate in a cold state with ethyl acetate, vaporizing the solution, again dissolving the residue in alcohol and crystallizing out pseudo-bufotalin, then dissolving the same in glacial acid and causing dry hydro-halogenic acid to act upon it while cooling it, and finally removing the remaining hydro-halogenic acid and acetic acid.

2,108,341
SYNTHETIC RESIN
Felix Lauter, Evanston, Ill., assignor to Sealkote Corporation, Chicago, Ill., a corporation of Delaware
No Drawing. Application December 7, 1935, Serial No. 53,431
3 Claims. (Cl. 260—4)



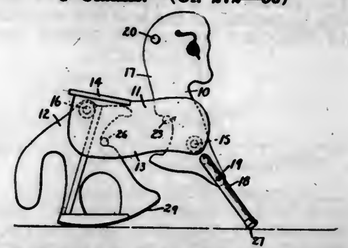
1. The method of producing a soluble and fusible synthetic resin which comprises heating a mixture of about 1 mol. of phenol and less than 1 mol. of formaldehyde in the presence of hydrochloric acid as a catalyzer; during the reaction adding a heated mixture of about ½ mol. phthalic acid and about ½ mol. of glycerine and about 1/180 mol. of lactic acid as a catalyzer between the two mixtures; dehydrating the mass after reaction between the two mixtures then cooling it and adding a metal halide capable of preventing oxidation during the cooling period.

2,108,342
DIAL FOR INDICATING INSTRUMENTS
Arden W. Le Fevre, Chicago, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia
Application September 12, 1933, Serial No. 689,103
2 Claims. (Cl. 116—129)



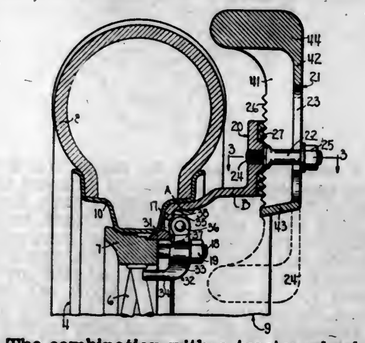
2. In a speedometer, a dial formed with circularly disposed concentric zones, at least one of said zones being translucent and having graduations thereon, an indicator disk mounted behind the dial and having opaque zones coterminous with the concentric zones on said dial, and a light source behind the indicator disk, the latter having radially spaced indicating windows through which the light source may be directed through the concentric zones in the movement of the indicator disk, one of said windows serving as an index mark, the indicator disk and dial being provided with transparent areas registering with each other to permit the observation of the digits of an odometer.

2,108,343
Johanna C. McAllister, Los Angeles, Calif.
FOLDED CONTAINER OR ENVELOPE
Application September 24, 1935, Serial No. 41,884
1 Claim. (Cl. 229—68)



A foldable container or envelope formed from a piece of sheet material substantially rectangular in shape and foldable along lines disposed at right angles to each other to form a front wall member, a rear wall member and end flaps at the sides of the front and rear wall members, said front and rear walls being identical in size, said end flaps being identical in size, and narrower than the front and rear wall members, the inner end portions of the flaps on one side of the container or envelope being positioned between the inner end portions of the other pair of flaps when the sheet of material is folded to form the container or envelope, a flap projecting from the upper edge of the front wall member, there being pairs of apertures formed in the four corners of the sheet of material, there being a pair of apertures formed in the lower edge of the sheet of material at the center thereof, which pairs of apertures coincide with each other when the sheet is folded to form the envelope and a tie passing through said coinciding apertures to retain the envelope in folded condition.

2,108,344
SCREW DRIVER AND SOCKET WRENCH ATTACHMENT
Thomas Miller, Brooklyn, N. Y.
Application September 25, 1936, Serial No. 102,467
5 Claims. (Cl. 81—121)

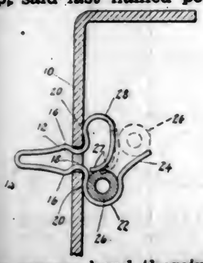


1. A socket wrench attachment for screw drivers having a tapering bit portion wider than the shank and forming shoulders, comprising a socket wrench having a tapering opening designed to receive the tapering bit of said screw driver, spring means comprising two arms held by said socket wrench longitudinally of said opening, said arms being disposed relative to said opening so as to face the shoulders of said screw driver, said arms being of a length to grip the screw driver shank directly above said shoulders and attach the socket wrench and said screw driver in unitary relation by positive interlocking engagement.

2,108,345
WALKING TOY
Arthur Orloff, Green Bay, Wis.
Application January 9, 1937, Serial No. 119,734
3 Claims. (Cl. 272—53)

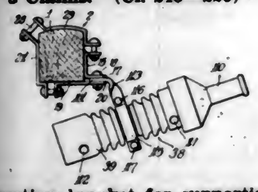
1. In a toy of the type described, the combination of a body, a front support pivoted to one end of said body intermediate said support, a rocker member pivotally connected to the other end of said body, said rocker member having a foot substantially radially curved from its pivot point as a center and having its center of gravity offset rearwardly of its pivot, and means for limiting the pivotal motions of said support and rocker member relative to said body.

2,108,346
TRACTOR WHEEL
Talbert W. Paul, Moline, Ill., assignor to John Deere Tractor Company, Waterloo, Iowa, a corporation of Iowa
Application March 23, 1936, Serial No. 70,260
8 Claims. (Cl. 301—50)



1. The combination with a tractor wheel, of a weight member detachably connected to said wheel, a plurality of traction lugs, said weight member being provided with a plurality of recesses having converging side walls, said traction lugs having tapered sides adapted to rest in said recesses, and means carried by said weight member for supporting said traction lugs in position, said means being adjustable for optionally supporting the lugs in the operating or non-operating position.

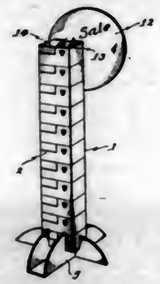
2,108,347
TUBING CLIP
Bert L. Quarnstrom, Grosse Pointe Farms, Mich.
Application December 7, 1936, Serial No. 114,545
7 Claims. (Cl. 24—81)



1. A spring fastener for securing a tube or the like to an apertured support comprising, a single length of spring material having a part fashioned to provide a securing portion adapted to be

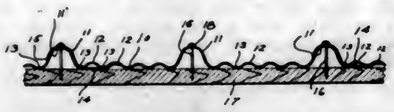
passed into the aperture for securing the fastener to the support, another portion of the material being fashioned to form an open loop-like part on one side of the aperture for receiving a tube, a further portion of the material being extended laterally on the side of the aperture opposite that of said loop, said last named portion having a

substantially reverse bend therein, and a spring arm extending from the reverse bend toward the open side of the loop for partially closing the same, said spring arm adapted to flex for entrance of the tube into the loop and arranged to engage the tube with spring tension for holding the tube in the loop.



2,108,348
CROSS ARM MOUNTING HANGER
Allan Ramsey, Evanston, Ill., assignor to Schweitzer & Conrad, Inc., Chicago, Ill., a corporation of Delaware
Application September 14, 1936, Serial No. 100,697
3 Claims. (Cl. 248—226)

2. A mounting bracket for supporting devices having apertured support ears of different thicknesses on cross arms having oblong cross sections of varying width and height comprising, in combination; a plurality of flat metal members for encircling and gripping a cross arm, two of said members having body portions and apertured lug portions for receiving said support ear therebetween, the lug portion of one of said two members extending in line with its body portion and the lug portion of the other of said two members extending substantially at right angles to its body portion; a bolt extending through said apertured support ear and lug portions for clamping the same together, said support ear before clamping being rotatable about the axis of said bolt, apertured mating lug portions on said members adapted to extend substantially at right angles to faces of said cross arm, and a bolt extending through each pair of mating lug portions for clamping said metal members to said cross arm.

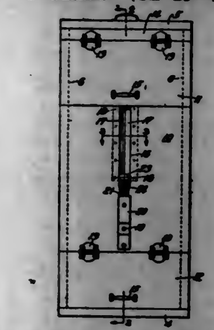


2,108,349
ADVERTISING DEVICE AND MAILING TUBE
Frank H. Rasmussen, Chicago, Ill., assignor to Magill-Weinsheimer Company, Chicago, Ill., a corporation of Illinois
Application June 12, 1936, Serial No. 84,879
Renewed January 5, 1938
4 Claims. (Cl. 40—126)

1. A device of the class described suitable for use in advertising or as a mailing tube consisting of the tubular construction having mounted thereon a series of package labels whereby the tubular construction has the appearance of a

stack of packages, in combination with a cardboard support consisting of a pair of interfitting cardboard members arranged to provide a seat for the tube, including a plurality of shoulders for engaging the tube at its sides.

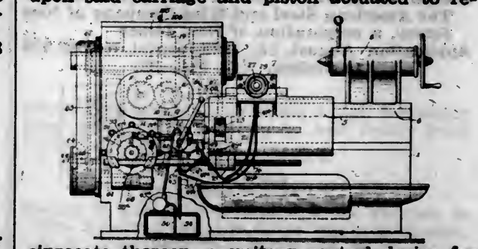
2,108,350
METAL ROOFING
Karl Roth, Terre Haute, Ind.
Application July 16, 1937, Serial No. 153,955
1 Claim. (Cl. 108—18)



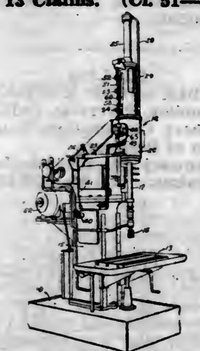
A coated metal roofing sheet comprising a plurality of spaced apart upwardly extending major ridges, a plurality of corrugations intervening between said ridges, the under sides of the grooves of the intervening corrugations being in a common plane and the upper sides of the ridges of the intervening corrugations being in a common plane, the upper sides of said major ridges being in a plane removed above the upper plane of said corrugation ridges, said major ridges being curved upwardly from a groove of said corrugations to have a side wall sloping but slightly outwardly from the perpendicular and having a top curving over and around therefrom into a downturned side wall of the same rate of but oppositely directed slope as that of the first wall, all of the said grooves and ridges including those in said corrugations and said major ridges being of sufficient curvature when formed as will retain said coating thereover in intimate contact without rupture, one of said major ridges being along one side of the sheet and having its outer downturned wall terminating by a longitudinal edge at an elevation at least as high as the tops of the ridges of said corrugations, and another of said major ridges being adjacent to the opposite sheet edge to have the outer wall of that ridge curved around into a laterally extending tongue in a plane common to that of the undersides of said corrugations, and an outer upturned end on said tongue, said tongue end being positioned under the second of the minor ridges of said corrugations, said tongue end being curved around under and in intimate contact with the underside of that second minor ridge.

2,108,351
PLOW
Walter H. Silver, Moline, Ill., assignor to Deere & Company, Moline, Ill., a corporation of Illinois
Application November 2, 1936, Serial No. 108,758
8 Claims. (Cl. 97—209)

1. In combination with a plow having a pair of laterally spaced, longitudinally extending beams, a rolling colter, and supporting means therefor providing independent vertical and lateral adjustments of said colter, said supporting means comprising a journal bearing on each of said laterally spaced beams, and a crank axle swingably mounted in said bearings and slidable laterally therein, said colter being journaled at the end of said crank axle.



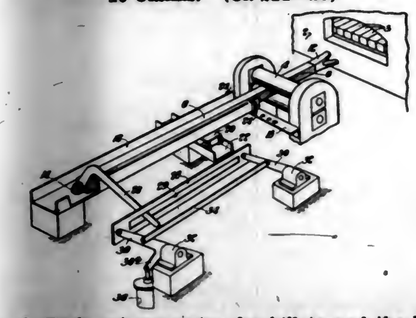
2,108,352
MOP RENOVATOR
Alfred D. Sund, Santa Rosa, Calif.
Application July 18, 1935, Serial No. 32,103
1 Claim. (Cl. 15—257)



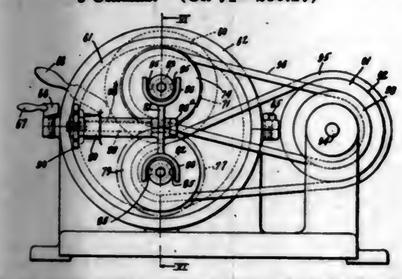
A mop renovator comprising a cabinet including a front wall provided with a panel having a vertical slot therein, a helical spring supported by said panel in such manner that its axis is in front of said slot and parallel with the walls of the latter, a knob connected with the upper end of said spring in such position as to be normally urged upwardly by the latter, and means for limiting said upward movement of the knob under the compression of said spring, said limiting means being so constructed as to normally maintain said knob in a position adjacent to but above the plane of the lower end of said slot, said spring being strong enough to impart a substantial rebound to a descending mop handle upon contact thereof with said knob.

2,108,353
FEEDING MECHANISM
Ernest J. Svenson, Rockford, Ill., assignor to Sundstrand Machine Tool Co., Rockford, Ill., a corporation of Illinois
Application April 7, 1928, Serial No. 268,159
Renewed July 14, 1937
30 Claims. (Cl. 82—2)

1. In a lathe, a bed having carriage ways, means for rotating a work piece, a tool carriage movable longitudinally on said ways and carrying a piston arranged normally to reciprocate the carriage at traverse speeds, a cross slide slidably mounted upon said carriage and piston actuated to reciprocate thereon, a unitary control device for said carriage and cross slide pistons, and mechanical means for restraining the movement of the carriage to a feeding speed when moving in one direction under the action of said piston.

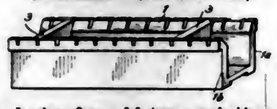


2,108,354
BLIND END CYLINDER HONING MACHINE
Floyd A. Swansen, Rockford, Ill., assignor to Barnes Drill Co., Rockford, Ill., a corporation of Illinois
Application June 8, 1935, Serial No. 25,546
13 Claims. (Cl. 51—34)



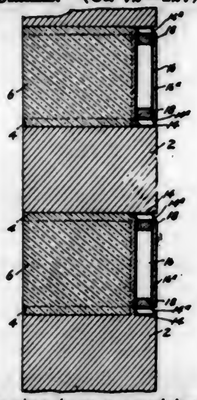
1. A honing machine for truing the bores of blind end cylinders of internal combustion engines or the like, comprising, in combination, means for supporting a work piece having a blind end cylinder to be honed, a honing tool, operating means including a rotary and reciprocatory tool spindle supporting said honing tool in position for insertion into said cylinder, actuating means for imparting reciprocal motion to said spindle, means for rotating said spindle continuously while the tool is in the cylinder, means for operating said actuating means including a hydraulic system embodying a pilot valve, means for controlling said pilot valve including reciprocal cycle defining stop mechanism operable as an incident to the attainment of opposite reciprocal limits by said tool spindle, limiting means for positively halting insertion of said tool into the work beyond a predetermined point short of the blind end of the cylinder, a member engageable with and serving to move said stop mechanism and operate said pilot valve commencing at a predetermined point prior to halting of the tool by said limiting means, and means in said hydraulic system including an adjustable delayed action valve for delaying operation of said system and thereby of said actuating means after said limiting means has halted insertion of the tool, whereby initiation of the return movement of said tool is delayed while it continues rotating in the work.

2,108,355
PUSH-OUT APPARATUS FOR BILLETS
Joseph H. Swift, Worcester, Mass., assignor to The American Steel and Wire Company of New Jersey, a corporation of New Jersey
Application August 26, 1936, Serial No. 98,020
10 Claims. (Cl. 214—23)



8. Push-out apparatus for billets and the like comprising a billet contacting element, means for reciprocating said billet contacting element, and means adapted to be actuated independent of said last named means for rotating said billet contacting element.

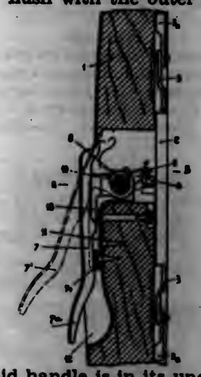
2,108,356
VARIABLE SPEED MECHANISM
Herbert E. Twomley, Riverside, Calif., assignor to Food Machinery Corporation, San Jose, Calif., a corporation of Delaware
Application January 14, 1936, Serial No. 59,065
9 Claims. (Cl. 74—230.17)



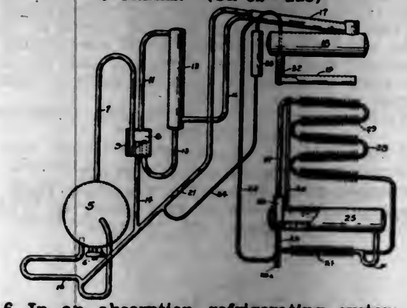
1. A mechanism of the type described comprising in combination a pair of driven members to be driven simultaneously in opposite directions, each having an individual pulley means attached thereto for driving it and the two pulley means being positioned coaxial with each other, motor means having a drive shaft parallel to the axis of said pulley means, a second drive shaft and means rotatably supporting it in parallel relation to and at a fixed distance from said motor drive shaft, intermeshing gears on said drive shafts for rotating said second drive shaft from said motor drive shaft in the opposite direction thereto, pulley means on each of said drive shafts juxtaposed to the respective pulley means on said driven members, belt means for directly coupling said juxtaposed pulley means whereby said driven members are rotated in opposite directions in response to rotation of said motor shaft in one direction, and means for varying the effective diameter of at least one of said pulleys on said drive shafts to vary the relative speeds of said driven members.

2,108,357
DEVICE FOR PRINTING HAND-COMPOSED ODD TYPE
Fritz Julius Weber, Winterthur, Switzerland, assignor to firm Schweizerische Lokomotiv- & Maschinenfabrik, Winterthur, Switzerland
Application July 20, 1936, Serial No. 91,598
In Switzerland August 2, 1935
3 Claims. (Cl. 276—15)

1. In a device for odd type printing in a type line setting and printing machine, a collecting channel of normal size for the normal circulating patrices, a holder serving to support type lines composed of odd patrices of the ordinary kind of letterpress printing type, said holder fitting into said circulating channel, and adjustable guide means for said type lines in the printing position.



2,108,358
WEATHERPROOF MASONRY JOINT
Frank P. White, Minneapolis, Minn.
Application October 19, 1936, Serial No. 106,287
8 Claims. (Cl. 72—127)

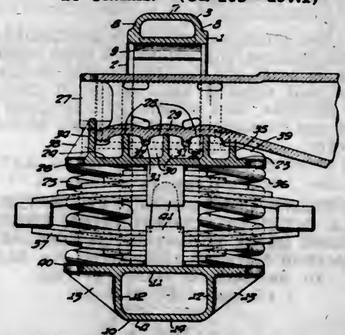


1. A masonry structure comprising a plurality of masonry units, laid in substantially horizontal courses connected by horizontal and vertical joints of binding material; the weather facing masonry units forming extended cavities from the binding material outwards to the weather exposed face of the structure, the said cavities being filled by joint sealing members constructed of impenetrable springy material in a tubular form compressed between the extended masonry units to flex in response to the expansion and contraction of the structure.

2,108,359
LOCK FOR AUTOMOBILE DOORS
Ferruccio Accardi, Turin, Italy, assignor to Fiat Società Anonima, Turin, Italy
Application July 26, 1935, Serial No. 33,401
In Italy October 10, 1934
2 Claims. (Cl. 292—34)

1. In an automobile door, safety latching means comprising a pair of locking bolts, a disc pivotally mounted in said door and adapted to be rotated by a knob on the inner side of said door, pin and slot connections between said bolts and said disc whereby rotation of said disc is effective to operate said bolts, means acting on said disc to hold said bolts in their locking positions, an eccentric pin on the outer side of said disc, said door having a recess in the outer surface thereof, a handle mounted in said recess substantially flush with the outer surface of the door when said handle is in its unoperated position, and a one-way driving connection from said handle to said eccentric pin, whereby operation of said handle is effective to unlock the door, but unlocking of the door by operation of said knob disengages said one-way driving connection to leave said handle in its unoperated position substantially flush with the outer surface of the door.

2,108,360
CONDENSER UNIT
Edmund E. Allyne and Walter J. Gusik, Cleveland, Ohio
Application March 29, 1934, Serial No. 718,051
7 Claims. (Cl. 62—118)

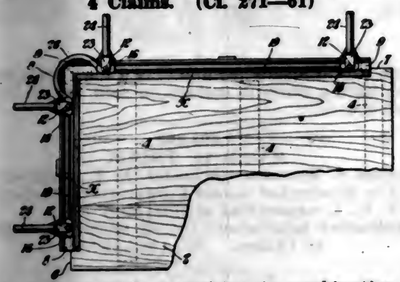


6. In an absorption refrigerating system, a still absorber, evaporator and condenser unit operatively connected in the order named, the said condenser unit including a condensate receiver and condenser tubes carried above said receiver and in fluid communication therewith whereby gas evolved in said still absorber necessarily passes through said evaporator and circulates through said condensate receiver and condenser tubes.

2,108,361
APPARATUS FOR MANUFACTURING LUSTER-FREE RAYON
Yukichi Asakawa, Tokyo, Japan
Application March 23, 1936, Serial No. 70,480
3 Claims. (Cl. 18—8)

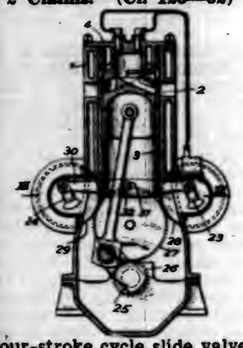
1. Apparatus for manufacturing luster-free rayon comprising, a spinning nozzle, means for supplying the rayon forming solution to said nozzle, a high frequency alternating current voltage source, and means for applying a high frequency alternating current voltage to said nozzle from said source.

2,108,362
RAILWAY TRUCK
Donald S. Barrows, Rochester, N. Y., assignor to The Symington-Gould Corporation, Rochester, N. Y., a corporation of Maryland
Application September 13, 1933, Serial No. 689,319
16 Claims. (Cl. 105—197.1)



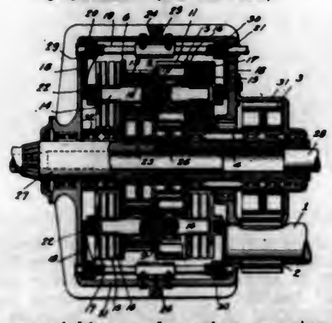
1. A side frame comprising a compression member, a tension member, bolster guide columns spacing intermediate portions of said members and spaced to leave a bolster opening therebetween, said guide columns comprising transverse webs and side flanges, a bolster with an end portion received in said opening, and a supporting member underlying said end portion and adapted to be supported by means of associated bolster springs, said member having side portions lying between the sides of said end portion and said guide columns, each side portion having a surface cylindrically curved about the vertical axis of the frame with the engaging surface of the adjacent member correspondingly curved for allowing relative horizontal angling, while maintaining the same area of contact regardless of bolster angularity.

2,108,363
LOOSE-LEAF SHEET
Frank Brodsky, New York, N. Y.
Application October 21, 1935, Serial No. 46,034
4 Claims. (Cl. 281—41)



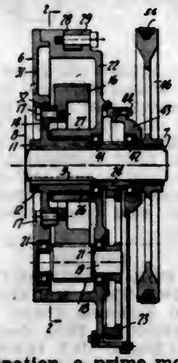
4. A sheet for the purpose described consisting of a normal sized sheet cut to provide a binding strip and a body portion forming together a sheet of the original width, and a connecting strip of flexible material adhesively connected some distance away from the edge portions of the top of the binding strip and the bottom of the body portion, said connecting strip having a fold line extending in spaced relation to the longitudinal edge of the portion of the strip secured to the binding strip and defining said secured portion from the remainder of the strip, said body portion having a fold line defining the part secured to the connecting strip from the remainder of the body portion.

2,108,364
SHEET GUIDE
Dario Buccicone, Gary, Ind.
Application March 15, 1937, Serial No. 131,104
4 Claims. (Cl. 271—61)



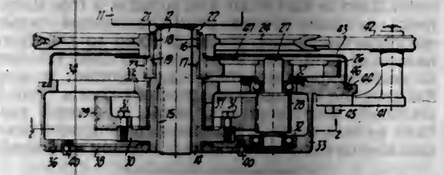
1. A sheet guide comprising, in combination, at least two squared and connected sheet-engaging sections, at least one vertical upright secured to each of said squared and connected sheet-engaging sections, and means for clamping said squared and connected sheet-engaging sections to a platform.

2,108,365
SLIDE VALVE CONTROLLED FOUR-STROKE CYCLE INTERNAL COMBUSTION ENGINE
Alfred Büchi, Winterthur, Switzerland
Application March 3, 1936, Serial No. 66,962
In Switzerland March 6, 1935
2 Claims. (Cl. 123—32)



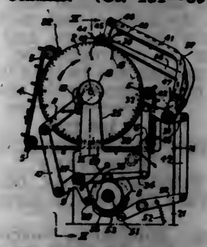
1. In a four-stroke cycle slide valve controlled internal combustion engine, a working cylinder having a closed end, a working piston in said cylinder cooperating with said cylinder end with its adjacent end, one of said ends having an axially extending bore of less diameter than the cylinder and constituting a combustion chamber, a slide valve in said cylinder surrounding said piston, said valve and cylinder having registerable intake and exhaust ports, and mating surface configurations on said cooperating piston and cylinder ends extending from the intake valve ports angularly around the piston and cylinder ends, and inwardly to the combustion chamber, forming near the top dead center position of said piston a guiding passage for the entering charge and scavenging air, which passage opens into the combustion chamber substantially tangentially for producing a helical flow of fluid into said chamber, said piston and cylinder ends also having substantially mating channel-shaped surface configurations extending from a central portion of the combustion chamber outwardly to the exhaust ports forming near the top dead center position of the piston an exhaust passage in contiguity with said helical flow, whereby the helical flow of fluid is reflected by the bottom of said bore axially of the combustion chamber to the exhaust passage and thence passes to the exhaust valve ports.

2,108,366
DEVICE FOR TRANSMITTING MOTION
Georges Raymond Cazeagne, Cazaux, France
Application January 19, 1934, Serial No. 707,378
In France February 8, 1933
6 Claims. (Cl. 74—295)



2. In a variable speed gearing, a motor shaft, two secondary shafts, toothed wheels keyed on said motor shaft and said secondary shafts, means for impressing on said secondary shafts an automatically controlled distribution of the power furnished by the motor shaft, comprising complementary toothed wheels located between said motor shaft and one of the secondary shafts for providing said last named secondary shaft with a rotating speed, the variations of which are always different from those of the other secondary shaft, and means for preventing rotation of said complementary toothed wheels so that said last named secondary shaft constituting a regulator may be either connected with the motor shaft or separated from the same, or maintained stationary.

2,108,367
SPEED CHANGE DEVICE
Joseph D. Christian, San Francisco, Calif.
Application November 28, 1936, Serial No. 113,246
3 Claims. (Cl. 74—421)



1. In combination, a prime mover, a shaft to be driven, a casing structure having three parallel wall members therein, a gear having a hub, at least one of said wall members being flanged inwardly within the casing toward another of said wall members, and supported for rotation on said gear hub, means for securing said hub to said shaft to position and support said casing structure on said shaft, another gear, a shaft extending into said casing and carrying said another gear, and bearing means in two of the parallel wall members on each side of said another gear, gearing connecting said gear and said another gear, and means connecting said extending shaft and said prime mover.

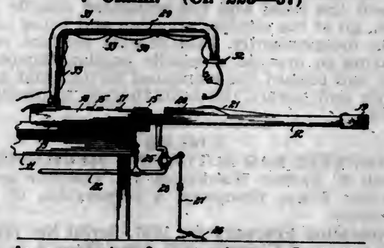
2,108,368
SPEED CHANGE DEVICE
Joseph D. Christian, San Francisco, Calif.
Application November 28, 1936, Serial No. 113,247
3 Claims. (Cl. 74—242.11)

1. In combination, a driven device including a power intake element, a hub secured to said element for rotating said element, a first gear secured to said hub, a second gear rotatable on said hub, a frame journalled on said hub, means for resisting rotation of said frame, gear means carried by said frame and joining said first gear to said second gear for driving, a motor including a drive shaft, a driving element thereon, a driven element for said second gear, and a continuous flexible drive means trained about said driving and driven elements, said resisting means including an element supported by said frame and engaging said flexible drive means at least upon rotation of said hub in one direction.

2,108,369
METHOD AND DEVICE FOR DISTRIBUTING TOBACCO MASS
Ernst Ruben Dahlström, Alsten, and Karl Erik Granstedt, Stockholm, Sweden, assignors to Aktiebolaget Formator, Stockholm, Sweden, a Swedish joint-stock company
Application April 2, 1936, Serial No. 72,430
In Sweden April 5, 1935
9 Claims. (Cl. 131—39)

2. In a device for distributing a tobacco mass, a container adapted for a tobacco mass and comprising two upright, oppositely disposed and spaced apart rotary side walls, and a distributor operative between the upper parts of said walls to deliver a part of the tobacco mass from said container.

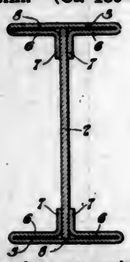
2,108,370
HIGHWAY MARKER
Otto Ernst, Larchmont, N. Y.
Application April 16, 1936, Serial No. 74,763
1 Claim. (Cl. 88—79)



A highway marker comprising a hollow transparent body member having an open end, a rabbet formed therearound, a disk seated within the rabbet and sealed therein, said disk having an aperture therethrough, a standard engaged through the aperture and sealed therein, one end of the standard engaging the interior of the body member for support thereof, said body member having projections upon the interior thereof, and a reflecting material fixed to the interior surface and the projections.

2,108,371
WATER RING FOR CONCRETE PIPE FORMS
Jay C. French, San Gabriel, Calif., assignor to American Concrete & Steel Pipe Company, a corporation of Delaware
Application August 3, 1937, Serial No. 157,146
3 Claims. (Cl. 25—30)

1. A water ring for concrete pipe forms comprising: a channel ring member having a toggle joint therein; and a continuous ring formed of resilient material secured to said channel ring member in the channel portion thereof, said continuous ring of resilient material having a greater outside diameter than said channel member; said channel ring member forming a continuous ring when in expanded position.



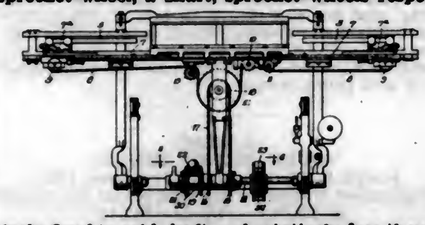
2,108,372
SEAM OPENER AND TURNER FOR PANTS
Robert L. Fulps, Waco, Tex.
Application September 2, 1937, Serial No. 162,217
7 Claim. (Cl. 223—57)

1. An apparatus for pressing or flattening the seams of a pair of pants and turning the garment right side out, comprising a supporting

base, a pair of spaced apart arms projecting from one side thereof to receive the leg sections of the garment and having heads at their outer ends for turning the garment right side out after the seams are pressed, and a block interposed between the arms and having diverging members for convenience in pressing the crotch and back seams.

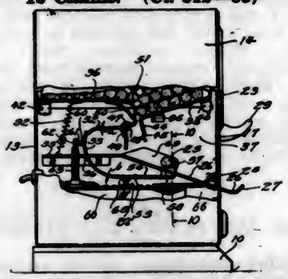
2,108,373
WELDED STRUCTURAL MEMBER
Gerald G. Greulich, Mount Lebanon, Pa.
Application December 31, 1936, Serial No. 118,663
1 Claim. (Cl. 189—37)

A structural member comprising at least one flange formed from a single piece of metal bent back upon itself to provide a double thickness of metal in spaced relationship and including laterally extended portions from the inner portion of said flange and a web provided with a plurality of projections extending alternately from each side thereof positioned between said laterally extended portions and welded thereto at the points said projections contact said laterally extended flange portions, said web adapted to project beyond the inner portion of said flange to contact the inner face of the outer portion thereof.



2,108,374
PERMANENT WAVE CURLER
Sidney Alexander Hamilton, Shreveport, La.
Application May 9, 1936, Serial No. 78,926
1 Claim. (Cl. 132—34)

A curler including a handle, a head, a rod connecting the handle and head, an elongated spindle section mounted for rotation on the rod and projecting into and rotatable within the handle, said section having one end tapered to provide a finger grip, means within said section for holding it against rotation in one direction relative to the handle, additional shorter spindle sections mounted for rotation on the rod between the head and the elongated spindle section, all of the sections abutting and being rotatable independently, said shorter sections cooperating to provide a spindle portion tapered at one end toward the elongated section and at its other end toward the head thereby to provide a bulge.

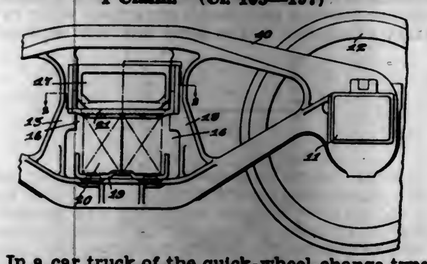


2,108,375
SHUTTLE BAR ACTUATING MECHANISM
Noah S. Harter, Waukegan, Ill., assignor to Cyclone Fence Company, a corporation of New Jersey
Application February 16, 1937, Serial No. 126,051
4 Claims. (Cl. 139—122)

1. A loom including a shuttle-bar slide, opposed shuttle-bars riding said slide, an endless chain, guide wheels guiding said chain so it crosses itself to form two loops with the oppositely moving sides of said loops mutually alined parallel said slide, means for interconnecting said sides of said loops and said shuttle-bars, a sprocket-wheel engaging said chain, a sprocket-wheel rotatively connected with the first named sprocket-wheel, a shaft, sprocket-wheels respec-

tively fixed to said shaft and rotatively free therefrom, a chain looped over the second named sprocket-wheel with its ends fixed to the third named of said sprocket-wheels so that rotation thereof wraps this chain therearound, a gear fixed to the one of said sprocket-wheels that is rotatively free from said shaft, a second gear fixed to said shaft, a gear intergearing said gears and means for reciprocatively turning said shaft.

2,108,376
CIGARETTE LIGHTING AND DISPENSING DEVICE
Francis C. Copeland, Beverly Hills, Calif.
Application March 10, 1936, Serial No. 68,056
13 Claims. (Cl. 312—33)



6. In a cigarette igniting and dispensing device, an inclined platform along which a cigarette will roll, an ignition unit disposed along the path of travel of a cigarette as it is being discharged from the device, means for arresting movement of said cigarette and lifting it into contact with the ignition unit, said means thereafter releasing the cigarette, and means acting automatically to determine the period during which the cigarette will be held in contact with the ignition means prior to the aforesaid release.

2,108,377
PRODUCTION OF AMMONIUM CHLORIDE CRYSTALS
Charles H. Heimbach, Elyria, Ohio, assignor to National Tube Company, a corporation of New Jersey
